BY HORACE HART, PRINTER TO THE UNIVERSITY

DEDICATED TO THE MEMORY

OF THE REV.

JAMES RIDDELL

LATE FELLOW AND TUTOR OF BALLIOL

PREFACE TO THE FIRST EDITION.

It may be said, without fear of giving offence, that a new Grammar of the Homeric dialect is sorely wanted. The admirable *Griechische Formenlehre* of the late H. L. Ahrens is now just thirty years old, and is confined, as its title indicates, to the inflexions. Not only has the course of discovery been going on since Ahrens wrote (and with hardly less rapidity than in the first years of the new science), but the historical method has been carried into the field of syntax. And apart from 'comparative philology,' the researches of Bekker, Cobet, La Roche, and many other students have brought together a wealth of material that only needs careful analysis and arrangement to make it accessible to the general body of learners.

The plan of this book has sufficient novelty to call for some explanation. I have not attempted to write a Comparative Grammar, or even a Grammar that would deserve the epithet 'historical:' but I have kept in view two principles of arrangement which belong to the historical or genetic method. These are, that grammar should proceed from the simple to the complex types of the Sentence, and that the form and the meaning should as far as possible be treated together. Now the simplest possible Sentence—apart from mere exclamations consists of a Verb, or word containing in itself the two elements of all rational utterance, a Subject and a Predicate. We begin, therefore, by analysing the Verb, and classifying (1) the Endings, which express the Person and Number of the Subject (§§ 1-7), and serve also to distinguish the 'Middle' or Reflexive use (§ 8), and (2) the modifications of the Stem which yield the several Tenses and Moods. These modifications, we at once perceive, are more numerous than the meanings which they serve to express, and we have therefore to

choose between classifying according to formation—i. e. according to the process by which each Tense-Stem and Mood-Stem is derived from the simple Verb-Stem or Root,—and the ordinary classification according to meaning (Present, Future, Perfect, Aorist, &c.). The former course seemed preferable because it answers to the historical order. The problem is to find how pre-existing forms—common to Greek and Sanscrit, and therefore part of an original 'Indo-European' grammar—were adapted to the specifically Greek system of Tense-meanings. I have therefore taken the different formations in turn, beginning with the simplest (§§ 9-20, 22-27, 29-69, 79-83), and introducing an account of the meaning of each as soon as possible (§§ 21, 28, 70-78). This part of the subject naturally includes the accentuation of the different forms of the Verb (§§ 87-89).

The next great division of the subject is concerned with the first enlargement of the Sentence. A word may be added which taken by itself says nothing—contains no Subject and Predicate—but which combines with and qualifies the primitive one-word Sentence. The elements which may gather in this way round the basis or nucleus formed by the Verb are ultimately of two kinds, Nouns and Pronouns; and the relations in which they may stand to the Verb are also two-fold. A Noun or Pronoun may stand as a Subject—limiting or explaining the Subject already contained in the Person-Ending—or may qualify the Predicate given by the Stem of the Verb. These relations are shown by the Ending, which again may be either a Case-Ending or an adverbial Ending. We begin accordingly by an account of the Declensions, supplemented by a list of the chief groups of Adverbs (Chapter V).

When we pass from the Endings to the Stems of Nouns and Pronouns, we find that they are essentially different. A 'Nominal Stem' consists in general of two parts, (1) a predicative part, usually identical with a Verb-Stem, and (2) a Suffix. Each of these two elements, again, may be complex. The addition of a further Suffix yields a fresh Stem, with a corresponding derivative meaning; and thus we have the distinction between *Primitive* or Verbal and Secondary or Denominative Nouns. The Suffixes employed in these two

classes are generally distinct, and deserve a more careful enumeration than is usually given in elementary grammars. The predicative part, again, may be enlarged by a second Nominal Stem, prefixed to the other, and qualifying it nearly as a Case-form or Adverb qualifies the Verb. The Compounds thus formed are of especial interest for the poetical dialect of Homer. The analysis which I have given of the chief forms which they present must be taken to be provisional only, as the subject is still full of doubt. With respect to the meaning I have attempted no complete classification. It is always unsafe to insist on distinctions which may be clear to us, but only because we mark them by distinct forms of expression.

The chapter on the formation of Nouns should perhaps have been followed by one on the formation of Pronouns. The material for such a chapter, however, lies for the most part beyond the scope of a grammar. It is represented in this book by a section on Heteroclite Pronouns (§ 108), which notices some traces of composite Pronominal Stems, and in

some degree by another on the Numerals (§ 130).

When we come to examine the syntactical use of the Cases, we find ourselves sometimes dealing with sentences which contain at least two members besides the Verb. Along with the constructions which may be called 'adverbial' (using the term Adverb in a wide sense, to include all words directly construed with the Verb), we have the constructions in which the governing word is a Noun or Preposition. And in these again we must distinguish between the government of a Case apparently by a Noun or Preposition, really by the combined result of the Noun or Preposition and the Verb, and the true government by a Noun alone, of which the dependent Genitive and the Adjective are the main types. These distinctions, however, though of great importance in reference to the development of the use of Cases, cannot well be followed exclusively in the order of treatment. I have therefore taken the Cases in succession, and along with them the chief points which have to be noticed regarding the 'concords' of Gender (§§ 166-168) and Number (§§ 169-173).

In the Infinitive and Participle (Chapter X) we have the first step from the simple to the complex Sentence. The pre-

dicative element in the Verbal Noun is treated syntactically like the same element in a true or 'finite' Verb; that is to say, it takes 'adverbial' constructions. Thus while retaining the character of a Noun it becomes the nucleus of a new imperfect Sentence, without a grammatical Subject properly so called (though the Infinitive in Greek acquired a quasi-Subject in the use of the Accusative before it), and standing to the main Sentence as an adverb or adjective.

While the Infinitival and Participial Clauses may thus be described as Nouns which have expanded into dependent Sentences, the true Subordinate Clause shows the opposite process. In many instances, especially in Homeric syntax, we can trace the steps by which originally independent Sentences have come to stand in an adverbial or adjectival relation. The change is generally brought about, as we shall see, by means of Pronouns, or Adverbs formed from Pronominal stems. Hence it is convenient that the account of the uses of the Pronouns (Chapter XI) should hold the place of an introduction to the part in which we have to do with the relations of Clauses to each other.

The next chapter, however, does not treat directly of subordinate Clauses, but of the uses of the Moods in them. It seemed best to bring these uses into immediate connexion with the uses which are found in simple Sentences. In this way the original character of Subordinate Clauses comes into a clearer light. If anything remains to be said of them, it finds its place in the account of the Particles (Chapter XIII); in which also we examine the relations of independent Sentences, so far at least as these are expressed by grammatical forms.

The last chapter contains a discussion of the Metre of Homer (Chapter XIV), and of some points of 'phonology' which (for us at least) are ultimately metrical questions. Chief among these is the famous question of the Digamma. I have endeavoured to state the main issues which have been raised on this subject as fully as possible: but without much hope of bringing them to a satisfactory decision.

A book of this kind is necessarily to a great extent a compilation, and from sources so numerous that it is scarcely possible to make a sufficient acknowledgment of indebtedness. The earlier chapters are mainly founded on the great work of G. Curtius on the Greek Verb. More recent writers have cleared up some difficulties, especially in the phonology. I have learned very much from M. de Saussure's Mémoire sur le système primitif des voyelles, and from several articles by K. Brugmann and Joh. Schmidt, especially the last. I would mention also, as valuable on single points, the papers of J. Paech (Vratisl. 1861) and H. Stier (Curt. Stud. II) on the Subjunctive, B. Mangold on the 'diectasis' of Verbs in -áw (Curt. Stud. VI), F. D. Allen on the same subject (Trans. of the American Phil. Assoc. 1873), Leskien on og in the Fut. and Aor. (Curt. Stud. II), and K. Koch on the Augment (Brunsvici 1868). On the subject of Nominal Composition I may name a paper by W. Clemm in Curt. Stud. VII, which gives references to the earlier literature of the subject, and one by F. Stolz (Klagenfurt 1874). On the forms of the Personal Pronouns there is a valuable dissertation by P. Cauer (Curt. Stud. VII): on the Numerals by Joh. Baunack (K. Z. XXV): on the Comparative and Superlative by Fr. Weihrich (De Gradibus, &c. Gissae 1869). Going on to the syntax of the Cases, I would place first the dissertation of B. Delbrück, Ablativ Localis Instrumentalis, &c. (Berlin 1867), and next the excellent work of Hübschmann, Zur Casuslehre (München 1875). On the Accusative I have obtained the greatest help from La Roche, Der Accusativ im Homer (Wien 1861): on the Dual from Bieber, De Duali Numero (Jena 1864). On the Prepositions I have used the papers of C. A. J. Hoffmann (Lüneburg 1857-60, Clausthal 1858-59), T. Mommsen (see § 221), Giseke, Die allmäliche Entstehung der Gesänge der Ilias (Göttingen 1853), La Roche, especially on ὑπό (Wien 1861) and ἐπί (in the Z. f. öst. Gymn.), Rau on παρά (Curt. Stud. III), and the articles in Ebeling's Lexicon. On this part of syntax the fourth volume of Delbrück's Forschungen is especially instructive. Of the literature on the Infinitive I would mention J. Jolly's Geschichte des Infinitivs im Indogermanischen (München 1873), also a paper by Albrecht (Curt. Stud. IV), and a note in Max Müller's Chips from a German Workshop (IV. p. 49 ff.). The use of the Participle has been admirably treated by Classen, in his Beobachtungen über den homerischen Sprachgebrauch

(Frankfurt 1867). A paper by Jolly in the collection of Sprachwissenschaftliche Abhandlungen (Leipzig 1874) is also suggestive. On the subject of the Pronouns the chief source is a dissertation by E. Windisch in Curt. Stud. II. On the Article almost everything will be found in H. Foerstemann's Bemerkungen über den Gebrauch des Artikels bei Homer (Magdeburg 1861). The controversy on the Reflexive Pronoun is referred to in § 255. On the Homeric uses of the Moods, besides Delbrück's great work, I would mention Jolly's monograph entitled Ein Kapitel vergleichender Suntax (München 1872), and L. Lange's elaborate papers on el (Leipzig 1872-73). It is to be regretted that they have not yet been carried to the point of forming a complete book on the Homeric use of el. For the general theory of the subject Prof. Goodwin's Greek Moods and Tenses is of the very highest value. Regarding the cognate question of the uses of av and κεν the main principles have been laid down by Delbrück. It is worth while to mention that they were clearly stated as long ago as 1832, in a paper in the Philological Museum (Vol. I. p. 96), written in opposition to the then reigning method of Hermann. For the other Particles little has been done by Homeric students since Nägelsbach and Hartung. I have cited three valuable papers; on $\tau \epsilon$ by Wentzel, on $\dot{\eta}$ ($\dot{\eta}\epsilon$) by Praetorius, and on $\mu\dot{\eta}$ by A. R. Vierke. I would add here a paper on the syntax of Causal Sentences in Homer, by E. Pfudel (Liegnitz 1871). On all syntactical matters use has been made of the abundant stores of Kühner's Ausführliche Grammatik. And it is impossible to say too much of the guidance and inspiration (as I may almost call it) which I have derived from the Digest of Platonic Idioms left behind by the lamented friend to whose memory I have ventured to dedicate this book.

On the collateral subjects of Metre I have profited most by Hartel's Homerische Studien, La Roche, Homerische Untersuchungen (Leipzig 1869), Knös, De digammo Homerico (Upsaliae 1872–79), and Tudeer, De dialectorum Graecarum digammo (Helsingforsiae 1879).

PREFACE TO THE SECOND EDITION.

THE rapid progress of linguistic science during the nine years that have passed since this Grammar was first published has necessitated considerable alteration and enlargement in a new edition. Much has been discovered in the interval; much that was then new and speculative has been accepted on all sides; and much has been done in sifting and combining the results attained. The Morphologischen Untersuchungen of Osthoff and Brugmann have been followed by Brugmann's admirable summary of Greek grammar (in Iwan Müller's Handbuch), and his comprehensive Grundriss der vergleichenden Grammatik der indogermanischen Sprachen. Of three portions of this work that have already appeared (Strassburg 1886-90-91), the last (treating chiefly of the Declensions) came too late to be of service to the present book. The part which deals with the Verb has not yet been published: and the volume on Comparative Syntax, promised by Delbrück—the first complete work on this part of the subject-is also still to come. It will doubtless be a worthy sequel to the Altindische Syntax, which now forms the fifth volume of his Syntaktische Forschungen. Among other books which have appeared since the publication of this Grammar, or which were not sufficiently made use of for the first edition, I would mention Joh. Schmidt's Pluralbildungen der indogermanischen Neutra (Weimar 1889), G. Meyer's Griechische Grammatik (second edition, Leipzig 1886), the new edition of Mr. Goodwin's Moods and Tenses (London 1889), the treatises in Schanz's series of Beiträge zur historischen Syntax der griechischen Sprache, Aug. Fick's two books (see Appendix F), articles by Wackernagel, Fröhde and others in Kuhn's Zeitschrift and Bezzenberger's Beiträge, the long series of papers by Aug.

Nauck collected in the Mélunges gréco-romains (St. Petersburg 1855-88)—a book not often seen in this country,—and the dissertations of J. van Leeuwen in the Mnemosyne. The two writers last mentioned are chiefly concerned with the restoration of the Homeric text to its original or prehistoric form. Their method, which is philological rather than linguistic, may lead to some further results when the numerous MSS. of the Iliad have been examined and have furnished us with an adequate apparatus criticus.

Although very much has been re-written, the numbering of the sections has been retained, with a few exceptions; so that the references made to the first edition will generally still hold good. The new sections are distinguished by an asterisk.

I will not attempt to enumerate the points on which new matter has been added, or former views recalled or modified. The increase in the size of the book is largely due to the fuller treatment of the morphology. Additions bearing on questions of syntax will be found in §§ 238, 248, 267, 270*, 362, 365. On the whole I have become more sceptical about the theories which seek to explain the forms of the Subordinate Clause from parataxis, or the mere juxta-position of independent clauses. In general it may be admitted that the complex arose in the first instance by the amalgamation of simpler elements: but we must beware of leaving out of sight the effect of 'contamination' in extending syntactical types once created. The neglect of this consideration is in reality another and more insidious form of the error from which recent writers on morphology have delivered us, viz. that of explaining grammatical forms as the result of direct amalgamation of a stem with a suffix or ending, without duly allowing for the working of analogy.

Oxford, March 21, 1891.

HOMERIC GRAMMAR.

CHAPTER I.

INTRODUCTORY.—THE PERSON-ENDINGS.

- 1.] ALL language of which grammar takes cognisance consists of Sentences. The simplest complete Sentence expresses the combination of a Subject—that about which we speak (or think); and a Predicate—that which we say (or think) about the Subject. On the sentences which are (apparently or really) without a Subject, see §§ 161, 163.
- 2.] In Greek (and generally in languages whose structure resembles that of Greek) every Verb is a complete Sentence, consisting of two parts, the Stem, which expresses the Predicate, and the Ending, which expresses the Subject. Thus $\xi\sigma$ - τ 1 he (or it) is, ϕa - θi say thou, $\mathring{\eta}\lambda\theta o$ - $\mu\epsilon\nu$ we came, are Sentences; the several Predicates are expressed by the Stems $\xi\sigma$ -, ϕa -, $\mathring{\eta}\lambda\theta o$ -, and the Subjects by the Endings $\tau\iota$ 1, $-\theta\iota$ 1, $-\mu\epsilon\nu$ 2. As the Endings of a Verb may always be translated by Personal Pronouns they are called the Person-Endings.

It may happen that the ending has been lost by phonetic corruption, as in ξλαβε (for ἐλαβε-τ) he took. This however does not form a real exception, because in Greek such words are used exactly as if the lost ending were still sounded. In English it is different: took can only be used to express a Predicate. The original Subject is lost to the mind as well as to the ear.

It should be noticed that the term 'Verb' is used in Grammars with a double meaning, sometimes of a single form—as when we say that $\partial \tau \dot{\nu} \pi \tau o - \mu \epsilon v$ is 'a Verb'—sometimes collectively, as when we say that $\partial \tau \dot{\nu} \pi \tau o - \mu \epsilon v$ is a 'part' of 'the Verb $\tau \dot{\nu} \pi \tau \omega$.' Here 'a Verb' means a group of forms, derived from a common root.

- 3.] There are three main sets of Person-Endings :-
- 1. Those used in the Tenses called 'Principal' (the Present, Perfect, and Future Indicative), and in the Subjunctive; these are called the *Primary* Endings.
- 2. Those used in the 'Historical Tenses' (the Imperfect, Aorist, and Pluperfect), and in the Optative; these are called the Secondary Endings.
 - 3. The Endings of the Imperative.

4. The further modifications which the Endings undergo depend chiefly upon the final letter of the Stem.

2

In certain forms the Ending is preceded by o or E: that is to say, O before the nasals μ , ν , and E before other letters; e.g. τύπτΟ-μεν, τύπτΕ-τε, τύπτΟ-ντι (older and Dor. form of τύπτουσι). We shall call this the Thematic Vowel.* and the Stems which contain it Thematic Stems. The term will naturally include the corresponding Subjunctives, in which the final letter of the Stem varies in the same way between η and ω, as τύπτω-μεν, τύπτη-τε, &c. and the I Sing. in -w. These long vowels doubtless represent a primitive contraction of the Thematic vowel with some other element: but the exact process can hardly be determined.

The forms which do not contain this variable & or o are called Non-Thematic. Among these, again, we have to distinguish a group of Tenses with Stems ending in -a, viz. the Perfect, the First Aorist, and some forms peculiar to the Ionic Dialect, as the Plpf. (e.g. ήδεα I knew), the Impf. η a I was, η ia I went.

these Stems the -a changes in the 3 Sing. to -e(v).†

The distinction between Thematic and Non-Thematic applies in strictness only to forms, but may generally be extended to Tenses and Moods. Thus the Pres. and Impf. of τύπτω are Thematic, the same Tenses of φημί are Non-Thematic. In every Verb the Future is Thematic, the Optative is Non-Thematic, &c. But the distinction does not apply to 'Verbs' (in the collective sense of the term), because almost every Verb is made up of forms of both kinds.

5.] In the following Table of the Person-Endings found in Homer the Endings distinguished by larger type are those of the Non-Thematic Tenses. The Endings in smaller type are, first, those of the forms with -a, and, under them again, those of the Thematic forms. In the Dual and Plural (except the 3 Plur.) the Endings are the same throughout.

^{*} This vowel has also been termed the 'Connecting' or 'Auxiliary' Vowelnames given on the supposition that it is originally euphonic, inserted in order to allow the Stem and the Ending to be distinctly heard in pronunciation. The name 'Thematic' implies a different theory, viz. that it serves to form a 'Theme' from a simpler element or 'Root,' as λεγ-ε from the Root λεγ-; see Curt. Chron. p. 40. On this theory the Stem λεγ-ε, λεγ-ο is originally the same as the Theme or Stem of the Noun λόγο-s. See the remarks of Brugmann, Grundriss, ii. § 8, n. 1.

In the former edition the -w of the I Sing. was explained as -o-µ (Sanser. -ā-mi). It is now generally thought that -ω and -μ are originally distinct, and represent respectively the Thematic and Non-Thematic Endings of the primitive Indo-European Verb. If so, the Sanscrit-āmi has extended from the Non-Thematic to the Thematic conjugation; and similarly the -open of Greek φέρομαι (Sanser. bhare). See Meyer, G. G. p. 404.

⁺ The & of these Stems is of course quite different from the final vowel of the Stem in such forms as φα-μέν, ἴστα-μαι, τέτλα-θι, where it is part of the Verb-Stem or 'Root.'

Remarks on the Table of Person-Endings.

1 Sing. On the Subj. in -ω-μι see § 82, and on the Optatives which take -μι in the 1 Sing. see § 83.

2 Sing. The original -σι remains only in ¿σ-σί thou art.

The form $\epsilon \bar{\epsilon} s$ (or enclitic $\epsilon \bar{\epsilon} s$) is read in nine places, but there is only one (Od. 17. 388) in which the metre does not allow $\epsilon \sigma \sigma'$ to be read instead. Probably, therefore, $\epsilon \sigma \sigma'$ is the genuine Homeric form. The Attic $\epsilon \bar{\epsilon}$ is not found in Homer.

The Ending -σθα occurs in the Pf. οἶσθα thou knowest (οΐδαs in Od. 1. 337, is a very doubtful reading), Plpf. ἤδησθα (Od. 19. 93), the Impf. ἦσθα and ἔησθα thou wast, ἔφησθα thou saidst, and the Pres. εἶσθα thou wilt go, τίθησθα (Od. 9. 404., 24. 476), διδοῖσθα (Il. 19. 270), perhaps φῆσθα (Od. 14. 149): also in some Subjunctives, ἐθέλησθα, εἴπησθα, βουλεύησθα (Il. 9. 99), ἴησθα (Il. 10. 67); and in the Optatives βάλοισθα (Il. 15. 571), κλαίοισθα (Il. 24. 619), and προφύγοισθα (Od. 22. 325).

The history of this $-\sigma\theta\alpha$ can still be traced. Originally $-\theta\alpha$ (Sanser. -tha) was the Ending of the 2 Sing, Pf. Ind.: hence $olo\theta\alpha$ for $olo\theta\alpha$ (Sanser. vettha for ved-tha), and $\hat{\eta}\sigma$ - $\theta\alpha$ (Sanser. ásitha) properly Pf. from the root $\hat{\epsilon}\sigma$ -. Having in these cases appeared accidentally as an ending $-\sigma\theta\alpha$, it was transferred in this form to other Tenses and Moods.*

The forms ήσθας, οἴσθας which appear in some MSS are due to the common 2 Sing. in -ἄs. Aristarchus rejected them in Homer.

In the Middle the σ of $-\sigma \alpha_i$, $-\sigma o$ when it follows a vowel is generally lost: so always in the Secondary Tenses, as $\hat{\epsilon}\mu\acute{a}\rho\nu\alpha-o$, $\delta \alpha\acute{\nu}\nu-o$, $\hat{\epsilon}\sigma\sigma\nu-o$, $\hat{\epsilon}\epsilon\acute{\nu}\sigma$ -o, contracted $\hat{\epsilon}\kappa\rho\acute{\epsilon}\mu\omega$ (Il. 15. 18), $\hat{\epsilon}\pi\epsilon\acute{\nu}\rho\acute{\mu}\sigma\omega$ (Il. 21. 410), $\hat{\epsilon}\kappa\tau\acute{\eta}\sigma\omega$ (Od. 24. 193)—for which, however, the metre allows us to write $\hat{\epsilon}\kappa\rho\acute{\epsilon}\mu\alpha'$, &c.—and the Opt. $-o_i$ -o. In the Pres. and Pf. Indic. and the Imper. the usage is not uniform: $\delta \acute{\nu}\nu\alpha-\sigma\alpha i$ (Il. 1. 393), $\delta \acute{\nu}o-\sigma\alpha i$ (Od. 17. 378), $\pi\alpha\rho-i\sigma\tau\alpha-\sigma\alpha i$ (Il. 10. 279., Od. 17. 450), $\dot{\nu}\pi o-\delta \acute{a}\mu\nu\alpha-\sigma\alpha i$ (Od. 16. 95), $\delta \acute{a}\nu\nu-\sigma\alpha i$ (Od. 21. 290), $\mu\acute{\epsilon}\mu\nu\eta-\sigma\alpha i$ (Il. 23. 648), Imper. $i\sigma\tau\alpha-\sigma o$ (seven times), $i\nu\eta-\sigma o$ (Od. 19. 68), $\kappa\epsilon \hat{i}-\sigma o$ (Il. 21. 122): but $\mu\acute{\epsilon}\mu\nu\eta-\alpha i$ (Il. 21. 442), $\mu\acute{\epsilon}\mu\nu\eta$ (Il. 15. 18, where we may read $\mu\acute{\epsilon}\mu\nu\eta'$), $\beta\acute{\epsilon}\beta\lambda\eta\alpha i$ (three places in the Iliad), $\delta i(\hat{i}\eta-\alpha i$ (Od. 11. 100), Imper. $\theta\acute{\epsilon}-o$ (Od. 10. 333), $\phi\acute{\alpha}-o$ (Od. 18. 171), $\mu\acute{\alpha}\rho\nu\alpha-o$ (Il. 15. 475), $\pi\alpha\rho-i\sigma\tau\alpha-o$ (Il. 10. 291, according to Aristarchus, $\pi\alpha\rho-i\sigma\tau\alpha-\sigma\sigma$ MSS.).

The loss of σ was in accordance with Greek phonetic law, and originally universal; but new forms in $-\sigma a\iota$, $-\sigma o$ were produced on the analogy of forms such as $\lambda \epsilon f o$ for $\lambda \epsilon \chi - \sigma o$), $\hat{\eta} \sigma o$ (for $\hat{\eta} \sigma - \sigma o$), $\pi \epsilon \pi \nu \sigma \sigma a\iota$ (for $\pi \epsilon \pi \nu \theta - \sigma a\iota$), $\tau \epsilon \tau \nu f o$, &e., in which the σ is preserved by the preceding consonant.

Verbs in -εω, which would properly form -εεαι, -εεο, sometimes

^{*} On this point recent writers have gone back to the explanation given by Bopp, Vergl. Gr. II. pp. 292, 498.

suffer Hyphaeresis (cp. § 105, 4), and drop one ε; as μύθεαι (Od. 2. 202), ἀπο-αίρεο, ἔκλεο. But we find also μυθεῖαι (Od. 8. 180), νείαι (Od. 11. 114., 12. 141)—where it is possible to substitute the uncontracted μυθέεαι, νέεαι—and αίδεῖο (Il. 24. 503).

In the Imper. the Ending -01 is common in Non-Thematic Tenses: $\tilde{t}-\theta\iota$, $\sigma\tau\hat{\eta}-\theta\iota$, $\kappa\lambda\hat{\upsilon}-\theta\iota$, $\kappa\epsilon\kappa\lambda\upsilon-\theta\iota$, $\tilde{\epsilon}\sigma\tau\alpha-\theta\iota$, $\tilde{\sigma}\rho\nu\upsilon-\theta\iota$, $\phi\dot{\alpha}\nu\eta-\theta\iota$ (II. 18. 198), δίδω-θι (Od. 3. 380), ἐμπίπλη-θι (II. 23. 311). We find -s in $\theta \dot{\epsilon}$ -s, $\delta \dot{\phi}$ -s, $\pi \rho \dot{\phi} \dot{\epsilon}$ -s ($\pi \rho \phi - i \eta \mu \iota$), and the thematic $\dot{\epsilon} \nu \dot{\iota}$ - $\sigma \pi \dot{\epsilon}$ -s in ρ -73. tell (ep. Attic $\sigma_{\chi \epsilon-s}$).

In the forms ἴστη (Il. 21. 313), δαίνῦ (Il. 9. 70), δείκνῦ (Hes. Th. 526), the long final vowel probably comes by analogy from the Pres. and Impf. Singular forms (by the 'proportion' Impf. έλεγε-s, έλεγε: Imper. λέγε: ιστης, ιστη:

ίστη). For the forms καθ-ίστα, τίθει, δίδου, &c., see § 18.

3 Sing. The original $-\tau \iota$ remains only in $\xi \sigma - \tau \iota(\nu)$, in which the phonetic change of -TI to -TI is prevented by the preceding J.

On the Subjunctives in -n-or see § 82.

3 Plur. The Ending -aoi (for -avri) is found in &-aoi (for] * fo-aoi) they are and i-aoi they go.

Stems in a, e, o, u form -aoi, -eioi, -ouoi, -ūoi (for -a-vti, &c.), as φασί, ίστασι, τιθείσι, διδούσι, ζευγνύσι (not τιθέ-ασι, &c., as in

Attic). On the accent of these forms, see § 87, 2.

The Perfect Act. has -aoi and -aoi. The latter occurs only twice in Homer, πεφύκ-ἄσι (Od. 7. 114), λελόγχἄσιν (Od. 11. 304); for other examples in Ionic see Curt. Verb. ii. 166. In these forms the a belongs to the Ending, since -aoi is for -ari, which corresponds to the -ντι of the Doric φα-ντί, λέγο-ντι (as -arai in the Mid. to -vrai). The forms with -aoi belong to two essentially distinct groups; see § 7.

The secondary -av (for -avt) is found in all Aorists which form the I Sing. in -a. It may also be traced in the Impf. of elui, in the form $\tilde{\eta}\nu$ (Hes. Th. 321, 825), for $\tilde{\eta}a\nu$ (Sanser. $\tilde{a}san$).

Non-Thematic -ν occurs in the forms ἔφα-ν, ἔβα-ν, ἔστα-ν, φθα-ν, ἔδν-ν (Il. 11. 263), ἐφν-ν (Od. 10. 397), ἔκτα-ν, Impf. ἵε-ν (in ξύν-ιεν, μέθ-ιεν), πρό-τιθε-ν (read by Aristarchus in Od. 1. 112), ἔδιδο-ν (H. Cer. 327), and many Passive Aorists, as ἔβλα- $\beta \epsilon - \nu$, $\delta \iota - \epsilon \tau \mu \alpha \gamma \epsilon - \nu$, $\delta \gamma \epsilon - \nu$, $\delta \alpha \mu \epsilon - \nu$, $\delta \alpha \mu \epsilon - \nu$, $\delta \gamma \epsilon \rho \epsilon - \nu$, $\delta \sigma \mu \eta \theta \epsilon - \nu$, κατ-έκταθε-ν. On the form μιάνθην (Il. 4. 146) see § 40. In these tenses -v is commoner in Homer than -oav. But -oav is the only Ending found in the two Imperfects $\hat{\eta}$ - σav and $\hat{\eta}\hat{\imath}$ - σav , "-σαν, and in the Pluperfect: see § 68.

In the Middle, the forms - ata, - ato are regular after consonants and the vowel i (including the diphthongs ei, n, oi, &c.); the forms -νται, -ντο after ă, ε, o. After u, η both forms are found : e.g. εἰρύ-αται, εἰρύ-ατο, but λέλυ-νται, κέχυ-νται ; βεβλή- ο ι αται (II. 11. 656), but μέμνη-ντο, ξύμβλη-ιτο; even ήντο (Il. 3.

153) as well as $\ddot{\eta}$ -ato (for $\ddot{\eta}\sigma$ -ato).

The Imper. Endings $-\tau\omega\sigma\alpha\nu$, $-\sigma\theta\omega\sigma\alpha\nu$ are post-Homeric.

1 Dual. -μεθον occurs only once, in περιδώμεθον, Il. 23. 485. Elmsley (on Ar. Ach. 733) maintained that this form was a fiction of the grammarians. It is defended by G. Curtius (Verb. I. 97 f.), and there seems no valid reason for rejecting it.

2 and 3 Dual. In the Historical Tenses, according to the ancient grammarians, the regular Endings are—

This scheme, however, is open to some doubt; for-

(1) Homer has three instances of the 3 Dual Impf. in -τον, where the metre does not admit of -την, viz. διώκε-τον (II. 10. 363), ἐτεύχε-τον (II. 13. 346), λαφύσσετον (II. 18. 583). Three others in -σθον occur as various readings, where the metre admits of either -σθον or -σθην, viz. ἀφίκε-σθον, read by some ancient critics (probably Zenodotus) in II. 13. 613: θωρήσσε-σθον, the reading of A. (the Cod. Venetus) and Eust. in II. 16. 218: πέτε-σθον, a marginal variant of A. in II. 23. 506.

(2) Three forms of the 2 Dual in $-\tau\eta\nu$ were read in the text of Zenodotus, viz. $\kappa\alpha\mu\acute{\epsilon}-\tau\eta\nu$ (II. 8. 448), $\lambda\alpha\beta\acute{\epsilon}-\tau\eta\nu$ (II. 10. 545), $\dagger\theta\epsilon\lambda\acute{\epsilon}-\tau\eta\nu$ (II. 11. 782). Aristarchus read $\kappa\acute{a}\mu\epsilon-\tauο\nu$, $\lambda\acute{a}\beta\epsilon-\tauο\nu$, $\dagger\theta\acute{\epsilon}\lambda\epsilon-\tauο\nu$. The metre gives no help to a

decision.

(3) In Attic the examples of the 2 Dual in $-\tau\eta\nu$, $-\sigma\theta\eta\nu$ are so common that Elmsley (on Ar. Ach. 733) held these to be the only correct forms, thus making the Dual of Historical Tenses uniformly end in $-\eta\nu$, as the Dual of the Principal Tenses ends in $-\sigma\nu$. Cobet maintains the same view (Misc. Crit. pp. 279 ff.). But the account of the Greek grammarians is strikingly borne out by the forms of the Sanscrit Dual. In Sanscrit we find that in the Historical Tenses the 2 Dual ends in -tam, 3 Dual in -tam, answering perfectly to the Greek $-\tau\sigma\nu$, $-\tau\eta\nu$. This therefore is to be regarded as the original rule. The exceptions which have been quoted are evidently due to the tendency towards uniformity: and it is to be noticed that this tendency seems to have acted in Homer in the direction of making all Duals end in $-\tau\sigma\nu$, $-\sigma\theta\sigma\nu$, whereas in Attic the tendency was to extend the Endings $-\tau\eta\nu$, $-\sigma\theta\eta\nu$ to the Second Person.

The Imper. Ending $-\tau\omega\nu$ is found in $\xi\sigma\tau\omega\nu$ (II. 1. 338) and $\kappa o \mu \epsilon (\tau\omega\nu)$ (II. 8. 109). As to $\xi\sigma\tau\omega\nu$ in Od. 1. 273, where it is usually taken as a Plural, see § 173.

Variation of the Stem.

6.] In Thematic Stems it is plain that the Ending influences only the final $\epsilon(o)$, leaving the rest of the Stem unaffected. Non-Thematic forms, on the other hand, are liable to variations in quantity which affect the main vowel of the Stem. These variations are governed by the general rule that when there are two forms of a Stem the longer is found with the Endings of the

Sing. Indic. Act., the shorter with all other Endings, viz. those of the Dual and Plural, the Imperative, and the Middle. Thus:—

- (1) α, ε, ο interchange with the corresponding long vowels \bar{a} (in Ionic η), η, ω; as $\phi\eta$ - μ ί, έ- $\phi\eta$ - ν , but 1 Plur. ϕ α- μ έ ν , Imper. ϕ α- θ ί, Mid. έ- ϕ α- τ ο; τ ίθη- μ ι, Mid. τ ίθε- μ αι; δίδω- μ ι, Mid. δίδο- μ αι.
- (2) $\mathfrak t$ with $\epsilon \iota$ and $\mathfrak o\iota$: as $\epsilon \hat \iota \mu \iota$, $\mathfrak l$ Plur. $\check \iota \mu \epsilon \nu$, Imper. $\check \iota \theta \iota$; of δa , $\mathfrak l$ Plur. $\check \iota \delta \mu \epsilon \nu$.
- (3) ŭ with ευ and ū: as ἔ-χενα, Mid. χύ-το (§ 15); δείκνῦ-μι,
 1 Plur. δείκνῦ-μεν. Sometimes with ου, as εἰλήλουθα, stem ἐλῦθ-.

Note however that all vowels are liable to be shortened before the combination $\nu\tau$, as in the 3 Plur. $\epsilon\sigma\tau\alpha\nu$ (but $\epsilon\sigma\tau\eta$ - $\mu\epsilon\nu$), &c., and the Participle, $\sigma\tau\alpha\nu\tau$ -os, $\gamma\nu\delta\nu\tau$ -os. Also before ι of the Optative, $\sigma\tau\alpha\iota\eta\nu$, $\gamma\nu\circ\iota\eta\nu$.

The same law governs the interchange of-

- (4) α with $\epsilon \nu$ and $\sigma \nu$: as $\gamma \epsilon \gamma \sigma \nu \alpha (\gamma \epsilon \nu \sigma s)$, I Plur. $\gamma \epsilon \gamma \alpha \mu \epsilon \nu \nu$; $\pi \epsilon \pi \sigma \nu \alpha \alpha (\pi \epsilon \nu \sigma \sigma s)$, Part. Fem. $\pi \epsilon \pi \alpha \sigma \nu \alpha \alpha s$.
- (5) αρ with ερ and ορ: as έφθορα, Mid. έφθαρ-ται (Pres. $\phi\theta$ είρω for $\phi\theta$ ερ- ι ω); and, with Metathesis (ρα for αρ, &c.), τέτροφε, Mid. τέθραπ-ται (τρέφ-ω).*

The combinations $\check{\alpha}\rho(\rho\check{\alpha})$ and $\check{\alpha}\lambda(\lambda\check{\alpha})$ represent the primitive 'liquid vowels,' g and g. They appear in place of the consonantal ρ and λ when these are phonetically impossible: e. g. $\check{\epsilon}\phi\theta\alpha\rho\tau a$ is for $\check{\epsilon}-\phi\theta\rho-\tau a$,—the $\epsilon\rho$ of the root $\phi\theta\epsilon\rho$ - passing into $\alpha\rho$ where Sanser. ar would pass into g.

Similarly, $\check{\alpha}$ represents the 'nasal vowels' m and m: thus $\pi\check{\alpha}\theta$ - is for $\pi v\theta$ -. Before another vowel $\epsilon\mu$, ϵv sometimes pass into $\check{\alpha}\mu$, $\check{\alpha}v$, as in $\check{\epsilon}\kappa\tau\alpha\nu\nu\nu$ for $\check{\epsilon}$ - $\kappa\tau\nu\nu$ -ov (root $\kappa\tau\epsilon\nu$ -), in the same way that u and i before a vowel may appear as uv, iy.

Sometimes the longer Stem contains an additional consonant, viz. in the Perfects and Aorists in -κα, as ἔστηκα, I Plur. ἔστα-μεν: ἔθηκα, I Plur. ἔθε-μεν.

These are the principal variations which can be exemplified within the limits of a single Tense. When we compare one Tense with another, we observe further the interchange of—

(6) Stems with the vowel ϵ or \bullet and Stems in which the vowel is lost; as $\tilde{\epsilon}\chi-\omega$ (for $\star\sigma\dot{\epsilon}\chi-\omega$), $\tilde{\epsilon}-\sigma\chi-o\nu$; $\pi\dot{\epsilon}\tau-\epsilon\sigma\theta\alpha\iota$, Aor. $\pi\tau-\dot{\epsilon}\sigma\theta\alpha\iota$ (ep. $\pi\sigma\tau-\dot{\epsilon}\sigma\theta\alpha\iota$).

This definition will cover the reduction of $\epsilon \rho$, $\epsilon \lambda$, $\epsilon \mu$, $\epsilon \nu$ to ρ , λ , μ , ν (instead of $\delta \rho$, $\delta \lambda$, δ); as in $\epsilon \gamma \rho - \epsilon \tau o$ ($\epsilon \gamma \epsilon \rho$ in $\epsilon \gamma \epsilon \epsilon \rho o$), $\epsilon - \tau e - \tau \mu - o \nu$ ($\tau \epsilon \mu - \sigma \rho o$).

^{*} Similarly, ἄλ(λἄ) with ελ and ολ: but it is difficult to find examples in Greek. The form πί-πλα-μεν perhaps answers to an original Sing. *πί-πελ-μι (cp. Sanser. piparmi, Pl. pipr-mas, Brugmann, M. U. I. p. 44), and the form τέ-τλά-μεν to *τέ-τολ-α (Lat. tetuli).

 $\nu\omega$), $\check{\epsilon}$ - $\pi \epsilon$ - $\phi\nu$ - $o\nu$ ($\phi\epsilon\nu$ -, cp. $\phi\delta\nu$ -os). Thus we have an apparent interchange of two short Stems, as $\phi\nu$ - in $\check{\epsilon}\pi\epsilon$ - $\phi\nu$ - $o\nu$ with $\phi\check{a}$ - in $\pi\dot{\epsilon}$ - $\phi\check{a}$ - τa , &c.

When loss of ϵ would make the word unpronounceable, it is sometimes retained in the short form, as in $\tilde{\epsilon}$ - $\tau\epsilon\kappa$ - $\epsilon\nu$, $\tau\epsilon\kappa$ - $\epsilon\hat{\nu}$ (Stems $\tau\epsilon\kappa$ -, $\tau\kappa\kappa$ -).

Again, there are in general two longer forms of each Stem, one marked by the predominance of the sounds ϵ , η , the other by that of o, ω . The chief interchanges which are due to this cause are—

- (7) ε and o, including the combinations ει, ευ, ερ, ελ, εμ, εν and οι, ου, ορ, ολ, ομ, ον. It is needless to give further examples.
- (8) \bar{a} (Ionic η) and ω : $\tilde{\epsilon}$ -πτη flew, πτήσσω cower, and π $\hat{\epsilon}$ -πτω-κa; ep. ϕ η-μ ℓ and ϕ ω-ν \acute η, δ δ-ηγ \acute s and \mathring{a} γ- ω γ- \acute η.
- (9) η and ω: ρην-νυμι and ερ-ρωνα; cp. αρηνω and αρων-ός, ηθος and είωθα.
- (10) In a certain number of Stems the only variation is between ω and ο: δί-δω-μι (δο-), ὅδ-ωδα, ὅλ-ωλα.

The Endings which are found with the long Stem have been

called the Light, the others the Heavy Endings.

The short form of the Stem is usually called the Weak Stem. Of the longer forms that which contains the vowel o (ou, ou, ov, op, oh) may be distinguished as the O-form: the other will be simply called the Strong form.

The different variations may be represented in a tabular form:—

Strong
$$\bar{a}(\eta)$$
 η ω $\epsilon\iota$ ϵv $\epsilon \rho(\rho \epsilon)$ $\epsilon\lambda$ $\epsilon\mu$ ϵv ϵ O-form ω ω ω or ov $o\rho(\rho o)$ o λ o μ ov o Weak \check{a} ϵ o $\check{\iota}$ \check{v} ρ λ μ v nil $\check{a}\rho(\rho\check{a})$ $\check{a}\lambda$ \check{a} \check{a} \check{a}

- 7.] The 3 Plur. offers some exceptions to the general rule:—
- (1) The Ending -ἄσι (for -ἄτι, -NTI) is used with the long Stem of the Pf., as λελόγχ-ἄσι, πεφύκ-ἄσι. Cp. Mid. τετεύχ-ἄται, ϵ-τετεύχ-ἄτοι (§ 22, 5).
- (2) The long Stem is also found in a few forms of the Pf. with the Ending $-\bar{\alpha}\sigma_i$, as $\pi\epsilon\pi o i\theta\bar{\alpha}\sigma_i$, $\epsilon\sigma\tau\eta'\kappa\bar{\alpha}\sigma_i$ (§ 24), and of the Aor. in $-\alpha$, as $\epsilon\chi\epsilon\nu\alpha\nu$, $\epsilon\theta\eta\kappa\alpha\nu$, $\epsilon\delta\omega\kappa\alpha\nu$ (§ 15).
- (3) The Endings $-(\sigma)\bar{a}\sigma\iota$, $-\sigma a\nu$ (for $-\Sigma ANTI$, $-\Sigma ANT$) are found with the weak Stem. The leading examples are :—

With Simple Stems: ἴ-σαν, ἔ-φα-σαν, ἔ-θε-σαν, ἔ-διδο-σαν, &c. Presents: τιθέ-ασι, διδό-ασι (Att.); ἐ-τίθε-σαν, ἐ-δίδο-σαν, &c. Perfects: ἴσασι (ἰδ-σασι), ἴσαν; εἴξασι (Att. 3 Plur. of ἔοικα). βεβά-ασι, γεγά-ασι, μεμά-ασι; Plpf. βέβα-σαν, μέμα-σαν. ἐστᾶσι (for ἐστά-ασι), τεθνᾶσι; ἔστα-σαν, τέθνα-σαν. πεφύ-ασι, δεδί-ασι; δείδι-σαν.

The hiatus shows that -aoi is for -oaoi, the Primary Ending

kort.

answering to -σαν. The corresponding Mid. -σαται is found in Doric (γεγράψαται, Tab. Heracl. i. 121, in C. I. 5774).

The contraction in $\epsilon \sigma \tau \hat{a} \sigma_i$, $\tau \epsilon \theta v \hat{a} \sigma_i$ is evidently due to the impossibility of $\epsilon \sigma \tau \hat{a} - \alpha \sigma_i$, $\tau \epsilon \theta v \hat{a} - \alpha \sigma_i$ in the hexameter. Brugmann regards them as wrongly accented, and would write $\epsilon \sigma \tau \alpha \sigma_i$, $\tau \epsilon \theta v \alpha \sigma_i$, i.e. $\epsilon \sigma \tau \alpha - v \tau_i$, $\tau \epsilon \theta v \alpha - v \tau_i$ (Curt. Stud. ix. 296). This is open to the objection (1) that it separates them from $\beta \epsilon \beta \hat{a} - \alpha \sigma_i$, $\gamma \epsilon \gamma \hat{a} - \alpha \sigma_i$, $\mu \epsilon \mu \hat{a} - \alpha \sigma_i$; and (2) that in all other Stems which form a Pf. or Aor. in $-\kappa \alpha$ the Endings $-v \tau_i$ and -v are confined in Homer to the forms with $-\kappa$: thus we find—

πεφύκ-ἄσι and πεφύ-ᾶσι, but not πέφυσι ἐστήκασι, &c. ,, βεβά-ασι, ,, βέβασι (οἴδασι Ηdt.) ,, ἴσασι ,, ἴδ-ασι ἔθηκα-ν ,, ἔθε-σαν ,, ἔθε-ν ἔδωκα-ν ,, ἔδο-σαν ,, ἔδο-ν (Hesiod).

The weak form with -vti, -v is therefore confined to Verb-Stems ending in a vowel, as in $\phi a \sigma i$, $\tau i \theta \epsilon i \sigma i$ (for $\phi a \nu \tau i$, $\tau i \theta \epsilon \cdot \nu \tau i$). And in these the short vowel is due to the (original) following -NT, as in $\xi - \sigma \tau a \nu$, $\eta \gamma \epsilon \rho \theta \epsilon \nu$, $\Delta \lambda \delta - \nu \tau \epsilon s$, &c.

For a plausible hypothesis as to the origin of the Ending $-\sigma av$ see § 40. Regarding $-(\sigma)\bar{a}\sigma\iota$ (i.e. the Ending $-\bar{a}\sigma\iota$ preceded by hiatus) no satisfactory view has been put forward.

Meaning of the Middle.

8.] The original force of the Middle Person-Endings is 'Reflexive;' that is to say, they denote that the action of the Verb is directed towards the agent.

Greek has no Passive Endings distinct from those of the Active and Middle: it is desirable therefore to speak, not of Passive forms, but of the Passive meaning or use of a form.

The chief uses of the Middle are —

(1) The use to signify that the agent is also the indirect object of the action—that the action is done by some one for or toward himself, or in his own interest: $\xi\nu\nu\nu$ - $\mu\alpha\iota$ I put (clothes, &c.) on myself; $\delta\epsilon\chi_0$ - $\mu\alpha\iota$ I take to myself; $\delta\epsilon\rho$ $\delta\xi\dot{\nu}$ $\epsilon\rho\nu\sigma\sigma\dot{\alpha}\mu\epsilon\nu\sigma$ having drawn him his sharp sword; $\dot{\eta}\rho\epsilon\dot{\tau}$ 0 $\tau\dot{\sigma}\xi\sigma\nu$ took his bow with him; $\dot{\phi}\epsilon\rho\dot{\epsilon}\sigma\theta\omega$ let him bear away (as his prize).

(2) The use in which the agent is the direct object of the action, as λούο-μαι I wash myself. This is comparatively rare.

(3) The Intransitive use, in which the reflexive sense is faint, as φαίνε-ται appears (but φαίνει ἐαυτόν he shows himself). So, generally, when the action centres in the agent; as in Verbs of bodily action (ἔρχομαι, πέτομαι, ἄλλομαι, οἴχομαι, &c.), and in such uses as λαβέσθαι to gain a hold (not to take a thing), δεδραγμένος clutching; ἐχεύατο threw her arms; also in Verbs of feeling and thinking (αἰσθάνομαι, αἰδέομαι, βούλομαι, οἴομαι, μέμνημαι, ἐπίσταμαι, μέλομαι, μέμφομαι, &c.). So in French, 'je m'aperçois' I perceive, 'je me doute' I suspect, 'il se peut' it may be.

- (4) The Reciprocal use; ἀμειβόμενος taking his turn; λέγεσθαι to tell over (in talk); ἀρέσκεσθαι to make friends with; νυσσομένων (Il. 14. 26) as they pierced each other; ἐρείδεσθον (Il. 23. 735) push each other, strive. Hence the Middle form of μάχομαι, Fr. se buttre and its equivalents, ἀγωνίζομαι, ἁμιλλάομαι, δικάζομαι.
- (5) The Passive use, as έχε-ται is possessed, έβλη-το was struck, 1979. δέδε-το was bound, ἐκ-πέπο-ται is drunk up. This is not a very common use of the Middle. It may be illustrated from the similar use of some Reflexive Verbs in French, as 'je me trouve' I am found, 'il se mange' it is eaten.

Conversely, Homer has the Act. of ω I think, expect, as well as the Mid. of ω I harbour the thought, suspect (cp. the distinction

in French between je doute and je me doute).

Sometimes (esp. in Homer) the Middle appears to be used because the Verb implies acting arbitrarily, as a superior, &c.; e.g. $\beta\iota\dot{\alpha}\zeta$ omai I use force towards, σ ivomai, $\delta\eta\lambda\dot{\epsilon}$ omai, &c. I do mischief for pleasure; $\dot{\epsilon}\phi$ i λ ato made a favourite of; δ i ϵ - ν tai run in a race, δ i ϵ odai to chase (but δ iov I fled); δ e ι δ i σ ϵ odai to terrify; $\kappa\dot{\epsilon}\kappa\lambda\dot{\epsilon}$ to shouted in command.*

A use intermediate between the Reflexive and the Passive (pointed out by Riddell, Dig. § 88) may be exemplified in $a\pi\eta\chi\theta\epsilon\tau o$ got himself hated, incurred hatred, $\kappa\tau\epsilon$ (vov τ aι (Il. 13. 110) let themselves be slain, $\lambda\epsilon$ ($\pi\epsilon\sigma\theta\epsilon$ (Il. 23. 409) get left behind: ep. Il. 13. 525., 15. 645, Od. 3. 284.

On the Futures only used in the Mid., see § 66.

CHAPTER II.

THE TENSES.

9.] Verb-Stem and Tense-Stem. A comparison of the different forms of a Greek Verb usually enables us to see that some one syllable or group of syllables is present in them all: as τυπ- in the forms of τύπτω, or βουλευ- in those of βουλεύω.

^{*} Cp. Icelandic 'heita' I promise, 'heitaz' I threaten.

This we shall call the Verb-Stem. A Verb-Stem not derived from

more primitive elements is called a Root.

The Subjunctive and Optative, again, are distinguished by a Suffix to the Tense-Stem: e.g. δο-ίη-ν, διδο-ίη-ν, τύπτο-ι-μι, στήσα-ι-μι. The new Stems so formed may be called Mood-

Stems.

Finally, the Stems used in the 'Historical' Tenses—the Impf., Aor., and Plpf.—are formed from the Tense-Stem by prefixing the Augment.

The Stems of the augmented forms are therefore parallel to the Mood-Stems, the only difference being that they are formed by a prefix, while the Mood-Stems are formed by a suffix. They may be described as Time-Moods of the several Tenses,—combining the notion of Past Time, which is expressed by the Augment, with the meaning contained in the Tense-Stem.

Each Tense-Stem furnishes an *Infinitive* and a *Participle*.

Thus we have (supplying one or two links by analogy) from the three Tense-Stems βαλλε (or -0), βαλε (or -0), βεβληκα.

	PRES.	AOR.	PERF.
Principal Tense	βάλλε-τε	wanting	βεβλήκα-τε.
Historical	ἐ -βάλλε-τε	ἐ -βάλε-τε	ϵ - $\beta\epsilon\beta\lambda\eta\kappa\epsilon$ - α .
Subjunctive	βάλλη-τε	βάλη-τε	βεβλήκη-τε.
Optative	βάλλο-ι-τε	βάλο-ι-τε	$\beta \epsilon \beta \lambda \eta \kappa o - \iota - \tau \epsilon$.
Imperative	βάλλε-τε	βάλε-τε	βεβλήκα-τε.
Infinitive	βαλλέ-μεναι	βαλέ-ειν	$\beta \epsilon \beta \lambda \eta \kappa$ - $\epsilon \nu \alpha \iota$.
Participle	βάλλο-ντος	βαλό-ντος	βεβληκ-ότος.

It is evident that there might have been a Future 'Time-Mood' as well as a Past for each Tense-Stem. In English indeed we can distinguish progressive action in the future as well as in the present and past: I shall be writing as well as I am writing and I was writing. See Goodwin's Moods and Tenses, § 65; Driver's Use of the Tenses in Hebrew, § 4. Modern Greek has two such Futures, θὰ γράφω I will be writing and θὰ γράψω I will write, related to each other as ἔγραφον and ἔγραψα.

- 10.] Formation of Tense-Stems. Leaving out of sight the meanings of the several Tenses, and looking to the mode of their formation, we may distinguish the following groups:—
 - (1) With the Verb-Stem serving as Tense-Stem— The Simple Non-Thematic Present, as $\phi \eta - \mu \ell$. The Simple Non-Thematic Aorist, as $\tilde{\epsilon} - \beta \eta - \nu$. The Aorist in $-\tilde{\alpha}$, as $\tilde{\epsilon} - \chi \epsilon \nu - a$.

(2) With Tense-Stem enlarged from Verb-Stem— The Non-Thematic Reduplicated Present, as τί-θη-μι. The Present in -νη-μι and -νῦ-μι, as σκίδ-νη-μι, δείκ-νῦ-μι. The Perfect.

III.

- (3) With the Thematic Vowel— The ordinary Thematic Present, as λέγω. The Present with short Stem, as ἄγω. The Simple Thematic Aorist, as ἔ-λάβ-ο-ν.
- (4) With Reduplication (Thematic)— The Thematic Reduplicated Present, as γί-γν-ο-μαι. The Thematic Reduplicated Aorist, as ἤγ-ἄγ-ο-ν.
- (5) With other Suffixes (Non-Thematic)— The Aorist in -σα, and in -σε, -σο. The Aorist in -η-ν (Aor. II Pass.). The Aorist in -θη-ν (Aor. I Pass.).
- (6) With other Suffixes (Thematic)—
 The Present in -τω (T-Class of Curtius).
 The Present in -νω (Nasal Class).
 The Present in -σκω, and the Iterative forms.
 The Present in -μω (I-Class).
 The Future in -σω, -(σ)ω.

The Non-Thematic Present and Aorist.

11.] The Simple Non-Thematic Present. The chief Presents in which the Tense-Stem is the same as the Verb-Stem are—

εἰ-μί (for ἐσ-μί) I am, εἶ-μι I go, φη-μί I say, ἢ he said, κεῖ-ται lies, ἢσ-ται sits (3 Plur. εἴ-αται, properly ῆ-αται, for *ἡσ-αται), ἐπί-στα-μαι I know, ἄγα-μαι I wonder, ἔρα-μαι I love, δύνα-μαι I am able, ἐ-κρέμω (for ἐ-κρέμα-ο) didst hang, δέα-το seemed, δίε-νται race (ἐν-δίε-σαν tried to scare), ὄνο-σαι dost blame (ἄνα-το II. 17. 25), ἄη-τον blow, κιχή-την caught, ἔρῦ-το protected, στεῦ-ται is ready, threatens, ἔδ-μεναι to eat: also ἵετο desired (ἰέμενοs eager), if it is to be separated from ἵημι and referred to Γίεμαι, Sanser. νί (see § 397). For ἵληθι see § 16.

On the Non-Thematic forms of Contracted Verbs (such as φορή-μενος), see § 19.

12.] Variation of the Stem according to the 'weight' of the ending is carried out consistently in φη-μί and εῖ-μι. Thus—Pres. φη-μί, φή-ς, φη-σί, Plur. φἄ-μέν, φά-τέ, φασί.

Impf. ἔ-φη-ν, ἔ-φη-s and ἔ-φη-σθα, ἔ-φη, 1 Plur. φά-μεν (for ἔ-φαμεν), 3 Plur. ἔ-φασαν and ἔφαν, Part. φάs.

Mid. 2 Plur. $\phi \acute{a}$ - $\sigma \theta \epsilon$, Impf. $\dot{\epsilon}$ - $\phi \acute{a}$ - $\mu \eta \nu$, $\ddot{\epsilon}$ - $\phi \breve{a}$ -το, Imper. $\phi \acute{a}$ -ο, φά-σθω, Inf. φά-σθαι, Part. φά-μενος.

And similarly-

Pres. $\epsilon \hat{\imath}$ - $\mu \imath$, $\epsilon \hat{\imath}$ - $\sigma \theta a$, $\epsilon \hat{\imath}$ - $\sigma \imath$, 3 Du. $\check{\imath}$ - $\tau o \nu$, Plur. $\check{\imath}$ - $\mu \epsilon \nu$, $\check{\imath}$ - $\tau \epsilon$, $\check{\imath} a \sigma \imath$. Impf. 3 Du. 1-την, 3 Plur. 1σαν, Imper. 1-θι, 1-τω, 1-τε, Inf. ἴ-μεναι (once ī), and lévai.

The I Sing. "ia does not represent the original form of the Impf., which would be na (for na, Sanser. ayam). Hence nia with the 3 Sing. net and 3 Plur. The rest of ήϊσαν, ήσαν must be formed like ήδεα and other Pluperfects in -εα (§ 68, 2); 1 the ε of the original ήεα, ήεσαν being changed to ι under the influence of 1-μεν, &c. (Wackernagel, K. Z. xxv. 266). For -oav see § 40.

The forms ἥτον (1 Sing. and 3 Plur.), τεν, Part. ἰών, are evidently produced

by confusion with the Thematic conjugation (§ 30, cp. also § 18).

The Verb ciui I am is inflected as follows:—

Imper. ἔσ-τω, ἔσ-τε, ἔσ-των; Inf. ἔμμεναι, ἔμεναι, ἔμεν, εἶναι; Imper. Mid. εσ-σο (Od. I. 302).

The root eo- is not reduced before Heavy Endings, as in the corresponding Sanser. forms (Dual s-vas, s-thas, s-tas, Plur. s-mas, -tha, s-anti, Opt. syam), and the Lat. sumus, sunt, sim. The loss of σ in εἰμί, εἰμέν, ἡμεν (for ἐσ-μί, &c.) is according to Greek phonetic law: the Attic ἐσ-μέν is a new formation, due to the analogy of $\tilde{\epsilon}\sigma$ -τι, $\tilde{\epsilon}\sigma$ -τέ, &c. On the other hand $\tilde{\eta}\tau\epsilon$ (II. 16. 557) follows $\tilde{\eta}\mu\epsilon\nu$; the older $\tilde{\eta}\sigma$ -τε survives in Attic. The σ of $\tilde{\eta}\sigma$ a ν belongs to the ending $-\sigma a\nu$ (§ 40), not to the root.

In the Impf. it is probable that we have an admixture of forms from the original Perfect: thus $\eta \sigma - \theta a$ (Sanscr. dsitha) is Pf., na, for *na, is both Pf. (Sanser. dea) and Impf. (Sanser. asam), ηεν may be Pf. (Sanser. asa) or thematic Impf. (answering to the Homeric 1 Sing. ¿ov); the original 3 Sing. Impf. survives in the Dor. η's (Vedic as). Again, the 2 Sing. έησθα and 3 Sing. έην, ήην seem to require a stem (ε)ση-, found also in Lat. e-rām (Brugmann, M. U. i. p. 35), The -v of the 3 Sing. is unexplained: it does not appear to be the ν ἐφελκυστικόν, for we find

no form $*\eta \epsilon$ alongside of $\eta \epsilon \nu$.

Note that the I Sing. ηv is not found in Homer.

The Homeric forms of $\epsilon l\mu l$ were discussed some years ago by L. Meyer (K. Z. ix. pp. 385, 423). He maintained that the Homeric 3 Sing. Impf. was ήεν or (without augment) εεν: the forms ήν, εην and ήην being due to

corruption or misreading. The facts certainly give much countenance to this view, which has been adopted by Curtius (Stud. i. 2, 292) and Nauck. It can hardly be accidental that out of 54 places in which $3\sqrt{7}$ occurs in the thesis or second half of the foot, there are 50 in which it is followed by a vowel, as—

Il. 2. 77 Νέστωρ ὅς ῥα Πύλοιο ἄναξ ἢν ἠμαθύεντος.
 Od. 17. 208 ἀμφὶ δ' ἄρ' αἰγείρων ὑδατοτρεφέων ἢν ἄλσος.

Moreover, out of 72 instances of $\tilde{\epsilon}\eta\nu$ there are 63 in which it is followed by a consonant including F). On the other hand, in 26 places $\tilde{\eta}\nu$ occurs in the first half of the foot, and in 2 places it ends the line (in the phrase $o\tilde{v}\tilde{b}'$ $\tilde{a}\rho\pi$ $\pi\omega$ s $\tilde{\eta}\nu$); and it is not easy to correct many of these so as to admit $\tilde{\eta}\epsilon\nu$ or $\tilde{\epsilon}\epsilon\nu$. Again, $\tilde{\eta}\nu$ and $\tilde{\epsilon}\eta\nu$ have some support in the 2 Sing. forms $\tilde{\eta}\sigma\theta\alpha$, $\tilde{\epsilon}\eta\sigma\theta\alpha$. (For $\tilde{\epsilon}\eta\sigma\theta\alpha$ Curtius proposed $\tilde{\epsilon}\epsilon\sigma\theta\alpha$, but there is no good reason for this.) And $\tilde{\epsilon}\eta\nu$ is found on an Ionic inscription of the 5th century (Röhl, no. 382). On the whole it seems that the argument for $\tilde{\epsilon}\epsilon\nu$ is stronger than the argument against $\tilde{\eta}\nu$ and $\tilde{\epsilon}\eta\nu$. Perhaps we must recognise two Stems, giving four forms: a Stem $\tilde{\epsilon}\sigma$ -, whence $\tilde{\eta}\epsilon\nu$, without augment $\tilde{\epsilon}\epsilon\nu$, and a Stem $(\tilde{\epsilon})\sigma\eta$ - (Lat. ϵ - $\tau\tilde{a}m$), whence $\tilde{\epsilon}$ - $\eta\nu$, without augment $\tilde{\eta}\nu$. The rare $\tilde{\eta}\eta\nu$ occurs followed by a vowel (so that we cannot read $\tilde{\eta}\epsilon\nu$) in 3 places only, viz. Od. 19. 283 (al. $\epsilon\tilde{\iota}\eta$, $\tilde{\eta}\epsilon\nu$), 23. 316., 24. 343. It may be due to mere 'contamination' of $\tilde{\eta}\epsilon\nu$ and $\tilde{\epsilon}\eta\nu$. But no theory can be accepted as satisfactory that does not account for the fixed - ν of all these forms.

The α of $\tilde{\epsilon}\alpha$ is treated as long in 3 places, II. 4. 321., 5. 887., Od. 14. 352. In Od. 14. 222 $\tau o \hat{i} o \hat{i} \circ \hat{i} = \hat{i} \nu$ mod $\hat{\epsilon} \mu \phi$ it is elided; but perhaps the $\hat{\epsilon} \nu$ may be omitted.

The vowel remains long before Heavy Endings in the Stems— $\dot{\alpha}\eta$ -, 3 Du. $\ddot{\alpha}\eta$ -τον, Inf. $\dot{\alpha}\dot{\eta}$ -μεναι, Mid. $\ddot{\alpha}\eta$ -το, Part. $\dot{\alpha}\dot{\eta}$ -μεναι, κιχ $\dot{\eta}$ -, 3 Du. Impf. κιχ $\dot{\eta}$ -την, I Plur. $\dot{\epsilon}$ -κίχ η -μεν, Inf. κιχ $\dot{\eta}$ -μεναι,

Part. $\kappa_i \chi \hat{\eta} - \mu \epsilon \nu \sigma$, except that it is shortened before $-\nu \tau$ and $-\iota$ (§ 6), as in the Part. $\hat{a} \epsilon \nu \tau \epsilon s$ blowing, 3 Plur. $\hat{a} \epsilon \iota \sigma \iota$ (for $\hat{a} \epsilon - \nu \tau \iota$, in Hes. Th. 875), and the Opt. $\kappa_i \chi \epsilon - \iota \eta$ may find. The vowel is also long in $\hat{\epsilon} \rho \bar{\nu} - \tau \sigma$ protected, Inf. $\hat{\rho} \hat{\nu} - \sigma \theta a \iota$; and in all forms of $\kappa \epsilon \hat{\iota} \mu a \iota$, $\hat{\eta} \mu a \iota$, $\sigma \tau \epsilon \hat{\nu} \mu a \iota$.

A similar Non-thematic inflexion, in which the final vowel of the Stem is long except before -ντ and -ι, appears in the Æolic conjugation of verbs in -μι, as γέλαι-μι Ι laugh, αἴνη-μι Ι praise (Hes. Op. 681), φίλη-μι Ι love (1 Plur. φίλη-μεν, 3 Plur. φίλεισι, Part. φιλή-μενοs), σάω-μι Ι save. See § 19.

13.] The Simple Non-Thematic Aorist. This term includes the 'Second Aorists,' such as $\tilde{\epsilon} - \beta \eta - \nu$ &c., and also those so-called First Aorists in which the - $\tilde{\alpha}$ of the I Sing. Active is

added directly to the Verb-stem, as in $\tilde{\epsilon}$ - $\chi \epsilon v$ -a.

Variation of quantity is rare in the Active, but the Stem is usually shortened in the Middle. The chief forms are :— $\tilde{\epsilon}$ - $\beta\eta$ - ν I went, 3 Du. $\beta\mathring{a}$ - $\tau\eta\nu$ (but also $\hat{\epsilon}$ - $\beta\mathring{\eta}\tau\eta\nu$), 3 Plur. $\mathring{\nu}\pi\acute{\epsilon}\rho$ - $\beta\mathring{a}$ - $\sigma a\nu$, Imper. $\mu\epsilon\tau\acute{a}$ - $\beta\eta\theta\iota$, Inf. $\beta\mathring{\eta}$ - $\mu\epsilon\nu a\iota$: $\tilde{\epsilon}$ - $\sigma\tau\eta$ - ν I stood, Du. $\sigma\tau\mathring{\eta}$ - $\tau\eta\nu$, Plur. $\tilde{\epsilon}$ - $\sigma\tau\eta$ - $\mu\epsilon\nu$, $\tilde{\epsilon}$ - $\sigma\tau\eta$ - $\tau\epsilon$, $\tilde{\epsilon}$ - $\sigma\tau\eta$ - $\sigma a\nu$, Imper. $\sigma\tau\mathring{\eta}$ - $\theta\iota$, $\sigma\tau\mathring{\eta}$ - $\tau\epsilon$, Inf. $\sigma\tau\mathring{\eta}$ - $\mu\epsilon\tau a\iota$; $\tilde{\epsilon}$ - $\theta\theta\eta$ came before, Part. $\phi\theta\mathring{a}$ - $\mu\epsilon\nu$ os: $\hat{\epsilon}$ ξ - $\hat{\epsilon}$ - $\pi\tau\eta$ flew out

The vowel is invariably long in ξυμ-βλή-την the two encountered, Mid. βλή-το was struck; πλή-το was filled; πλή-το came near; ἀπ-όνη-το profited, Imper. ὄνη-σο, Part. ὀνή-μενος; ἄμ-πνῦ-το

recovered breath; ε-στρω-το was strewed: see § 14.

On the Non-Thematic Aorists with Stems ending in a consonant, such as ἆλτο, ἔ-παλτο, ὧρτο, δέκτο, λέκτο, μίκτο, &c., with the Inf. πέρθαι and the Participles ἄρμενος, ἴκμενος, ἄσμενος,

see § 40.

14.] Metathesis. This term has been employed to explain a number of forms in which a short vowel is lost before a liquid, and the corresponding long vowel follows the two consonants thus brought together: as ξυμ-βλή-την met, Mid. βλῆ-το was struck (βἄλ-, βέλ-οs), ἔ-τλη endured (τάλα-s), πλῆ-το drew near (πέλα-s), πλῆ-το was filled (Sanser. par-), ἔ-στρω-το was scattered (στορε-), κλη-τός called (καλ-έω, κέλ-ομαι), κασί-γνη-τος kinsman (γεν-), μέμνη-μαι (μεν-), δμη-τός tamed (δἄμά-), &c. But this long vowel—ā, η, or ω—is clearly of the same nature as the η of σχή-σω (σεχ-), ενι-σπή-σω (σεπ-), πε-πτη-ώς (πετ-, πί-πτ-ω), ἄημι (root av in αὕρα), or the ω of πέ-πτω-κα (πετ-), ἔ-γνω-ν (root gan), ζω-ός (root gi, hence Greek ζη- and ζω-, for γμ-η, γμ-ω). In these and many similar cases 'metathesis' is out of the question. Moreover we find several Stems of the same character with the long vowel υ,

as $\hat{\rho}\hat{v}$ - $\sigma\theta a\iota$ to shield $(F\rho\bar{v}-)$, $\hat{\rho}\bar{v}$ - τos drawn $(F\epsilon\rho\check{v}-, F\rho\bar{v}-)$, $\tau\rho\check{v}-\omega$ (cp. $\tau\rho$ - η -, root tar). Hence it is probable that the long vowel is of the nature of a suffix, by which a new verbal stem is formed from the primitive stem or 'root.' This vowel usually does not vary with the Person-endings, but is long in all forms of the Tense. It cannot be an accident, however, that the same Stems appear also as disyllables with a short final vowel: $\tau\check{a}\lambda$ - \check{a} , $\pi\epsilon\lambda$ - \check{a} , $\sigma\tau\rho$ - ϵ , $\kappa\lambda$ - ϵ (in $\kappa\alpha\lambda\acute{\epsilon}$ - $\sigma\alpha\iota$), $\gamma\epsilon\nu$ - ϵ (in $\gamma\acute{\epsilon}\nu\epsilon$ - $\sigma\iota s$), $\delta\check{a}\mu$ - \check{a} , $\pi\epsilon\tau$ - \check{a} , $F\epsilon\rho$ - $\check{\nu}$ in $\hat{\epsilon}\rho\acute{\nu}$ - $\sigma\alpha\iota$, and many others. What then is the relation between these forms and the monosyllable $\tau\lambda$ - η , $\pi\lambda$ - η , $\sigma\tau\rho$ - ω , $\kappa\lambda$ - η , $\gamma\nu$ - η , $\delta\mu$ - η , $\pi\tau$ - η ? Apparently the difference is ultimately one of accent. The same disyllable would become $\tau\acute{a}\lambda$ -a or $\tau\lambda$ - $\acute{\eta}$ as the stress fell upon the first or the second syllable*.

15.] Aorists in -ă and -кă. These consist of (1) four Aorists from stems ending in -v, (2) three Aorists in -ка, and (3) the

isolated forms $\tilde{\eta}\nu\epsilon\iota\kappa a$ and $\epsilon\tilde{\iota}\pi a$.

The four Aorists $\check{\epsilon}\sigma\sigma\epsilon\upsilon$ -a (weak stem $\sigma\check{v}$ -) I urged, $\check{\epsilon}$ - $\chi\epsilon\upsilon$ -a or $\check{\epsilon}$ - $\chi\epsilon$ -a I poured, $\check{\epsilon}$ - $\kappa\eta$ -a (weak stem $\kappa\check{a}v$ -) I burned, $\mathring{\eta}\lambda\epsilon\check{\upsilon}$ -ato avoided (Opt. $\grave{a}\lambda\acute{\epsilon}$ - $a\iota\tau$ o, Inf. $\grave{a}\lambda\acute{\epsilon}$ - $a\sigma\theta a\iota$) form the I Sing. with $-\check{a}$ instead of -v. Thus $\check{\epsilon}$ - $\chi\epsilon v$ -a is formed like $\check{\epsilon}$ - $\phi\eta$ -v, except that, after the diphthong $\epsilon\upsilon$ the final -m of the ending passed into $-\check{a}$, as in the Impf. $\mathring{\eta}a$ (for $\mathring{\eta}\sigma$ -a). So too in the Accusative of Nouns we have -v after a single vowel ($\lambda\acute{o}\gamma o$ -v, $\pi\acute{o}\lambda\iota$ -v, $\iota\chi\theta\acute{v}$ -v), but $-\check{a}$ after $\eta\upsilon$, $\epsilon\upsilon$ or a consonant: $v\mathring{\eta}$ -a (for $v\eta\mathring{v}$ -a or $v\mathring{\eta}$ -a), $\pi\acute{o}\check{o}$ -a, as in Latin $n\check{a}v$ -em, ped-em. The forms without υ , as $\check{\epsilon}\chi\epsilon a$, $\check{\epsilon}\kappa\eta a$, are obtained by v passing into the semi-vowel ($\check{\epsilon}\chi\epsilon$ -a for $\check{\epsilon}\chi\epsilon$ -a).

The original inflexion then was $\tilde{\epsilon}-\chi\epsilon\nu-a$ ($\tilde{\epsilon}-\chi\epsilon F-a$), $\tilde{\epsilon}-\chi\epsilon\nu-s$, $\tilde{\epsilon}-\chi\epsilon\nu(-\tau)$, Plur. $\tilde{\epsilon}-\chi\nu-\mu\epsilon\nu$, $\tilde{\epsilon}-\chi\nu-\tau\epsilon$ (ep. $\tilde{\epsilon}-\kappa\tau\check{a}-\mu\epsilon\nu$, § 13), $\tilde{\epsilon}-\chi\epsilon\nu-a\nu$, Mid. $\tilde{\epsilon}-\chi\check{\nu}-\tauo$ (like $\tilde{\epsilon}-\phi\check{a}-\tauo$, $\tilde{\epsilon}-\kappa\tau\check{a}-\tauo$), &c. Thus $\tilde{\epsilon}\chi\nu\tauo$ and $\tilde{\epsilon}\sigma\sigma\nu\tauo$ are primitive forms, standing to $\tilde{\epsilon}\chi\epsilon\nu a$, $\tilde{\epsilon}\sigma\sigma\epsilon\nu a$ as $\tilde{\epsilon}-\phi\check{a}-\tauo$ to

 $\ddot{\epsilon}$ - $\phi\eta$ - ν .

How then are we to account for such forms as $\hat{\epsilon}$ -χεύα-μεν, $\hat{\epsilon}$ -χεύα-το, σ ενά-μενος, ἢλεύα-το? They are obtained from the 1 Sing. and 3 Plur. by treating the stem plus the -ŭ as a new stem or base, to which the Person-endings are then attached. Thus $\tilde{\epsilon}$ -χενα-ς, $\hat{\epsilon}$ -χεύα-μεν, $\hat{\epsilon}$ -χεύα-το are duplicate forms, related to $\tilde{\epsilon}$ -χεν-ς, $\tilde{\epsilon}$ -χῦ-μεν, $\tilde{\epsilon}$ -χυ-το as the later οἶδα-ς, οἴδα-μεν to οἶσθα,

^{*} Joh. Schmidt, K. Z. xxiii. 277; Brugmann, M. U. i. 1–68; Fröhde, B. B. ix. 119. The whole subject, as Brugmann has recently warned us (Grundriss, it. § 8, n. 1), is full of uncertainty, and it is possible that forms such as pelē-represent the 'root' or primitive word, from which not only plē- ($\pi\lambda\eta$ -, Lat. plē-nus) and pele-, but also pel- (Sanscr. pi-par-ti) and pl- (π i- $\pi\lambda\check{\alpha}$ - $\mu\epsilon\nu$), are derived. We are dealing here, not with the derivation of Greek, &c. from Indo-European,—where the comparison of other languages, such as Sanscrit, may give us help,—but with the formation of Indo-European itself, to which the comparative method is ex hypothesi inapplicable.

 $\tilde{\iota}\delta$ - $\mu\epsilon\nu$. The 3 Sing. in $-\epsilon(\nu)$, follows the analogy of the Thematic conjugation ($\tilde{\epsilon}\chi\epsilon\nu\epsilon$ like $\tilde{\epsilon}\lambda\epsilon\gamma\epsilon$).

The three Aorists in -κα, έ-θηκα I put, έ-ηκα I sent forth, έ-δωκα

I gave, are inflected as follows:—

I Sing. $\tilde{\epsilon}$ - $\theta\eta\kappa\alpha$ 2 ,, $\tilde{\epsilon}$ - $\theta\eta\kappa\alpha$ -s
2 Du. $\tilde{\epsilon}$ - $\theta\epsilon$ - $\tau o \nu$ 3 ,, $\tilde{\epsilon}$ - $\theta\eta\kappa\epsilon(\nu)$ 3 ,, $\tilde{\epsilon}$ - $\theta\eta\kappa\epsilon(\nu)$ 3 ,, $\tilde{\epsilon}$ - $\theta\eta\kappa\alpha$ - ν .

Imper. $\theta \dot{\epsilon}$ -s, $\theta \dot{\epsilon}$ - $\tau \omega$, Plur. $\theta \dot{\epsilon}$ - $\tau \dot{\epsilon}$, $\theta \dot{\epsilon}$ - $\nu \tau \omega \nu$.

Inf. $\theta \dot{\epsilon}$ - $\mu \epsilon \nu a \iota$, $\theta \dot{\epsilon}$ - $\mu \epsilon \nu$, $\theta \dot{\epsilon} \hat{\imath} \nu a \iota$, Part. $\theta \dot{\epsilon} \iota \hat{\imath}$, $\theta \dot{\epsilon}$ - $\nu \tau o s$, &c. Mid. $\dot{\epsilon}$ - $\theta \dot{\epsilon}$ - $\mu \eta \nu$ &c. with $\theta \dot{\epsilon}$ - as stem throughout.

Thus $\theta\eta\kappa a$ -, $\dot{\eta}\kappa a$ -, $\delta\omega\kappa a$ - alternate with $\theta\epsilon$ -, $\dot{\epsilon}$ -, δo - as long and short Stems respectively. The only forms in Homer which do not conform to this scheme are the 1 Plur. $\dot{\epsilon}\nu$ - $\dot{\eta}\kappa a$ - $\mu\epsilon\nu$ (Od. 12. 401), and the 3 Sing. Mid. $\theta\dot{\eta}\kappa a$ - τo (Il. 10. 31., 14. 187, also Hes. Th. 175). The primitive 3 Plur. $\dot{\epsilon}$ - δo - ν occurs in Hes. Th. 30, and in Doric: $\dot{\epsilon}$ - $\theta\epsilon$ - ν only on inscriptions (C. I. 29).

The Homeric forms with the stem &- do not take the augment:

in Attic we have (e.g.) $\epsilon \hat{l} - \mu \epsilon \nu \epsilon \hat{l} - \tau \epsilon$ (for $\hat{\epsilon} - \hat{\epsilon} - \mu \epsilon \nu \hat{\epsilon} - \hat{\epsilon} - \tau \epsilon$).

In respect of the $-\check{\alpha}$ of the Stem the 2 Sing. $\check{\epsilon}$ - $\theta\eta\kappa\alpha$ -s is formed like $\check{\epsilon}$ - $\chi\epsilon\nu\alpha$ -s, and the occasional examples of the type $\check{\epsilon}$ - $\theta\dot{\eta}\kappa\alpha$ - $\mu\epsilon\nu$, $\check{\epsilon}$ - $\theta\dot{\eta}\kappa\alpha$ - τ 0 are parallel to $\check{\epsilon}$ - $\chi\epsilon\dot{\nu}\alpha$ - $\mu\epsilon\nu$, $\check{\epsilon}$ - $\chi\epsilon\dot{\nu}\alpha$ - τ 0. That is to say, the $-\check{\alpha}$ comes from $\check{\epsilon}$ - $\theta\eta\kappa\alpha$, $\check{\epsilon}$ - $\theta\eta\kappa\alpha$ - ν . The relation of $\check{\epsilon}$ - $\theta\dot{\eta}\kappa\alpha$ - $\mu\epsilon\nu$, $\check{\epsilon}$ - $\theta\dot{\eta}\kappa\alpha$ - τ 0 to $\check{\epsilon}$ - $\theta\epsilon$ - $\mu\epsilon\nu$, $\check{\epsilon}$ - $\theta\epsilon$ - τ 0, is complicated by the use of a new Verb-Stem ($\theta\eta$ - κ - instead of $\theta\eta$ -). Thus it is the same as the relation of $\check{\epsilon}\sigma\tau\dot{\eta}\kappa\alpha$ - $\mu\epsilon\nu$ to $\check{\epsilon}\sigma\tau\check{\alpha}$ - $\mu\epsilon\nu$ (§ 22).

The Aorist ἤνεικα (without augment ἔνεικα) shows no variation of stem; I Plur. ἐνείκα-μεν, 3 Plur. ἤνεικα-ν and ἔνεικα-ν, Imper.

ενείκα-τε, Mid. 3 Plur. ηνείκα-ντο.

On the Aorist εἶπα see § 37.

16.] The Non-Thematic Reduplicated Present. These Presents are formed by Reduplication, usually of the initial consonant with $\tilde{\iota}$; $\tau(\theta\eta-\sigma\iota)$ puts, $\delta(\delta\omega-\mu\iota)$ I give, $\tilde{\iota}\eta-\sigma\iota$ (for $\sigma(\sigma\eta-\sigma\iota)$) sends, $\tilde{\iota}\sigma\tau\tilde{\alpha}\sigma\iota$ ($\sigma\iota-\sigma\tau\tilde{\alpha}-1$) they set, $\pi\iota\mu\pi\lambda\tilde{\alpha}\sigma\iota$ they fill (the μ is euphonic: it is dropped after μ in $\tilde{\epsilon}\mu-\pi(\pi\lambda\eta-\theta\iota)$, $\delta(\delta\eta)$ bound, $\beta\iota\beta\tilde{\alpha}-s$ striding; with Attic Reduplication, $\tilde{\sigma}\sigma(\eta-\sigma\iota)$ (for $\tilde{\sigma}\sigma(\eta-\sigma\iota)$) benefits: perhaps also $\tilde{\iota}\lambda\eta-\theta\iota$ be appeased ($\tilde{\iota}\lambda\alpha-\mu\alpha\iota$ I propitiate, Hom. H. xxi. 5: Stem $\tilde{\iota}\lambda\alpha$ for $\sigma\iota-\sigma\lambda\tilde{\alpha}$, Meyer, G. G. p. 437).

In these Present Stems the quantity of the vowel in the Stem

regularly varies under the rules laid down in § 6 (1).

The vowel is long in $\epsilon\mu$ - $\pi(\pi\lambda\eta-\theta\iota)$ (Il. 21. 311), $t\lambda\eta-\theta\iota$, $\delta(\delta\omega-\theta\iota)$ (Od. 3. 380)*, and the Inf. $\tau\iota\theta\dot{\eta}-\mu\epsilon\nu\alpha\iota$ (Il. 23. 83, 247) and Part.

^{*} The variation is perhaps less regular in the Imper.; cp. κλῦ-θι. In Sanser, the 3 Sing, Imper. has the strong Stem.

τιθή-μενος (Il. 10. 34). Also in δίζη-μαι I seek (for *δι-διη-), the Homeric Verb answering to Attic ζη-τέω.

ἴημι is now generally connected with Lat. sero (for si-so, ep. ἴστημ sisto). Earlier scholars (as Bopp) derived it from the root $y\bar{a}$ (Lat. ja-c-io). Possibly it represents both σί-σημι ($s\bar{a}$ -) and i-μημι ($y\bar{a}$ -). In meaning it is much nearer to jacio than to sero.

17.] Present Stems in -νη (-να) and -νυ. The Tense-Stems of this class—which may be called the Non-Thematic Nasal class—form the Present-Stem from the Verb-Stem by the Suffixes -νη, -νυ (which with Heavy Endings regularly become -να, -νυ).

The Presents with $-\nu\eta$ ($-\nu\alpha$) are nearly all peculiar to Homer, $\delta\acute{a}\mu$ - $\nu\eta$ - $\mu\iota$ I subdue, $\kappa(\rho-\nu\eta)$ mixed, $\pi\acute{\epsilon}\rho$ - $\nu\alpha$ - τ selling, $\sigma\kappa(\delta-\nu\alpha-\tau\alpha\iota)$ is scattered, $\pi(\lambda-\nu\alpha-\tau\alpha\iota)$ comes near, $\mu\acute{a}\rho-\nu\alpha-\tau\alpha\iota$ fights. Note ι for ϵ in

κιρ-, σκιδ-, πιλ-; cp. the later Verbs πίτ-νω, κτίν-νυμι.

A few Presents with $-\nu\nu$ are common to all periods of Greek, $\delta\epsilon(\kappa-\nu\nu-\mu\iota)$ I show, $\delta\mu-\nu\nu-\mu\iota$ I swear, $\zeta\epsilon\delta\gamma-\nu\nu-\mu\iota$ I join, $\delta\lambda\lambda\nu\mu\iota$ (for $\delta\lambda-\nu\nu-\mu\iota$) I destroy; but they are mainly Homeric or poetical; $\delta\rho-\nu\delta-\ell\iota$ arouse, $\delta\alpha\ell-\nu\bar{\nu}$ feasted, $\delta\gamma-\nu\nu-\tau\nu\nu$ break, $\delta\tau\rho-\nu\bar{\nu}\sigma$ spreading, $\delta\tau-\nu\nu-\nu\bar{\nu}$ wiped away, $\delta\epsilon\rho\gamma-\nu\bar{\nu}$ shut in, $\delta\eta\gamma-\nu\bar{\nu}\sigma\iota$ they break, $\gamma\delta-\nu\nu-\tau\alpha\iota$ is gladdened, $\tau\delta-\nu\nu-\tau\alpha\iota$ is stretched, $\delta\gamma-\nu\nu-\tau\nu$ was finished, $\delta\epsilon-\nu\nu-\tau\nu$ were moved, $\epsilon\ell-\nu\nu-\tau\nu$ surpassed, $\delta\rho-\nu\bar{\nu}-\sigma\theta\eta\nu$ won, $\delta\chi-\nu\nu-\mu\alpha\iota$ I am vexed, $\delta\epsilon-\nu\nu-\tau\nu$ were opened, $\delta\nu-\nu\nu-\tau\nu$ for $\delta\nu-\nu-\tau\nu$ put on, $\delta\nu-\nu\nu-\tau\nu$ (for $\delta\nu-\nu\nu-\tau\nu$) girded himself, $\delta\rho\epsilon\gamma-\nu\bar{\nu}-s$ stretching out, $\delta\rho$

In the Verbs in -νημι the Verb-Stem is nearly always disyllabic: cp. δαμάσαι (παν-δαμά-τωρ, &c.), κερά-σαι, πετά-σαι, περά-σαι, σκεδά-σαι, πέλα-s. So in some Verbs in -νῦμι; cp. ὀμό-σαι, ὀλέ-σαι, στορέ-σαι. Thus we may regard δαμ-α and δαμ-νη, ὀμ-ο and ὀμ-νῦ, &c., as twin forms obtained by the addition of a different suffix to the same original root δαμ-, ὀμ-, &c. (§ 14). It is to be observed also that Presents in -νημι are often found along with forms in -αζω and -αω: δάμ-νημι, Αττίε δαμ-άζω; κίρ-νημι, κερ-άω: πέρ-νημι, περ-άω: σκίδ-νημι, σκεδ-άω: πίλ-νημι, πελ-άζω. Cp. κάμ-νω, κάμα-τος (§ 47).

The Verb-Stem, it will be seen, has most commonly its weak form (note especially τά-νυ-ται, Pf. τί-τά-ται), sometimes the strong form, as in

δείκ-νυ-μι, ζεύγ-νυ-μι, δήγ-νυ-μι.

The forms in -avvulu and -evvulu are post-Homeric.

18.] Thematic forms. Some forms of Non-Thematic Tenses follow the conjugation of the corresponding Contracted Verbs in $-\alpha\omega$, $-\epsilon\omega$, $-\omega$ (§ 56); especially in the Impf. Indic. and the Imperative. Thus we find:—

ἐδάμνα (as if from *δαμνάω), ἐκίρνα (Od. 7. 182, &c.), πίτνα:

Imper. καθ-ίστα (Il. 9. 202).

 $\tilde{\epsilon}$ τίθει, $\tilde{\epsilon}$ ι (ἀφ-ἰει, προ-ίει, &c.), ἄει (v. l. ἄη) blew, κίχεις : Imper. τίθει, $\tilde{\epsilon}$ ι (ξυν-ίει).

18 101.11

έδίδους, έδίδου: Imper. δίδου (Od. 3. 58).

Examples occur also in the Pres. Indic.; δαμνᾶ (3 Sing. Act.) in Od. 11. 221 (with v. l. δάμνατ'); δαμνᾶ (2 Sing. Mid.) in Il. 14. 199 (with v. l. δάμνα, for δάμνα-αι); ἀν-ιεῖs (Il. 5. 880), μεθ-ιεῖs (Il. 6. 523, Od. 4. 372), μεθ-ιεῖ (Il. 10. 121), τιθεῖ (Il. 13. 732), παρ-τιθεῖ (Od. 1. 192), for which the MSS. usually have ἀνίεις, &c.: διδοῖς (Il. 9. 164), διδοῖ (Il. 9. 519, Od. 4. 237). So for προτει in Il. 2. 752 we should read προιεῖ.

Add the Part. βιβῶντα (Il. 3. 22, cp. 13. 807., 16. 609), Fem. βιβῶσα (Od. 11. 539); for which Bekk. writes βιβάντα, βιβᾶσα.

Editors differ in their manner of dealing with these forms. Bekker in his second edition (1858) restored the 2 Sing. Pres. τίθης, ἵης, δίδως, and Impf. ἐτίθη, ἵη, ἐδίδω, but left the 3 Sing. τιθεῖ, διδοῖ and Imper. τίθει, ἵει, δίδου. Nauck proposes to restore καθίστη (Imper.) and the Impf. ἐδάμνη, πίτνη, ἐκίρνη. In the case of τίθημι, ἵημι, δίδωμι the weight of authority seems to be for the spelling which follows the Thematic conjugation, viz. -εῖς, -οῖς in the 2 Sing. Pres., and -εις, -ει, -ους, -ου in the Impf. (Cobet, Misc. Crit. p. 281, is extremely positive on this side). But Verbs which have η in the Dual and Plural (ἄη-τον, κιχή-την) should follow the analogy of the Passive Aorists: hence ἄη, κίχης. And we may leave undisturbed the form δίδη he bound (Il. 11. 105), for which no one has proposed to read δίδει.

The 1 Sing. προ-ter (Od. 9. 88., 10. 100., 12. 9) stands alone, and is doubtless a mere error for προτην (Bekker, ed. 1858). Ash when the making and the framewish 2 23 person

Porson (in his note on Eur. Or. 141) condemns ξυνιεῖς, τιθεῖς, &c. on the ground that if τιθεῖς were right we ought also to have τιθῶ, τιθεῖ, τιθοῦμεν, τιθεῖτε. It is possible, however, that a form like τιθεῖς may have crept in through the analogy of the Verbs in -εω, although no 'Verb' τιθέω was in use. It is characteristic of the working of analogy to be partial and gradual. In Homer we find the corresponding 3 Sing. Pres. δαμνᾶ, τιθεῖ, μεθιεῖ, διδοῦ—forms which are guaranteed by the metre. The forms so guaranteed are indeed few, and perhaps were not found in the oldest text of the poems; but they are supported by similar forms in Herodotus and other Ionic writers*.

Similarly, in the Presents formed with -νν there is evidence of a tendency to introduce the Thematic -νυε(ο). The instances are:

δρ-νν-ον (Il. 12. 142), ὅμννε (Il. 14. 278), ζεύγννον (Il. 19. 175), τανύ-οντο, τανύ-οντο (four times),

^{*} In considering this and similar questions it should be remembered (1) that we do not know when the Homeric poems were first written down; (2) that we do not know of any systematic attention having been paid to spelling, accentuation, &c. before the time of the Alexandrian grammarians; (3) that the tendency of oral recitation must have been to substitute later for earlier forms, unless the metre stood in the way; (4) that this modernising process went on in different parts of Greece, and therefore need not represent the exclusive influence of any one dialect; (5) that the older Ionic alphabet confused ϵ , ϵ , η and ϵ , ω , ω .

τανύ-ειν (Il. 17. 391), ἀνύω (Il. 4. 56, but may be Fut.). As to

119.

δαινύ-η (2 Sing. Subj. Mid.) see § 80.

Also, the Verb ρύομαι protect, save, is for the most part Non-Thematic ($\check{\epsilon}\rho\bar{v}$ - σ 0, $\check{\epsilon}\rho\bar{v}$ - τ 0, 3 Plur. $\dot{\rho}\dot{v}$ - $a\tau$ 0, Inf. $\dot{\rho}\hat{v}$ - $\sigma\theta$ aι), but partly Thematic ($\dot{\rho}\acute{v}\epsilon$ - τ aι, $\dot{\rho}\acute{v}\epsilon$ - τ 0, $\dot{\rho}\acute{v}$ 0- $\nu\tau$ aι, &e.), see § 11. And the Aor. $\check{\epsilon}$ - $\kappa\lambda\dot{v}$ - ν 0 is Thematic, except the Imper. $\kappa\lambda\dot{v}$ - θ ι, $\kappa\lambda\dot{v}$ - τ ε.

It should be observed that in all the foregoing cases the Thematic form is obtained by combining thematic endings with the final vowel of the Stem. In other cases the original final vowel is lost, as $\kappa i \chi \epsilon(\nu)$ for $\dot{\epsilon}$ - $\kappa i \chi \eta$, $\delta i \zeta \omega$ for $\delta i \zeta \eta$ - $\mu \alpha \iota$, and the like.

19.] Non-Thematic Contracted Verbs. The following Homeric forms are usually regarded as instances of 'irregular Contraction' of Verbs in $-a\omega$, $-\epsilon\omega$, $-o\omega$:—

 $(-\alpha\omega)$: συναντή-την met, συλή-την spoiled, προσαυδή-την spoke to, φοιτή-την went about, κυῆ scraped, ἀρή-μεναι to pray, γοή-μεναι to

bewail, πεινή-μεναι to hunger, θη-σθαι to milk. σρημί?

(-εω): ἀπειλή-την threatened, ὁμαρτή-την met, καλή-μεναι to call, πενθή-μεναι to mourn, ποθή-μεναι to regret, φιλή-μεναι to love, φορή-μεναι, φορή-ναι to carry, ἀλιτή-μενος sinning, τερσή-μεναι to get dry (§ 42).

(-οω): σάω 3 Sing. Impf. and also 2 Sing. Imper of σαόω

I keep safe.

These forms cannot be explained by the ordinary contraction with the Thematic ϵ or \circ : e.g. ϕ οιτή-την cannot come from * ϕ οιταέτην, ϕ ορ $\hat{\eta}$ -ναι from * ϕ ορε $\hat{\epsilon}$ -ναι, ἀλιτή-μενος from * $\hat{\alpha}$ λιτε $\hat{\epsilon}$ -μενος, $\hat{\sigma}$ άω from $\hat{\sigma}$ άο $\hat{\epsilon}$, &c. On the other hand, as Curtius has shown (Stud. iii. 377–401, Verb. i. 352 ff.), they agree exactly with those Non-Thematic forms in which the vowel before the Ending is long except before -ντ and -ι, such as the Pres. κιχή-μεναι, ἀήμεναι (§ 12), the Aor. $\hat{\sigma}$ τή-μεναι, τλ $\hat{\eta}$ -ναι, γνώ-μεναι, &c. and (as we may add by anticipation) the Passive Aorists in - η ν and - θ ην.

Moreover, the same type of inflexion appears in the peculiar 'Verbs in - μ ' of the Æolic dialect, as $\phi(\lambda\eta-\mu\iota)$, I Plur. $\phi(\lambda\eta-\mu\epsilon\nu)$, 3 Plur. $\phi(\lambda\epsilon\iota\sigma\iota)$ (for $\phi(\lambda\epsilon-\nu\tau\iota)$), Part. $\phi(\lambda\eta'-\mu\epsilon\nu\sigma)$; and also in the Latin Verbs in $-\bar{a}re$ and $-\bar{e}re$, except in the I Sing.; e.g. $am\bar{a}-mini$ is parallel to $d\rho\eta'-\mu\epsilon\nu\alpha\iota$, docemini to $\phi\rho\eta'-\mu\epsilon\nu\alpha\iota$, docemus,

doce-nt to φίλη-μεν, φίλεισι.

Further traces of this formation may be seen in those Attic verbs in $-\alpha\omega$ and $-\omega$ which take η and ω instead of $\bar{\alpha}$ and ω respectively (as $\zeta \dot{\alpha} \omega$, $\zeta \dot{\eta} s$, $\zeta \dot{\eta} s$, $\zeta \dot{\eta} s$, $\zeta \dot{\eta} s$, $\delta \dot{\eta} s$, and in the Opt. in $-\omega \eta \nu$, $-\omega \eta \nu$ (for which however in the case of verbs in $-\omega s$ we expect $-\omega s$ as in $\kappa \iota \chi \varepsilon (\eta \nu)$ and Æolic ωs .)

These facts seem to show that the formation now in question is of high antiquity, and Curtius even maintained that it was older than the ordinary conjugation of the verbs in -αω, -εω, -οω.

I les Hom.

In these verbs, as he pointed out, there is evidence to show that the vowel before the thematic ending was originally long (e.g. in Homeric $\delta\iota\psi\dot{\alpha}\omega\nu$, $\pi\epsilon\iota\nu\dot{\alpha}\omega\nu$, $i\pi\nu\dot{\omega}o\nu\tau\epsilon$ s, Æolic $\pi o\theta\dot{\eta}\omega$, $i\delta\iota\kappa\dot{\eta}\epsilon\iota$, &c.). The forms in $-\bar{\alpha}\omega$, $-\eta\omega$, $-\omega\omega$, again, may represent an older (and Æolic) $-\bar{\alpha}\mu\iota$, $-\eta\mu\iota$, $-\omega\mu\iota$, just as $\delta\epsilon\iota\kappa\nu\dot{\nu}\omega$ is for older $\delta\epsilon\dot{\iota}\kappa\nu\bar{\nu}\mu\iota$: and these again may be explained by contraction from $-\bar{\alpha}\iota\eta\mu\iota$, $-\eta\iota\eta\mu\iota$, $-\omega\iota\eta\mu\iota$, the Greek representatives of the Sanscrit $-a\eta\dot{\alpha}mi$. The Latin amo, doceo, Pl. $am\bar{a}mus$, $doc\bar{e}mus$, would fall into this scheme, if we suppose that they belong to the stage at which the

thematic endings had not extended beyond the I Sing.

Against this theory it is urged by Brugmann (M. U. i. 86) that the thematic conjugation of these verbs is found also in Sanscrit, Zend, Slavo-Lithuanian and Germanic—all which members of the Indo-European family, if Curtius is right, must have recast their derivative verbs on the same thematic model. more probable therefore that these verbs were originally thematic, and according to the final vowel of the base appeared as verbs in -αω (as νικά-ω), -εω (as $\pi \circ \theta \in \omega$), or -οω (as δηϊό-ω). On this assumption, again, the Homeric forms now in question may be variously explained. Where we find η for $\epsilon\epsilon$ or $\alpha\epsilon$, as in φιλήμεναι, γοήμεναι (instead of the ει, ā required by the ordinary rules), we may suppose, with Wackernagel (K. Z. xxvii. 84), that the contraction belongs to an earlier (pre-Hellenic) period. The existence of such a period is proved (e.g.) by the temporal augment, as in $\hat{\eta}(\sigma)a$ for an original $\hat{\epsilon}$ - $\epsilon\sigma a$. Then the participles αλιτήμενος, φιλήμενος and the like may be explained by supposing a form in -εμενος, cp. Lat. leg-imini, docēmini, so that φιλήμενος would be a primitive contraction from φιλε-έμενος (φιλε-ιε-μενος). The solution however is confessedly incomplete. It does not (directly at least) explain Æolic φίλημεν, φίλεισι, Lat. amamus, docemus, amant, docent. It only explains the long vowel of φιλή- $\sigma\omega$, εφίλη- σa , φιλητός, &c., if we also suppose that the - $\iota\epsilon$ of the Present was carried through all the tenses. And it does not give any satisfactory account of the common contracted forms, νικάτε, φιλείτε, δηλούτε, &c., since these must have come from νικάετε, φιλέετε, δηλόετε, &c. at a period in which the ordinary Greek rules of contraction were in force.

A wholly different explanation is proposed by Brugmann himself (ℓ . c.). He shows, as we have seen (§ 14), that there is a large class of non-thematic forms with stems ending in a long vowel— \bar{a} , η , ω —which is of the nature of a suffix. Such are $\ddot{\epsilon}$ - $\beta\lambda$ - η - ν ($\beta\ddot{\omega}\lambda$ -, $\beta\lambda$ - η), $\ddot{\epsilon}$ - $\pi\tau\eta$ - ν ($\pi\epsilon\tau$ -, $\pi\tau$ - η), $\ddot{\epsilon}$ - $\gamma\nu\omega$ - ν ($\gamma\epsilon\nu$ -, $\gamma\nu$ - ω -), and many others, which have their representatives in all languages of the Indo-European family. By an extension of this type has been formed the specifically Greek class of the Passive aorists in $-\eta\nu$, as $\ddot{\epsilon}$ - $\phi\alpha\nu\eta$ - ν . $\dot{\epsilon}$ - $\tau\dot{\nu}\pi\eta$ - ν and one or two in $-\omega\nu$, as $\dot{\epsilon}$ - $\dot{\alpha}\lambda\omega$ - ν .

We cannot be sure, however, that all the examples of this type which appeared in the original text of Homer have been preserved. Wackernagel has observed that nearly all the words now in question are forms which would be unfamiliar in the Greece of classical times. The list is made up chiefly of duals (προσανδήτην, φοιτήτην, &c.) and Infinitives in -μεναι. It is not improbable (e.g.) that the familiar form προσηνόδα has supplanted an original Non-Thematic προσηνόδη. On the other hand in II. 11. 638 ἐπὶ δ' αἴγειον κνῆ τυρόν the metre points rather to the uncontracted κνάε.

- 20.] Aorists. Of the Aorist Stems noticed in § 13, several are probably derived from Nouns, and do not differ in formation from the Presents discussed in the preceding section: e. g. $\dot{\epsilon} \gamma \dot{\eta} \rho a$ ($\gamma \dot{\eta} \rho a s$), $\beta \iota \dot{\omega} \tau \omega$ ($\beta \iota \dot{o} s$), $\dot{\epsilon} \pi \dot{\epsilon} \pi \lambda \dot{\omega}^2 s$ ($\pi \lambda \dot{o} s$), $\dot{\alpha} \lambda \dot{\omega} \nu a \iota$, perhaps $\dot{\alpha} \pi \dot{o} \nu \eta \tau o$. Regarding the Passive Aorists, see §§ 42–44.
- 21.] Meaning of the Non-Thematic Pres. and Aor. The Presents formed by Reduplication, and by the Suffixes -νη and -νυ, are nearly always Transitive or 'Causative' in meaning, as $l\sigma\eta$ -μι, $\sigma\kappa$ (δ-νη-μι, $\delta\rho$ -νυ-μι: whereas the simpler Verbs, whether Present or Aorist, are usually Intransitive as $\epsilon\sigma\eta$ -ν, $\epsilon\sigma\beta\eta$.

Regarding the Tense-meaning, it is enough to point out here that the difference of the Present and Aorist is not given by the form of the Tense: thus the Impf. $\xi - \phi \eta - \nu$ is the same in forma-

tion as the Aor. $\xi - \beta \eta - \nu$, $\xi - \sigma \tau \eta - \nu$.

The Perfect.

22.] The Perfect-Stem is formed by Reduplication, and is liable to vary with the Person-Endings (§ 6). This variation is the rule in the Homeric Perfect. In Attic it survives in a few forms only; it is regular in of δa and $\xi \sigma \tau \eta \kappa a$.

The weak form of the Stem is the same (except for the Reduplication) as in the Tenses already discussed. The long Stem is often different, showing a predilection for the O-form.

The variation appears in the interchange of-

(1) η (ā) and ă: as τεθήλ-ει bloomed, Part, Fem. τεθάλ-νία: άρηρε is fitting, άραρ-νία; λεληκ-ώς, λελάκ-νία yelling, μεμηκ-ώς, μεμάκ-νία bleating; λέλασται (λελαθ-ται, λήθ-ω) has forgotten, άκαχ-μένος sharpened, πέφαν-ται has appeared; σέσηπε is rotten (σαπρός), τέτηκα (τήκ-ω), τέθηπα (Aor. Part. ταφ-ών), πέπηγε (πάγ-η), κεχην-ότα, κεκληγ-ώς, πεπληγ-ώς, τετρήχ-ει (τἄρἄχ-); πεπάσ-μην I had eaten (πατ-έομαι), κεκασμένος (κάδ-) excelling, ερράδ-αται are sprinkled, δέδασ-ται is divided (but 3 Plur. δεδαίαται, from δαι-, § 51, 2). In the last four cases the strong form does not actually occur.

δέδηε is on fire is for *δέδηνε (δεδηF-ε): the weak Stem is δαν-(δαίω for δαF-ιω, cp. καίω, ἔκηα). Similarly γέγηθε rejoices is for *γέγηνθε (Lat. gaud-eo).

ā for η occurs in έαγε is broken (Hes. Op. 534: έάγη as Subj. is only Bekker's conj. in Il. 11. 558, see § 67): also in ἐαδ-ότα

pleasing, as to which see § 26, 2.

w and ă: this interchange cannot be exemplified from Homer: cp. Attic έρρωγα (ράγ-, Mid. συν-έρρηκ-ται). ω is also found in άνωνα I bid, γέγωνε calls aloud, but the corresponding weak Stems are unknown.

(2) ω and ϵ : $\epsilon i\omega\theta \epsilon$ is accustomed (cp. $\epsilon\theta\omega\nu$, $\eta\theta$ os, root $\sigma f\eta\theta$ -): $\epsilon\pi$ - $\omega\chi$ -ato were shut to (of gates), from $\epsilon\pi$ - $\epsilon\chi\omega$: σvv - $o\chi\omega\kappa$ - $o\tau\epsilon$ (better perhaps συν-οκωχότε, see Cobet, Misc. Crit. p. 303) leaning together, from $\sigma v v - \epsilon \chi \omega$ (cp. $\delta \kappa \omega \chi \dot{\eta}$ a stay or buttress, $\dot{\alpha} v - \kappa \kappa \omega \chi \dot{\eta} =$ àνοχή staying, cessation).

η and ε: in μέμηλε is a care, έδ-ηδ-ώς having eaten.

* (3) ω and ο: in δέδο-ται (δω-), ἐκ-πέπο-ται is drunk up, ὅλωλε is lost, ὄρωρε is aroused, ὅπωπα I have seen, ὀδώδ-ει smelt: perhaps also δρώρει watched (Il. 23. 112 έπὶ δ' ἀνὴρ ἐσθλὸς δρώρει = was the ἐπί-ουρος), cp. § 30.

προ-βέβουλα (Il. 1. 113) seems to follow the Pres. βούλομαι:

we expect $\beta \in \beta \omega \lambda a$ ($\beta \circ \lambda$ -, $\delta \circ \beta$).

(4) οι and ι : οίδα, 1 Plur. ἴδ-μεν; πέποιθα, 1 Plur. Plpf. ἐπέπιθ-μεν; ἔοικα, Dual ἔϊκ-τον, Part. Fem. ἐϊκ-νία; λέλοιπα, Aor. ἔ-λἴπ-ον; δείδω I fear, for δέδΓοια (by loss of and contraction), I Plur. δείδι-μεν (for δέδΓι-μεν).

This account of the isolated I Sing. δείδω was given by G. Mahlow (K. Z. xxiv. 295), and has been adopted by most scholars. The original Homeric form was probably δείδοα (or δέδ Γοα), which can be restored in all the passages where the word occurs. Others (as Cobet) would substitute δείδια, a form the state of the state which is found in several places, sometimes as an ancient v. l. for δείδω. But it is difficult on his view to account for the change from δείδια. Rather, an original δείδοα (or δέδ σα) was altered in two ways, (1) by contraction, which gave it the appearance of a Present in -ω, and (2) by change of o to t under the influence of δείδι-μεν, &c.

(5) ευ and $\check{\mathbf{v}}$: πεφευγ-ώς having escaped, Mid. πεφυγ-μένος; τετεύχ-αται are made, 3 Sing. τέτυκ-ται; κέκευθε hides (Aor. κύθε); εζευγ-μένοι joined (ζυγ-όν). Other weak Stems: κέχὔ-ται, έσσὔ-ται (§ 15), πέπυσ-μαι (πὔθ-), κέκλὔ-θι listen.

ου interchanging with \mathbf{v} is much less common: εἰλήλουθα I am

come (ἐλῦθ-), perhaps δεδουπ-ότος (cp. κτύπ-ος).

υ appears in μέμυκε (Aor. μύκε), βέβρυχεν roars, as in the Pres.

μυκάομαι, βρύχω.

(6) ορ (ρο), ολ and ἄρ (ρὰ), ἄλ (for ァ, l, § 6, 5): δι-έφθορας art destroyed (φθἄρ-); ἔμμορε has a share, Mid. εἴμαρ-το was apportioned; τέτροφε is thickened (τρἄφ-); ἐπι-δέδρομε runs over; δέδορκε sees; ἔοργας hast done; ἔολπα I hope. Weak forms: πεπαρ-μένος pierced, τέτραπ-το (τρέπ-ω), ἐ-τέταλ-το (τέλλω).

But $\epsilon \rho$, $\epsilon \lambda$ in $\epsilon \epsilon \rho$ - $\mu \dot{\epsilon} vos$ strung (Lat. sero), $\dot{\epsilon} \rho \chi$ - $\alpha \tau \alpha i$ are packed in, Part. $\dot{\epsilon} \epsilon \rho \gamma$ - $\mu \dot{\epsilon} v \alpha \iota$ ($F \dot{\epsilon} \rho \gamma$ - ω), and $\dot{\epsilon} \epsilon \lambda$ - $\mu \dot{\epsilon} v os$ cooped in: cp. § 31, 6.

ρῖ appears in βέβρῦθε is heavy, ἔρρῖγα I dread, πεφρῖκ-υῖαι bristling, τετρῖγ-υῖαι chirping, with no corresponding weak Stem. In these words ρῖ seems to come from original ερ, ρ, or γ ; cp. § 29, 4.

- (7) ον and α (for η): γέγονε is born, I Plur. γέγα-μεν; πέπονθα I suffer, 2 Plur. πέπασθε (for πεπαθ-τε), Part. πεπαθ-νîα; μέμονας art eager, 2 Plur. μέμα-τε; λελόγχ-ασι have as portion (Aor. ἔλαχον); πέφα-ται is slain (φόν-ος), τέτα-ται is stretched (τόν-ος), δεδα-ώς (§ 31, 5). But we find αν in κεχανδ-ώς containing (Aor. ἔχαδε).
- (8) and ε: as in τέτοκα (Hes. Op. 591, cp. Aor. ἔ-τεκ-ον); δέδεγ-μαι I await (cp. προ-δοκ-αί ambush); ἔσ-σαι art clothed; ἀνήνοθεν mounted up (of a stream of blood, Il. 11. 266), ἐπ-ενήνοθὲ is upon: ἀγηγέρ-ατο were assembled (cp. ἀγορ-ή): κεκοπ-ώς striking. Properly the form with should interchange with a form without a vowel (τοκ- with τκ-, &c.), but when this is impossible ε remains in the weak Stem: see § 6, 6.

ἀνήνοθε answers in meaning to the Attic ἀνθέω, to be on the surface, come forth upon: the Pres. would be ἀνέθ-ω (related to ἄνθ-ος as ἀλέγ-ω to ἄλγ-ος). So ἐν-ήνοθε supposes ἐνέθ-ω, weak form ἐνθ-.

(9) Stems which take the suffix κ^* .

^{*} A word may be said here on the origin of the Perfects in -kä. They may be regarded as formed in the ordinary way from Stems in which a Root has been lengthened by a suffixed κ , as in δλέ-κ-ω, ἐρύ-κ-ω (§ 45), πτήσσω (for $\pi \eta$ -κ- $\pi \omega$, cp. ἔ-πτα-κ-ον), δειδίσσομαι (for δει-δρικ- $\pi \omega$). Thus δλώλεκα is the regular Pf. of δλέκω, and πέπτωκα, δείδοικα, answer to the weak stems $\pi \tau \tilde{\alpha}$ -κ-, δρί-κ-. So βέβηκα, ἔστηκα answer to (possible) Presents *βή-κω (cp. βάκ-τρον), *στή-κω. It is not necessary to suppose an actual Stem in κ in each case; a few instances would serve to create the type. The reason for the use of the longer Stems βη-κ, στη-κ, &c., was probably that the forms given by the original Stems were too unlike other Perfects. The characteristic -ἄ would be lost by contraction with the preceding vowels.

When the Stem ends in a vowel, certain forms of the Pf. Act. take k, thus filling the hiatus which would otherwise be made between the Stem and the Ending: as in έστη-κ-as, δείδοι-κ-a, τεθαρσή-κ-ασι. The Perfects of this type—including those of which no forms with k are actually found - may be divided again into-

(a) Perfects with variable root-vowel: έστηκα I stand, I Plur. έστα-μεν; δείδοικα I fear, 1 Plur. δείδι-μεν; πέφυκε, 3 Plur. πεφύασι: βέβηκα, Inf. βεβά-μεν; τέθνηκα, Imper. τέθνα-θι; τέτληκα, Imper. τέτλα-θι. Add also μέμυ-κε is closed (of a wound), δέδυ-κε is sunk in, though the short form is not found.

(b) Perfects with invariable long vowel, especially n and w (discussed in § 14): $\beta \epsilon \beta \lambda \hat{\eta} - \kappa - \epsilon \iota \ struck$, Mid. $\beta \dot{\epsilon} \beta \lambda \eta - \tau \alpha \iota$ (cp. $\epsilon \nu \mu - \iota$ βλή-την, βλή-μενος); κέκμη-κ-as art weary; πεπλη-μένος brought near, κέκλη-μαι, είρη-ται, μέμνη-μαι, τετμη-μένος; βεβρω-κ-ώς having eaten (Fut. Mid. $\beta \epsilon \beta \rho \dot{\omega} - \sigma \epsilon \tau \alpha \iota$), $\mu \dot{\epsilon} \mu \beta \lambda \omega - \kappa - \epsilon$ is gone, $\pi \epsilon \pi \rho \omega - \epsilon \iota$ névos fated.

Similarly, from disyllabic Stems, δεδάη-κε (Aor. ε-δάη-ν) has learned (Od. 8. 134), τετύχη-κε (Od. 10. 88), and the Participles

κεχαρη-ότα (ε-χάρη-ν), βεβαρη-ότα, κεκαφη-ότα, τετιη-ότες.

To this class belong the Perfects of derivative Verbs in -aw. -εω, -οω, -υω, as βεβίη-κ-εν (Il. 10. 145, 172., 16. 22), ύπ-εμνήμυκε (Il. 22. 491), δεδειπυή-κει (Od. 17. 359), τεθαρσή-κ-ασι (Il. 9. 420, 687): κεκοτη-ότα, κεκορη-ότα, ἀκ-άχη-μαι, ἀλ-άλη-μαι, ἀλαλύκτη-μαι.

παρ-ώχη-κεν (Il. 10. 252, with v. l. παρώχωκεν) is formed as if from *παρ-οιχέω, for παρ-οίχομαι.

άδη-κ-ότεs (Od. 12. 281, and four times in Il. 10) means displeased, disgusted, it

and should probably be written ἀαδηκότες, from ἀαδέω (for ἀ-σ ξάδ-εω).

The Subj. ἱλήκησι (Od. 21. 36), Opt. ἱλήκοι (H. Apoll. 165) point to a Pf. ίληκα or Pres. ίλή-κω.

(10) A Perfect in -θα may be recognised in έγρηγόρ-θασι keep awake (Il. 10. 419): perhaps in the Opt. βεβρώθοις (Il. 4. 35). In general the Perfects of derivative Verbs are formed with an

It is a confirmation of this view that the Stem with -ka is in the same form

as the Present Stems with a suffixed κ , γ , θ (§ 45), or $\sigma\kappa$ (§ 48). A similar theory may be formed of the Perfects in $-\theta a$, of which the germs have been mentioned above. βέβρω-θα is related to a Part. βεβρω-ωs (§ 26, 4) as τέθνη-κα to τεθνη-ωs, and to a Mid. *βέβρω-μαι (cp βεβρω-σεται) as βέβλη-κα to βέβλη-μαι. If in a few more cases, such as $βέβρ\overline{ρ}-θα$ ($βρ\overline{ρ}-$), $ε\~tωθα$ (su $\overline{ε}$ -tus), γέγη-θα (γαf-ιω), we had had short forms of the Stem without θ, the suffix -θα would have been felt to characterise the Pf. Act.; that is to say, the type of the 'Pf. in -0a' would have been created, and might have spread as the Pf. in -ka has done.

The Aorists in -κα are to be accounted for in the same way. The κ may be traced in the Pres. δώκω (on the inscription of Idalion, see Curt. Stud. vii. 243)

and in the Noun θήκ-η, which points to a Verb-Stem θη-κ-.

invariable Stem: as κεκορυθ-μένος, πεπόλισ-το, δδώδυσ-ται, κεκονῖμένος. But no such Perfects are used in the Active.

23. The Reduplication takes the following forms:-

(1) An initial consonant is repeated with ε. This is the general rule: we need only notice the Perfects in which an original consonant has been lost, viz.:—

A labial semi-vowel (F) in $\dot{\epsilon}$ - $\epsilon\lambda$ - $\mu\acute{\epsilon}vos$ cooped in (for $F\epsilon$ - $F\epsilon\lambda$ - $\mu\acute{\epsilon}vos$), $\epsilon l\rho\acute{\nu}a\tau a\iota$ ($F\epsilon\rho v$ -) are drawn up, $\epsilon l\lambda v$ - τo ($F\epsilon\lambda v$ -, volvo), ℓ - $o\rho\gamma a$ ($F\epsilon\rho\gamma$ -ov), ℓ - $o\lambda\pi a$, ℓ o $\iota\kappa a$, Mid. $\eta \ddot{\iota}\kappa$ - τo (unless this comes from $\ell \acute{t}\sigma\kappa \omega$).

A sibilant (σ) in $\vec{\epsilon}$ - $\sigma\tau\eta\kappa a$ (for $\star\sigma\dot{\epsilon}$ - $\sigma\tau\eta\kappa a$), $\vec{\epsilon}$ - $\epsilon\rho$ - $\mu\dot{\epsilon}\nu\sigma s$ strung together (Lat. sero). But the σ is retained in $\sigma\dot{\epsilon}\sigma\eta\pi\dot{\epsilon}$.

(2) Stems beginning with two consonants (except when the second is ρ λ μ or ν), or with ζ , usually prefix ϵ only: as $\delta\iota$ - ϵ - $\phi\theta o\rho as$, ϵ - $\phi\theta (a\tau o)$, ϵ - $\kappa\tau \eta \sigma \theta a\iota$ (but $\kappa \epsilon \kappa \tau \eta \mu a\iota$, Hes. Op. 437), ϵ - $\zeta \epsilon \nu \gamma \mu \epsilon \nu a\iota$. But we find $\pi \epsilon - \pi \tau \eta \omega s$, $\pi \epsilon - \pi \tau a \nu \tau a\iota$. And in $\epsilon \sigma \tau \eta \kappa a$ the rough breathing represents original σ -.

The group of has been lost in ε-āδώs (either σε-σfāδώs or

 ϵ - $\sigma F \bar{a} \delta \omega s$) pleasing, and $\epsilon l \omega \theta a$, $\epsilon \omega \theta a$ (Lat. $su\bar{e}$ -sco).

The group δF has the effect of lengthening the vowel of the reduplication in $\delta \epsilon (\delta o \iota \kappa a, \delta \epsilon (\delta \iota - \mu \epsilon \nu, \&c., which represent original$

δέ-δFοι-κα, δέ-δFῖ-μεν, &c.

Similarly we have ἔμμορε, Mid. εἴμαρ-ται (σμαρ-), and ἔσσὕται (σεύω, root κιευ-: also εἴληφα (post. Hom., cp. ἔλλαβου, § 67.)

We must distinguish between (1) phonetic loss, as of σ or F, and (2) substitution of initial $\hat{\epsilon}$ - for the reduplication. The latter may be seen (e.g.) in $\hat{\epsilon}$ - $\kappa\tau\hat{\eta}\sigma\theta a\iota$, which cannot be derived by phonetic decay from $\kappa\epsilon$ - $\kappa\tau\hat{\eta}\sigma\theta a\iota$. The distinction will serve to explain the difference between $\epsilon\hat{\iota}\mu a\rho\tau a\iota$, which is the proper representative of an original $\sigma\hat{\epsilon}$ - $\sigma\mu a\rho$ - $\tau a\iota$, and $\hat{\epsilon}\mu\mu\rho\rho\epsilon$, which follows the general tendency to double an initial μ , ν , λ or ρ after the augment.

(3) Attic Reduplication; as ὅπ-ωπα I have seen, ἐλ-ήλα-το was

driven, έγρ-ήγορα I am awake.

The syllable which follows the Attic Reduplication may vary in quantity, as ἄρηρε, Fem. Part. ἀρᾶροῦα; ἐρήριπε, Mid. ἐρέριπτο. Usually it is long, as ἐλήλαται, ἀρηρομένος, ἀκηχεμένος, ὀδώδυσται, ἐνῶκ ἀρφρειστο, ἐρήρισται (Hes. fr. 219), 3 Plur. ἀγηγέρατο, ἐρηρέδαται, ἐνῶκ ἀρωρέχαται. But it is short in ἀκάχημαι, ἀλάλημαι, ὑροκονοῦς.

(4) Temporal Augment (see § 67): e.g. $\epsilon \phi - \hat{\eta} \pi - \tau \alpha \iota$ (άπτω), κατ-ήκισ-ται (αἰκίζω), ἤσκη-ται (ἀσκέω), ἦσχυμμένος.

(5) In a few cases there is no Reduplication:-

οίδα, for Fοίδα, Sanser. veda.

ξρχ-αται are shut in (Fεργ-), Plpf. ξρχ-ατο and (with augment)

¿έρχατο. Christ prolip III: είρχαται

έἰμαι I am clothed with $(f \epsilon \sigma)$, έσ-σαι, Plpf. έσ-σο, έσ-το and (with augment) έ-εσ-το, Du. έσ-θην, 3 Plur. εἴατο, Part. εἰμένος. Reduplication is not to be found in the ει of εἶμαι, εἰμένος, since these are for $F \epsilon \sigma$ -μαι, $F \epsilon \sigma$ -μένος (as εἶμα for $F \epsilon \sigma$ μα). The 3 Sing. Pf. occurs once in Homer, in Od. 11. 191, where the best MSS. have ἢσται, others εἶσται and εἶται. The true form is probably ἔσται, preserved in an oracle in Hdt. 1. 47 (cp. ἔσσαι).

ἀμφιαχυῖα (II. 2. 316) crying around can hardly be divided ἀμφ-ιαχυῖα, since the Stem ἰἄχ- has initial F (§ 390). But a Stem $F_{\eta\chi}$ - ($F_{\eta\chi\dot{\eta}}$ cry), weak form $F_{\ddot{\alpha}\chi}$ -, without Reduplication

would give the Fem. Part. Făχvîa, whence ἀμφι-αχνῖα.

These examples make it doubtful whether initial F was originally reduplicated in the Pf. stem. In Sanser, the roots which begin with va (answering to Gr. $F_{\epsilon-}$) take u-, as uvdea (vac-, Gr. $F_{\epsilon\pi-}$). Thus the $F_{\epsilon-}$ of $F_{\epsilon}F_{\epsilon}F_{\epsilon}V_{\epsilon}U_{\epsilon}F_{\epsilon}V_{\epsilon}U_{\epsilon}V_{\epsilon}$, &c. may be later, due

to the analogy of other Perfects.

δέχ-αται await (Il. 12. 147), Plpf. ε-δέγμην (Od. 9. 513., 12. 230), Part. δέγμενος (Il. 2. 794., 9. 191., 18. 524., Od. 20. 385), with the same Pf. meaning that we have in δέδεγμαι (await, not receive, § 28): while in other places έ-δεκτο, &c. are no less clearly Aorists. It seems that we must recognise a Pf. form *δέγμαι (Buttm. G. G. ii. 149., Curt. Verb. ii. 144), probably older than δέδεγμαι.

(6) The Reduplication in δει-δέχ-ἄται they welcome, seems to be that of the 'Intensive' forms, as in δει-δίσκομαι: see § 61. The

form belongs to δείκ-νυμι, not δέχ-ομαι (see Veitch).

24.] In the 3 Plur.— 4,573.

The long Stem with -āσι (-a-NTI) is comparatively rare:—
πεποίθασι (Π. 4 325), ἐστήκασι (Π. 4. 434, v. l. ἐστήκωσι), κατατεθνήκασι (Π. 15. 664), τεθαρσήκασι (Π. 9. 420, 682), ἐγρηγόρθασι (Π. 10. 419).

These forms evidently result from generalising the Stem in -a. So we have olda-s (Od. 1. 337), οἴδά-μεν, οἴδασι in Herodotus (and in Attic, see Veitch s. v.).

2. The final consonant of the Stem, if a labial or guttural, is aspirated before the $-\check{\alpha}\tau a\iota$, $-\check{\alpha}\tau o$ of the Mid.; as $\dot{\epsilon}\pi\iota$ - $\tau\epsilon\tau\rho\dot{\alpha}\phi$ - $a\tau a\iota$ are entrusted, $\tau\epsilon\tau\rho\dot{\alpha}\phi$ -a τo were turned, $\check{\epsilon}\rho\chi$ -a $\tau a\iota$ ($\epsilon\rho\chi$ -a shut in, $\epsilon\rho\chi$ -a $\tau a\iota$ ($\epsilon\rho\chi$ -a shut in, $\epsilon\rho\chi$ -a consoler are stretched out, $\epsilon\rho\chi$ -a consoler are shut in,

welcome, κεκρύφ-αται (Hes. Op. 386). The aspirated forms of the Act., such as εἴληφα, κέκοφα, are entirely unknown to Homer.

It has been pointed out by Joh. Schmidt (K. Z. xxviii. 309) that the aspiration in these cases is due to the analogy of the forms in which a similar aspiration is caused by the ending: $\tau\epsilon\tau\rho\dot{a}\phi$ - $a\tau\alpha\iota$ because of the 2 Plur. $\tau\dot{\epsilon}\tau\rho a\phi$ - $\theta\epsilon$, Inf. $\tau\epsilon\tau\rho\dot{a}\phi$ - $\theta a\iota$. This explains why a final dental is not affected: for δ before θ passes into σ .

3. An anomalous ε for τ appears in δει-δέχ-αται (δείκ-νυμι, see § 23, 6), ἐρ-ηρέδ-αται (ἐρείδω, ep. ἠρισ-μένοs Hesyeh.), and ἀκ-

ηχέδ-αται (ἀκαχίζω).

4. A final δ of the Stem sometimes appears only in the 3 Plur.: as ἀκηχέδ-αται, ἐρράδ-αται (ῥαίνω, τ Aor. ῥάσσατε), ἐληλάδ-ατο. But the last of these forms is doubtful; it occurs only in Od. 7. 86 χάλκεοι μὲν γὰρ τοῖχοι ἐληλάδατ', where some good MSS. have ἐρηρέδατ'.

25.] Interchange of Stems. The original variation between the Strong and the Weak form is disturbed by various causes.

I. The O-form of the Stem is found instead of the weak form in $\epsilon l\lambda \dot{\eta} \lambda o v \theta - \mu \epsilon v$ we are come (for $\epsilon l\lambda \dot{\eta} \lambda v \theta - \mu \epsilon v$), $\ddot{\alpha} \omega \rho \tau o$ was hung aloft (cp. $\ddot{\alpha} \epsilon \rho - \theta \epsilon v$), $\dot{\epsilon} \gamma \rho \dot{\eta} \gamma o \rho \theta \epsilon$ keep awake, with the Inf. $\dot{\epsilon} \gamma \rho \dot{\eta} \gamma o \rho \theta a \iota$ (Il. 10. 67, cp. $\dot{\epsilon} \gamma \rho \eta \gamma o \rho \tau \iota$ 10. 182); $\ddot{\alpha} v \omega \gamma \mu \epsilon v$ (H. Apoll. 528); cp. $\dot{\epsilon} o \iota \gamma \mu \epsilon v$ (in Tragedy), $\dot{\delta} \dot{\epsilon} \delta o \iota \gamma \mu \epsilon v$ (Et. M.).

2. The strong Stem of the Pres. takes the place of the weak Stem in συν-έρρηκται (Attic έρρωγα), λέλειπ-ται, έζευγ-μέναι, ήρήρειστο (ἐρείδω); also in ἐερ-μένος, ἐελ-μένος, ἔρχ-αται (§ 22, 6).

So κεχανδ-ώς (for κεχάδ-Γώς, χανδάνω).

έστητε, commonly read in Il. 4. 243, 246, is an error for

ἔστητε: see § 76.

3. The influence of the Present may further be traced in the Perfects which take $\bar{\iota}$ for $\epsilon\iota$ (§ 22, 4), and $\bar{\upsilon}$, $\epsilon\upsilon$ for $\epsilon\upsilon$ (§ 22, 5). So $\dot{\epsilon}\delta\eta\delta$ - $\dot{\omega}s$ (but $\dot{\epsilon}\delta\omega\delta\dot{\eta}$), $\pi\rho\sigma$ - $\beta\dot{\epsilon}\beta\sigma\upsilon\lambda\alpha$ ($\beta\sigma\dot{\upsilon}\lambda\sigma\mu\alpha\iota$).

In all these cases it is worth noticing that the change does not affect the metrical form of the word: e.g. we may read $\epsilon l\lambda \dot{\eta} \lambda v \theta \mu \epsilon v$, $\dot{\epsilon} \rho \rho \alpha \kappa \tau a \iota$, $\dot{\epsilon} \dot{\xi} v \gamma \mu \dot{\epsilon} v a \iota$, $\dot{\eta} \rho \dot{\eta} \rho \iota \sigma \tau o$, &c. and some of these

may be the true Homeric forms.

The weak Stem appears to take the place of the O-form in $\delta\epsilon i\delta\iota a$ (as to which see § 22, 4), and in $\dot{a}\nu a-\beta\dot{\epsilon}\beta\rho\dot{\nu}\chi\epsilon\nu$ (II. 17. 54) gushes up. For the latter Zenodotus read $\dot{a}\nu a\beta\dot{\epsilon}\beta\rho\sigma\chi\epsilon\nu$ —doubtless rightly, since this is the correct Pf. of $\dot{a}\nu a-\beta\rho\dot{\epsilon}\chi\omega$.

In Attic Reduplication the second vowel of a disyllabic Stem may be short, as in $\hat{\epsilon}\lambda\hat{\eta}\lambda\nu\theta a$ (less common in Homer than

εἰλήλουθα), and κατερήριπε (Il. 14. 55).

26.] The Perfect Participle was formed originally from the

weak Stem, but there are exceptions in Homer, due partly to the F of the Masc. and Neut. Suffix $(-F\omega_s, -u\hat{\alpha}, -F\delta_s)$, partly to the general tendency to adopt the form of the Sing. Indic. as the Stem. Thus the Homeric Pf. Part. is intermediate between the primitive formation with the weak Stem (as in Sanscrit), and the nearly uniform long Stem of Attic. In particular—

I. When the Ending -ώs (-ότοs) follows a vowel, one or both of the concurrent vowels may be long: $μεμ\bar{a}$ -ότε, $μεμ\bar{a}$ -ῶτε (both for $μεμ\bar{a}$ -Γότε). So $γεγ\bar{a}$ -ῶτας; $βεβ\bar{a}$ -ῶτα; $πεφ\bar{v}$ -ῶτε; κεκμη-όταs and κεκμη-ῶτα; τεθνη-ότοs, τεθνη-ῶτα, also τεθνεῶτι; πεπτη-ότα and πεπτη-ῶτες (πτήσσω): πεπτεῶτα (πίπτω). Both vowels are short in εστ \bar{a} -ότοs. Σδιδ

ω also appears in τετρῖγ-ῶτας (Il. 2. 314), κεκληγ-ῶτας (Il. 16. 430). For the latter there is a v. l. κεκλήγοντας (see § 27); and

so perhaps we may read τετρίγοντας.

2. When -ώs (-ότοs) follows a consonant, the Stem generally takes the long form, as in the Sing. Ind. Act.: ἀρηρ-ώs, μεμηκ-ώs, λεληκ-ώs, ἐοικ-ώs, πεποιθ-ώs, ἐοργ-ώs: except εἰδ-ώs (οἶδα), εἰκ-ώs οτ ἐϊκ-ώs (Π. 21. 254), ἑᾶδ-ότα (ἀνδάνω, root σ̄ταδ-).

As these exceptions show, the strong form is not original: thus $\epsilon i\delta \omega$ s is for $f\iota\delta - f\omega s$, $\epsilon \bar{a}\delta \delta \tau a$ for $\epsilon \sigma f a\delta - f \delta \tau a$. So we have $\mu \epsilon \mu \bar{a}\omega s$ (perhaps $\mu \epsilon \mu a \nu \omega s$), not $\mu \epsilon \mu \sigma \omega s$. When f was lost the original quantity of the syllable was preserved by lengthening the vowel: and in determining the new long vowel the analogy of the Sing. Ind. naturally had much influence.

3. A long vowel appears in the Feminine είδ-νῖα (Il. 17. 4, elsewhere ἰδυῖα, Schol. Il. 20. 12), εἰοικ-νῖα (Il. 18. 418, elsewhere ἐτκ-νῖα)*, τεθνη-νῖα, πεπληγ-νῖα, τετρηχ-νῖα (as Plpf. τετρήχ-ει), βεβρῖθ-νῖα, τετρῖγ-νῖα, πεφρῖκ-νῖα, κεκληγ-νῖα (Hes. Op. 449). Later forms, ἀρηρ-νῖα (Hes. Th. 608), τεθηλ-νῖα (Hom. H. xlviii. 4).

The form $\beta \epsilon \beta \hat{\omega} \sigma a$ (Od. 20. 14) is an anomaly, apparently formed from the Masc. $\beta \epsilon \beta \hat{\omega} s$ on the analogy of Participles in

-oús, -oû σa and - ϵls , - $\epsilon l\sigma a$.

4. The κ of the Indic. Act. (§ 22, 9) appears in τετυχη-κ-ώς (II. 17. 748), δεδαη-κ-ότες (Od. 2. 61), ἀδη-κ-ότες (II. 10. 98, 312, 399, 471., Od. 12. 281), and βεβρω-κ-ώς (II. 22. 94., Od. 22. 403). These instances are hardly sufficient to prove that the form is Homeric, since we might read τετυχηώς, δεδαηότες, &c. (like κεχαρηώς, κεκοτηώς, &c.) A form βεβρωώς is supported by Attic βεβρῶτες (Soph. Ant. 1022). τεθυη-κ-ώς (for

^{*} The form ¿oukula is found in-

καλή Κασσιέπεια θεοίς δέμας έσικυία

quoted by Athenaeus xiv. p. 632 as an instance of a line defective in quantity. It does not occur in the text of Homer, but seems to be a variant for Il. 8. 305—καλὴ Καστιάνειρα δέμας ἐῖκυῖα θεῆσιν.

the Homeric τεθνη-ώς) is not earlier than Theognis. Similarly γεγον-ώς for γεγαώς first appears in H. Merc. 17.

5. The form $\pi\epsilon\phi\nu\zeta$ -or ϵs flying (only in Il. 20 and 21), seems to be formed from the noun $\phi\dot{\nu}\zeta a$, without the intervention of any Tense-Stem. This account will apply also to—

κεκοπ-ώς (Il. 13. 60), from κόπ-os striking.

δεδουπ-ότος (II. 23. 679) having fallen with a thud. (The regular form would be δεδουπη-ώς, or rather perhaps έγδουπη-ώς, cp. $\dot{\epsilon}$ -γδούπη-σαν.)

άρη-μένος, in which the a of ἄρη is retained, against analogy.

It is in favour of this view that many Denominative Verbs form the Pf. Part. without the corresponding Indicative, as κεκοτη-ώς and the others given above (§ 22, 9). That is to say, the Participle is treated as a derivative Adjective, which may be formed independently of the corresponding verb.

27.] Thematic Perfects. By this term we understand the forms which arise when a Perfect is inflected like a Present in -ω. This change took place universally in Syracusan Doric, occasionally in other dialects. The chief Homeric instances are as follows:—

ἄνωγα: 3 Sing. ἀνώγει, which has a Present sense in several places (though more commonly it is a Plpf.), Dual ἀνώγε-του; also ἤνωγον, ἄνωγον, ἄνωγε, Opt. ἀνώγοιμι, Imper. ἀνωγέ-τω, ἀνώγε-τε. Such a form as ἤνωγον may be regarded either as a thematic Plpf. of ἄνωγα, or as Impf. of a new thematic Pres. ἀνώγω. This remark applies also to the next three cases.

γέγωνα: εγέγωνε, Inf. γεγωνέ-μεν (also γεγώνειν or γεγωνείν,

II. 12. 337). EYEYWYEUT

πεπληγώς (only in the Part.): ἐπέπληγον and πέπληγον, Inf. πεπληγέ-μεν, Mid. πεπλήγε-το. Similarly—

μεμηκώς (Part.): ἐμέμηκου. 1439

κεκληγώς: Plur. κεκλήγοντες (Il. 12. 125., 16. 430., 17. 756, 759), perhaps τετρίγοντες (§ 26, 1), and κεκόπων (v. l. for κεκοπώς,

Il. 13. 60., Od. 18. 335).

μέμνημαι: the Opt. μεμνέφτο (Il. 23. 361) is apparently obtained by transference of quantity from a thematic μεμνή-οιτο; but we may read μέμνητο, 3 Sing. of the regular Opt. μεμνή-μην (Il. 24. 745). For this, again, some MSS. have μεμνοίμην, as if from *μέμνο-μαι. The 2 Sing. Ind. μέμνη (Il. 15. 18) also points to μέμνομαι, but we may read μέμνη (i. e. μέμνηαι).

μέμβλε-ται (II. 19. 343) and μέμβλε-το (μέλ-ω) may be variously explained. Perhaps μεμελ-, the short Stem answering to μέμηλε, became by metathesis μεμλε-, μεμβλε-: cp. ημβροτον for ημαρτον.

όρωρε-ται (Od. 19. 377, 524, Subj. ὀρωρη-ται Il. 13. 271). ἐδήδε-ται (v. l. in Od. 22. 56, see § 25, 3). We may add the Pluperfects δείδιε feared, ἀνήνοθεν (Il. 11. 266), ἐπ-ενήνοθεν (Il. 2. 219., 10. 134): perhaps also the Optatives in -οιμι, -οις, &c. viz. β εβρώθ-οις (Il. 4. 35), β εβλήκοι (Il. 8. 270), πεφεύγοι (Il. 21. 609), ὶλήκοι (H. Apoll. 165); see § 83.

28.] Meaning of the Perfect. The Perfect denotes a lasting condition or attitude (ξξιs). If we compare the meaning of any Perfect with that of the corresponding Aorist or Present, we shall usually find that the Perfect denotes a permanent state, the Aor. or Pres. an action which brings about or constitutes that state. Thus, δαίω I kindle, δέδηε blazes, or (better) is ablaze; κύθε hid, κέκευθε has in hiding; ὅρ-νν-ται bestirs himself, ὅρωρε is astir; ἄλε-το was lost, ὅλωλε is undone; ἥραρε made to fit, ἄρηρε fits (Intrans.); ταράσσω I disturb, τετρήχει was in disorder; μείρο-μαι I divide, ἔμμορε has for his share; ῥύομαι I save, shelter, εἰρό-αται keep safe; τεύχω I make, τέ-τυκ-ται is by making (not has been made); ἔφυ grew, πέφυκε is by growth.

Thus the so-called Perfecta praesentia, βέβηκα, ἔστηκα, γέγηθα, μέμνημαι, πέποιθα, οΐδα, ἔοικα, κέκτημαι, &c., are merely the

commonest instances of the rule.

Note the large number of Homeric Perfects denoting attitude, temper, &c. Besides those already mentioned we have—παρμέμβλωκε is posted beside, δέδορκε is gazing, ἔρριγε shudders, τέτηκα I am wasting, μέμυκε is closed (of wounds), δεδάκρυσαι art in tears, δέδεξο be in waiting, ὀρωρέχατο were on the stretch, πεποτήσται are on the wing, κέκμηκα I am weary, προβέβουλα I prefer, δείδια I fear, ἔολπα I hope, τέθηπα I am in amazement, τέτληκα-s thou hast heart, πέπνῦται has his senses, δειδέχ-αται welcome (in the attitude of holding out the hand, while δεικνύ-μενοs denotes the action), together with many Participles—κεχηνώς agape, κεκαφηώς panting, πεπτηώς cowering, συν-οχωκότε bent together, κεκοτηώς in wrath, τετιηώς vexed, ἀδηκώς disgusted, μεμηλώς in thought, πεφυλαγμένος on the watch, δεδραγμένος clutching, λελιημένος eager, κεχολωμένος enraged, &c. So in later Greek; ἐξηνθηκός (Thue. 2. 49) in eruption, ἐσπουδασμένος in haste.

Verbs expressing sustained sounds, esp. cries of animals, are usually in the Perfect: γέγωνε shouts, βέβρυχε roars, κεκληγώς, λεληκώς, μεμηκώς, μεμνκώς, τετριγώς, ἀμφιαχυΐα. So in Attic,

βοών και κεκραγώς (Dem.).

With Verbs of striking the Perfect seems to express continuance, and so completeness: κεκοπώς, πεπληγώς, βεβολή-ατο was tossed about, βεβλήκει made his hit, ἠρήρειστο was driven home. (Cp. Ar. Av. 1350 δς αν πεπλήγη τὸν πατέρα νεοττὸς ων.)

Note the number of Imperatives of the Perfect in Homer: τέτλαθι, μέματε, δέδεξο, τέθναθι, δείδιθι, κέκλυθι, ἄνωχθι; Mid. τετύχθω let it be ordered, τετράφθω let him keep himself turned.

(In later Greek this use seems to be confined to the Middle: $\mu\dot{\eta}$

πεφόβησθε do not be in alarm, πέπαυσο keep silence.)

The number of Homeric Perfects which can be rendered by have is comparatively small. The chief instances in the Active are, copya-s thou hast done. $\delta\pi\omega\pi a$ I have seen, $\lambda\epsilon\lambda\omega\pi\epsilon$ has left, $\pi\epsilon\pi\alpha\sigma\theta\epsilon$ ye have suffered, $\epsilon\delta\eta\delta$ - ω s, $\beta\epsilon\beta\rho\omega\kappa$ - ω s having eaten; they are somewhat commoner in the Middle. Yet in the use of these Perfects (and probably in the Perfect of every period of Greek) we always find some continuing result implied. There is nothing in Greek like the Latin idiom fuit Ilium (= Ilium is no longer),

vixi (= I have done with living), &c.

The Intransitive meaning prevails in the Perfect, so that the Act. is hardly distinguishable from the Mid.: cp. τέτενχε and τέτνκται, πεφευγώς and πεφυγμένος. γέγονα and γεγένη-μαι. Compare also the Pf. Act. with the Pres. Mid. in such instances as ὅλωλα and ὅλλυμαι, πέποιθα and πείθομαι, βέβουλα and βούλομαι, ἔολπα and ἔλπομαι. The forms τέτροφα, ἔφθορα are Intrans. in Homer, but Trans. in Attic: and an Intrans. or almost Passive meaning is conspicuous in the Homeric group of Participles κεκοτηώς enraged, τετιηώς (=τετιη-μένος) vexed, κεκορηώς (=κεκορημένος) satiated, βεβαρηώς heavy, κεχαρηώς rejoicing, κεκαφηώς επαιτίης (§ 22, 9, b).

Thematic Tenses.

29.] The simple Thematic Present. The Stems which fall under this description generally contain the same vowels (or diphthongs) as the strong Stem of the Non-Thematic Present (§§ 6, 12). They may be classed according to the stem-vowel, as follows:—

(1) η, Ionic for ā: λήθ-ε-το forgot, τήκομαι I waste away, θήγει sharpens, σήπεται is rotted, κήδει vexes.

η: ἀρήγει helps, λήγει ceases, μήδεται devises. The η of these Stems is 'pan-Hellenic,' i. e. answers to η, not ā, in other dialects.

- (2) ει: εἴδ-ε-ται seems, εἶκε yield, λείβειν to pour, λείπει leaves, πείθω I persuade, στείβον trod, στείχειν to march, πείκετε comb, εἴβει drops, φείδεο spare, ἄειδε sing, ἄλειφε anointed, ἄμειβε exchanged, ἐρεικόμενος torn, ἔρειδε stayed, ἔρειπε knocked down, νειφέμεν to snow (so to be read instead of νῖφέμεν in II. 12. 280). For ἴκω I come the Doric form is εἴκω.
- (3) ευ: φεύγ-ω I fly, πεύθομαι I learn (by hearing), ἐρεύγεται belches, ἐρεύθων reddening, σπεύδειν to hasten, ψεύδονται play false, εὐόμενοι being singed, ἐσσεύοντο were urged on, νεῦον nodded, δεύομαι I need; also, with loss of u before the Thematic vowel, ἔν-νεον swam (νεF-ον), θέει runs, πλέων sailing, πνέει breathes, ρέει flows, χέει pours, κλέομαι I am famed.

The forms with ϵ_i for ϵ , as $\theta \epsilon i - \epsilon_i \nu$, $\pi \lambda \epsilon i \epsilon_i \nu$, $\pi \nu \epsilon i \omega \nu$, $\epsilon \gamma - \chi \epsilon i \eta$, (for $\theta \epsilon - \epsilon_i \nu$, &c.) should probably be written with $\epsilon_i \nu$, $\theta \epsilon \nu - \epsilon_i \nu$, $\pi \lambda \epsilon \nu - \epsilon_i \nu$, &c. See Appendix C.

(4) $\epsilon \rho$ ($\rho \epsilon$): δέρκ-ο-μαι I behold, τέρπειν to rejoice, πέρθετο was sacked, έξργει confines, τέρσεται is dried, ξρπει creeps, σπέρχουσι urge, ξρρων sweeping, δέρον flayed, θέρεσθαι to be warmed, βέπε sank downwards, ξπρεπε shone, τρέπε turned, τρέφει nurtures, στρέφει twists.

ελ: $\tilde{\epsilon}\lambda\pi$ -ο-μαι I hope, μέλπεσθαι to play, $\tilde{\epsilon}\lambda$ κει draws, αμελγε milked, κέλομαι I command, πέλει turns, $\tilde{\epsilon}\theta\tilde{\epsilon}\lambda\omega$ I am willing.

ρῖ from $\epsilon \rho$ appears in $\tau \rho \bar{\imath} \beta$ - $\epsilon \mu \epsilon \nu a \iota$ to rub (Lat. ter-o), $\chi \rho \hat{\imath} - o \nu$ anointed (Sanser. gharsh-ati), $\beta \rho \hat{\imath} \theta o \nu$ were heavy.

τρ (ρτ, ρτ) for g appears in certain combinations: κίρ-νημ (§ 17), κρίνω, κρι-τόs (cerno, certus), ρίζα for Fρδ-ια, δρί-ον for δρΓ-ον (δρῦ-s): κριδόs (Lat. cervus), κριθή for κρσ-θη, hordeum, O. Germ. gersta (Meyer, G. G. p. 35: Thurneysen, K. Z. xxx. 352).

(5) εν: πέν-ε-σθαι to labour, στένει groans, μένω I wait, φθέγγεο call out, ἐλέγχει reproves, σπένδων making libation.

εμ: πέμπω I send, ἐπι-μέμφομαι I blame, τέμει (Il. 13. 707) cuts, δέμου built, βρέμει roars, νέμει apportions, ἔ-τρεμε trembled.

(6) ϵ : λέγ- ϵ told, ἔχ- ω I have, ἔδει eats, ἔπεται follows, πέτεται flies, δέχομαι I receive, ἔνν- ϵ πε say, ἔ- σ τεφε set as a covering; with loss of σ , τρε $\hat{\epsilon}$ (τρέει, for τρε σ - ϵ ι, cp. ἄ-τρε σ -τοs) trembles, ζε $\hat{\epsilon}$ (ζέει) boils, νέομαι (cp. νό σ -τοs) I return.

The Thematic forms of εἰμί, viz. ἔου, Opt. ἔοι, Part. ἐών, belong to this head, since ἐσ- is the strong stem. So too κέονται

(for κει-ονται), 3 Plur. of κει-μαι.

ω (instead of η) appears in $\tau \rho \omega \gamma - \epsilon \iota \nu to gnaw$ ($\tau \rho \alpha \gamma - \gamma$), διώκειν to chase. Both forms appear to be derivative (with suffixed γ , κ , § 45): $\tau \rho \omega - \gamma \omega$ may be connected with $\tau o \rho - \epsilon \hat{\iota} \nu$ (§ 31, 4). διώ-κω is related to δίε-μαι (§ 11): it has been supposed to be a Thematic Perfect, with loss of reduplication (i.e. from *δε-δίω-κα).

ῦ appears in τρύχ-ουσι waste away, ἀνα-ψύχ-ειν to cool, ἐρύκ-ει

restrains. These also are derivative (§ 45).

o appears in λόε washed (Od. 10. 361, H. Apoll. 120), Inf. λοῦσθαι (Od. 6. 216). λο- is for λοΓ-, cp. Lat. lav-ere. A Pres. *λούω is inferred from the form λούεσθαι (Il. 6. 508 = 15. 265), for which we may read λοέεσθαι (from the derivative Pres. λοέω).

30.] Thematic Present with weak Stem. Of this formation there are a few instances: $\check{a}\gamma$ - ω I drive, bring (Aor. $\check{\eta}\gamma$ - $\check{a}\gamma ov$), $\check{a}\chi o\mu a\iota$ I am vexed (Aor. $\check{\eta}\kappa$ - $\check{a}\chi\epsilon$), $\mu \acute{a}\chi ov \tau a\iota$ fight, $\beta \lambda \acute{a}\beta \epsilon \tau a\iota$ fails, breaks down, $\beta \acute{o}\lambda \epsilon \tau a\iota$ wishes, $\check{o}\rho ov \tau a\iota$ watch, $\check{o}\theta o\mu a\iota$ I care, $\check{a}t\epsilon\iota s$, dost hear, $\check{a}\pi o$ - $\delta \rho \acute{v}\phi o\iota$ (Opt.) tear off, $\check{a}\rho \chi \epsilon\iota$ leads, $\check{a}\gamma \chi \epsilon$ choked; also the Thematic forms of $\epsilon \check{\iota}\mu\iota$, viz. Impf. $\check{\eta}$ -Imple

Note that $\gamma\rho\dot{a}\phi\omega$ is not found in Homer except in the Aor. $\xi\gamma\rho a\psi a$.

The forms $\beta \delta \lambda \epsilon \tau a$ (II. 11. 319), $\epsilon \beta \delta \lambda o v \tau a$ (Od. 1. 234), $\beta \delta \lambda \epsilon \sigma \theta \epsilon$ (Od. 16. 387) were restored by Wolf: see Buttmann's Lexil. s. v.

The form βλάβεται (II. 19. 82, 166, Od. 13. 34) occurs in gnomic passages

only, where an Aorist would be equally in place (§ 78, 2).

ὅρονται (Od. 14. 104), ὅροντα (Od. 3. 471) occur in the phrase ἐπὶ δ' ἀνέρες ἐσθλοὶ ὅρονται, where ἐπὶ ὅρονται seems to be = 'act as ἐπίουροι,' 'are in charge.'

dtω only occurs as a Pres, in the phrase οὐκ ἀτεις; = have you not heard?

Elsewhere alor is used as an Aorist (Schulze, K. Z. xxix. 249).

A Pres. δρύφω cannot be inferred with certainty from the Opt. ἀποδρύφοι

(Il. 23. 187., 24. 21), which may be an Aorist.

The forms $\Tilde{\alpha} \rho \chi \omega$, $\Tilde{\alpha} \gamma \chi \omega$ are difficult because original $\Tilde{\alpha} \rho \chi$, $\Tilde{\alpha} \gamma \chi$ -would shorten the vowel (before a semi-vowel and mute), and consequently the Stem would be indistinguishable from original $\Tilde{\alpha} \rho \chi$. That in $\Tilde{\alpha} \rho \chi \omega$ the Stem is weak may be inferred from the Nouns $\Tilde{\alpha} \rho \chi \omega$, $\Tilde{\alpha} \rho \chi \omega$ (\$109): the O-form may be found in $\Tilde{\alpha} \rho \chi \omega \rho$, the strong form possibly in $\Tilde{\alpha} \rho \chi \omega \rho \omega$. Again $\Tilde{\alpha} \gamma \chi \omega \omega$ may be identified with Sanscr. $\Tilde{\alpha} \rho \chi \omega \omega$ (for $\Tilde{\alpha} \rho \chi \omega \omega$): the strong form being $\Tilde{\alpha} \gamma \chi \omega \omega$ (De Saussure, $\Tilde{\omega} \rho \omega \omega$).

31.] The Thematic Aorist. The Verb-Stem is in the weak

form: we may distinguish the following groups:-

(1) With ă as Stem vowel (the strong Stem with ā or η): λάθε was unseen by, λάκε crackled, ἔλ-λαβε took, εὕαδε (for ἔ-σΓάδε) pleased, μακών bellowing, φάγον ate, δι-έ-τμαγον (τμήγω) parted, ἀν-έ-κραγον cried aloud (Attic Pf. κέκρᾶγα), ἄρετο gained, ἄληται (Subj.) shall leap, ἔ-χρᾶε ἀssailed (χρᾶν-), δάηται (Subj.) shall be burned (δᾶν-), φάε shone (φᾶν-, cp. πιφαύσκω), λάε seized, pinned (λᾶν-, cp. ἀπο-λαύω), ἄλθετο was healed, ἢλφον (Opt. ἄλφοι) earned, ἤντετο met (Part. ἀντ-όμενος).

The forms φάε (Od. 14. 502) and λάε, Part. λάων (Od. 19. 229, 230) are placed here provisionally. Each occurs once, in a context which does not decide between Aor. and Impf.

The existence of an Aor. $\tilde{\epsilon}$ -fax-ov has been made probable by W. Schulze (K.Z. xxix. 230). He shows that the form $\tilde{\iota}$ axov, generally taken as the Impf. of $\tilde{\iota}$ axov (§ 35), is an Aor. in meaning, and constantly occurs after elision $(\mu \epsilon' \gamma' \tilde{\iota}^a \chi ov, \epsilon' \pi l \tilde{\iota}^a \tilde{\iota}^a \chi ov, \epsilon' \pi l \tilde{\iota}^a \tilde{\iota}^a \chi ov, \epsilon' \pi l \tilde{\iota}^a \tilde{\iota}^a \chi ov)$. Consequently we can always read $f\tilde{\iota}$ axov $(\mu \epsilon' \gamma a f\tilde{\iota}^a \chi ov, \epsilon' \pi l \tilde{\iota}^a \tilde{\iota}^a \chi ov, \epsilon' \pi l \tilde{\iota}^a \tilde{\iota}^a \chi ov)$, or with augment $\tilde{\iota}^a \alpha \chi ov$ (cp. $\tilde{\iota}^a \sigma \delta \epsilon$ or $\tilde{\epsilon}$ - $f \sigma \delta \epsilon$). In Il. 20. 62 $\kappa \alpha l \tilde{\iota}^a \chi \epsilon$ would be read $\kappa \alpha l \tilde{\iota}^a \sigma \chi \epsilon$. The alternative is to suppose that $\tilde{\epsilon}$ - $f l f \sigma \chi ov$ became $\tilde{\epsilon}^a \iota \chi ov$ by loss of f and contraction (Wackernagel, K.Z. xxv. 279): but contraction in such a case is very rare in Homer, and the Aor. meaning of $\tilde{\iota}^a \iota \chi ov$ has to be accounted for. On the other hand if we accept Schulze's view we have still to admit a Pres. (or Aor.?) Participle $l \tilde{\iota} \chi \omega v$ ($f \iota f \tilde{\iota} \chi \omega v$).

(2) With ε (strong η): ἔθων doing as he is wont (cp. ἦθ-os for σΓηθ-os), perhaps μέδ-οντο bethought them (μήδ-ομαι).

The forms $\mu \epsilon \delta o v \tau o$, &c. are generally referred to a Verb $\mu \epsilon \delta o - \mu a \iota$: but no such Present is found, and the other Moods—Subj. Opt. Imper. and Inf.—always admit the Aor. meaning. As to $\epsilon \theta \omega v$ see § 243, I. If an Aor. it should be accented $\epsilon \delta \omega v$.

(3) With \mathbf{i} (strong $\mathbf{\epsilon}\mathbf{i}$): $\mathbf{\hat{\epsilon}}$ -στίχ-ον (στείχω) marched, $\mathbf{\hat{\epsilon}}$ -πίθοντο obeyed, \mathbf{i} κέσθαι to come to, λιτέσθαι to entreat, ἤριπε ($\mathbf{\hat{\epsilon}}$ ρείπω) fell down, ἤρικε ($\mathbf{\hat{\epsilon}}$ ρείκω) was torn, ἤλιτεν offended (Mid. ἀλιτέσθαι), ἄιον heard, δίε feared ($\mathbf{\delta}$ Γι-), δίον ran, $\mathbf{\hat{\epsilon}}$ -κιον moved, $\mathbf{\hat{\epsilon}}$ -πιον drank, ὅλισθε slipped, κρίκε cracked.

With αι, αιθόμενον burning, αίδετο felt shame (§ 32, 2);

έχραισμε availed (§ 32, 3). Ξα

δίον I ran (II. 22. 251) is not to be connected with δίε feared, but with Δίεν-δίε-σαν, δίε-νται chase, of which we have the Thematic Subj. δίωμαι, Opt. δίοιτο, Inf. δίεσθαι. That they are Aorists appears (e.g.) from Il. 16. 246 ἐπεί κε δίηται when he shall have chased.

ἔκιον is probably an Aor., since *κίω does not occur. The accentuation of the Part. κιών is in favour of this, but not decisively (cp. ἐών, ἰών).

(4) With $\check{\mathbf{v}}$ (strong $\boldsymbol{\epsilon v}$): $\kappa \acute{v}\theta \epsilon$ hid, $\phi \acute{v}\gamma o v$ fled, $\tau \acute{v}\chi \epsilon$ hit upon, $\pi v \theta \acute{o}\mu \eta v$ I heard tell, $\check{\epsilon}\sigma \tau v \gamma o v$ felt disgust, $\check{\epsilon}\kappa \tau v \pi \epsilon$ sounded, $\check{\eta}\rho v \gamma \epsilon$ bellowed, $\check{\eta}\lambda v \theta o v$ I came, $\check{\epsilon}\kappa \lambda v o v$ heard, $\check{a}\mu - \pi v v \epsilon$ recovered breath.

With au, ave shouted, avη (Subj.) kindle, έπ-auρείν to gain from,

enjoy. With Eu, Eupe found.

ἔκλυον is clearly an Aor. in Homer. The Pres. κλύω, which occurs in Hesiod (Op. 726 οὐ γὰρ τοί γε κλύουσιν) and in Attic poets, is perhaps only a mistaken imitation of the Homeric style.

(5) With ἄρ, ρἄ, ρ (strong ερ, ρε): ἐ-πράθ-ο-μεν (πέρθ-ω) we sacked, κατ-έδραθον went to sleep, ἔ-δρακον (δέρκομαι) looked, ἔδραμον (δρόμος) ran, ἔ-τραπον turned, ἔτραφε (τρέφω) was nurtured, ταρπώμεθα (τέρπω) let us take our pleasure, ἔβραχε rattled, ἄμαρτε (also ἤμβροτε) missed, ἔπταρε sneezed, ἔγρ-ετο (ἐγερ-) was roused, ἀγρόμενοι (ἀγερ-) assembled (§ 33).

With $\check{\alpha}\lambda$, λ (strong $\epsilon\lambda$): $\check{\epsilon}$ - $\beta\alpha\lambda$ -ov ($\beta\acute{\epsilon}\lambda$ -os), $\check{\epsilon}$ - $\pi\lambda$ - $\epsilon\nu$, $\check{\epsilon}\pi\lambda\epsilon\tau$ o

turned, came to be (§ 33).

With op, oλ: έ-πορ-ον furnished, έθορε leaped, έτορε pierced, ώρετο was stirred up, έκ-μολ-ε came out, δλέσθαι to perish.

The ε of the strong Stem appears in είλον, έλ-ον took, ερ-έσθαι

to ask (ep. § 22, 6).

It will be seen that $\check{\alpha}\rho$, $\rho\check{\alpha}$, $\check{\alpha}\lambda$ are generally placed between consonants, where ρ , λ would be unpronounceable. The only exceptions are, $\check{\epsilon}\pi\tau\alpha\rho\sigma\nu$ and $\check{\epsilon}\beta\alpha\lambda\sigma\nu$. On the other hand $o\rho$, $o\lambda$ only appear before a vowel.

(6) With ă (strong εν, εμ): ἔ-παθ-ον (πένθ-ος) suffered, μάθ-ον learned, ἔλαχον obtained as share, ἔχαδε (Fut. χείσομαι) contained, δακέειν to bite, δάηται shall learn (δάσ-, strong form *δενσ-, cp. δέδαεν, § 36, 5).

αν, αμ (before a vowel): ϵ-κταν-ον killed, ϵθανϵ died, ϵ-καμ-ον wearied, τάμϵ cut (cp. ϵ-δάμ-η, § 42).

εν appears in γεν-έσθαι to become.

(7) With loss of ϵ : $\check{\epsilon}$ - $\sigma\chi$ -ov held $(\check{\epsilon}\chi$ - ω for $\sigma\check{\epsilon}\chi$ - ω), $\check{\epsilon}\sigma\pi\check{\epsilon}\tau$ followed, Inf. $\check{\epsilon}\pi\iota$ - $\sigma\pi\check{\epsilon}\sigma\theta$ aι $(\check{\epsilon}\pi$ o μ aι for $\sigma\epsilon\pi$ - $o\mu$ aι), $\check{\epsilon}\pi\iota$ - $\pi\tau\check{\epsilon}\sigma\theta$ aι $(\pi\epsilon\tau$ -) to fly over, $\check{\epsilon}\zeta\epsilon\tau$ 0 sat (for $\check{\epsilon}$ - $\sigma\delta$ - $\epsilon\tau\tau$ 0, Ahrens, Gr. F. § 9.5).

The ϵ is retained in $\tilde{\epsilon}$ - $\tau\epsilon\kappa$ -ov brought forth, $\tilde{\alpha}\pi$ - $\epsilon\chi\theta$ - $\epsilon\sigma\theta\alpha\iota$ to incur hatred, $\tilde{\epsilon}\sigma\chi\epsilon\theta$ ov held (?). In these cases loss of ϵ is phonetically

impossible.

ἀπ-ἡχθε-το is an Aor. in Homer (the Pres. being ἀπ-εχθάνο-μαι), although a Present ἔχθο-μαι is found in Attic. The simple ἥχθετο (Od. 14. 366, ἔχθεσθαι Od. 4. 756, ἐχθόμενος Od. 4. 502) is called Impf. by Veitch; but the meaning in the three places seems to be the same as in ἀπ-ἡχθετο—not was hateful, but came to be hated.

The only ground for taking $\xi \sigma \chi \epsilon \theta \sigma v$ to be an Aor. is the Inf. $\sigma \chi \epsilon \theta \epsilon \epsilon v$ (II. 23. 466, Od. 5. 320). Possibly this may be a Pres. Inf. in $-\epsilon v$ (§ 85, 2), preserved owing to the impossibility of $\sigma \chi \epsilon \theta \epsilon v$ in the hexameter.

32. The foregoing list calls for some further remarks.

7. Comparing the Second Aorists of later Greek, we are struck by the number of instances in Homer in which the Thematic ϵ or o follows another yowel.

In ἔχραε, φάε, λάε, δάηται (for ἔ-χραῖ-ε, φά \overline{r} -ε, λά \overline{r} -ε, δά \overline{r} -ηται) the hiatus is due to the loss of \overline{r} . So in λόε (for λό \overline{r} ε). Simi-

larly σ is lost in δάηται (δασ-) shall learn.

In several cases the Thematic inflexion is found intermingled with Non-thematic forms. Thus we have $\tilde{\epsilon}\kappa\lambda\nu\nu\nu$, Imper. $\kappa\lambda\hat{\nu}\theta\iota$; $\tilde{\epsilon}\mu-\pi\nu\nu\epsilon$, Mid. $\tilde{\epsilon}\mu-\pi\nu\bar{\nu}-\tau\sigma$; $\tilde{\epsilon}\pi\iota\nu\nu$, Imper. $\pi\hat{\iota}\theta\iota$ (Ar. Vesp. 1489); $\delta\iota\nu$ I ran, $\dot{\epsilon}\nu-\delta\iota\epsilon-\sigma\alpha\nu$ chased ($\delta\iota\eta-\mu\iota$). The presumption is that the Non-thematic forms are older, the others being derived from them as $\check{\epsilon}\nu$ I was and $\check{\eta}\iota\nu$ I went from corresponding parts of $\epsilon\iota\mu\iota$, $\epsilon\iota\mu\iota$ (cp. § 18). Similarly we may account for $\check{\epsilon}\kappa\iota\nu\nu$ ($\kappa\iota$ - in Pres. $\kappa\iota$ - $\nu\nu\mu\alpha\iota$), and perhaps $\delta\iota\epsilon$ feared, $\check{\alpha}\iota\nu\nu$ heard.

- 2. Another characteristic group is formed by the Aorist Stems in which we find initial α either entering into a diphthong (al-, $a\hat{v}$ -) or followed by a double consonant: viz. $al\theta$ -, $al\delta$ -, $al\delta$ -, $a\hat{v}$ (in $a\hat{v}_{\ell}$), $a\hat{v}$ (in $a\hat{v}_{\ell}$), $a\hat{v}_{\ell}$ -, $a\hat{v}_{\ell}$ -, $a\hat{v}_{\ell}$ -, $a\hat{v}_{\ell}$ -, $a\hat{v}_{\ell}$ -. Some of these which are usually counted as Present Stems require separate notice:—
- alθ- occurs in Homer only in the Part. alθόμενος burning: as to the adjectival use of Participles see § 244. The Stem is found in the Sanser. idh-ati burns.

aίδ- occurs in the Indic. αἴδετο, Imper. αἴδεο, Part. αἰδόμενος; the corresponding Pres. is always αἰδέομαι.

aue shouted may always be an Aor. (Il. 11. 461., 13. 477., 20.

48, 51). We may identify this ad- with u in Sanser. u-noti calls.

The à- is a distinct syllable in the Aor. ἄῦ-σε, cp. ἀῦτή.

αὖη (Od. 5. 490, v. l. αὖοι) makes good sense as an Aor., expressing the act of kindling. The Stem is weak (αὖσ-=Sanser. ush- in ush-ás, Æol. αὖως); the strong form appears in ϵ ὖ-ω, Lat. uro.

 $\epsilon \pi$ -avp $\epsilon \hat{\imath} \nu$ exhibits the Thematic form answering to $a\pi$ - $\eta \nu \rho a$, $a\pi \sigma$ - $\nu \rho ds$ (§ 13). Wead is miningue:

αλθ-ετο, found only in Il. 5. 417, is clearly an Aor. αλφ- occurs in ηλφον, Opt. αλφοι, with Aor. meaning.

ἀντ- in ἤντετο, συν-αντέσθην, Inf. ἄντεσθαι, Part. ἀντόμενος, always with clear Aor. meaning. Accordingly ἄντεσθαι in Il. 15. 698 (the only place where it occurs) was accented by Tyrannio ἀντέσθαι.

The ἀ- of αἰθ-, αὐσ-, &c. is discussed by De Saussure along with that of ἀρχ-, ἀγχ- in a passage quoted above (§ 30 note). He regards it as 'prothetic,' so that the Stems in which it appears are generally in the weak form. The -ὕ- of αὐ- may answer to either $F\epsilon$ or ϵ υ in the strong form; thus αὐδ-ή: ἀ $F\epsilon$ ίδ-ω = αὕEίς-ω (Sanser. vaksh-) = αὐχ-ή: ϵὕχ-ομαι, perhaps ἐπ-αυρεῖν: ϵὑρ-εῖν. A similar ἀ- appears in ἀ-μείβω, ἀ-μέλγω, ἀείρω; perhaps in ἀ-λιτέσθαι, ἀ-μαρτεῖν (but in these it may be originally significant, infra, 3).

In ἀλθ-, ἀλφ-, ἀντ- the form is weak (perhaps $d\lambda\theta$ - is to a strong ἀλεθ- as ἄλγ-os: ἀλέγ-ω or ἀλκ-ή: ἀλεκ- in ἀλέξω), or else the strong and weak forms

coincided (as in apx-, ayx-, § 30).

It appears then that in the Tenses with which we are dealing the strong Stem has generally disappeared, and the Present has been derived afresh from the weak Stem, by means of one of the various Suffixes. Thus we have alδ-, Pres. alδ-έομαι; αὖε, Pres. ἀῦτέω; αὖρ-, Pres. ἐπ-αυρ-ίσκω; ἀντ-, Pres. ἀντιάω, ἀντιάζω. The process has been the same in ἀλιτ-έσθαι and Pres. ἀλιτ-αίνω, άμαρτ-εῖν and ἀμαρτ-άνω, εὐρ-εῖν and εὐρ-ίσκω, ἐχθέσθαι and ἀπ-εχθ-άνομαι, ὅλισθε and ὀλισθ-άνω, also in Attic αἰσθ-έσθαι and αἰσθ-άνομαι. The last is interesting as the only post-Homeric Second Aorist which is used in good Attic prose.

3. A few Thematic Aorists seem to be formed from the Stems of Nouns of the O-declension. Thus $\xi\chi\rho a\iota\sigma\mu\epsilon$ availed is generally derived from $\chi\rho\eta\sigma\iota\mu$ os useful (Curt. Verb. ii. 13). So, according to Curtius, $\theta\epsilon\rho\mu\epsilon$ - $\tau\epsilon$ warm ye, $\theta\epsilon\rho\mu\epsilon$ - τ 0 grew warm, from $\theta\epsilon\rho\mu$ 0s; $\tilde{\sigma}\pi\lambda\epsilon$ - $\sigma\theta$ aι (Il. 19. 172., 23. 159) to get ready, from $\tilde{\sigma}\pi\lambda$ 0v ($\tilde{\sigma}\pi\lambda\epsilon$ - $\tilde{\omega}$); γ 0ov (Il. 6. 500) bewailed, from γ 0os (γ 0- $\tilde{\omega}$ 0); $\tilde{\sigma}\mu$ 0 miss, from $\tilde{\sigma}$ - τ 0- without part in.

Some at least of these instances may be otherwise explained. For $\delta \pi \lambda \epsilon \sigma \theta a \omega$ we may read $\delta \pi \lambda \epsilon \hat{\imath} \sigma \theta a \omega$ (the uncontracted $\delta \pi \lambda \hat{\imath} \epsilon \epsilon \sigma \theta a \omega$ is impossible in the hexameter). $\gamma \delta \sigma v = 1$, $\delta \delta \sigma$

33.] In several cases it is difficult to say whether loss of ϵ is characteristic of an Aor. Stem, or is merely phonetic, due to

'syncope.' Thus we have ἀγέροντο, Part. ἀγρόμενοι: ἄφελον anglit and the Attic ὧφλον aveil: πέλω and the syncopated forms έπλεν, ἔπλετο, Part. ἐπιπλόμενος, &c. (not ἔπελεν, ἐπέλετο, &c. in Homer).

άγέροντο were assembled, Inf. ἀγέρεσθαι (so accented in MSS.) imply a Pres. ἀγέρω; but the Part. ἀγρ-όμενοι seems to be an Aor. The ϵ is only lost in the Part., whereas in the undoubted Aor. ἔγρ- ϵ το the form ἐγερ- never occurs (Opt. ἔγροιτο, Inf. ἔγρεσθαι). In Il. 7. 434., 24. 789 ἀμφὶ πυρὴν . . . ἔγρετο λαός Cobet Misc. (rit. p. 415) proposed to read ἥγρετο, from ἀγερ-. The emendation gives a good sense, but is not absolutely necessary.

ἄφελον ought (=ucould that bears a different sense from the Aor. &φλον, but is indistinguishable from the Impf. ἄφελλον (Od. 8, 312 τὰ μὴ γείνασθαι ὅφελλον, so Il. 7. 390., 24. 764, Od. 14. 68., 18. 401). Hence ἄφελον is probably an older form of the Imperfect which has survived in this particular use.

ἔπλεν, ἔπλε-το, &c. must be Aorists, since-

- (1) ἔπλετο occurs in the 'gnomic' use, e.g.—
- Il. 2. 480 ἡύτε βοῦς ἀγέληφι μέγ' ἔξοχος ἔπλετο πάντων and so in Il. 24. 94, Od. 7. 217. This use is not found with the Impf.
- (2) ἔπλετο with the meaning of a Present can only be explained as an Aor. = the English Pf., has turned out, has come to be, (and so is): see § 78, and cp. II. 12. 271 νῦν ἔπλετο ἔργον ἀπάντων now it has become: with another Aor, similarly used, II. 15. 227 πολὺ κέρδιον ἔπλετο, ὅτι ὑπόειξεν it is better that he has yielded: also II. 6. 434., 7. 31., 8. 552., 14. 337., 19. 57, Od. 20. 304, &c.

34.] Comparison of the Thematic 'Strong' Aorists found in Homer with those of other periods of Greek brings out strikingly the relation between the Homeric and the later dialect.

It may be assumed that the Strong Aorists, like the Strong Preterites in English, were a diminishing class, never added to (except by learned imitators of the Epic style), and gradually superseded by the more convenient forms in -σα. Hence the comparative frequency of these Aorists in an author indicates either an early date or (at least) the use of an archaic style.

Curtius enumerates altogether 117 Strong Aorists, of which 84 are found in Homer. Of these 84, again, about 30 occur also in prose, while as many more are used in the later poetical style (ξλακον, ξκιον, ξκλνον, μολεῖν, πορεῖν, &c.). Of the non-Homeric examples only one, viz. $ai\sigma\theta i\sigma\theta a\iota$, belongs to the language of prose; about 15 are found in good early poetry (e.g. δικεῖν, θιγεῖν, κανεῖν, βλαστεῖν, in Attic dramatists'; most of the others are evidently figments of learned poets, imitated from actual Homeric forms, e.g. ἔδαεν (from Homeric δέδαεν), ξμμορον (from μόρος and the Homeric Pf. ξμμορος), ξδουπε.

These facts seem to show both the high antiquity of the Homeric language and the position which it held as the chief though not the only source of the poetical vocabulary of historical times. 35.] The Reduplicated Thematic Present. This formation appears in a few instances only:—

 $\mu\ell-\mu\nu-\epsilon au\epsilon$ await $(\mu\epsilon\nu-\omega)$.

πίπτε fell (πετ-).

ἴσχει holds, for *σι-σχ-ει, from *σεχ-.

ίζει sits, for $*\sigma\iota$ - $\sigma\delta$ - $\epsilon\iota$, from $\sigma\epsilon\delta$ -.

γίγνεται becomes (γεν-).

τίκτω, for τι-τκ-ω, from τεκ-.

νίσομαι I go, pass, for νι-νσ-ομαι, or νι-νσ-ιο-μαι, from νεσ-: related to νέομαι (\S 29, \S) as ἴσχω to ἔχω.

δίζε sought (Thematic form answering to δίζη-μαι, § 16).

laú- $\epsilon\iota s$ sleepest (Aor. å $\epsilon\sigma a$, for å $f\epsilon$ - σa , I slept, op. $a\check{v}\xi\omega$ and $a\check{\epsilon}\xi\omega$). In this group of Verbs the Root is in the weak form; the vowel of the reduplication is always ι .

ἰάχω (for $F\iota$ -Fάχω) is generally placed in this class. The Pres. Indic. does not occur, and the past Tense ἴαχον is an Aor. in Il. 5. 860., 14. 148., 18. 219 ὅτε τ' ἴαχε σάλπιγξ (§ 79), and may always be so in Homer. As to its original form see § 31, 1, note. Thus the evidence for ἰάχω is reduced to the Part. ἰάχων, and that is not used in a way that is decisive between the Pres. and the Aor.

36.] The Reduplicated Aorist. These Tenses are formed with the weak Stem, and either (1) reduplication of an initial consonant with ϵ , or (2) Attic Reduplication. The following are the chief examples:—

(1) $\ddot{\mathbf{a}}$: $\dot{\boldsymbol{\epsilon}} \kappa - \lambda \dot{\boldsymbol{\epsilon}} \lambda a \theta - o v$ made to forget, $\lambda \dot{\boldsymbol{\epsilon}} \lambda a \beta \dot{\boldsymbol{\epsilon}} \sigma \theta a to seize$, $\kappa \dot{\boldsymbol{\epsilon}} \kappa a \delta \dot{\boldsymbol{\omega}} v$ severing, $\kappa \dot{\boldsymbol{\epsilon}} \kappa \dot{\boldsymbol{\epsilon}} \delta o v \tau o$ gielded, $\kappa \dot{\boldsymbol{\epsilon}} \chi \dot{\boldsymbol{\epsilon}} \rho o v \tau o$ rejoiced, $\dot{\boldsymbol{a}} \mu - \pi \dot{\boldsymbol{\epsilon}} \pi a \dot{\boldsymbol{\omega}} v$ brandishing on high, $\tau \dot{\boldsymbol{\epsilon}} \tau a \dot{\boldsymbol{\omega}} v$ grasping, $\ddot{\eta} \gamma - a \gamma - o v$ led, $\dot{\boldsymbol{\epsilon}} \dot{\boldsymbol{\epsilon}} - \dot{\eta} \pi a \dot{\boldsymbol{\omega}} \dot{\boldsymbol{\epsilon}}$ deceived, $\ddot{\eta} \rho a \rho \dot{\boldsymbol{\epsilon}}$ fitted, $\ddot{\eta} \kappa a \chi \dot{\boldsymbol{\epsilon}}$ vexed.

(2) ι: πεπίθ-οιμεν may persuade, πεφιδέσθαι to spare.

(3) $\ddot{\mathbf{v}}$: τετύκ-οντο made for themselves, πεπύθοιτο may hear by report, κεκύθωσι shall hide.

(4) ἄρ (ρἄ), ἄλ, λ: τετάρπ-ετο was pleased, πέφραδε showed forth, ἄλ-αλκε warded off, ἐ-κέ-κλ-ετο shouted (κελ-).

(5) α, ν (for εν): λελάχ-ητε (Subj.) make to share, δέδαεν taught
 (cp. § 31, 5); ἔ-πε-φν-ε slew (cp. πέ-φα-ται is slain).

(6) Loss of ε: ἔ-τε-τμε found, caught (τεμ-?); ἔειπον said (per-haps for ἐ-Fε-Fεπ-ον)*; also ἔσπετο followed, if it is taken to be for σέσπε-το.

^{*} The difficulty in the way of this explanation is that in the old Attic inscriptions which distinguish the original diphthong & (written EI) from the sound arising from contraction or 'compensatory' lengthening (written E), the word & ne is always written with EI (Cauer in Curt. Stud. viii. 257). In Sanser, the corresponding form is avocam, for a-va-vac-am (văc becoming uc). Answering to this we expect in Greek & vuor (Vogrinz, Gr. d. hom. Dial. p. 123).

The forms which point to * $\sigma\epsilon$ - σ $\pi\epsilon$ - τ 0, viz. $\xi\sigma\pi\omega\nu\tau\alpha\iota$ (Od. 12. 349), $\xi\sigma\pi\delta\iota\mu\eta\nu$ (Od. 19. 579., 21. 77), $\xi\sigma\pi\delta\sigma\theta\omega$ (Il. 12. 350, 363), $\xi\sigma\pi\delta\iota\mu\epsilon\nu\sigma$ (Il. 10. 246., 12. 395., 13. 570), can be easily altered (e.g. by writing $\tilde{a}\mu\alpha$ $\sigma\pi\delta\iota\mu\eta\nu$ for $\tilde{a}\mu$ $\tilde{\epsilon}\sigma\pi\delta\iota\mu\eta\nu$). We always have $\xi\pi\iota$ - $\sigma\pi\delta\sigma\theta\alpha\iota$, $\xi\pi\iota$ - $\sigma\pi\delta\iota\mu\epsilon\nu\sigma$ s, $\mu\epsilon\tau\alpha\sigma\pi\delta\iota\mu\epsilon\nu\sigma$ s (never $\xi\phi$ - $\epsilon\sigma\pi\delta\iota\mu\epsilon\nu\sigma$ s, &c.); i, e, $\xi\sigma\pi$ - only creeps in when a preceding final vowel can be elided without further change.

(7) A peculiar Reduplication is found in ηρύκακε (Pres. ἐρύκ-ω)

checked, and ηνίπαπε (ἐνιπή) rebuked.

These Aorists are exclusively Homeric, except $\tilde{\eta}\gamma\alpha\gamma\sigma\nu$ and $\tilde{\epsilon}\epsilon\iota\pi\sigma\nu$ (Attic $\epsilon\tilde{\iota}\pi\sigma\nu$). They are mostly Transitive or Causative in meaning; compare $\tilde{\epsilon}-\lambda\alpha\chi\sigma-\nu$ I got for my share, with $\lambda\epsilon\lambda\alpha\chi\sigma-\nu$ I made to share; $\tilde{\alpha}\rho\eta\rho\epsilon$ is fitting, with $\tilde{\eta}\rho\alpha\rho\epsilon$ made to fit, &c. In Table 187

The Inf. $\delta\epsilon\delta\dot{a}a$ - $\sigma\theta\alpha$ (Od. 16. 316) is not to be connected with the Perf. Part. $\delta\epsilon\delta a$ - $\dot{\omega}s$, but is for $\delta\epsilon\delta\dot{a}\dot{\epsilon}\sigma\theta\alpha$, Inf. Mid. of the Reduplicated Aorist $\delta\dot{\epsilon}\delta a\dot{\epsilon}v$ taught. Thus the sense is to have oneself taught.

37.] Aorists in - $\check{\alpha}$. Besides the usual forms of $\check{\epsilon}$ - $\epsilon\iota\pi o$ - ν ($\epsilon \iota\pi o$ - ν) we find a 2 Sing. $\epsilon \iota\pi a$ -s (II. 1. 106, 108), or $\check{\epsilon}$ - $\epsilon\iota\pi a$ -s (II. 24. 379), 2 Plur. $\epsilon \iota\pi a$ - $\tau \epsilon$ (Od. 3. 427). Answering to the Attic $\check{\eta}\nu\epsilon\gamma\kappa o\nu$ Homer has $\check{\eta}\nu\epsilon\iota\kappa a$, Opt $\check{\epsilon}\nu\epsilon\iota\kappa a$ - ι , &c.: but Inf. $\check{\epsilon}\nu\epsilon\iota\kappa \acute{\epsilon}$ - $\mu\epsilon\nu$ (II. 19. 194). In these two cases the form in - $o\nu$ is probably older.

Tenses with Suffix (Non-Thematic).

38.] The Tense-Stems which remain to be discussed are formed (like the Presents in $-\nu\eta\mu\iota$ and $-\nu\nu\mu\iota$) by means of a characteristic Suffix. Of these Tense-Stems three are Non-Thematic, viz. those of the Aorists formed by the Suffixes $-\sigma\check{a}$, $-\eta$, and $-\theta\eta$.

It is important to notice the difference between these formations and the Perfect and Aorist Stems which take -κα. The Suffix -κα in such cases is not characteristic of the Tense-Stem. It is only found as a rule with certain Person-Endings.

39.] The Aorist in $-\sigma \tilde{a}$ (called 'Sigmatic' and 'Weak*' Aor.). The Suffix $-\sigma \tilde{a}$ is joined to the Verb-Stem (usually in its strong form), as $\tilde{\epsilon}\rho\rho\eta\xi\epsilon$ ($\dot{\rho}\eta\gamma$ -), $\dot{\eta}\lambda\epsilon\iota\psi\alpha$ - ν ($\dot{\alpha}\lambda\epsilon\iota\phi$ -), $\dot{\epsilon}-\pi\nu\epsilon\nu$ - σa - ν ($\pi\nu\epsilon\nu$ -), $\dot{\epsilon}\delta\epsilon\iota\sigma\epsilon$ (for $\dot{\epsilon}-\delta F\epsilon\iota$ - $\sigma\epsilon$) feared, $\dot{\epsilon}-\beta\eta$ - $\sigma \tilde{a}$ - ν , $\dot{\epsilon}-\dot{\phi}\bar{\nu}$ - $\sigma \tilde{a}$.

The following are the chief varieties:-

1. Verb-Stems ending in a Dental or σ , preceded by a short vowel, form - $\sigma\sigma$ a or - σ a; thus we have $\tilde{\eta}\rho\epsilon\sigma\sigma$ a and $\tilde{\eta}\rho\epsilon\sigma$ a (for $\tilde{\eta}$ - $\rho\epsilon\tau$ - σ a, from $\tilde{\epsilon}\rho\epsilon\tau$ -); $\tilde{\epsilon}\sigma$ - σ aτο, $\tilde{\epsilon}\sigma$ a $\tilde{\sigma}\theta$ aι ($F\epsilon\sigma$ -); $\sigma\beta$ έ σ - σ aι, $\tau\rho$ έ σ -

^{*} The term 'Weak' implies formation by means of a Suffix. It was suggested by the analogy between the two Aorists and the Strong and Weak Preterites of the Teutonic languages,

σαι; ἔσας, ἐφ-έσσα-το (ἐδ- for *σεδ-); ἔ-θλασε and θλάσ-σε, σπάσα-το, ἐ-δάσ-σα-το, ἐσ-ε-μάσ-σα-το, νάσ-σα (§ 51, 2); χάσσα-το (cp. ἔ-χαδε), ἐ-φρασά-μην (φράδ-), ῥάσσα-τε (ῥάδ-), πασά-μην (πᾶτ-); ἐλλισά-μην (λῖτ-), ἀδύσα-το (ὀδυσ-).

Verbs in -ζω form the Aorist in this way, as ὅπασα, ἐκόμισσα, ξείνισεν, ἥρμοσε; or (less commonly) in -ξα, as ἐξενάριξα, δαίξαι,

μερμήριξε, εγγυάλιξε. άρπάζω forms ήρπαξε and ήρπασε.

2. Derivative Verbs in $-\alpha\omega$, $-\epsilon\omega$, $-\omega\omega$ usually form the Aor. with a long vowel (in $-\eta\sigma\alpha$, $-\omega\sigma\alpha$, $-\bar{\nu}\sigma\alpha$). But the Verbs in $-\epsilon\omega$ often form the Aor. in $-\epsilon\sigma\sigma\alpha$, $-\epsilon\sigma\alpha$; not only the Verbs derived from Noun-Stems in $-\epsilon\sigma$, such as $\tau\epsilon\lambda\epsilon\omega$, $\nu\epsilon\iota\kappa\epsilon\omega$, $\lambda\kappa\eta\delta\epsilon\omega$, but also several Verbs derived from Masc. Nouns in $-\sigma$; e.g. $\epsilon\kappa\rho\rho\epsilon\sigma-\sigma\alpha\tau\sigma$ was satisated (Pf. $\kappa\epsilon\kappa\rho\rho\eta-\mu\epsilon\nu\sigma$), $\kappa\sigma\tau\epsilon\sigma-\sigma\alpha\tau\sigma$ was enraged ($\kappa\epsilon\kappa\sigma\eta-\omega\sigma$),

πόθεσαν longed for (ποθή-μεναι), άλεσσαν ground.

Other examples of σσ in the Aor., though the Verb-Stem cannot be shown to end in σ or a Dental, are: ἡγάσσατο (ἄγα-μαι) was amazed, ἐτάλα-σσα endured, κέρα-σσε mixed, πέρα-σσα sold, ἡλα-σσα drove, ἡρα-σάμην loved, ἐδάμα-σσα tamed, ἱλά-σσονται (Subj.) shall appease, καλέ-σσαι to call, δλέ-σσαι to destroy, ἐτάνυ-σσα stretched, ἐκάπυ-σσε panted, ἐρύ-σσαμεν drew, ἄε-σα slept, λοέ-σσατο washed, ὀμό-σαι to swear, ὀνό-σσατο made light of; see § 51. Note that when -σα is preceded by a short vowel there is always a collateral form in -σσα: the only exceptions are στορέ-σαι to strew and κρεμά-σαι to hang, and these are due to metrical reasons.

Most of the Aorists in -ἄσσα, -εσσα, &c. are evidently due to the analogy of those in which -σα was originally preceded by a short vowel and a dental or σ. That is to say, ἐτάλα-σσα, ἐκάλε-σσα, &c. do not follow the type of ἔρρηξα, ἤλειψα (as ἔβη-σα, ἔφῦ-σα did), but the type of ἔθλασ-σα, ἐτέλεσ-σα. Thus -σσᾶ becomes the Tense Suffix after a short vowel, just as -σᾶ is after a long vowel or diphthong.

The forms λοῦσε, λοῦσαι, λούσαντο, λούσασθαι, &c., which suppose an Aor. *ἔ-λου-σα can nearly always be written λοε-. The exceptions are, Il. 14. 7 θερμήνη καὶ λούση ἄπο βρύτον (read λοέση τε ἀπὸ), Od. 6. 210 λούσατέ τ' ἐν ποταμῷ, 6. 219 ἀπολούσομαι.

3. With Verb-Stems ending in μ , ν , ρ , λ , the σ is usually lost, and the preceding vowel lengthened, ϵ becoming $\epsilon\iota$: as $\tilde{\epsilon}-\gamma\eta\mu\alpha$ ($\gamma\alpha\mu$ -), $\kappa\rho\eta\tilde{\eta}\nu\alpha\iota$ ($\kappa\rho\bar{\alpha}a\nu$ -, § 55), $\tilde{\epsilon}\pi-\tilde{\epsilon}-\tau\epsilon\iota\lambda\alpha$ ($\tau\epsilon\lambda$ -), $\tilde{\epsilon}-\phi\ell\lambda\alpha-\tau\sigma$ ($\phi\tilde{\iota}\lambda$ -), $\tilde{\eta}\gamma\epsilon\iota\rho\alpha$ ($\tilde{\epsilon}\gamma\epsilon\rho$ -), $\chi\tilde{\eta}\rho\alpha-\tau\sigma$ ($\chi\alpha\rho$ -)*. A few Stems retain σ : $\tilde{\delta}\rho-\sigma\alpha$, $\tilde{\alpha}\rho-\sigma\alpha\iota$, $\tilde{\alpha}\pi\tilde{\sigma}-\epsilon\rho-\sigma\epsilon$, $\tilde{\epsilon}-\kappa\epsilon\rho-\sigma\epsilon$, $\kappa\dot{\nu}\rho-\sigma\alpha$ -s, $\phi\dot{\nu}\rho-\sigma\omega$, $\tilde{\epsilon}\lambda-\sigma\alpha-\nu$, $\kappa\dot{\epsilon}\lambda-\sigma\alpha\iota$, $\kappa\dot{\epsilon}\nu\sigma\alpha\iota$. This is the rule when ρ or λ of the Stem is followed by a dental, as in $\tilde{\epsilon}-\pi\epsilon\rho\sigma\epsilon$ (for $\tilde{\epsilon}-\pi\epsilon\rho\theta-\sigma\epsilon$), $\tilde{\eta}\mu\epsilon\rho\sigma\epsilon$ ($\tilde{\alpha}\mu\dot{\epsilon}\rho\delta\omega$). But ν

^{*} The form ἥρἄ-το, which is usually taken to be an Aor. of ἄρ-νυ-μαι, may stand to ἀρέσθαι as ἔ-πτἄ-το to πτέσθαι, ἄνα-το to ὄνο-μαι, δίε-νται to δίε-σθαι (see however Cobet, Misc. Crit. p. 400).

before 8 is lost in έ-σπεισα (for έ-σπενδ-σα): cp. πείσομαι for π ένθ-σομαι, &c. The form κένσαι (Il. 23. 337) is later.

The Verb-Stem ὀφελ- makes an Aor. Opt. ὀφέλλειε: see § 53.

40.] Primitive Aorists with Suffix -σ-. Originally the Signatic Aorist was inflected like the Aorist in -a already described (§ 15): that is to say, the a appeared in the I Sing. (perhaps also 3 Plur. -av) and the Stem was liable to variation between a strong and a weak form. Thus from a Stem TEUK-, τυκ-, with the regular phonetic changes, we should have had—

Active, I Sing. έτευξα.

 $\xi \tau \epsilon v \xi$ (for $\xi - \tau \epsilon v \kappa - \sigma - s$). $\tilde{\epsilon}\tau\epsilon\nu\dot{\epsilon}$ (for ϵ - $\tau\epsilon\nu\kappa$ - σ - τ). I Plur. ἔτευγμεν (or ἔτυγμεν). 2 $\xi \tau \epsilon \nu \kappa \tau \epsilon$ (or $\xi \tau \nu \kappa \tau \epsilon$). ἔτευξαν.

Middle, I Sing. $\dot{\epsilon}\tau\dot{\nu}\gamma\mu\eta\nu$ (for $\dot{\epsilon}-\tau\nu\kappa-\sigma-\mu\eta\nu$). έτυξο (for έ-τυκ-σ-σο), Imper. τύξο.

έτυκτο (for $\dot{\epsilon}$ -τυκ-σ-το). 3 Du. ἐτύχθην (for ἐ-τυκ-σ-σθην).

Inf. τύχθαι (for τυκ-σ-σθαι or τυκ-σ-θαι).

Part. τύγμενος (for τυκ-σ-μενος).

Several forms belonging to this scheme have survived in Homer:

έλεξα, Mid. ελέγμην, έλεκτο, Imper. λέξο, Inf. κατα-λέχθαι, Part. κατα-λέγμενος.

(ἐδεξά-μην), δέκτο, Imper. δέξο, Inf. δέχθαι.

έμιξα, Mid. έμικτο and μίκτο.

έπηξα, Mid. κατ-έπηκτο (Il. 11. 378).

έπερσα, Mid. Inf. πέρθαι.

έπηλα, Mid. ἀν-έπαλτο, πάλτο.

 $(\tilde{\eta}$ λα-το), \tilde{a} λσο, \tilde{a} λτο (better \tilde{a} λσο, \tilde{a} λτο), Part. $\tilde{\epsilon}\pi$ - \tilde{a} λμ ϵ νος. ῶρσα, Mid. ὧρτο, Imper. ὅρσο, Inf. ὅρθαι, Part. ὅρμενος.

ήρσα, Part. άρμενος. (ήσα-το), Part. ἄσμενος.

(ἐλελιξά-μενος), ἐλέλικτο (read Γελιξάμενος, ἐΓέλικτο, § 53).

γέντο seized (γεμ-).

ξμίηνα, 3 Du. μιάνθην (cp. πέφανθε for πεφαν-σθε).

гкто (Hes. Th. 481), Part. Гкиєгов coming. Add εὖκτο (Thebais, fr. 3), κέντο (Alcm. fr. 141).

The 'regular' forms, such as ἐδέξατο, ἥλατο, ἥσατο, are to be explained like ἐχεύα-το, &c. (§ 15). On this view ἐδέξατο and ήλατο are related to δέκτο and άλτο precisely as έχεύατο to χύτο,

and similarly ησα-το to άσμενος as έχεύατο to χύμενος.

The form μιάνθην (Il. 4. 146) is now generally taken as 3 Plur., for εμίανθεν, or εμιάνθησαν. The 3 Plur. in -ην is found occasionally on inscriptions in other dialects (Meyer, G. G. p. 468); but that is very slight ground for admitting it in Homer. In any case it is later than -ev, and due to the analogy of the other Person-Endings*.

The Homeric forms of the Subj. also pre-suppose a Stem without final α : e.g. the Subj. $\beta\eta\sigma$ -o- $\mu\epsilon\nu$ points to an Indic. * $\tilde{\epsilon}$ - $\beta\eta\sigma$ - $\mu\epsilon\nu$ (§ 80). The existence of such Indicatives in an earlier period of the language is proved by the Sanserit Aorists with S, many of which join the Person-Endings directly to the Stem, without an 'auxiliary' α (except in the 1 Sing. and 3 Plur.); e.g. the Root ji gives ajaish-am, 3 Sing. ajais (for a-jai-s-t), 1 Plur. ajaish-ma, &c.

Upon this stage of inflexion Joh. Schmidt has based a very probable explanation of the 3 Plur. Ending -σαν (Κ. Ζ. xxvii. p. 323). It is evident that owing to the loss of σ the Tense-Stem of such forms as ἔτευγμεν, ἔτευκτε, ἔτυκτο appears as τευκ- οτ τυκ-, instead of τευξ-, τυξ-. Consequently the form ἔτευξαν would be felt as ἔτευκ-σαν; that is to say, -σαν would become in fact the 3 Plur. Ending. Such an Ending would then be easily transferred to other Tenses,—ἔδο-σαν, ἔστα-σαν, &c. The usual theory is that -σαν in these forms comes from the regular Aor. in -σα. But this does not explain why it is confined to the 3 Plur.—why we have (ε.g.) ἔδο-σαν but not ἐδό-σαμεν.

41.] Aorist in -σε(ο). Several Stems form a Weak Aorist as a thematic tense, with ε or ο instead of α : viz. ἶξο-ν, ἐ-βήσε-το, ἀ-[-330 ἐ-δύσε-το (δυσό-μενος Od. 1. 24); Imper. πελάσσε-τον (Il. 10. 442), ἄξε-τε, οἴσε-τε, λέξε-ο, ὄρσε-ο; Inf. ἀξέ-μεναι (Il. 23. 50, 111), οἰσέμεναι (Il. 3. 120): perhaps also ἔ-πεσο-ν (πετ-).

The forms ἐβήσετο, ἐδύσετο were preferred by Aristarchus to those in -σἄτο: see Schol. A on Il. 2. 579., 3. 262., 10. 513. They were regarded by ancient grammarians as Imperfects (Schol. A on Il. 1. 496); and this view is supported by one or two passages, esp. Od. 10. 107, where ἡ μὲν ἄρ' ἐς κρήνην κατεβήσετο must mean she was going down to the spring (when the messengers met her). So in the Part., Od. 1. 24 οἱ μὲν δυσομένου Τπερίονος οἱ δ' ἀνιόντος, and Il. 5. 46 νύξ' ἵππων ἐπιβησόμενον pierced as he was mounting his chariot, cp. 23. 379.

The forms ίξο-ν, ἀξέ-μεναι, &c. answer closely to the Sanscr. Preterite in -sa-m, as ά-diksha-m. ἔπεσον is difficult to explain as ἔ-πετ-σον, both (1) because it can hardly be accidental that we never have ἔπεσσον, and (2) because it has to be separated from the Doric ἔπετον. Possibly there was a primitive non-Thematic *ἔ-πετα, ἔ-πες, ἔπες (for ἐ-πετ-ς, ἔ-πετ-τ), Du. ἔπεστον, &c., 3 Plur. ἔ-πετ-αν, from which both ἔπετ-ον and ἔπεσ-ον might be derived in much the same way as ἔ-κταν-ον from the primitive ἔ-κτενα, Plur. ἔ-κτά-μεν (§ 13).

^{*} One of the reviewers of the former edition (Cauer in the Jahresb. d. philol. Vereins) objects that the Dual does not suit the context ('hier gar nicht in den Zusammenhang passt'). The subject is μηροί, which is Dual in sense; and the Dual might well be restored throughout the sentence (τοίω τοι, Μενέλαε, μάνθην αἴματι μηρὼ εὐφνέε, κνῆμαί τε κ.τ.λ.). The explanation of μιάνθην as a Dual is due to Buttmann (Ausf. Spr. ii. 244, ed. 2).

The Stem is long in $\hat{\epsilon}$ - $\pi\lambda\dot{\eta}\gamma$ - η (cp. $\hat{\epsilon}$ - $\pi\dot{\epsilon}\pi\lambda\eta\gamma$ -ov, $\pi\lambda\eta\gamma$ - $\dot{\eta}$), and once in $\hat{\epsilon}\dot{a}\gamma\eta$ (\bar{a} in Il. 11. 559)*. The Inf. $\tau\epsilon\rho\sigma\dot{\eta}$ - $\mu\epsilon\nu a\iota$ ($\tau\epsilon\rho\sigma\dot{\eta}\nu a\iota$), which occurs in Il. 16. 519, Od. 6. 98, need not be an Aorist: see the similar forms in § 19. The Part. $\hat{a}\nu\alpha$ - $\beta\rho\rho\chi\dot{\epsilon}\nu$ (Od. 11. 586) is not connected with $\hat{a}\nu a$ - $\beta\dot{\epsilon}\beta\rho\rho\chi\dot{\epsilon}\nu$ (§ 25); see Buttmann,

Lexil.

There is evidently a close relation between these 'Passive' Aorists and the forms discussed in § 14 (such as $\tilde{\epsilon}-\beta\lambda\eta-\nu$, $\tilde{\epsilon}-\pi\tau\eta-\nu$, $\tilde{\epsilon}-\tau\lambda\eta$, $\tilde{\epsilon}-\sigma\beta\eta$), and we can hardly doubt that they are nothing more than an extension by analogy of that older type (see Brugmann, M. U. i. 71). The chief difference is that (as in the Thematic Aorist) the Stem is usually disyllabic, retaining the short vowel of the root: thus we have $\tilde{\epsilon}-\delta \Delta \mu\eta$, but $\delta \mu\eta$ - in $\delta \hat{\epsilon}-\delta \mu\eta-\tau a\iota$, &c.

The Aorists with Stems in ā and ω (§ 19) are parallel to the Aorists in -η. Thus γηρᾶ-ναι, βιῶ-ναι, ἀλῶ-ναι only differ in the quality of the vowel from δαῆ-ναι, ἀλῆ-ναι: and there might have been numerous Aorists in -āv and -ων along with those in -ην, just as there are derivative Verbs in -αω, -οω as well

as in -εω.

43.] The Aorist in $-\theta\eta-\nu$. The Stem of this Tense is formed by the Suffix $-\theta\eta$. The Person-Endings are the same as those of the Aorist in $-\eta$, and the meaning is Reflexive or Passive.

In later Greek the Verb-Stem is mostly in the strong form, as $\dot{\epsilon}$ - $\delta\dot{\eta}\chi$ - $\theta\eta$ - ν , $\dot{\epsilon}$ - $\lambda\epsilon\dot{\iota}\phi$ - $\theta\eta\nu$, $\dot{\epsilon}$ - $\zeta\epsilon\dot{\nu}\chi$ - $\theta\eta\nu$; but this does not seem to have been the original rule: e.g. Homer has $\dot{\epsilon}$ - $\tau\dot{\nu}\chi$ - $\theta\eta$ was made, Attic $\dot{\epsilon}$ - $\tau\epsilon\dot{\nu}\chi$ - $\theta\eta$. So we find the weak Stem in $\kappa\alpha\tau$ - $\dot{\epsilon}$ - $\kappa\tau\ddot{\alpha}$ - $\theta\epsilon\nu$ ₁/ ϵ ($\kappa\tau\epsilon\nu$ -), $\tau\dot{\alpha}$ - $\theta\eta$ ($\tau\epsilon\nu$ -), $\tau\dot{\alpha}$ - θ - θ ($\tau\epsilon$ - τ), τ), τ - τ 0 (Od. 17. 463), $\lambda\dot{\nu}$ - $\theta\eta$, $\dot{\epsilon}$ 5- ϵ - $\tau\dot{\nu}$ - $\theta\eta$, $\dot{\epsilon}$ - $\theta\dot{\nu}$ - $\theta\dot{\nu}$.

The Stems of $\kappa\lambda$ in ω and $\kappa\rho$ in regard to the ν : we

have $\dot{\epsilon}$ - $\kappa\lambda$ (ν - $\theta\eta$ and $\dot{\epsilon}$ - $\kappa\lambda$ ($\dot{\epsilon}$ - $\theta\eta$, $\kappa\rho$ (ν - θ ($\dot{\epsilon}$ - $\nu\tau$) and δ ($-\dot{\epsilon}$ - $\kappa\rho$ ($-\theta$ ($-\nu$).

44.] Meaning of the Passive Aorists. The Aorist in $-\eta$ appears to have originally had an Intransitive sense, of which the Passive sense was a growth or adaptation. This transition is

^{*} In the former edition Bekker's reading $\dot{\epsilon}\dot{\alpha}\gamma\eta$ (Pf. Subj) was given as the probable correction for this passage. But the sense required is rather that of the Aor.—were (i.e. had been) broken—than the Pf.—are in a broken state. Cp. Hes. Op. 534 or $\dot{\epsilon}\dot{\alpha}\dot{\gamma}$ ènì vŵra $\dot{\epsilon}\alpha\gamma\epsilon$ whose back is broken down, i.e. bowed. As to the $\bar{\alpha}$ of $\dot{\epsilon}\dot{\alpha}\gamma\gamma$ see § 67, 3.

seen (e.g.) in $\epsilon \chi d\rho \eta$ rejoiced, $\epsilon \delta d\eta$ learned, $\delta \ell \eta$ flowed, $\epsilon \varphi d\nu \eta$ appeared. In these instances the Passive grows out of the Intransitive meaning (as in the Middle forms it grows out of the Reflexive meaning). Similar transitions of meaning may be found in the Perfect (§ 28, fin.), the Aorist ($\epsilon \sigma \beta \eta$ was quenched), and even in the Present, as $\epsilon \kappa \pi \ell \pi \tau \epsilon \nu \nu$ to be driven out, $\kappa \epsilon \ell \tau \tau \alpha \nu$ is

laid down (as Pf. Mid. of τίθημι), and πάσχω itself.

The Aorist in $-\theta\eta$ - ν is often indistinguishable in meaning from the Aor. Middle. There appears to be ground for distinguishing it from the Aor. in $-\eta\nu$ as originally reflexive rather than intransitive (Wackernagel, K. Z. xxx. 305.) In many cases Middle forms are used in Homer interchangeably with those in $-\theta\eta$ - ν : thus we find ἀάσατο and ἀάσθη, αἴδετο ἢδέσατο and αἰδέσθητε, ἀἰξασθαι and ἀϊχθῆναι, δυνήσατο and δυνάσθη, κορέσσατο and κορέσθην, μνήσασθαι and μνησθῆναι, ἀπ-ενάσσατο and νάσθη, ἐφρασάμην and ἐφράσθης, ὀίσατο and ἀίσθη, ἐχολώσατο and ἐχολώθη, ἐρείσατο and ἐρείσθη, ὡρμήσατο and ὡρμήθη, &c.; also ἔφθιτο and ἔφθιθεν, ἄμπνῦτο and ἀμπνύνθη, λύτο and λύθη, ἔκτατο and ἔκταθεν, λέκτο and ἐλέχθην, μῖκτο and ἐμίχθη.

This observation has recently suggested a very probable account of the origin of the Aor. in -θη-ν. The 2 Sing. Mid. Ending in Sanser. is -thās, to which would correspond Greek -θηs. Hence the original inflexion was (e.g.) $\hat{\epsilon}$ -λύ-μην, $\hat{\epsilon}$ -λύ-θηs, $\hat{\epsilon}$ -λυ-το, &c. Then $\hat{\epsilon}$ λύθηs was regarded as $\hat{\epsilon}$ -λύθη-s, that is to say, λυθη- was taken as the Tense-Stem, and the inflexion was completed on the model of the already formed Aorists in -ην (Wackernagel, l. c.).

The Aorists in -η-ν and -θη-ν are formations peculiar to Greek, and were doubtless developed along with the separation of Present and Aorist forms which had hardly been completed in the time of Homer (Curtius, Verb. ii. 1 ff.). It is worth notice that the three Aorists that have a distinctive Suffix agree in avoiding the Thematic Endings, while the Impf. tends to adopt them, as in ἐτίθει, ἐδίδου, ώμνυε, &c. The reason doubtless was that the Thematic inflexion already prevailed in the Present. Thus a distinction of form was gained which was especially needed for the Aorists in -η-ν. Forms like ἐφίλει (which at first, as we see from φιλή-μεναι, subsisted side by side with ἐφίλη) were adopted as Imperfects, while ἔμίγη &c. were retained as Aorists.

Thematic Present (with Suffix).

45.] In the forms to which we now proceed the Verb-Stem receives a suffix which serves to distinguish the Present Stem;

as τύπ-τω, κάμ-νω, βά-σκω, κτείνω (for κτεν-ιω).

These suffixes may be compared with other elements used in the same way, but not always confined to the Present; as κ in $\delta\lambda\dot{\epsilon}$ - $\kappa\omega$ I destroy, $\dot{\epsilon}\rho\dot{\nu}$ - $\kappa\omega$ I restrain, $\delta\iota\dot{\omega}$ - $\kappa\omega$ I chase, γ in $\tau\mu\dot{\eta}$ - $\gamma\omega$ I cut, χ in $\nu\eta$ - $\chi\dot{\epsilon}$ - $\mu\epsilon\nu\alpha\iota$ to swim, $\tau\rho\dot{\nu}$ - χ covo ι they waste, $\sigma\mu\dot{\eta}$ - $\chi\epsilon\iota\nu$ to smear, σ in $\alpha\dot{\nu}\dot{\epsilon}\omega$ (aug-eo), θ in $\sigma\chi\dot{\epsilon}$ - $\theta\epsilon$ held, $\dot{\epsilon}\sigma\theta\epsilon\iota\nu$ ($\dot{\epsilon}\delta$ - $\theta\epsilon\iota\nu$) to eat,

βρ̂ι-θο-ν were heavy, πλῆ-θεν was full, ἔρε-θε provoke, φλεγέ-θει blazes, μινύ-θει diminishes, φθινύ-θει wastes, ἔργα-θεν kept off, θαλέ-θο-ντες blooming, μετ-ε-κία-θον moved after, ἢερέ-θο-νται flutter, ἢγερέ-θο-ντο were assembled (ἀγερ-, in ἀγείρω), &c. These elements were called by Curtius Root-Determinatives (Chron. p. 22 ff.)—the name implying that they are of the nature of suffixes modifying or 'determining' the meaning of a simple Root. But their origin and primitive significance are quite unknown (Brugmann, Grundriss, ii. \S 8, n. 2).

46.] The T-Class. The suffix $-\tau\epsilon$ (o) is usually found with a Verb-Stem ending in a labial mute (π, β, ϕ) , as $\epsilon \nu \iota \pi - \tau\epsilon$ rebuke $(\epsilon \nu \iota \pi - \eta)$, $\chi \alpha \lambda \epsilon \pi - \tau \epsilon \iota$ annoys, $\delta \alpha \tau \tau \rho \alpha \pi - \tau \epsilon \iota$ lightens, $\sigma \kappa \epsilon \pi - \tau \epsilon \sigma$ look out, $\kappa \lambda \epsilon \pi - \tau \epsilon$, $\kappa \delta \pi - \tau \epsilon$, $\tau \nu \epsilon \pi - \tau \epsilon$, $\epsilon - \mu \alpha \rho \pi - \tau \epsilon$; $\delta \pi \tau \omega$ ($\delta \phi$ -) fasten, $\kappa \rho \nu \epsilon \pi \omega \nu$ ($\kappa \rho \nu \phi - \alpha$) hiding, $\theta \delta \pi \tau \epsilon$ ($\theta \delta \phi$ -) bury, $\delta \delta \pi \tau \epsilon \iota \nu$ to sew, string together; $\beta \lambda \delta \pi \tau \epsilon \iota$ ($\beta \lambda \delta \beta$ -) harms.

The Stem is in the weak form; the corresponding long forms

are generally wanting.

This suffix is combined with Reduplication in *l*-άπ-τω (for *l*-μάπ-τω, cp. Lat. *jac-io*) *I hurl*, which occurs in Od. 2. 376 κατὰ χρόα καλὸν lάπτη shall maltreat (lit. knock about) her fair flesh*.

πτ may be for $\pi_{\cdot \ell}$, and, if so, these Verbs would belong to the I-Class (§ 50). In some cases, however, the π represents an original guttural. Thus we find $\ell\nu i\sigma\sigma\omega$ ($\ell\nu\iota\nu\cdot_{\ell}\omega$), as well as $\ell\nu i\pi\tau\omega$ ($\ell\nu\iota\pi\cdot\eta$); $\pi\ell\sigma\sigma\omega$, later $\pi\ell\pi\tau\omega$ ($\pi\ell\pi-\omega\nu$); $\nu\ell\zeta\omega$, later $\nu\ell\pi\tau\omega$ ($\ell\pi\tau\omega$) ($\ell\pi\tau\omega$) and consequently $\ell\pi\tau\omega$). Here $\ell\pi\tau\omega$, $\ell\pi\tau\omega$ must be otherwise explained. So in $\ell\pi\tau\omega$, since $\ell\pi\tau\omega$, $\ell\pi\tau\omega$, $\ell\pi\tau\omega$, $\ell\pi\tau\omega$ must be at least later than the metathesis. Hence if we adhere to the supposition that $\ell\pi\tau$ is for $\ell\pi\tau\omega$, we must explain these four forms as due to the analogy of other Verbs in $\ell\pi\tau\omega$ already in existence.

47.] The Nasal Class. The suffix is $-v\epsilon$ (o) after a vowel or μ : $\phi\theta\dot{\alpha}$ - $v\epsilon$ ι comes first, $\tau\dot{\iota}$ - $v\omega v$ paying (a penalty), $\delta\hat{v}$ - $v\epsilon$ sank in, $\theta\hat{v}$ -vov bustled, $\kappa\dot{\alpha}\mu$ - $v\epsilon$ grew weary, $\tau\dot{\alpha}\mu$ - $v\epsilon$ cut; $-\ddot{\alpha}v\epsilon$ (o) after a mute, $\ddot{\eta}\mu\dot{\alpha}\rho\tau$ - $av\epsilon$ missed, $\ddot{\eta}\lambda\dot{\delta}$ - $av\epsilon$ made fat, $\lambda\eta\theta$ - $av\epsilon$ ι makes to forget, old- $av\epsilon$ ι swells, $\kappa v\dot{\delta}$ - $a\dot{v}\epsilon$ ι glorifies, $\dot{\epsilon}$ - $\kappa\dot{\epsilon}\dot{v}\theta$ -avov hid, $\ddot{\alpha}\pi$ - $\epsilon\chi\theta$ - $av\epsilon$ aι becomest hateful: often with the weak Stem and v inserted, $\ddot{\alpha}v\dot{\delta}$ - $av\epsilon$ ι pleases ($\ddot{\alpha}\dot{\delta}$ -), $\lambda av\theta$ - $av\dot{\delta}\mu\eta v$, $\dot{\epsilon}$ - $\chi\dot{\alpha}v\dot{\delta}$ -avov, $\dot{\epsilon}$ - $\lambda\dot{\alpha}\gamma\chi$ -avov, $\tau\dot{v}\gamma\chi$ - $av\epsilon$, $\pi vv\theta$ - $avo\mu a\iota$.

The suffix -aνε(o) is combined with Reduplication (as in § 35)

^{*} With i-á π - $\tau\omega$ may be connected i-á ϕ - $\theta\eta$, which occurs in the phrase $i\pi l$ δ daris ia $\theta\eta$ κ al κ b ρ ν s (Il. 13. 543., 14. 419), of a warrior's shield, which falls with or after him. For the aspirate (ia θ $\theta\eta$ for i-ia θ η 0 compare i9 κ 0, &c. This explanation was given by Ebel, in K. Z. iv. 167. The scholar to whom I owe this reference, F. Froehde, derives it from Sanser. vapami, 'I throw, strew about:' so ia π 0 π 0i9i9° one whose words are thrown about at random' (Bezz. Beitr. iii. 24). See Curtius, Verb. ii. 364 (2 ed.).

in πιμ-πλ-άνεται (ΙΙ. 9. 679), ἰσχάνω (for *σι-σχ-άνω), ἰζάνω (for

* $\sigma\iota$ - $\sigma\delta$ - $\Delta\nu\omega$).

έλαύνω has been explained as *έλα-νυ-ω, but there is no parallel

for epenthesis of u.

The $\bar{\alpha}$ of $i\kappa \dot{\alpha}\nu\omega$, $\kappa i\chi \dot{\alpha}\nu\omega$ points to $-\alpha\nu - F\omega$, but the forms have not been satisfactorily explained.

48.] Stems formed by -σκε(ο), the Iterative class of Curtius.

(1) Without Reduplication, as βά-σκε go, βό-σκει feeds, φά-σκε said, ίλά-σκο-νται propitiate, ἢλάσκουσι flit about, θνῆ-σκο-ν died, θρφ-σκουσι leap, προ-βλω-σκέ-μεν to go before (βλω- for μλω-).

(2) With Reduplication, μι-μνή-σκε-ται is reminded, κί-κλη-σκεν με

called, γι-γνώ-σκω I know, πί-φαυ-σκε showed.

49.] Iterative Tenses. The suffix $-\sigma\kappa\epsilon(o)$ is also used to form a number of Past Tenses with Iterative meaning, as $\tilde{\epsilon}\sigma\kappa\epsilon$ (for $\tilde{\epsilon}\sigma-\sigma\kappa\epsilon$) used to be, $\tilde{\epsilon}\chi\epsilon-\sigma\kappa\epsilon$ used to hold, $\kappa\alpha\lambda\dot{\epsilon}-\epsilon\sigma\kappa\epsilon$, $\pi\epsilon\lambda\dot{\epsilon}-\sigma\kappa\epsilon$ -0 (II. 22. 433), νικά-σκο-μεν (Od. 11. 512), τρωπά-σκετο (II. 11. 568), ρίπτα-σκε, οίχνε-σκε, πωλέ-σκε-το, ώθε-σκε, &c.; and from Aorist Stems, as στά-σκε, δό-σκο-ν, είπε-σκε, φάνε-σκε, $\tilde{\epsilon}$ ρητύ-σα-σκε, δα-σά-σκε-το, ώσα-σκε, &c. These formations differ from the Present Stems described above (1) in carrying distinctly the notion of repeated action and (2) in being confined to the Past Indicative. They are peculiar to the Ionic dialect, and the forms derived from Aorists in -σα are only found in Homer.

-φασκο-ν has sometimes a distinctly Iterative meaning in Homer, as ν. 1/ 19/1/2.

Od. 8. 565 Καυσιθόου, δε έφασκε Ποσειδάων ἀγάσασθαι, and the Pres. φάσκω does

1/2 PIN 9 Od. 11:306 του Μ. 11:306 τ

£ 170118310,

TIETO(\$205

not occur. It may be regarded as a link between the two groups of Stems with -ork.

It is remarkable that in the Latin Verbs in -sco we may distinguish in the same way between the regular Inceptives, such as lique-sco, puer-a-sco, and the Presents, such as pa-sco, pro-fic-iscor, in which the Inceptive meaning is hardly, or not at all, perceptible. Originally, no doubt, there was a single group of derivative Stems in σκε(ο) with the meaning of continued or repeated action.

- 50.] The I-Class. The suffix was probably $-\iota_{\epsilon}(o)$ in a prehistoric period of Greek: it appears in Stems of the following forms :—
- a. In $-i\omega$, $-\alpha i\omega$, $-\epsilon i\omega$, $-\upsilon i\omega$ or $-\bar{\upsilon}\omega$ (for $-\iota i\omega$, $-\alpha i\omega$, &c.), the ι blending with the final vowel of the Stem.
 - b. With epenthesis of i, in -airw, -airw (for -av-iw, -ap-iw).
- c. With assimilation, in $-\lambda\lambda\omega$ (for $-\lambda-\iota\omega$), $-\sigma\sigma\omega$ (for $-\kappa-\iota\omega$, $-\tau-\iota\omega$), and $-\zeta\omega$ (for $-\delta-\iota\omega$, $-\gamma-\iota\omega$).
- d. By compensatory lengthening in -εινω, -ειρω, -ῖνω, -ῦνω, -ῦρω (for $-\epsilon \nu_{-i}\omega$, $-\epsilon \rho_{-i}\omega$, $-i\nu_{-i}\omega$, $-i\nu_{-i}\omega$, $-i\nu_{-i}\omega$). That the $\epsilon \iota$ of $-\epsilon \iota \nu \omega$, $-\epsilon \iota \rho \omega$ is not a true diphthong (and therefore not due to epenthesis) is shown by the corresponding Doric $-\eta\nu\omega$, $-\eta\rho\omega$.
 - e. In $-\alpha\omega$, $-\epsilon\omega$, $-\omega\omega$, $-\alpha\omega\omega$, $-\epsilon\omega\omega$, $-\omega\omega$ (for $-\alpha-\omega$, &c.).

a. Verbs in -ιω, &c.

51.] The Verbs in which the original , becomes , thus forming $-i\omega$, $-ai\omega$, $-\epsilon i\omega$, $-vi\omega$, are almost confined to the Homeric dialect. The chief examples are as follows:—

(1) -ιω: ἐσθίει eats, ἴδιον I sweated, μήνιε be angry, μάστιε whip, άνα-κήκιε gushed forth, κονίο-ντες raisiny dust. In these verbs (except perhaps the first two) the Verb-Stem ends in , so that (e.g.) κονίο-ντες is for κονι-ιο-ντες; so probably τίω I honour, φθίω I waste away, for τι-ιω, φθι-ιω. The therefore is naturally long, but may be shortened before a vowel; hence it is usually doubtful in quantity. The state of the

(2) -aw: usually with loss of o or F, valovoi dwell (Aor. váo-oa, Oryabis K3. νάσ-θη), μαίεσθαι to feel one's way (Fut. μάσ-σεται), λιλαίεαι desirest (λι-λασ-); καίω (for καξ-ιω, ep. Aor. έκηα for έ-κηξ-α), κλαίω (for κλαξ-ιω), δαιε kindled (δαν-), ναιον swam (cp. ναθ-s), γαίων rejoicing (γαθ-ρος, Lat. gau-deo); κέραιε mix, ἀγαιόμενος indignant (ep. $\dot{\epsilon}$ - $\kappa \dot{\epsilon} \rho \alpha \sigma$ - $\sigma \alpha$, $\dot{\eta} \gamma \dot{\alpha} \sigma$ - $\sigma \alpha \tau \sigma$, but the σ in these words is not original, § 39, 2); perhaps also φθαίω (if παρα-φθαίησι in Il. 10. 346 is Pres. Subj., see K. Z. xxiii. 298).

δαίω divide forms its Tenses from two roots, (1) δαι-, 3 Plur. Pf. δεδαί-αται, cp. δαί-νυμι, δαί-ς, δαι-τρός, and (2) δατ-, Pf. δέδασ-ται, Pres. δατ-έομαι (cp. πατέομαι, πεπάσμην).

(3) -ειω: πενθείε-τον (probably for πενθεσ-ιε-τον) mourn, μαχειόμενος fighting, οινοβαρείων drunken, τέλειο-ν brought to pass, κείων splitting, ακειό-μενοι being healed, νεικείη-σι shall quarrel, οκνείω I

shrink, ὑμνείω (Hes.).

When the diphthongs α_i , ϵ_i come before a vowel there is a tendency to drop the ι ; as $\dot{\alpha}\gamma a - i\sigma - \mu a_i$, 2 Plur. $\dot{\alpha}\gamma \dot{\alpha} a - \sigma \theta \epsilon$ (for $\dot{\alpha}\gamma \dot{\alpha} - \sigma \theta \epsilon$, § 55); $\kappa \epsilon \rho a - i\omega$, 2 Plur. $\kappa \epsilon \rho \dot{\alpha} a - \sigma \theta \epsilon$; $\tau \dot{\epsilon} \lambda \epsilon - i\sigma - \nu$, also $\tau \dot{\epsilon} \lambda \epsilon - \sigma - \nu$; $\nu a \dot{\epsilon} \alpha \nu swam$, also $\nu \dot{\alpha} - \epsilon \iota$, $\nu \dot{\alpha} - o\nu \sigma \iota$; perhaps also $\delta \dot{\alpha} \eta \tau a \iota shall$ be destroyed (root $\delta \alpha \iota$ -; see Schulze, K. Z. xxix. p. 258). Where this tendency does not show itself, as in $\pi a i\omega$, $\pi \tau a i\omega$, $\sigma \epsilon i\omega$, it will usually be found that the diphthong belongs to the whole Verb, not merely to the Present Stem.

So perhaps ἐράασθε ye loved, ἰλάονται appease, ἔλων drove (Part. ἐλάων), ἔκλων broke: unless these forms are obtained by simple change from the Non-Thematic ἔρα-μαι, &c. (§ 18).

For the Presents in -ειω from -ε Fω (θείω, πλείω, &c.), see § 29, 3.

(4) -υιω: ὅπυιε had to wife (for ἀπυσ-ιω).

Most of the Presents in -υω are of this Class (original -υιω), as φύω (Aeolic φυίω), θύω (ἔθυιεν Hesych.), λύω, δύω, ἰθύω, ἢπύω, διζύω. The vowel is doubtful, but only because it comes before another vowel (as was noticed in the case of Verbs in -ιω).

ἰθύω generally has \bar{v} ; but \bar{v} in ἐπ-ιθύουσι (II. 18. 175), which ought to be so divided, not ἐπι-θύουσι. It is a Denominative from ἰθύς (\bar{v}) aim.

The Verbs in $-\epsilon u\omega$, $-ou\omega$ are probably also of the I-Class (for $-\epsilon v_L\omega$, $-ov_L\omega$). For, as Curtius points out (*Verb*. i. 360), they are chiefly Denominatives, and it is contrary to analogy to form a Verb by suffixing the Thematic ϵ (o) to a Noun-Stem.

b. Epenthesis of ..

52.] It will suffice to give a few examples :-

-νω: μαίνο-μαι, φαίνω, βαίνω (βαμ-ιω), and with reduplication, τ ι-ταίνω, παμφαίνω.

-ρω: αἴρω, σκαίρω, ἀσπαίρω, μαρμαίρω, καρκαίρω, χαίρω.

αἴρω (for ἀρ-½ω) is distinct from ἀείρω, which by contraction would become ἄρω: ep. ἀείδω, ἄδω (Brugmann, K.Z. xxvii. 196).

This Class includes also the numerous Denominatives in -alpw, -alpw: see § 120. The Stem is in the weak form.

c. Assimilation of 4.

53.] Examples: -λλω: ἄλλο-μαι, βάλλω, πάλλω, στέλλω, τέλλω; from Nouns, ἀγγέλλω, ναυτίλλομαι; with Reduplication ἰάλλω, ἀτιτάλλω I rear, tend, cp. ἀτάλλω I cherish.

Epenthesis (instead of Assimilation) is found in ὀφείλω Ι οινε.

-σσω: ὄσσο-μαι (ὀκ-), πέσσω (πεκ-), ελίσσω (ελικ-), πτύσσω (πτὔχ-), λίσσο-μαι (λἴτ-), κορύσσω (κορυθ-), πτώσσω (πτωκ-).

-ζω: for -δίω in κλύζω, φράζω, χάζο-μαι; for -γίω in άζο-μαι, ρέζω, τρίζω; with reduplication, μιμνάζω I loiter, βιβάζω I cause to go, ἐλελίζω I make to quiver (II. 1. 530)*.

d. Compensatory lengthening.

54.] Examples: $-\epsilon \iota \nu \omega$ (for $-\epsilon \nu - \iota \omega$), in $\tau \epsilon \iota \nu \omega$, $\kappa \tau \epsilon \iota \nu \omega$, $\theta \epsilon \iota \nu \omega$.

-ειρω (for -ερ-ιω), in είρω, κείρω, μείρομαι, πείρω, σπείρω, τείρω, φθείρω, ἀγείρω, ἐείρω, ἐγείρω, ἐθείρω.

-τνω (for -ιν-ιω), in κλίνω, κρίνω, δρίνω.

-ūνω (for -υν-ιω), in πλύνω, ἐντύνω,

-ῦρω (for -υρ-τω), in κύρω, μύρομαι, φύρω, ὀδύρομαι.

e. Verbs in $-a\omega$, $-\epsilon\omega$, $-\omega$.

55.] Assimilation. This term is applied to certain forms of the Verbs in $-a\omega$, in which, instead of contraction, we find assimilation of one of two concurrent vowels to the other, as $\delta\rho\delta\omega$ for $\delta\rho\delta\omega$, $\delta\rho\delta\alpha$ for $\delta\rho\delta\alpha$.

The chief varieties are as follows:--

(a) Forms with simple Assimilation, the vowel being long—

μνᾶό-μενοι gives μνωό-μενοι ἡβάο-ντες ,, ἡβώο-ντες μενοινάω ,, μενοινώω ἠγά-εσθε ,, ἠγάασθε μνά-εσθε ,, μνάασθε μνάη ,, μνάα (2 Sing. Mid.).

(b) With shortening of the first vowel—

δράω gives δρόω ἐάη-s ,, ἐἄ*q*-s αἰτιάε-σθαι ,, αἰτιάα-σθαι.

Cp. δεδάα-σθαι from δεδαέ-σθαι (§ 35) and ἀγάα-σθε from ἀγάε-σθε; Fut. ἐλόω, κρεμόω from ἐλάω, κρεμάω.

(c) With lengthened second vowel-

δράο-ντες gives δρόω-ντες δράοι-τε ,, δρόφ-τε δράει-ς ,, δράφ-ς.

This is the commonest form of Assimilation: cp. δηϊόω-ντο, δηϊόω-εν from δηϊόω, ἀρόωσι (Od. 9. 108) from ἀρόω, κατ-ηπιόωντο (Il. 5. 417), ἐστρατόωντο (Il. 4. 378), ῥυπόωντα (Od.).

^{*} Cobet (Misc. Crit.), following Bentley, has sought to show that the forms of $\delta\lambda\epsilon\lambda t t$ belong in reality to $\delta\lambda t \sigma \omega$ ($F\epsilon\lambda t \sigma \omega$). He is doubtless right in substituting $F\epsilon\lambda t \chi \theta t v \tau \epsilon$ for $\delta\lambda\epsilon\lambda t \chi \theta t v \tau \epsilon$ where the meaning is to set trembling (with intensive reduplication, like $d\kappa\alpha\chi t t \omega$, $\delta\lambda \lambda \lambda t t \omega$, &c.).

(d) With lengthened second vowel (the first being also long), in very few forms—

δράουσι gives δρώωσι μαιμάουσι ,, μαιμώωσι μα ἡβάουσα ,, ἡβώωσα μενοινάει ,, μενοινάα.

Other isolated examples are: μενοινήησι (Il. 15. 82); ἀλόω (Od. 5. 377), 2 Sing. Imper. of ἀλάομαι (for ἀλάοο ἀλάον); κεκράανται, κρηήναι, κραιαίνω; φαάνθη (for φαέν-θη); σόωσι (Subj.), σόως, σόω (Opt., ep. § 83), σώοντες (σαόω). Similar phenomena may be seen in φόως for φάος (or φᾶος), σόος for σάος, φαάντατος for φαέντατος, νηπιάας for νηπιέας, πρώονες (Il.) for πρήονες, ἀστυβοώτης for ἀστυβοήτης: also in a form Αἰνείωο (for Αἰνείαο) read by Zenodotus in Il. 5. 263, 323. νωνανία (1λ.)

- I. These forms were regarded by the older grammarians as the result of a process called 'distraction,' (the exact reverse of contraction), by which a long vowel, ā or ω, could be separated into two distinct vowels (aa, ow, &c.). The first attempt to account for them in a more rational way was made by L. Meyer (K. Z. x. 45 ff.). According to him they represent an intermediate stage in the process of contraction. The order, he argued, is $\delta \rho \dot{\alpha} \omega - \delta \rho \dot{\omega} - \delta \rho \dot{\omega}$; i.e. in $\delta \rho \dot{\omega}$ the α has been assimilated to the following w, but is not yet uttered in one breath with it. In the forms ὁρόωντες, ὁρόωσι, &c. he pointed out that the long vowel is never wanted for the metre, and accordingly he wished to read ὁρόοντες, ὁρόονσι, &c. To this last proposal exception was taken by G. Curtius (Erläuterungen, p. 96), who made the counter-supposition that, as the a of these Verbs was originally long, the successive steps might be δράοντες, δρώοντες and (by metathesis of quantity) δρόωντες. The stage -ωο- is exemplified in μνωόμενος.
- 2. The main objection to this theory lies in the circumstance that the forms ὁρόω, ὁράας and the like are exclusively 'Epie,' that is to say, they are confined to Homer, Hesiod, and their direct imitators. If they had been created by any natural development of Greek sounds, we should expect to find them in other dialects. But neither in Ionic nor elsewhere is there any trace of their existence in living speech. It must be admitted, too, that neither Meyer nor Curtius has given a satisfactory account of the long vowel in ὁρόωσι, ὁρόωντο, ὁρόωντος, &c. A form ὁρόοντος, as Curtius pointed out, would give ὁροῦντος, not ὁρῶντος. And if there has been metathesis of quantity, why do we never find ὁρόωμεν for ὁράομεν, or ὁράατε for ὁράστε?

3. An entirely different theory was put forward by J. Wack-

in angel it is in the decree is a fact , that II , _ Christ prote pills.

ernagel (Bezz. Beitr. iv. 259). The true Homeric forms, in his view, are the original uncontracted $\delta\rho\dot{a}\omega$, $\delta\rho\dot{a}\epsilon\iota s$, &c. and these have passed into the $\delta\rho\dot{o}\omega$, $\delta\rho\dot{a}qs$, &c. of our Homer by a process of textual corruption consisting of two stages: (1) contraction, according to the ordinary rules of Attic, into $\delta\rho\dot{\omega}$, $\delta\rho\dot{q}s$, &c.—which would obviously give forms of different metrical value from the original words,—and then (2) restoration of the metre by a kind of 'distraction' (in the old sense of the term), i.e. the insertion of a short vowel before the new contracted $-\dot{\omega}$, $-\dot{q}s$, &c. Thus $o\dot{v}\chi$ $\delta\rho\dot{a}\epsilon\iota s$ first became $o\dot{v}\chi$ $\delta\rho\dot{q}s$, and then metri gratia $o\dot{v}\chi$ $\delta\rho\dot{q}as^*$.

4. Paradoxical as this may seem, there can be little doubt that it is substantially right. The forms in question, as Wackernagel justly argues, are not a genuine growth of language. They are the result of literary tradition, that is to say, of the modernising process which the language of Homer must have undergone in the long period which elapsed before the poems were cared for by scholars. The nature of this process is excellently described and illustrated in his dissertation. In many cases, too, he shows that when the later form of a word ceased to fit the metre, some further change was made by which the metrical defect was cured, or at least disguised. Corruption of this latter kind may often be traced in the various readings of MSS.

But must we suppose that ὁρόω, &c. went through the two

changes which Wackernagel postulates?

- 5. The case is unique, not only from the large number of forms involved, and the singularly thorough and systematic way in which they have been introduced into the text, but also from the circumstance which he has himself so well pointed out, viz. their unreal conventional stamp. They are hardly more 'modern'—in the sense of being familiar through contemporary speech—than the forms which they have displaced. Wackernagel has shown how $\tilde{\epsilon}_{\omega S}$ and $\tau \hat{\epsilon}_{\omega S}$ supplanted the original $\hat{\eta}_{oS}$ and $\tau \hat{\eta}_{oS}$, even where the result was absolute ruin to the verse; as in Od. 19. 367, where nearly all the MSS. have $\tilde{\epsilon}_{\omega S}$ incoo. Similarly the loss of the old Gen. in -oo (§ 98) has produced the forms $Al\delta \lambda o\nu$, ' $I\phi \ell \tau o\nu$, ' $I\lambda \ell o\nu$, &c. scanned – . These examples, however, prove too much; for if such unmetrical forms could remain in the text without further change, why do we never find the slightest trace of an unmetrical $\delta \rho \hat{\omega}$?
- 6. It is a further objection to this part of Wackernagel's theory that in several words the original -aw, -aeis, -aouoa, &c.

^{*} This theory was criticised by Curtius in the Leipziger Studien, iii. pp. 192 ff.

- have been retained. The instances are, ναιετάω, -άει (Hes. Th. 775), -άουσι, -άων, -άοντα, ἱλάει, -άουσι, ἀοιδιάει, -άουσα, ὁμοστιχάει, γοάοιμεν, -άοιεν, κραδάων, ἐλάων, ἱλάονται, τηλεθάοντας; with \bar{a} , ἀναμαιμάει, πεινάων, -άοντα, διψάων. (The forms which have lost a F, as λάε, φάε, ἔχραον, do not concern us now.) A third variety is exhibited by the form ναιετάωσαν (-σηs, -ση, -σαs), which occurs in MSS., usually as a variant along with -άουσαν and -όωσαν. These facts are enough to show that the causes which produced the Homeric -οω, -αqs, &c. were not of universal efficacy.
- 7. Is there, then, any way from $\delta\rho\delta\omega$, $\delta\rho\delta\epsilon\iota$ s to $\delta\rho\delta\omega$, $\delta\rho\delta\alpha$ s except through the contracted $\delta\rho\hat{\omega}$, $\delta\rho\hat{\alpha}s$? We have to deal with a time when $\delta\rho\hat{\omega}$, $\delta\rho\hat{\alpha}s$ were the forms of ordinary speech, while $\delta\rho\delta\omega$, $\delta\rho\delta\epsilon\iota$ s were only known from the recitation of epic poetry. Under such conditions it is surely possible that the poetical forms were partially assimilated to the colloquial forms—that $\delta\rho\delta\omega$, $\delta\rho\delta\epsilon\iota$ s were changed into $\delta\rho\delta\omega$, $\delta\rho\delta\alpha$ s by the influence of the familiar $\delta\rho\hat{\omega}$, $\delta\rho\hat{\alpha}s$. Similarly $\epsilon\eta\nu\delta\alpha\nu\epsilon$ for $\epsilon\lambda\nu\delta\alpha\nu\epsilon$ was doubtless due to the presence of the later $\eta\nu\delta\alpha\nu\epsilon$, not to any process of contraction and distraction. The principle is constantly exemplified in language; cp. the change of $\phi\rho\alpha\sigma\iota$, the original Dat. Plur. of $\phi\rho\eta\nu$, into $\phi\rho\epsilon\sigma\iota$ through the association of the other Case-forms.
- 8. With this modification of Wackernagel's view it is easier to account for the occasional retention of the original -αω, -αεις, &c. If δρόω, δράφε are due to the presence of δρῶ, δρậς in every-day language, we may expect to find a different treatment of words which went out of use in post-Homeric times. Thus ναιετάω does not pass into ναιετόω because there was no ναιετῶ alongside of it in common use. Similarly ἐλόω, ἐλάαν are accounted for by the Attic ἐλῶ, ἐλᾶν; but the Homeric Pres. Part. ἐλάων is unaffected. Two instances call for a different explanation, viz. πεινάω and διψάω, since they are not rare or poetical words. But these are exceptions which prove the rule. As is shown by the Attic contraction (πεινῆς, &c.), they are not really Verbs in -αω. Whatever may be the origin of the ā in the Homeric πεινάων, διψάων, &c., they do not belong to the group with which we are now concerned.
- 9. An example of the process supposed by Wackernagel may be found in the Homeric $\tau\rho\omega\pi\dot{\alpha}\omega$, $\tau\rho\omega\chi\dot{\alpha}\omega$, $\sigma\tau\rho\omega\dot{\alpha}\dot{\omega}$, $\pi\omega\tau\dot{\alpha}o\mu\alpha\iota$ (as to which see Nauck, Mél. gr.-rom. iv. 886). The forms which occur are always contracted, but in every instance except one (Il. 13. 557 $\sigma\tau\rho\omega\dot{\alpha}\dot{\alpha}\tau$) the uncontracted form can be restored if at the same time the root-vowel is shortened. Thus in Il. 15. 666 $\mu\eta\dot{\alpha}\dot{\epsilon}$ $\tau\rho\omega\pi\dot{\alpha}\sigma\theta\dot{\epsilon}$ $\phi\dot{\epsilon}\beta$ ov $\dot{\epsilon}$ we may read $\mu\eta\dot{\epsilon}\dot{\epsilon}$ $\tau\rho\sigma\pi\dot{\epsilon}\sigma\theta\dot{\epsilon}$ $\phi\dot{\epsilon}\beta$ ov $\dot{\epsilon}$. The verb $\pi\omega\tau\dot{\epsilon}\omega\mu\iota$ only occurs once (Il. 12.

287 λίθοι πωτῶντο θαμειαί), while the form ποτάομαι is well attested. In the other cases the restoration is supported by etymology (τροπάω from τροπή, &c.), and by the considerable traces of τροπάω, τροχάω, στροφάω in our manuscripts (see Leaf on II. 15. 666). The process must have been that (e.g.) original τροπάεσθε became τροπᾶσθε (which is also found in MSS.), and then τρωπᾶσθε.

10. In the Impf. Act. assimilation is unknown, mainly because the metre generally allows contraction. We find however (1) several uncontracted forms, viz. οὖταε (Od. 22. 356), πέραον (Il. 16. 367), ὕλαον (Od. 16. 5), κατεσκίαον (Od. 12. 436): ἐχράετε, ἔχραον (for ἐχράΓετε ἔχραΓον) do not belong to this head. Also (2) some verbs show the New Ionic -εο- for -αο-, viz. ὁμόκλεον, ὁμοκλέομεν, ποτέονται, μενοίνεον, ἤντεον, τρόπεον.

For $\phi \acute{a}os$ we find the two forms $\phi \acute{\omega} \omega s$ (II. 16. 188 $\ifrac{i}{\epsilon} \acute{\epsilon} \acute{\epsilon} \gamma \alpha \gamma \epsilon \nu \right.$ $\phi \acute{\omega} \omega \sigma \delta \acute{\epsilon}$), but never $\phi \acute{\omega} os$ or $\phi \acute{\omega} os$ *. The exclusion of $\phi \acute{\omega} os$ is remarkable, since it is related to $\phi \acute{a}os$ as $\mu \nu \omega \acute{\omega} \mu \epsilon \nu os$ to $\mu \nu \ddot{a} \acute{\omega} \mu \epsilon \nu os$. The reason doubtless is that $\phi \acute{a}os$ came under the influence of $\phi \acute{\omega} s$ (cp. $\acute{\nu} \acute{\rho} \acute{a} \dot{q} s$ and $\acute{\nu} \rho - \mathring{q} s$). On the other hand $\sigma \acute{a}os$ became $\sigma \acute{\omega} os$ owing to the later $\sigma \acute{\omega} os$. The change of $\pi \rho \eta \acute{\omega} \nu es$ to $\pi \rho \acute{\omega} \upsilon \nu es$ is similarly due to $\pi \rho \acute{\omega} \nu es$. In the case of $\acute{a} \sigma \tau \nu \beta o \acute{\omega} \tau \eta s$ (for $-\beta o \acute{\eta} \tau \eta s$) there is no evidence of a form $-\beta \acute{\omega} \tau \eta s$, but such a form would be according to the rules of Ionic contraction ($\beta \acute{\omega} \sigma as$ for $\beta o \acute{\eta} \sigma as$, &e.).

- 56.] Contraction. The extent to which contracted forms of verbs were admitted in the original text of Homer is a matter of much dispute. In this place we are properly concerned only with verbs of the I-Class ($-\alpha\omega$, $-\epsilon\omega$, $-\omega$, for $-\alpha-\omega$, $-\epsilon-\omega$, $-\omega$), not with those in which a different spirant has been lost (as $\tau\rho\epsilon\omega$ for $\tau\rho\epsilon\sigma-\omega$, $\pi\lambda\epsilon\omega$ for $\pi\lambda\epsilon F-\omega$).
- 1. In the verbs in -αω contraction is frequent. If the resolved form were written wherever the metre admits it, we should still find that in about half the whole number of cases the contraction must remain. It is worth notice too that contracted forms are often used in phrases of a fixed type, as ἔπεα πτερόεντα προσηύδα (οr προσηύδων)—τόδ' ἀφθαλμοῖσιν ὁρῶμαι—ὁρῷ (ὁρῶν) φάος ἢελίοιο—ἀνείρεαι ἢδὲ μεταλλῷς—ἐξαύδα, μὴ κεῦθε, and the like †. It has indeed been noticed that there is an apparent preference for the resolved -αον of the I Sing. and 3 Plur. Impf.; but this must be accidental. We must conclude then that contracted and uncontracted forms of verbs in -αω were used in the language of Homeric times with equal freedom: or at least—if this be thought improbable—that they subsisted together as alternative forms in the poetical dialect.

^{*} φόως may represent an ancient Plur, φάως (Joh. Schmidt, Pluralb. p. 142). † Mangold, Curt. Stud. vi. 194. ‡ Menrad, pp. 122-124.

2. Verbs in -εω rarely contract -εο or -εω, except in the Participle (-ευμενος for -εομενος). This rule is confirmed from New Ionic inscriptions (Erman, Curt. Stud. v. 292), as well as the MSS. of Herodotus. For ευ in ποιεύμην (Il. 9. 495), θηεῦντο (Il. 7. 444), ὀχλεῦνται (Il. 21. 261), ἐγεγώνευν (Od. 9. 47, &c.) and a few similar forms we should write -εο (see § 57).

The contraction of -ee, -ee is established by the large number minutes of instances * in which it is required by the metre. Moreover it is not merely a license, necessary for the sake of admitting certain forms into the hexameter (such as ταρβείς, νεικείν, τελείται, ἡγείσθαι, σμαραγεί, ἐφίλει, οἰνοχόει). Among the ω 327 instances of contraction in the last foot we find 29 of -e, for -ee (as χόλος δέ μιν άγριος ήρει), and 16 of -εί for -έει (as καί με γλυκύς τμερος αίρει); also the forms φιλεί (Il. 2. 197 τιμή δ' έκ Διός ἐστι, φιλεῖ δέ ἐ μητίετα Ζεύς, also Il. 7. 280., 10. 245, 552., 16. 94, Od. 15. 74), δοκεί (Od. 2. 33, and six times in the phrase ως μοι δοκεί είναι άριστα), τελεί (II. 4. 161), καλεί (II. 3. 390, Od. 17. 382), poßeî (Il. 17. 177). On the other hand the uncontracted form has the support of the metre in about a hundred places, and against the instances now quoted of φιλεί, &c. we have to set about thirty of the corresponding uncontracted φιλέει, δοκέεις, -ει, τελέει, καλέει, φοβέειν. The uncontracted form therefore seems to have a slight preference. when the metre allows either.

In the MSS, of Homer contraction is generally introduced as far as possible, according to the tendencies of Attic: but the open forms occasionally survive, chiefly in the fourth foot (in such forms as προσεφώνεε θεῖος ὄνειρος—καὶ ἤτεε σῆμα ἰδέσθαι—κατὰ δ' ἦρεε Πηλείωνα). And the metre clearly points to the open form in several other places: as—

II. 11. 55\$ (=17. 663) τάς τε τρέει ἐσσύμενός περ.

21. 362 ως δε λέβης ζέει ένδον κτλ.

16. 201 ἀπειλέετε Τρώεσσιν.

Od. 10. 548 ἀωτέετε γλυκὺν ὕπνον.

3. Verbs in -οω generally contract; χολοῦμαι, κορυφοῦται, γουνοῦμαι. For the 'assimilated' forms δηϊόωντο, κατηπιόωντο, ἐστρατόωντα, ρυπόωντα (§ 55) we ought, on the analogy of the Verbs in -αω, to substitute δηϊόοντο, &c.

57.] Synizesis. The vowel ϵ sometimes coalesces with a following o or ω, so as to form one syllable for the purpose of the metre; e. g. ἀελπτέοντες, ἢλάστεον, ἢγίνεον, ἐπόρθεον (at the end of a verse), οἰκέοιτο, εἰλέωσι, χρεώμενος. Whether the pronunciation of these words differed from that of the contracted forms is a question which perhaps there are no means of determining.

^{*} About 160 according to the list in Menrad, pp. 132-142.

Meaning of Verbs of the I-Class.

58.] Verbs in $-\epsilon \omega$ are mainly Intransitive, whether formed from Adjectives, as $\partial \pi \iota \sigma \tau \dot{\epsilon} \omega$ I am unbelieving, or abstract Nouns, as $\mu o \chi \theta \dot{\epsilon} \omega$ I labour. But there is also a group of Causatives in $-\epsilon \omega$, as $\phi o \beta \dot{\epsilon} \omega$ I put to flight, $\partial \chi \dot{\epsilon} \omega$, $\phi o \rho \dot{\epsilon} \omega$.

Verbs in -oω are chiefly formed from Adjectives in -os, and are Causative, as χηρόω I make desolate. Exceptions are, ὑπνώ-οντες

sleeping, ριγόω I shudder, βιόω I live.

- 59.] Desideratives. One instance in -σειω is found in Homer, δψείοντες (Il. 14. 37) going to see. A suffix -ιε(0) may be found in κακκείοντες going to bed (κατά-κει-μαι), πι-όμενα going to drink, δραίνεις (Il. 10. 96) thou art for doing.
- **60.**] Frequentatives, expressing habitual action, in -ταω, -ταζω, -τεω: as εὐχετάο-μαι, ναιετάω, οἰνοπο-τάζω, ζη-τέω (δί-ζη-μαι), λαμπετόωντι, ελκυστάζων, εκγετάω

In -ιαω, κελευτιόων shouting (as if from an abstract Noun κελευ-

τία), κυδιόων glorying.

În -ναω, as ἐρυκανόωσι keep restraining, ἰσχανόωσι. In -θαω, as τηλεθόωσα blooming (θαλ-έθω).

- 61.] Intensives, expressing actions intensified by repetition. These are generally reduplicated Verbs of the I-Class, the reduplication containing either a diphthong or a second consonant, as δει-δίσσεσθαι to terrify, δαι-δάλλων working curiously, ξκ-παι-φάσσειν to rush in front, παμ-φαίνων gleaming, βαμ-βαίνων staggering, μαρμαίροντες glittering, κάρ-καιρε chattered, πόρ-φυρε was troubled (lit. of water), πα-φλάζοντα splashing, πα-πταίνων peeping round, μαι-μάει rages, δενδίλλων (for δελδ-?) winking.
- 62.] Collateral forms of the Present. It is characteristic of the Homeric language that Present Stems formed in different ways from the same Verb-Stem often subsist together in actual use, as alternative forms expressing the same (or nearly the same) meaning. Thus we have $\lambda \dot{\eta}\theta \omega$, $\lambda \eta \theta \dot{\alpha} \nu \omega$, $\lambda \alpha \nu \dot{\theta} \dot{\alpha} \nu \omega$; $\pi \epsilon \dot{\nu} \dot{\theta} o \mu \alpha i$; $\beta \dot{\alpha} \sigma \kappa \omega$, $\beta \dot{\alpha} \dot{\nu} \omega$, $\beta i \dot{\beta} \dot{\alpha} s$, $\beta i \dot{\beta} \dot{\alpha} \zeta \omega$, $\beta i \dot{\beta} \dot{\alpha} \dot{\sigma} \dot{\omega} \omega$; $\delta \dot{\nu} \dot{\alpha} \dot{\nu} \dot{\omega}$, $\delta \dot{\nu} \dot{\nu} \dot{\nu} \dot{\nu} \dot{\omega}$, $\delta \dot{\nu} \dot{\nu} \dot{\nu} \dot{\nu} \dot{\nu} \dot{\nu}$, $\delta \dot{\nu} \dot{\nu} \dot{\nu} \dot{\nu}$

It may be conjectured that these different forms originally expressed corresponding shades of meaning. In some cases a more specific meaning may still be traced; e.g. φάσκω I allege (i.e. keep saying, or perhaps try to say) has something of the Iterative force (cp. βίπτασκε he kept flinging about) which in

θνήσκω, διδάσκω, &c. has been softened or generalised into the ordinary meaning of the Present. Similarly the reduplication in βίβος striding, μιμνάζω I stay waiting, τιταίνω I stretch is to be compared with that of the Intensive Verbs. The Perfect, too, may be regarded as a refined and generalised kind of Intensive; cp. the forms λέληκα, κέκρᾶγα, μέμῦκα, &c. with καρκαίρω, ὀλολύζω, παφλάζω, &c.

Future in $-\sigma\omega$.

63.] The Stem of the Future is formed by suffixing $-\sigma\epsilon(o)$ to the Verb-Stem (in the strong form); as $\phi\dot{\eta}-\sigma\epsilon\iota$, δώ- $\sigma\omega$, δείξω (δεικ-), ἐκ-πέρσω (περθ-), πείσομαι (πενθ-), χείσεται (χενδ-), δέξομαι (δεχ-), εἴ-σομαι (εῖ-μι).

The Stem ἐσ- gives ἔσ-σομαι and ἔσομαι (3 Sing. ἔσε-ται and ἔσ-ται); so ἔσ-σω (Γεσ-). The Futures φράσσο-μαι (οτ φράσο-μαι), μάσσε-ται, ἀπο-δάσσο-μαι (δάσο-νται), χάσσο-νται are formed like

the corresponding Aorists in $-\sigma a$; see § 39.

Other Verbs which have an Aorist in -σσα (-σα)—the Verbstem ending in a *short vowel* (§ 39, 2)—usually form the Future without σ. Thus we find:—

Aor. τελέσσαι Fut. TENÉ-W, TENESSWY 50 4 καλέ-ουσα (Π. 3. 383). καλέσσαι ολείται, ολέ-εσθε (also ολέσσεις, ολέσσει) 649 ολέσσαι μαχέσασθαι μαχέ-ονται, μαχείται. κορέσασθαι κορέ-εις. κρεμόω (for κρεμά-ω). κρεμάσαντες $\pi\epsilon\rho\dot{\alpha}a\nu$ (for $\pi\epsilon\rho\dot{\alpha}-\epsilon\iota\nu$). **ἐ**πέρασσε δαμόω, δαμᾶ (for δαμά-ω, δαμά-ει). έδάμασσα $\epsilon \lambda \delta \omega$, Inf. $\epsilon \lambda \delta \alpha \nu$ (for $\epsilon \lambda \delta \omega$, $\epsilon \lambda \delta - \epsilon \nu$). ήλασσα όμουμαι (for όμό-ομαι: 3 Sing. όμειται, ώμοσα on the analogy of ολείται, μαχείται). **ἐ**τάνυσσε τανύω. φ97,174 ανύω. ανύσας έρύω, έρύ-εσθαι. ξρυσσα ρύεσθαι (Il. 20. 195). €ρρύσατο αντιόω (also αντιάσεις, Od. 22. 28). αντιάσας €κόμισσα κομιώ. **ἀεικίσσασθαι** ἀεικιῶ. κτερίσαιεν κτεριούσι. αγλαϊείσθαι.

It is not easy to determine (even approximately) the number of Future Stems formed like the Aorist in -σσα. In several instances the reading is uncertain: e.g. between ἐρύσσασθαι and ἐρύσσασθαι (Il. 21. 176, Od. 21. 125), ἀγάσσεσθαι and ἀγάσσασθαι (Od. 4. 181), ἀνύσσεσθαι and ἀνύσασθαι (Od. 16. 373), παρελάσσεις, παρελάσσαις and παρελάσσαι (Il. 23. 427), ἀπουρίσσουσι and ἀπουρήσουσι (Il. 22. 489). Several forms may be either

Fut. or Aor. Subj.: γουνάσομαι (II. 1. 427), δπάσσομεν (II. 24. 153), εὐνάσω (Od. 4. 408), ληίσσομαι (Od. 23. 357), ερύσσεται (II. 10. 44), δλέσω (Od. 13. 399), ἀρεσσόμεθα. There remain: ἀρκέσει (II. 21. 131—in Od. 16. 261 we should read ἀρκέση), αιδέσεται (II. 22. 124., 24. 208), δνόσσεται (II. 9. 55), γανύσσεται (II. 14. 504), δλέσσεις (II. 12. 250), δλέσσει (Od. 2. 49), and a few forms of derivative Verbs in -αζω, -ιζω, νιz. αιχμάσσουσι (II. 4. 324), θανμάσσεται (II. 18. 467), ἐφοπλίσσουσι (Od. 6. 69), ἀντιάσεις (Od. 22. 28). On the whole it would appear that the Futures with σσ (or σ representing original σσ) are confined to the stems which ended in σ or a dental. In a very few instances they are due to analogy, like the corresponding Aorists in -σσἄ. Distinct Stems are used in ἀρπάζω, Aor. ῆρπασεν and ἀρπάξαι, Fut. ἀρπάξων; ἀφύσσω, Aor. ἀφυσσάμενος, Fut. ἀφύξενν.

From μάχο-μαι, besides Λοr. μαχέσασθαι, Fut. μαχέ-ονται, the MSS. give an Λοr. μαχέσσατο, Fut. μαχήσομαι. The ancient critics were divided as to these forms: Aristarchus wrote μαχήσατο, μαχήσομαι, others μαχέσσατο, μαχέσσομαι. The form μαχέσσα-το is supported by μαχέσασθαι; on the other hand μαχήσομαι is supported by μαχητής, μαχήμων, &c. Considering the number of cases in which the language has avoided forming the First Aorist and the Future in the same way, the probability would seem to be that the MSS. are right.

For γυναῖκα γαμέσσεται αὐτός, which the MSS. give in II. 9. 394, Aristarchus read γυναῖκά γε μάσσεται αὐτός: doubtless rightly, the trochaic caesura in the fourth foot being unknown in Homer (§ 367, 2: Veitch, p. 130). The usual Fut. is γαμέω.

Verb-Stems ending in a liquid $(\rho, \lambda, \mu, \nu)$ insert ϵ and drop the σ , as $\mu \epsilon \nu - \dot{\epsilon} - \omega$, $\dot{\alpha} \gamma \gamma \epsilon \lambda - \dot{\epsilon} \omega \nu$, $\kappa \epsilon \rho - \dot{\epsilon} \epsilon \iota \nu$, $\kappa \rho a \nu - \dot{\epsilon} \epsilon \sigma \theta a \iota$, $\dot{\sigma} \tau \rho \nu \nu - \dot{\epsilon} \omega$, $\kappa \tau \epsilon \nu - \dot{\epsilon} \omega^*$, and (with contraction) $\dot{\epsilon} \kappa - \dot{\phi} a \nu \epsilon \hat{\iota}$ (Il. 19. 104), $\kappa a \tau a - \kappa \tau \epsilon \nu \epsilon \hat{\iota}$ (Il. 23. 412). But some Stems in ρ form $-\rho \sigma \omega$, as $\delta \iota a - \dot{\phi} \theta \dot{\epsilon} \rho - \sigma \epsilon \iota$, $\check{\sigma} \rho - \sigma o \nu \sigma a$ (Il. 21. 335), $\theta \epsilon \rho - \sigma \acute{\sigma} \mu \epsilon \nu \sigma s$ (Od. 19. 507).

Similarly μάχομαι forms μαχέ-ονται (Il. 2. 366), and with con-

traction $\mu a \chi \epsilon i \tau a \iota$ (Il. 20. 26).

The derivative Verbs in $-a\omega$, $-\epsilon\omega$, $-o\omega$, $-v\omega$ form $-\eta\sigma\omega$, $-\omega\sigma\omega$, $-\bar{v}\sigma\omega$, the vowel being invariably long.

Exceptional: διδώ-σομεν (Od. 13. 358), διδώσειν (Od. 24. 314). On the anomalous Futures έδομαι, πίομαι, δήω, κείω, βείομαι, see §§ 59, 80.

64.] The Future in $-\sigma\epsilon\omega$. The Suffix $-\sigma\epsilon\epsilon(o)$ is found in $\epsilon\sigma-\sigma\epsilon\hat{\imath}\tau\alpha\iota$ (Il. 2. 393., 13. 317, Od. 19. 302), and $\pi\epsilon\sigma\hat{\epsilon}o\nu\tau\alpha\iota$ (Il. 11. 824) which is perhaps for $*\pi\epsilon\tau-\sigma\epsilon o-\nu\tau\alpha\iota$ (but see § 41). Also,

^{*} The forms κατα-κτανέουσι (Il. 6. 409) and κατακτανέεσθε (Il. 14. 481) are probably corrupt (Cobet, V. L. p. 195). κτανέοντα (Il. 18. 309) involves a use of the Fut. Part. which is hardly to be defended; see § 86.

the accent of the Futures $\kappa o\mu\iota$ - $\hat{\omega}$, $\hat{\alpha}\epsilon\iota\kappa\iota$ - $\hat{\omega}$, $\kappa\tau\epsilon\rho\iota$ - $\circ\hat{v}\sigma\iota$, $\hat{\alpha}\gamma\lambda\alpha\ddot{\iota}$ - $\epsilon\hat{\iota}\sigma\theta\alpha\iota$ points to contamination of the forms in $-\sigma\omega$ and in $-\epsilon\omega$.

According to some ancient grammarians the Fut. of $\partial \nu \dot{\nu}\omega$, $\partial \rho \dot{\nu}\omega$, &c. should be written $\partial \nu \nu \dot{\omega}$, $\partial \nu \dot{\omega}$, &c.; see Schol. II. 11. 454-, 20. 452. This form in $-\sigma \dot{\omega}$ is found in Attic $(\pi \lambda \epsilon \nu \sigma \sigma \hat{\nu} \mu a\iota$, &c.: see however Rutherford's New Phrynichus, pp. 91–95); it answers to the Doric Fut. in $-\sigma \nu \omega$.

65.] Futures from Perfect and Aorist Stems. A Future Perfect meaning appears in $\mu\epsilon\mu\nu\eta'$ -σομαι I shall remember, $\kappa\epsilon\kappa\lambda\eta'$ -ση thou wilt bear the name, $\epsilon l\rho\eta'$ -σεται will be said, $\kappa\epsilon\chi$ ολώ-σεται he will be in wrath, δεδέξομαι I will await, $\pi\epsilon\phi\eta'$ -σεται will appear (Il. 17. 155), $\pi\epsilon\phi\eta'$ -σεαι thou wilt be slain, $\tau\epsilon\tau\epsilon'$ έξεται will be made, $\lambda\epsilon\lambda\epsilon'$ ψεται will remain behind, $\beta\epsilon$ βρώσεται will be devoured. In these cases the Fut. answers to a Perfect in actual use.

For πεφήσεαι J. Wackernagel (Κ. Ζ. xxvii. 279) would read πεφείσεαι (for πε-φεν-σεαι, related to πεφά-ται as τετεύξεται to τέτνκται). But the stem πεφεν-does not occur in the inflexion of the Verb, and there is no analogy to suggest it. More probably πεφήσεαι is formed from πέφαται on the analogy of έφά-το and φή-σω, δύνα-μαι and δυνή-σομαι, &c.

Active Futures of the kind occur in II. 15. 98 οὐδέ τί φημι πᾶσιν ὁμῶς θυμὸν κεχαρη-σέμεν I do not suppose I shall gladden the heart of all alike (cp. Od. 23. 266 οὐ μέν τοι θυμὸς κεχαρήσεται will not be gladdened): II. 22. 223 πεπιθή-σω I will persuade: Od. 21. 153, 170 κεκαδή-σει will deprive. These forms may be either connected with the Perfect (κεχαρη-ότα rejoicing), or with the Reduplicated Aorist (κεχάρο-ντο were gladdened, πεπιθεῖν to persuade). The latter view is supported by two other Futures of the kind; κεκαδη-σόμεθα we will give way, answering to the Aor. κεκαδών, Mid. κεκάδο-ντο; and πεφιδή-σεται will spare, answering to πεφιδέ-σθαι to spare. It will be seen that the Active forms of this kind have a distinctly causative meaning, whereas (e.g.) χαιρήσω and πιθήσω are intransitive.

Futures from the Passive Aorists. Of this formation two examples at most can be found in Homer: $\mu i \gamma \dot{\eta} - \sigma \epsilon - \sigma \theta a i$ (II. 10. 365), and $\delta a \dot{\eta} - \sigma \epsilon - a i$ (Od. 3. 187., 19. 325). It has been already noticed (§ 9) that there is nothing in the Greek Future answering to the distinction between the Aorist and the Imperfect, though à priori such a distinction is quite conceivable.

It is worth noticing that in the Doric dialect this group of

Futures takes the Active endings: as φανήσω.

66.] The Fut. is sometimes found with Mid. Endings while the corresponding Pres. is Act. The examples in Homer are:— εἰμί, ἔσομαι; θέω, θεύσομαι; κλαίω, κλαύσομαι; φεύγω, φεύξομαι; ἀείδω, ἀείσομαι; κατα-νεύω, κατα-νεύσομαι; θαυμάζω, θαυμάσσεται.

With these are usually reckoned the Verbs in which the Presis of a different formation, as ὁμοῦμαι (ὅμ-νυμι), πεσέονται (πίπτω), τέξεσθαι (τίκτω), φθήσονται (φθάνω), βήσομαι (βαίνω), καμεῖται (κάμνω), τεύξεσθαι (τυγχάνω), ὁμαρτήσεσθαι (ἁμαρτάνω), θανέεσθαι (θνήσκω), πείσομαι (πάσχω): also the Futures to which no Pres. corresponds, as εἴσομαι (οἴδα), δείσομαι (δείδια), ὄψομαι (ὀπ-).

It may help to explain these cases if we consider that the Fut. Act. is apt to have a *Transitive* sense, as in $\sigma\tau\dot{\eta}\sigma\omega$, $\beta\dot{\eta}\tau\omega$, $\phi\dot{\nu}\sigma\omega$. Hence there was a tendency to have recourse to the Middle

whenever a distinctly intransitive sense was wanted.

Historical Tenses—the Augment.

67.] The Augment takes two forms, the Syllabic and the

Temporal.

The Syllabic Augment is the prefix ϵ -, and is used for Stems beginning with a consonant. The Temporal Augment is a simple lengthening of the initial vowel of a Stem, the vowels $\check{\alpha}$ and ϵ becoming η ; as $\mathring{\eta}\gamma o - \nu$ ($\check{\alpha}\gamma o - \nu$), $\mathring{\eta}\lambda a - \sigma a - \nu$ ($\check{\epsilon}\lambda\check{\alpha} - \nu$), $\mathring{\iota}\kappa \epsilon - \tau o$ ($\check{\epsilon}\kappa \epsilon - \nu$), $\mathring{\iota}\kappa \epsilon - \tau o$ ($\check{\epsilon}\kappa \epsilon - \nu$), $\mathring{\iota}\kappa \epsilon - \tau o$ ($\check{\epsilon}\kappa \epsilon - \nu$), $\mathring{\iota}\kappa \epsilon - \tau o$ ($\check{\epsilon}\kappa \epsilon - \nu$), $\mathring{\iota}\kappa \epsilon - \tau o$ ($\check{\epsilon}\kappa \epsilon - \nu$), $\mathring{\iota}\kappa \epsilon - \tau o$ ($\check{\epsilon}\kappa \epsilon - \nu$). So the Impf. $\mathring{\eta}a$ I went (Sanser. $\mathring{a}\gamma a m$), from the stem $\check{\epsilon}\iota$ ($\check{\epsilon}\iota - \mu\iota$): as to the form $\mathring{\eta}\iota a$ see § 12.

Many seeming exceptions are due to the loss of the original initial consonants, F, σ , ι . The loss of one of these consonants may generally be presumed whenever we find the Syllabic instead

of the Temporal Augment. Thus-

F has been lost in $\dot{\epsilon}$ -άγη and $\dot{\epsilon}$ -αξε (ἄγνυμι), $\dot{\epsilon}$ -άλη (Fελ-), $\dot{\epsilon}$ -ειπε, $\dot{\epsilon}$ -έσ-σα-το (ἔννυμι), εἶδον (for ἔ-ϊδο-ν), $\dot{\epsilon}$ -ώθεο-ν; so perhaps, with contraction of εε to ει, εἴρν-σα (Fερν-), and εἶλο-ν.

For ἔίδον there is an Æolic form $\epsilon ὕιδον$ (ἔ- $\digammaιδον$, cp. $\epsilon ὕαδε$), which should perhaps be restored in some at least of the numerous places where the present text of Homer has $\epsilon ἵσιδε$ (Nauck, Mél. gr.-rom. ii. 407).

σ in $\dot{\epsilon}$ -έσσα-το (for $\dot{\epsilon}$ -έσσα-, from $\sigma \epsilon \delta$ -), and, with contraction, $\dot{\epsilon}$ ίπ $\dot{\epsilon}$ -το ($\sigma \epsilon \dot{\tau}$ -), $\dot{\epsilon}$ ίσα-ν ($\sigma \epsilon \dot{\delta}$ -), $\dot{\epsilon}$ ίχο-ν ($\sigma \dot{\epsilon} \chi$ -), $\dot{\epsilon}$ ίρπο-ν ($\sigma \dot{\epsilon} \rho \pi$ -). In these cases the σ passed into the rough breathing, which was then thrown back on the Augment: but $\dot{\epsilon}$ ίχον has the smooth breathing owing to the following χ . Also $\dot{\epsilon}$ ία ($\dot{\epsilon}$ άω for $\sigma \dot{\epsilon}$ $\dot{\epsilon}$ άω).

 ι (or y) perhaps in $\epsilon \eta \kappa a$ (for $\epsilon - \iota \eta \kappa a$) and, with contraction, $\epsilon \iota \iota \mu \epsilon \nu$ ($\epsilon - \epsilon - \iota \mu \epsilon \nu$), and $\pi a \rho - \epsilon \iota \theta \eta$ ($- \epsilon - \epsilon \theta \eta$). But see § 16.

Several Homeric forms have been supposed to point to a Syllabic Augment $\mathring{\eta}$ -(instead of $\mathring{\epsilon}$ -). One of these— $\mathring{\eta}$ $\overset{.}{u}$ I went—has been already explained (§ 12). As to the others we have to note as follows:

(1) ἥειρεν (Il. 10. 499) is not from εἴρω to join together (Lat. sero), but from ἀείρω: for, as Cobet has shown (Misc. Crit. p. 326), ἀείρω is a technical word in the sense required (cp. Il. 15. 680 συναείρεται ἵππους, also the words ξυνωρίς, for ξυν-αορ-ίς, and παρ-ήορος).

(3) A different explanation is required for ἐάγη (ā), supported as it is by Αττίε ἐώρων (ὁράω) and ἐάλων (ἄ in ἀλῶναι, &c.)*. These point to an Augment ἡ, the combinations η ρο, η ρᾶ passing into εω, εᾶ (as in βασιλέως, -εᾶ for -η ρος, -η ρα). Such an Augment is also found in ἡείδης, ἡείδει (Plpf. of οἶδα), and ἥισκε. There is much probability in the suggestion of G. Meyer (G. G. p. 423) that this ἡ- is a Temporal Augment obtained from the prothetic ἐ- so often found before ρ: e.g. in ἐ-εισάμενος (ρειδ-). Thus ἥισκε would be the aug-

mented form of itone, not of lone.

(4) The forms ἀνέφγε, ἀνέφξε are peculiarly difficult on account of the Homeric Pres. ὀΐγ-νυμ, Aor. ἄϊξα, and Lesbian ἀείγω (Pres. Inf. ὀείγην, Coll. 214, 43). We might read ἀν-ὁείγε, &c., but the ordinary forms οἵγω (Hes. Op. 817), ἀν-οίγω, &c. would still be unexplained.

Initial ρ is nearly always doubled, initial λ , μ , ν , σ very often. This may often be explained as the assimilation of an original initial F or σ : thus $\tilde{\epsilon}\rho\rho\eta\xi a$ is for $\tilde{\epsilon}-F\rho\eta\xi a$, and so $\tilde{\epsilon}\rho\rho\epsilon\xi\epsilon$ ($F\epsilon\rho\gamma$ -) and $F\rho\epsilon\gamma$ -), $\hat{\epsilon}\rho\rho(\gamma\eta\sigma\epsilon)$ ($F\rho\bar{\nu}\gamma$ -). Again $\tilde{\epsilon}\rho\rho\epsilon\epsilon\nu$ is for $\tilde{\epsilon}-\sigma\rho\epsilon\epsilon\nu$, $\tilde{\epsilon}\nu\nu\epsilon\sigma\nu$ for $\tilde{\epsilon}-\sigma\nu\epsilon\sigma\nu$, $\tilde{\epsilon}\lambda\lambda\alpha\beta\epsilon$ perhaps for $\tilde{\epsilon}-\sigma\lambda\alpha\beta\epsilon$ (Joh. Schmidt, Pluralb. p. 434). So $\tilde{\epsilon}\delta\delta\epsilon\iota\sigma\epsilon\nu$ (which Ar. wrote $\tilde{\epsilon}\delta\epsilon\iota\sigma\epsilon\nu$) is for $\tilde{\epsilon}-\delta F\epsilon\iota\sigma\epsilon\nu$: and $\tilde{\epsilon}\sigma\sigma\epsilon\nu a$ probably for $\tilde{\epsilon}-\kappa\iota\epsilon\nu a$ (Sanser. root cyu). So too in $\tilde{\epsilon}-\gamma\delta\sigma\nu\eta\sigma\alpha\nu$ the γ reappears which is lost in the unaugmented $\delta\sigma\nu\eta\eta\sigma\epsilon\nu$.

There are instances, however, to which this explanation does not apply, as $\xi \mu \mu a \theta \epsilon$. These are probably due to the influence of forms such as those already mentioned upon the traditional poetic dialect (Curtius, *Stud.* iv. 479 ff.; for a different view see

Hartel's Homerische Studien). Cp. § 371.

68.] The Pluperfect. The Perfect Stem forms the corresponding Historical or Past Tense—the Pluperfect—in two ways:—

Simply, with the Augment (often omitted) and the Secondary Person-Endings. All Middle forms of the Tense are of this kind, as ἐ-τέτυκ-το, ἐφ-ῆπτο, τετά-σθην, ἢλήλα-το. In the Active the examples are comparatively few, viz. δείδιε (Il. 18. 34), ἀνήνοθεν (Il. 11. 266), and ἐπ-ενήνοθε (Il. 2. 219); Plur. ἐ-πέπιθ-μεν, ἐ-δείδι-μεν, ἐ-δείδι-σαν, ἔστα-σαν, βέβα-σαν, μέμα-σαν, ἀπο-τέθνα-σαν; Dual ἐΐκ-την, ἐκ-γεγά-την.

^{*} ήλω was taken (Od. 22. 230 σ $\hat{\eta}$ δ' ήλω βουλ $\hat{\eta}$ κτλ.) should perhaps be written ἐάλω. The Stem 'Γάλω- appears in the Moods (ἀλώω, ἀλώγι, ἀλῶναι, ἀλούs), except in the form ἀλόντε (II. 5. 487), where the metre requires \hat{a} .

With these may be placed the Thematic forms $\hat{\epsilon}$ - $\gamma \hat{\epsilon} \gamma \omega \nu \epsilon$ (II. 14. 469), $\check{a} \nu \omega \gamma o - \nu$, $\check{a} \nu \omega \gamma \epsilon$, $\check{\epsilon} - \pi \hat{\epsilon} \pi \lambda \eta \gamma o - \nu$, $\pi \epsilon \pi \lambda \dot{\eta} \gamma \epsilon - \tau o$, $\check{\epsilon} \mu \hat{\epsilon} \mu \eta \kappa o \nu$, in Hesiod $\check{\epsilon} \pi \hat{\epsilon} \phi \nu \kappa o \nu$: see § 27.

2. By Composition, with the Augment and the Suffix $-\epsilon \alpha$ (probably for $-\epsilon \sigma \alpha$), joined to the longer form of the Stem: e.g. $\hat{\epsilon} - \tau \epsilon \theta \dot{\eta} \pi - \epsilon \alpha$, $\pi \epsilon \pi o i \theta \epsilon \alpha$, $\dot{\eta} \nu \dot{\omega} \gamma - \epsilon \alpha$. The 3 Sing. usually has $-\epsilon \epsilon (\nu)$ contracted $-\epsilon \iota(\nu)$, as $\hat{\epsilon} - \pi \epsilon \pi o i \theta \epsilon \iota$, $\dot{\eta} \nu \dot{\omega} \gamma \epsilon \iota \nu$, $\delta \epsilon \delta \dot{\eta} \epsilon \iota$, $\dot{\eta} \rho \dot{\eta} \rho \epsilon \iota$, $\delta \epsilon \beta \dot{\eta} \kappa \epsilon \iota$. The Plur. occurs only once in Homer, in $\hat{\epsilon} o i \kappa - \epsilon \sigma a \nu$ (Il. 13. 102): the Dual never.

To this group belongs $\mathring{\eta}\delta\epsilon a\ I\ knew$, 2 Sing. $\mathring{\eta}\epsilon(\mathring{\delta}\eta s\ (\text{for }\mathring{\epsilon}-F\epsilon(\mathring{\delta}\epsilon as),$ also $\mathring{\eta}\delta\eta\sigma\theta a$, 3 Sing. $\mathring{\eta}\epsilon(\mathring{\delta}\epsilon\iota)$, $\mathring{\eta}\delta\epsilon\iota$ (or, as Aristarchus read, $\mathring{\eta}\epsilon(\mathring{\delta}\eta,$ $\mathring{\eta}\check{\delta}\eta)$). As to the augment $\mathring{\eta}$ - see § 67. In respect of form $\mathring{\eta}\check{\delta}\epsilon a$ is a Sigmatic Aorist, standing for $\mathring{\epsilon}$ - $F\epsilon(\mathring{\delta}\epsilon\sigma a,$ Sanser. $\mathring{a}vedisham$, and is only a Pluperfect because it is used as the past tense answering to $\mathring{o}\mathring{\delta}a\ (M.\ U.\ iii.\ p.\ 16)$.

69.] Loss of Augment. The Augment is so often dropped in Homer that the augmented and the unaugmented forms are almost equally numerous. It has been observed however * that the forms without the Augment are comparatively rare in the speeches, the proportion of augmented to unaugmented forms (excluding speeches which mainly consist of narrative matter) being about 10 to 3, whereas in narrative it is about 5 to 7. It would appear therefore that the Augment is chiefly omitted where the context shows that past time is meant; and this is confirmed by the remarkable fact that the Iteratives, which are only used as Historical Tenses, do not take the Augment.

The only clear instance of an Iterative form with the Augm. is ε-μισγέσκοντο (Od. 20. 7). On the forms ε-φασκο-ν, ε-φασκε see § 49. παρεπερίζεται ξείν, εία (πενί

Meaning of the Present and Aorist Stems.

70.] The forms which contain the Present Stem (the Present and Imperfect Indic., with the Moods of the Present) denote *progressive* action (incipient, continued, repeated, &c.), as opposed to a *single* fact or event.

It is easy to understand why a language which distinguished these two kinds of action should have no Aorist for present time (* $\beta \hat{\eta} \mu$, * $\lambda \acute{a} \beta \omega$, &c.). The present is not a space of time, but a point; what is present therefore is not (generally speaking) a whole action or event, but the fact that it is in course of happening. So in English we usually say, not I write now, but I am writing now. The mere effort of regarding an action as in present time almost obliges us to give it a progressive character.

The forms εἰμί, εἶμι, φημί, ἄγω, γράφω, &c., in which the Stem has the form generally found only in Aorists (§ 11, § 30), may be regarded as surviving

^{*} Konrad Koch, De Augmento apud Homerum omisso, Brunswick, 1868.

instances of the 'Present Aorist,' i.e. of a Present not conveying the notion of progress. We may compare the English use of I am, I go (now archaic in the sense of I am going), I say (says he), &c. In these cases the use of a distinctly progressive form has not been felt to be necessary.

A past action may usually be regarded, if we choose, as a single fact, irrespective of its duration $(\epsilon \beta a\sigma i \lambda \epsilon v \sigma \epsilon v \epsilon \tau \eta \tau \rho i \delta \kappa o v \tau a)$ he reigned, not he continued reigning). But an action which is thought of as contemporary with some other event is almost necessarily regarded as progressive. Accordingly, answering to the Present I am writing (now), we have the Past Tense I was writing (when he came).

It follows from what has been said that a Pres. or Impf. may be used either (1) because the action intended is essentially progressive, or (2) because the time is fixed by reference (a) to the moment of speaking, or (β) to a point of time in the past. E. g. $\delta \ell \delta \omega \mu \iota$ may mean either I seek to give, I offer, or I am giving; $\delta \ell \delta \delta \omega \nu$ either he offered or he was giving. In the second of these uses the notion of progress is only relative, arising from the relation of time under which the action is thought of *.

71.] From the relative notion of progress or continuance is derived the general rule that the Impf. is used of a subordinate action or circumstance: Il. 8. 87 ὄφρ' ὁ γέρων ἀπέταμνε τόφρ' Εκτορος ἀκέες ἵπποι ἦλθον while he was cutting the chariot came.

Some varieties of this use may be noticed :-

(1) The Impf. shows that a Verb stands in a special connexion with the Verb of another clause; Il. 1. 3-5 ψυχὰς ἄτοὺς δὲ ἐλώρια τεῦχε κύνεσσιν sent down the souls of heroes to Hades, while it made themselves a prey to dogs.

Od. 8. 532 ἔνθ' ἄλλους μὲν πάντας ἐλάνθανε δάκρυα λείβων, 'Αλκίνοος δέ μιν οιος ἐπεφράσατ' ηδ' ἐνόησε while he was unobserved by

the others, Alcinous observed him.

So II. 7. 303 ὧs ἄρα φωνήσας δῶκε ξίφος ἀργυρόηλου, Αἴας δὲ ζωστῆρα δίδου (gave in exchange).

Od. 8. 63 τον περί Μοῦσ' ἐφίλησε, δίδου δ' ἀγαθόν τε κακόν τε, ὀφθαλμῶν μὲν ἄμερσε, δίδου δ' ἡδεῖαν ἀοιδήν.

(2) In oratio obliqua, as Il. 22. 439 ἥγγειλ' ὅττι ῥά οἱ πόσις ἔκτοθι μίμνε πυλάων.

(3) The action or point of time to which the Verb in the Impf. is subordinate may be merely implied:—

Il. 4. 155 θάνατόν νύ τοι ὅρκι' ἔταμνον it was death then to you

that I made (in making the treaty).

So in the common use with αρα: as σὺ δ' οὐκ αρα τοῖος ἔησθα you were not as I thought (= you are not, it now seems).

- 72.] Essentially progressive action (incomplete or continuous) is exemplified—
- (1) In the Verbs which form the Aor. from a different Verb-Stem: $\delta\rho\dot{\alpha}\omega$ I watch (Lat. tueor, whereas $\epsilon\tilde{\imath}\delta\sigma\nu$ means I descried); $\lambda\dot{\epsilon}\gamma\omega$ I relate, set forth (but $\epsilon\tilde{\imath}\pi\sigma\nu$ I said); $\phi\dot{\epsilon}\rho\omega$ I carry (but $\tilde{\eta}\nu\epsilon\gamma\kappa\sigma\nu$ I brought); so $\tau\rho\dot{\epsilon}\chi\omega$, $\tilde{\epsilon}\rho\chi\sigma\mu\omega$ (expressing different kinds of motion).
- (2) In other Verbs of motion, esp. βαίνω and ἴστημι, as Il. 21. 313 ἴστη δὲ μέγα κῦμα raise up a great wave, and often in the Mid., as Il. 2. 473 ἐν πεδίω ἵσταντο were drawn up in the plain, παρίστατο came and stood beside, &c.

Note I. We should read ເστασαν (not εστασαν as a First Aor.) in—

Il. 2. 525 στίχας ιστασαν (Bekk., La R., from the best MS.).

56 τοὺς ἴστασαν υἶες 'Αχαιῶν which the Greeks had planted; see § 73.
 3. 180 τέτρατον ἦμαρ ἔην ὅτ' ἐν 'Αργεῖ νῆας ἐΐσας

ο τέτρατον ήμαρ έην οτ' εν Αργεί νησε είσας Τυδείδεω έταροι . . . ζστασαν (see Ameis a. l.).

18. 307 αὐτίκα λαμπτῆρας τρεῖς ἴστασαν Bekk., La Roche.

2. The Verb ἄγω is often so used: II. 1. 367 την δὲ διεπράθομέν τε καὶ ἥγομεν ἐνθάδε πάντα; II. 7. 363 κτήματα δ' ὅσσ' ἀγόμην the treasures which I brought (=have brought); II. 9. 664 την Λεσβόθεν ἦγε whom he had brought. In this Verb, however, the Aorist meaning appears distinctly in the Participle; II. 6. 87 ἡ δὲ ξυνάγουσα γεραάς assembling (=having assembled); II. 1. 311 εἶσεν ἄγων brought and seated (cp. 3. 48., 4. 392., 11. 827., 22. 350). Perhaps these uses should be connected with the Aoristic form of the Stem (§ 70).

(3) In Verbs expressing the beginning of a motion, as ἄρνυτο bestirred himself (but ὧρτο arose); ἀφίει, προίει, ἔπεμπε; μύθων ἢρχε began speech.

This usage extends to all words which imply a continuous result; κελεύει, ἐκέλευε, ἐπέτελλε, ἤτεε; οὐκ ἐᾳ will not allow;

 $\lambda \epsilon i \pi \omega$ (to leave = to keep at home).

- (4) ἀκούω and πεύθομαι sometimes mean to know by hearing; as II. 11. 497 οὐδέ πω εκτωρ πεύθετο Hector was not yet aware: 14. 125 τὰ δὲ μέλλετ ἀκουέμεν ye are like to have heard it; Od. 3. 87, 187, 193. So in Attic μανθάνω I understand, αἰσθάνομαι I am aware, πυνθάνομαι I learn (Goodwin, § 28).
- 73.] A process thought of in relation to the present time, or to a point in the past, is expressed by the Impf. (=Engl. I have been doing, I had been doing): e. g.—
- II. 6. 282 μέγα γάρ μιν 'Ολύμπιος ἔτρεφε πῆμα has reared him up to be a mischief (a process). Cp. II. 1. 414 τί νύ σ' ἔτρεφον; why have I reared thee? 9. 524 ἐπευθόμεθα we have been accustomed to hear. So the Participle, II. 3. 44 φάντες who have been saying.
 - 74.] The 'historical Present' is not found in Homer, but

somewhat the same effect is often given by the use which may be called the *descriptive* Imperfect. E.g.—

Il. 2. 150 νῆας ἔπ' ἐσσενοντο, ποδῶν δ' ὑπένερθε κονίη ἴστατ' ἀειρομένη, τοὶ δ' ἀλλήλοισι κέλευον ἄπτεσθαι νηῶν ἢδ' ἐλκέμεν εἰς ἄλα δῖαν, οὐρούς τ' ἐξεκάθαιρον κ.τ.λ.

The Impf. appears sometimes to be used in a description along with Aorists for the sake of connexion and variety (i. e. in order to avoid a series of detached assertions): e. g. in II. 1. 437-439., 2. 43-45., 4. 112-119, Od. 4. 577-580.

75.] The Aorist gives the meaning of a Verb without the accessory notion of progress or continuance. It does not describe, or transport us to a time in the past when the action was present (as the Impf. does), but makes us think of it as now past. Hence it asserts a single occurrence,—an action, or series of actions, regarded as an undivided whole,—or completion, a culminating point, in which the action is summed up. Thus μογέω I am toiling, ἐμόγησα (II. 1. 162) I have toiled; νοέω I think of, ἐνόησε perceived, understood; θαρσέω I feel confident, θαρσήσας taking courage, and so δείσας, ἀλγήσας, μίσησε, νεμέσησε, &c., of the access of a feeling; δηρινθήτην (II. 16. 756) joined in strife; παπτήνας casting a glance; φωνήσας either raising his voice or having spoken: ἐπ' ἤματι δακρύσαντες (II. 19. 229) performing the due weeping for the day.

76.] The Aorist is often used in Homer of the immediate past—that which in an especial sense is thought of as now past:—Il. 2. II4 νῦν δὲ κακὴν ἀπάτην βουλεύσατο, καί με κελεύει δυσκλέα Ἄργος ἵκέσθαι.

Od. 1. 182 νῦν δ' ὧδε ξὺν νητ κατήλυθον (cp. 23. 27).

Il. 20. 16 τίπτ' αὖτ', ἀργικέραννε, θεοὺς ἀγορήνδε κάλεσσας;
Sometimes the Aor. seems to give the question a tone of impatience: Il. 2. 323 τίπτ' ἄνεω ἐγένεσθε; 4. 243 τίφθ' οὕτως ἔστητε τεθηπότες; (vulg. ἔστητε, an impossible form), cp. 20. 178 τί νν τόσσον ὁμίλον πολλὸν ἐπελθὼν ἔστης; 21. 562., 22. 122., Od. 4. 810., 10. 64. Cp. the Attic use of τί οὐ, as Soph. O. T. 1002 τί δῆτ' ἐγὼ οὐχὶ... ἐξελυσάμην; (Goodwin, § 62).

When the Aor. is used of an action which is subordinate to another in the past, it implies completion before the main action: Il. 2. 642 οὐδ' ἄρ' ἔτ' αὐτὸς ἔην, θάνε δὲ ξανθὸς Μελέαγρος he was no longer living, and yellow-haired Meleager had died.

A similar use of the Aor. is regular in the Subj., as II. 1. 168 $\epsilon \pi \epsilon i \kappa \epsilon \kappa \Delta \mu \omega$ when I have grown weary: and in the Participle, as $\epsilon \kappa \epsilon i \pi \omega \nu$ having thus spoken. The Aor. in these uses expresses, not past time as such (with reference to the moment of speak-

ing), but completion with reference to (i.e. usually before) the time of the principal Verb.

77.] The Participle of the Aor. is sometimes used to express exact coincidence with the action of the principal Verb: as $\beta\hat{\eta}$ de at $\xi a\sigma a$ went with a spring, $\psi \epsilon v\sigma a\mu \epsilon v\eta$ $\pi \rho o\sigma \eta v\delta a$ spoke a lie, $a\lambda \tau o\lambda a\theta \omega v$ leaped unseen. Here a Pres. Part. would imply that there was a distinct subordinate action: the Aor. expresses something

that coincides with, or is part of, the main action.

This is especially found with Verbs expressing the manner (tone, gesture, &c.) with which a thing is said or done: II. 6. 54 δμοκλήσας έπος ηθδα shouted the words; II. 8. 219 ποιπνύσαντι θοῶς ὀτρῦναι 'Αχαιούς to make hot haste in stirring up the Greeks; II. 13. 597 χείρα παρακρεμάσας: II. 10. 139., 16. 474., 17. 334., 20. 161, Od. 2. 422., 17. 330 (cp. φεύγειν παρασείσαντι Arist. Eth. Nic. 4. 3. 15).

78.] The Aor. sometimes appears to be used of present time.

(1) As in—

Il. 14. 95 νῦν δέ σευ ἀνοσάμην πάγχυ φρένας οἶον ἔειπες. The Aor. here expresses a culminating point, reached in the immediate past, or rather at the moment of speaking: I have been brought to the point of blaming, i.e. I blame.

II. 20. 306 $\eta\delta\eta$. . $\eta\chi\theta\eta\rho\epsilon$ has now come to hate.

Il. 3. 415 τως δέ σ' ἀπεχθήρω ως νῦν ἔκπαγλ' ἐφίλησα come to hate you as I now love you (lit. have got to love; cp. Od. 8. 481).

So $\xi \pi \lambda \epsilon \tau o$ has come to be, is (§ 32); Attic $\eta \sigma \theta \eta v$, $\xi \pi \eta \nu \epsilon \sigma a$, &c. In these cases the Aor. is used because the stress is on the nature of the action as something completed, though the completion is in present time *.

By a slight boldness of expression the Aor. may even be used

of an event completed in future time:-

Il. 9. 412 εὶ μέν κ' αὖθι μένων Τρώων πόλιν ἀμφιμάχωμαι, ἄλετο μέν μοι νόστος, ἀτὰρ κλέος ἄφθιτον ἔσται: =my return will have been lost, i. e. will be ipso facto lost. The

^{*} So Eur. Med. 791 $\Tilde{\sigma}\mu\omega\xi\alpha$, I. A. 510 $\Tilde{a}\pi\ell\pi\tau\nu\sigma\alpha$: where, as Aken observes, 'die Handlung geschieht erst mit dem Aussprechen' (Grundz. § 18). These Aorists are sometimes explained of the past time at which the action began. As a reviewer of the former edition put it, 'Greek speakers, in describing feelings excited by the previous remarks of other speakers, frequently refer those feelings to the time when they were felt, and not to the present time of the description' (Saturday Rev., Feb. 17, 1883). That is to say, $\Tilde{\epsilon}\pi\eta\nu\epsilon\sigma\alpha$ means I praised (when I heard). But this kind of subordination to a past event is precisely what is expressed by the Impf., not the Aor. The reviewer goes on to explain $\Tilde{\epsilon}\pi\lambda\epsilon\tau$ 0 in II. 19. 57 by the presence of the particle $\Tilde{\epsilon}$ 0 ($\Tilde{\eta}$ 1 $\Tilde{\epsilon}$ 2 $\Tilde{\epsilon}$ 3 $\Tilde{\epsilon}$ 3 $\Tilde{\epsilon}$ 4 $\Tilde{\epsilon}$ 5 $\Tilde{\epsilon}$ 6 $\Tilde{\epsilon}$ 6 $\Tilde{\epsilon}$ 6 $\Tilde{\epsilon}$ 7 $\Tilde{\epsilon}$ 8 $\Tilde{\epsilon}$ 9 $\Tilde{\epsilon}$

speaker puts himself at the (future) point of time given by the context, and uses the Tense which then becomes appropriate.

(2) Again—

When an assertion is made irrespective of time, the Pres. or Aor. is used—the Pres. for continuous and the Aor. for single or momentary action. Hence the use—

In similes, as Il. 3. 23 ωστε λέων εχάρη as a lion is gladdened (but in v. 25 κατεσθίει goes on devouring): Il. 4. 75 οΐον δ' ἀστέρα

ήκε . . τοῦ δέ τε πολλοὶ ἀπὸ σπινθήρες [ενται.

The only examples of the Impf. in a simile are II. 15. 274., 21. 495, in the phrase $o\dot{v}\delta'$ $\check{a}\rho a$.. $a\check{t}\sigma\iota\mu o\nu$ $\mathring{\eta}\epsilon\nu$, where it is virtually a Present.

Also in 'gnomic' passages, reflexions, general sayings, &c.:

ΙΙ. τ. 218 ος κε θεοις επιπείθηται μάλα τ' έκλυον αὐτοῦ.

9. 320 κάτθαν' όμῶς ὅ τ' ἄεργος ἀνήρ, ὅ τε πολλὰ ἐοργώς. These uses of the Aor. are very common in Homer.

The Impf. may possibly be found in a gnomic passage, Il. 13. 730-732—
ἄλλφ μὲν γὰρ ἔδωκε θεὸς πολεμήια ἔργα
ἄλλφ δ' ἐν στήθεσσι τιθεῖ νόον εὐρύοπα Ζεύς,

where the MS. reading τίθει may be defended as an Impf. marking subordina-

tion to the Aor. ἔδωκε: cp. the examples in § 71. 2.

Much light has been thrown upon the history of the Aorist by the comparison of the use in Sanscrit (Delbrück, S. F. ii, and A. S. p. 280). If the result has not been to determine the original force of the Aorist, it has at least shown that the question cannot be settled from the material furnished by Greek alone. The use which predominates in Greek, the historical use to assert the happening of a single event in the past, is almost unknown to the earliest Sanscrit. In the Veda the Aor. is employed, as often in Homer (§ 74), of what has happened in the immediate past. In the early Sanscrit prose (the Brāhmanas) the Aor. is used of what has happened to the speaker himself. It is worth noticing that these uses, in which the Aor, answers approximately to the English Pf. with have, are found in later Greek in the case of the verbs whose Pf. retains its original meaning. As Mr. Gildersleeve puts it, 'when the Perfect is used as a Present, the Aorist is used as a Perfect. So ἐκτησάμην I have gained possession of, κέκτημαι I possess' (Am. Journ. of Phil. iv. 429). Hence, if the Greek Perfect is originally a kind of present, there is a presumption that the Aor. was originally akin in meaning to our Perfect. On this view the ordinary historical Aor. is a derivative use.

CHAPTER III.

THE MOODS.

79.] The Moods of the Verb (properly so called) are the Subjunctive, the Optative, and the Imperative. It is convenient however to rank the two Verbal Nouns, the Infinitive and the

Participle, along with them. The meanings of the Moods and Verbal Nouns cannot well be discussed until we come to the chapters dealing with Complex Sentences.

The Subjunctive.

80.] Non-Thematic Tense-Stems usually form the Subj. by taking the Thematic Vowel, with the Primary Endings; except that when the Thematic Vowel enters into a diphthong, or is followed by two consonants, it becomes η or ω instead of ε or o. Thus the scheme is—

Sing		\mathbf{D}	ual.	1	Plur.	
Act.	Mid.	Act.	Mid.	Act.	Mid.	
- ω	-ομαι			-υμ€ν	-όμεθα,	-όμεσθα
-718	-€aι			-676		
-η (-ησι?)	-€Tai	<i>-€</i> Т0 <i>v</i>	$-\eta\sigma\theta$ o ν	$-\omega\sigma\iota(\nu)$	$-\omega \nu \tau \alpha \iota$.	

The long η or ω , it will be seen, comes in place of ϵ or σ wherever it can do so without disturbing the metre. Examples:—

Strong Aorists: $\tilde{\epsilon}$ - $\phi\theta\eta$, Subj. $\phi\theta\dot{\eta}$ - η :

έ-βη, Subj. βή-ω (or βείω), ὑπερ-βή-η, βή-ομεν (or βεί-ομεν): έ-στη, Subj. στή-ης, στή-η, στή-ετον, στή-ομεν, στή-ωσι:

 $\tilde{\epsilon}$ - $\gamma\nu\omega$, Subj. $\gamma\nu\omega-\omega$, $\gamma\nu\omega-o\mu\epsilon\nu$, $\gamma\nu\omega-\omega\sigma\iota$:

 $\tilde{\epsilon}$ -δν, Subj. δύω, δύ-ης, δύη:

έ-βλη-το, Subj. βλή-εται:

 $\tilde{\epsilon}$ - ϕ θι-το, Subj. ϕ θί- ϵ ται, ϕ θι-όμεσθα:

άλ-το, Subj. άλ-εται:

Stem $\theta\eta$ -, Subj. $\theta\epsilon i$ - ω (or $\theta \dot{\eta}$ - ω), $\theta \dot{\eta}$ - ηs , $\theta\epsilon i$ - ω (or $\theta \dot{\eta}$ - $\omega \nu$), $\dot{\alpha}\pi_0$ - $\theta\epsilon i$ - ω

Stem $\dot{\eta}$ -, Subj. $\dot{\epsilon}\phi$ - ϵ $\dot{\iota}$ - ω , $\dot{\alpha}\nu$ - $\dot{\eta}$ - η :

Stem $\delta\omega$ -, Subj. $\delta\omega$ - η and $\delta\omega$ - $\eta\sigma\iota$, $\delta\omega$ - $\circ\mu\epsilon\nu$, $\delta\omega$ - $\omega\sigma\iota$.

Presents: $\epsilon \hat{l}\mu \hat{l}$, Subj. $\hat{\epsilon} - \omega$ (for $\hat{\epsilon} \sigma - \omega$), $\hat{\epsilon} - \eta s$, $\hat{\epsilon} - \eta$ and $\hat{\epsilon} - \eta \sigma \iota$, $\hat{\epsilon} - \omega \sigma \iota$: $\epsilon \hat{l} - \mu \iota$, Subj. $\hat{l} - \omega$, $\hat{l} - \eta \sigma \theta a$, $\hat{l} - \eta \sigma \iota$, $\hat{l} - \iota \omega \epsilon \nu$ (\hat{l}):

 $\epsilon \iota^{-}\mu\iota$, Subj. $\iota^{-}\omega$, $\iota^{-}\eta\sigma\theta\alpha$, $\iota^{-}\eta\sigma\iota$, $\iota^{-}\circ\mu\epsilon\nu$ (ι^{-}

φη-μί, Subj. φή-η:

κιχή-ναι, Subj. κιχεί-ω, κιχεί-ομεν (or κιχή-ω, κιχή-ομεν):

so $\epsilon \rho \epsilon i - o\mu \epsilon \nu$ as if from $\star \epsilon \rho \eta - \mu \iota$.

Passive Aorists: ε-δάμη, Subj. δαμεί-ω, δαμή-ης, δαμή-ετε: so δαεί-ω, άλώ-ω, άλώ-η, σαπή-η, φανή-η, τραπεί-ομεν.

For δαινύη, 2 Sing. Subj. Mid. (Od. 8. 243., 19. 328), we

may read $\delta a i \nu \dot{\nu} \dot{\epsilon}$, i. e. $\delta a i \nu \dot{\nu} - \epsilon - a i$.

Perfects: πέποιθα, Subj. πεποίθ-ης, πεποίθ-ομεν: ἔρριγε, Subj. ἔρρίγ-ησι: βέβηκε, Subj. προ-βεβήκ-η: so ἔστήκ-η, ἀρήρ-η, μεμήλ-η, ἀλώλ-η, ὀρώρ-η, βεβρύχ-η: also ἱλήκησι (Od. 21. 365.)—unless we assume a Pres. ἱλήκω (§ 45).

Pf. Mid. προσ-αρήρεται (Hes. Op. 431).

οίδα, Subj. είδέω, είδης, είδη, είδομεν, είδετε, είδωσι.

For $\epsilon i\delta \epsilon \omega$, &c., Tyrannio wrote $\epsilon i\delta \omega$, $\epsilon i\delta \eta s$, $\epsilon i\delta \eta$, $\epsilon i\delta \omega \sigma \iota$ (Schol. Od. I. 174), uniform with $\epsilon i\delta \epsilon \iota \omega \epsilon \iota$. Both forms may be accounted for: $\epsilon i\delta \epsilon \omega$ is Subj. of $\epsilon - F \epsilon i\delta \epsilon \omega$ (§ 68); $\epsilon i\delta \omega$ with the Plur. $\epsilon i\delta - \epsilon \iota \iota \iota \omega$, $\epsilon i\delta - \epsilon \iota \iota \iota \omega$. Non-Thematic * $F \epsilon i\delta - \iota \iota \omega$, Sanser. ved - mi (M. U. iii. 18). The form $i\delta \epsilon \omega$, read by most MSS. in II. 14. 235, is a mere error for $\epsilon i\delta \epsilon \omega$. The form $i\delta \epsilon \omega$ and $i\delta \iota \omega$ is the form $i\delta \iota \omega$.

Aorists in $-\sigma \ddot{\alpha}$: $\dot{\epsilon}$ -βήσα-μεν, Subj. βήσ-ομεν: ἤγειρα, Subj. ἀγείρ-ομεν: ἔ-τισα, Subj. τίσ-ετε, τίσ-ωσι: ἠμείψα-το, Subj. ἀμείψ-εται: ἠλεύα-το, Subj. ἀλεύ-εται: and many more. These Subjunctives properly belong to the older inflexion of the Sigmatic Aorist without -ἄ (§ 40).

To these should be added some forms used as Futures:-

ἔδ-ο-μαι, ἔδονται shall eat (cp. Sanser. ad-mi, Lat. est for ed-t).
δή-εις, δή-ομεν, δή-ετε shall find, with the strong Stem answering to δἄ(σ)- in δέδαεν, &c.

βεί-ο-μαι shall live, from the stem βίβ-; also in the form

βέομαι. Evidently βείομαι : βιώναι : : δήω : δαήναι.

It will be found that the Homeric uses of these words are all such as can be referred to the Subj. On πίομαι and κείω see § 59. The form δήεις may be a trace of an older inflexion, -ω, -εις, -ει, answering to -ομεν, -ετε.

It will be seen that the strong form of the Stem is found in the Subjunctive, as $\phi\dot{\eta}-\eta$, $\delta\dot{\omega}-o\mu\epsilon\nu$, $\dot{\epsilon}\sigma\tau\dot{\eta}\kappa-\eta$. Apparent exceptions are, (1) the Subj. of $\epsilon \tilde{\iota}\mu\iota$ —in which the $\bar{\iota}$ of $\tilde{\iota}o\mu\epsilon\nu$ (for $\epsilon \tilde{\iota}-o\mu\epsilon\nu$) is byto unexplained, while the forms $\tilde{\iota}-\omega$, $\tilde{\iota}-\eta\sigma\iota$ may be Thematic, (as are Opt. $\tilde{\iota}o\iota$, Part. $l\dot{\omega}\nu$); and (2) the forms $\dot{\alpha}\phi-\dot{\epsilon}-\eta$ (Aor. of $\dot{\alpha}\phi-\dot{\iota}\eta-\mu\iota$), which is are $\dot{\alpha}\omega$, $\dot{\alpha}\dot{\alpha}\dot{\alpha}-\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}$, $\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}$, $\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}$, $\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}$. These forms are the result of transference of quantity, $\dot{\alpha}\tau\dot{\epsilon}-\dot{\omega}\dot{\alpha}\dot{\alpha}\dot{\alpha}$. These forms are the result of transference of quantity, $\dot{\alpha}\tau\dot{\epsilon}-\dot{\omega}\dot{\alpha}\dot{\alpha}\dot{\alpha}$. And it is important to notice that the last six are always scanned as disyllables, thus forming the transition to the contracted $\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}$, $\dot{\alpha}\tau\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}\dot{\alpha}$, &c.

Anomalous lengthening is found in $\mu\epsilon\tau$ - $\epsilon\ell\omega$ (Il. 23, 47) for $\mu\epsilon\tau$ - $\epsilon-\omega$. On the $\epsilon\iota$ for η in $\beta\epsilon\ell-\omega$, $\theta\epsilon\ell-\omega$, $\delta\alpha\mu\epsilon\ell-\omega$, &c. see Append, C.

81.] Subjunctives with lengthened Stem-vowel. The formation of the Subj. by means of the Thematic vowel must have been confined originally to Stems ending in a consonant, or in one of the vowels i, u. The hiatus in such forms as $\phi \dot{\eta} - \eta$, $\sigma \tau \dot{\eta} - o\mu \epsilon \nu$, $\gamma \nu \dot{\omega} - o\mu \epsilon \nu$ is enough to prove that they are not primitive. In Vedic Sanscrit, accordingly, while as-a-ti, han-a-ti are Subj. of as-ti, han-ti, we find $sth\dot{a}-ti$, $d\dot{a}-ti$ as the Subj. answering to the Aorists $\dot{a}-sth\ddot{a}-t$, $\dot{a}-d\ddot{a}-t$. These would become in Homer $\sigma \tau \dot{\eta} - \sigma \iota$, $\delta \dot{\omega} - \sigma \iota$ or (with the usual ι of the 3 Sing.) $\sigma \tau \dot{\eta} - \sigma \iota$, $\delta \dot{\varphi} - \sigma \iota$. Similarly we may infer an original Plural $\sigma \tau \dot{\eta} \mu \epsilon \nu$, $\sigma \tau \dot{\eta} \tau \epsilon$, $\sigma \tau \dot{\eta} \nu \tau \iota$ ($\sigma \tau \dot{\eta} \sigma \iota$); $\delta \dot{\omega} \mu \epsilon \nu$, $\delta \dot{\omega} \tau \epsilon$, $\delta \dot{\omega} \nu \tau \iota$ ($\delta \dot{\omega} \sigma \iota$); and so on. The principle of the formation is that the Stem ends in a simple long vowel—not one that has arisen from specifically Greek contraction.

Traces of this type of Subj. are found in the Greek dialects: $\delta \dot{v} \dot{v} \bar{\iota} - \mu a \iota$ (for $\delta \dot{v} v \omega \mu a \iota$), $\kappa a \theta - \iota \sigma \tau \bar{\iota} - \tau a \iota$, $\pi \rho o - \tau \iota \theta \eta \nu \tau \iota$, &c. (Meyer, G. G. p. 502). In Homer it may be recognised in the 3 Sing. forms $\phi \dot{\eta} \sigma \iota \nu$ (Od. 1. 168), $\phi \theta \dot{\eta} \sigma \iota$ (Il. 23. 805), $\dot{\eta} \sigma \iota$ (Il. 15. 359), $\mu \epsilon \theta - \iota \eta \sigma \iota$ (Il. 13. 234), $\delta \dot{\omega} \sigma \iota$; perhaps in $\delta \dot{\omega}$, $\delta \dot{\omega} \rho \epsilon \nu$, $\delta \dot{\omega} \sigma \iota$, $\pi \epsilon \rho \iota - \delta \dot{\omega} \mu \epsilon \theta \sigma \nu$, $\epsilon \tau \iota - \delta \dot{\omega} \mu \epsilon \theta a$; $\gamma \nu \dot{\omega} \rho \iota$; perhaps in $\delta \dot{\omega}$, $\delta \dot{\omega} \rho \iota$, $\delta \dot{\omega} \rho \iota$, $\delta \dot{\omega} \sigma \iota$, $\pi \epsilon \rho \iota - \delta \dot{\omega} \mu \epsilon \theta \sigma \nu$, $\epsilon \tau \iota - \delta \dot{\omega} \mu \epsilon \theta a$; $\gamma \nu \dot{\omega} \rho \iota$, $\gamma \nu \dot{\omega} \rho \iota$

How then did the Homeric forms of the type of $\phi \dot{\eta} - \eta$, $\sigma \tau \dot{\eta} - \rho \mu \epsilon \nu$, $\gamma \nu \dot{\omega} - \rho \mu \epsilon \nu$ arise? Doubtless by a new application of the process already familiar in $\dot{\iota} - \rho - \mu \epsilon \nu$ ($\epsilon \dot{\iota} - \mu \iota$), $\phi \theta \dot{\iota} - \epsilon - \tau \alpha \iota$, $\chi \epsilon \dot{\nu} - \epsilon - \tau \alpha \iota$, $\pi \epsilon \pi o \dot{\iota} \theta - \rho - \mu \epsilon \nu$, &c. We may compare the extension of the Endings - $\dot{\alpha} \tau \alpha \iota$, - $\dot{\alpha} \tau \sigma$ to the Pf. $\beta \epsilon \beta \lambda \dot{\eta} - \alpha \tau \alpha \iota$, in imitation of $\kappa \epsilon \kappa \lambda \dot{\iota} - \alpha \tau \alpha \iota$,

εἰρύ-αται (§ 5).

Contraction appears in the 3 Sing. $\phi \hat{\eta}$ (Od. 19. 122), $\sigma r \hat{\eta}$ (Od. 18. 334), $\beta \hat{\eta}$ (Od. 2. 358), $\phi a v \hat{\eta}$ (II. 9. 707), $\gamma v \hat{\phi}$ (II. 1. 411., 16. 273)—unless we suppose that these are obtained by dropping the $-\sigma \iota$ of $\phi \hat{\eta} - \sigma \iota$, &c. on the analogy of the Thematic $-\eta$. Also in the 1 Plur. $\mu \epsilon \theta - \hat{\omega} \mu \epsilon v$ (II. 10. 449), $\sigma v v - \hat{\omega} \mu \epsilon \theta a$ (II. 13. 381), $\delta a \hat{\omega} \mu \epsilon v$ (II. 2. 299), $\mu \epsilon \mu v - \hat{\omega} \mu \epsilon \theta a$ (Od. 14. 168; and the 3 Plur. $\hat{\omega} \sigma \iota$ (II. 14. 274, Od. 24. 491), $\beta \hat{\omega} \sigma \iota v$ (Od. 14. 86); but it is probably more correct to write these words with $\epsilon \omega$ (like $\phi \theta \epsilon \omega \sigma \iota$, $\epsilon \omega \mu \epsilon v$, &c.), except when a vowel precedes (as in $\delta a \hat{\omega} \mu \epsilon v$).

The two forms of the Subj. present a certain analogy to the two kinds of derivative Verbs—the Attic $-a\omega$, $-\epsilon\omega$, $-\omega\omega$, and the Æolic $-a\mu\iota$, $-\eta\mu\iota$, $-\omega\mu\iota$. Thus $\delta\dot{\nu}\nu\dot{a}-\mu\alpha\iota$, $\tau\dot{\iota}\theta\gamma-\nu\tau\iota$ are related to $\delta\dot{\nu}\nu\omega-\mu\alpha\iota$, $\tau\iota\theta\dot{\epsilon}\omega\sigma\iota$ nearly as $\phi\dot{\iota}\lambda\eta\mu\epsilon\nu$, $\phi\dot{\iota}\lambda\dot{\epsilon}\omega\iota$ to $\phi\iota\lambda\dot{\epsilon}\omega\mu\epsilon\nu$, $\phi\iota\lambda\dot{\epsilon}\omega\nu\sigma\iota$.

κεῖται occurs as a Subj. in Il. 19. 32., 24. 554, Od. 2. 102., 19. 147. It has been explained as contracted from κεί-εται, the regular form answering to the Non-Thematic κεῖ-ται (Curt. Stud. vii. 100). The best MS. (Ven. A of the Iliad) gives κῆται. The true reading is probably κέεται (related to κείεται as $\tau \epsilon \lambda \epsilon \omega$ to $\tau \epsilon \lambda \epsilon (\omega)$.

ξώννυνται, construed with ὅτε κεν (Od. 24. 89) is regarded by Curtius as a Subj. (*Verb.* ii. 67). But the example is uncertain; the clause refers to past time, so that ὅτε κεν with the Subj. is quite irregular (§ 298).

σόφ and σόφς or σοφς (Il. 9. 424, 681) are probably Optatives; see § 83.

82.] Thematic Tense-Stems form the Subj. by changing ϵ into η and δ into ω .

The Subjunctive of the Thematic Aor. and Pres. frequently employs the Person-Endings - μ i and - σ i: e.g. $\epsilon\theta\epsilon\lambda$ - $\omega\mu$ i, $\epsilon\theta\epsilon\lambda$ - $\eta\sigma$ i; $\epsilon\tilde{i}\pi\omega\mu$ i, $\epsilon\tilde{i}\pi\eta\sigma$ i; $\tilde{i}\lambda\alpha\mu\mu$ i, $\tilde{i}\lambda\alpha\mu\mu$ i, $\tilde{i}\lambda\alpha\mu\mu$ i, $\tilde{i}\lambda\alpha\mu\mu$ i, $\tilde{i}\lambda\alpha\mu\mu$ i, $\tilde{i}\lambda\alpha\mu\mu$ i, $\tilde{i}\lambda\alpha\mu$ i, $\tilde{i}\lambda\lambda\mu$ i, \tilde{i}

(II. 3. 353). The 2 Sing. sometimes takes $-\sigma\theta\ddot{\alpha}$; $\dot{\epsilon}\theta\dot{\epsilon}\lambda-\eta\sigma\theta\alpha$, $\dot{\epsilon}i\pi-\eta\sigma\theta\alpha$, $\pi i\eta\sigma\theta\alpha$, &c.

The Subj. in -ωμι had almost disappeared at one time from the text of Homer, having been generally corrupted into -ομμι, sometimes -ωμαι. It was restored by Wolf, chiefly on the authority of the ancient grammarians. Some of the best MSS. (especially Ven. A) have occasionally preserved it.

It is interesting to observe the agreement in form between the Thematic Indic. and the Non-Thematic Subj.; e.g. Indic. ἄγω and Subj. γνώ-ω, in contrast to Subj. ἐθέλω- μ : just as ἄγο- μ εν and γνώ-ο μ εν agree in contrast to ἄγω- μ εν.

A few forms of the Aorist in -σἄ follow the analogy of the Thematic Stems, as ὅρσ-ωμεν (II. 7. 38), ὅρσ-ητε (II. 23. 210), δηλήσ-ηται (II. 3. 107), μνησώμεθα (II. 15. 477, &c.), παύσωμεν (II. 7. 29), παυσώμεσθα (II. 7. 290., 21. 467), πέμψωμεν (Od. 20. 383), ἐνιπλήξωμεν (II. 12. 72), φθίσωμεν (Od. 16. 369), περάσητε (Od. 15. 453), ἀντιάσητον (II. 12. 356), τρώσητε (Od. 16. 293., 19. 12), δείσητε (II. 24. 779), βουλεύσωμεν (Od. 16. 234).

In most of these instances the original reading is probably either a Pres. Subj. or an Opt. Thus in Il. 21. 467 the best MSS. have παυώμεσθα, and in Od. 20. 383 there is good authority for πέμπωμεν (in Il. 15. 72 the MSS. are divided between παύω and παύσω). Similarly we may read παύωμεν and ένιπλήσσωμεν. Again φθίσωμεν follows a Past Tense (§ 298), περάσητε an Opt. (§ 308, 1, b): read φθίσωμεν, περάσαιτε. For ἀντιάσητον we may have either the Opt. ἀντιάσαιτον or a Pres. Subj. ἀντιάητον. For τρώσητε we should perhaps read τρώητε (ep. the Pres. Ind. τρώει), and for βουλεύσωμεν βουλεύωμεν.

There are no clear instances of Thematic Stems forming the Subjunctive with a short vowel (e or o). Odd 2004 26 (15.2.2)

The forms μίσγεαι, κατίσχεαι (Il. 2. 232, 233), for μίσγηαι, κατίσχηαι, are like βέβληαι (Il. 11. 380) in which the η forms a short syllable.

In Il. 14. 484 τῷ καί κέ τις εὕχεται ἀνήρ κτλ. Hermann's conjecture καί τέ τις is found in two of La Roche's MSS., and in any case the κε is unsuitable to the sense. The true reading is probably καί τίς τ' (§ 332).

In Od. 4. 672 ώς ἀν ἐπισμυγερῶς ναυτίλλεται write ναυτίλεται, the Aor. Subj. Three places remain to be mentioned:

Π. 1. 66 αἴ κέν πως ἀρνῶν κνίσης αἰγῶν τε τελείων βούλεται ἀντιάσας ἡμῖν ἀπὸ λοιγὸν ἀμύνειν.

Curtius adopts the suggestion of Stier, βούλητ' ἀντιάσας (Curt. Stud. ii. 138).

II. 10. 360 ώς δ' ὅτε καρχαρόδοντε δύω κύνε, εἰδότε θήρης, ἢ κεμάδ' ἢὲ λαγωὸν ἐπείγετον ἐμμενὲς αἰεὶ χῶρον ἀν' ὑλήενθ', ὁ δέ τε προθέησι μεμηκώς.

Here ἐπείγετον is difficult because the Subj. προθέησι is used in the next clause. Possibly the author of book 10 used the archaic form in -ησι as an Indicative.

II. 12. 42 ώς δ' ὅτ' ἀν ἔν τε κύνεσσι καὶ ἀνδράσι θηρευτῆσι κάπριος ἢὲ λέων στρέφεται.

The use of ὅτ' ἄν in a simile is doubtful in Homer (see § 289). Should we read ὡς δ' ὅτ' ἔναντα? Cp. Π. 20. 67.

The Optative.

[83.

- 83.] The Optative Stem is formed from the Tense Stem by the Suffix ιη or ι, as διδο-ίη-ν, τύχο-ι-το.
- 1. Non-Thematic Tenses (except the Aorist in $-\sigma\check{\alpha}$) take $\iota\eta$ before Light Endings, ι before Heavy Endings; as $\epsilon\check{\iota}\eta$ - ι (for $\epsilon\sigma$ - $\iota\eta$ - ι), $\theta\epsilon$ - $\iota\eta$ - ι , $\delta\sigma$ - $\iota\eta$, $\kappa\iota\chi\epsilon$ - $\iota\eta$, $\tau\epsilon\theta\nu\alpha$ - $\iota\eta$ - ι , $\delta\alpha\mu\epsilon$ - $\iota\eta$; but Plur. $\phi\alpha$ - ι - $\mu\epsilon\nu$, $\delta\iota\alpha$ - $\kappa\sigma\sigma\mu\eta\theta\epsilon$ - ι - $\mu\epsilon\nu$, $\epsilon\pi\iota$ - $\theta\epsilon$ - ι - $\tau\epsilon$.

The 3 Plur ends in -iev, as e-lev, dame-lev, do-lev: once -in-oav,

viz. στα-ίησαν (Il. 17. 733).

The ι is lost in δύη (Od. 9. 377., 18. 348., 20. 286, for δυ-ίη), $\tilde{\epsilon}\kappa$ -δυμεν, λελυτο (Od. 18. 238 La Roche), δαινυτο (Il. 24. 665), δαινύ-ατο (Od. 18. 248), φθιτο, ἀπο-φθίμην (for φθι-ι-το, ἀπο-φθι-ι-μην). Μόλιβο

2. In Thematic Tenses the scheme of Endings is :-

	Sing.		Dual.		Plur.
1οιμι	Midοίμην		Mid	-οιμεν	Mid. $-oi\mu\epsilon\theta a$
2015	-010	-01700	$-o\iota\sigma\theta o\nu$	-017€	$-o\iota\sigma\theta\epsilon$
301	-0170	-οίτην	$-o(\sigma\theta\eta\nu)$	-οι ∈ ν	-οί <i>ἄτο</i> .

- 3. The Aorist in -oa forms the Optative in two ways-
 - (1) In -σεια the (so-called) Æolic Optative.
 - (2) In -σαι-μι with Endings as in the Thematic Tenses, putting a for o throughout.

The scheme of the Homeric forms is :-

- 1 Sing. -αιμι Plur. -αιμεν
 - ,, -ειάs, rarely -aιs ,, -αιτε
- 3 ,, $-\epsilon\iota\epsilon(\nu)$, sometimes $-a\iota$,, $-\epsilon\iota\check{a}\nu$ ($-a\iota\epsilon\nu$ II. 24. 38).

The Mid. Endings are of the second kind, -aίμην, -aιο, -aιτο, &c.

The Perfect forms the Opt. from the weak Stem, as $\tau \epsilon \tau \lambda a - i\eta$, $\tau \epsilon \theta \nu a - i\eta - s$, $\epsilon \sigma \tau a - i\eta$. The Opt. of of δa is formed (like the Plpf., see § 68, 2) from an Aor. $\epsilon - F \epsilon i \delta \epsilon - \sigma a$ ($\epsilon i \delta \epsilon i \eta - \nu$ for $F \epsilon i \delta \epsilon \sigma - \iota \eta - \nu$).

The instances of the Pf. Opt. with Thematic -0ι-μι, -0ι-ς, &c. Δτωτού are doubtful. βεβλήκοι is the reading of Aristarchus in Il. 8. 270, where the best MSS. have βεβλήκει. In Il. 21. 609 γνώμεναι ὅς τε πεφεύγοι ὅς τ' ἔθαν' κτλ., the reading πεφεύγει is given by one good MS. (D.), and evidently agrees better with ἔθανε. βεβρώθοις (Il. 4. 35) points to a form βέβρωθα, of which however there is no other evidence. ἱλήκοι (H. Apoll. 165) may be Pf. or Pres.

Irregular forms:—

Thematic ϵ_{0i} -s, ϵ_{0i} (Il. 9. 142, 284), ϵ_{0i} (Il. 14. 21), δ_{0i} - ϵ_{0i} (Od. 17. 317). Homer has also ϵ_{0i} - ϵ_{0i} (Il. 19. 209), to be compared with ϵ_{0i} - ϵ_{0i} -

The so-called 'Æolie' Opt. of Contracted Verbs $(-\omega \eta - \nu, -o\iota \eta - \nu)$ appears in $\phi \iota \lambda o \iota \eta$ (Od. 4. 692) and $\phi o \rho o \iota \eta$ (Od. 9. 320).

In Il. 14. 241 most authorities give ἐπισχοίης as an Opt. (τῷ κεν ἐπισχοίης λιπαροὺς πόδας εἰλαπινάζων. Three of the chief MSS. (A. B. C.) have ἐπίσχοιες, and this was quoted by Herodian, apparently as the only reading known to him (see Ludwich, A. H. T. i. 374). The Syr. palimpsest has ἐπίσχοιας. All three forms are anomalous; ἐπισχοίης finds a parallel in ἀγαγοίην (Sappho) and one or two other forms, but can hardly be Homeric.

The forms σόφs (II. 9. 681), σόφ (II. 9. 424) are so written by modern editors. Most MSS have σόης, σόη. In the former place we learn that Ar. doubted between σαφς and σοφς (or σόφς, for the accent here is conjectural). The ancient grammarians apparently took both forms as Opt. (which suits the sense, § 304, a). Some wrote σαφς, σαφ (or σοφς, σοφ), deriving them directly from σαόω: others σόφς, σόφ, from σώω or σόω. It is not difficult to restore the uncontracted σαόοις, σαόοι, or, if the Subj. is preferred, σαόης, σαόη (so Nauck).

For the 3 Plur, in -oie-v Bekker finds one instance of -oi-v, viz. in Od. 20. 382, where the common text has—

τούς ξείνους εν νητ πολυκλήϊδι βαλόντες ες Σικέλους πέμψωμεν ὅθεν κέ τοι ἄξιον ἄλφοι,

for which he would read ἄλφοιν. The I Sing, in -οι-ν (instead of the anomalous -οι-μι) was not unknown in Attic (Bekker, H. B. p. 111 ff)*.

παρα-φθα-ίη-σι (II. 10. 346), with Primary instead of Secondary Ending, is perhaps a pseudo-archaic form, made on the analogy of the Subjunctives in -ησι.

The Verbal Nouns.

- 84.] Infinitives and Participles are not properly speaking Verbs—since they do not contain a Subject and Predicate—but Nouns: the Infinitive is a kind of Substantive and the Participle an Adjective. In certain respects however they belong to the scheme of the Verb:—
- 1. They answer in form and meaning to the Tense Stems; each Tense Stem has in general an Infinitive and a Participle formed from it.
- 2. They are distinguished as Active and Middle (or Passive) in sense.
- 3. They are construed with the same oblique cases of Nouns, and the same Adverbs and Adverbial phrases, as the corresponding Verbs.

^{*} It must not be supposed, however, that the I Sing. and the 3 Plur. in -ow are primitive forms. The termination -ow was originally impossible in Greek (as -em and -om are in Sanserit); we should expect -oid, -oidv (Sanser. -eyam, -eyas). Hence -oi-up probably made its way into Greek in place of *-oid, as -o-ai-up in the Aor. in place of -o-id (see Brugmann, in Curt. Stud. ix. 313). The 3 Plur. form amorivoid is found in the Eleian dialect.

85. The Infinitive Active is formed—

(1) In Non-Thematic Tenses (except the Aor. in -σα) by the

Suffixes - μεναι, - μεν, - εναι, - ναι.

Of these - μ eval is the most usual, as $\theta \acute{\epsilon}$ - μ eval, $\gamma v \acute{\omega}$ - μ eval, $\mu v \gamma \acute{\eta}$ - μ eval, $\tilde{\tau} \acute{\delta}$ - μ eval, $\tau \acute{\epsilon} \theta v \acute{\alpha}$ - μ eval, $\tilde{\zeta} \acute{\epsilon} v \gamma$ - $v \acute{v}$ - μ eval: - μ ev occurs after short vowels, as \tilde{t} - μ ev, $\delta \acute{o}$ - μ ev, $\tau \acute{\epsilon} \theta v \acute{\alpha}$ - μ ev, $\delta \acute{\rho}$ - $v \acute{v}$ - μ ev; also in $\tilde{\epsilon} \mu \mu$ ev (five times, but always where we may write $\tilde{\epsilon} \mu \mu$ ev'), $\tilde{t} \acute{\delta}$ - μ ev (II. 11.719), and $\tilde{\zeta} \acute{\epsilon} v \gamma$ - $v \acute{v}$ - μ ev (II. 16. 145), in which the long v is irregular.

The full Suffix -έναι only occurs in l-έναι; but there are many other Infinitives in -ναι, all of them containing a long vowel or diphthong in which an ε may be supposed to have been absorbed; as δοῦναι (for δο-έναι, see Max Müller, Chips, iv. 56), θεῖναι, στῆναι, βῆναι, δῦναι, γνῶναι, ἀλῶναι, βιῶναι, ἀῆναι, φορῆ-ναι, διδοῦναι (Il. 24. 425). The original form of the Suffix seems to have been -Γεναι, i historical doctival

From $\epsilon l\mu'$ ($\epsilon \sigma$ -) are formed $\epsilon \mu \mu \epsilon \nu a$, $\epsilon \mu \epsilon \nu$, $\epsilon \mu \epsilon \nu a$, $\epsilon \mu \epsilon \nu$, and $\epsilon l\nu a$. Of these $\epsilon \mu \epsilon \nu a$, $\epsilon \mu \epsilon \nu$ are irregular; they follow the analogy of $\theta \epsilon \mu \epsilon \nu a$, &c. Cp. the I Plur. $\epsilon \mu \epsilon \nu$ (Soph. El. 21). From $\epsilon l\nu a$ are formed $l\nu a \nu a$, $l\nu a$ and $l\nu a \nu a$. In one place (Il. 20. 365) $l\nu a \nu a$ is scanned with $l\nu a \nu a$ in imitation of $l\nu a \nu a \nu a$ (Solmsen, K. Z. xxix, 72).

The common Attic Present Infinitives ἰστά-ναι, τιθέ-ναι, διδό-ναι, δεικ-νύ-ναι, &c., as well as the Perfect Infinitives in -έναι, are entirely unknown in

Homer.

(2) In Thematic Tenses by -έ-μεναι, -έ-μεν, -ειν; as είπ-έ-μεναι,

 $\epsilon i\pi - \epsilon - \mu \epsilon \nu$, $\beta \dot{\alpha} \lambda \lambda - \epsilon i \nu$.

The Ending $-\epsilon - \epsilon \iota \nu$ only occurs in the Thematic Aor., and is anomalous; compare $\beta a \lambda - \epsilon - \epsilon \iota \nu$ (Stem $\beta a \lambda \epsilon - \epsilon$) and $\beta a \lambda \lambda - \epsilon \iota \nu$ (Stem $\beta a \lambda \lambda \epsilon - \epsilon \nu$). The original ending was doubtless $-\epsilon \epsilon \nu$: thus—

Stem $\beta a \lambda \epsilon$ -, Inf. $\beta a \lambda \epsilon \epsilon \nu$, contr. $\beta a \lambda \epsilon \hat{\imath} \nu$. $\beta a \lambda \lambda \epsilon$ -, ,, $\beta a \lambda \lambda \epsilon \nu$.

In the Aor. the metre usually allows us to restore - \(\epsilon\epsilon\epsilon\) (see Renner, Curt. Stud. i. 2. p. 33).

It is possible that the forms $\beta a\lambda \acute{\epsilon} - \epsilon \nu$, &c., are genuine, since - $\epsilon \epsilon \nu$ might pass into - $\epsilon \epsilon \iota \nu$ from the analogy of the Pres. Inf. in - $\epsilon \iota \nu$, just as in the Rhodian dialect - $\acute{\epsilon} \mu \epsilon \nu$ became - $\acute{\epsilon} \mu \epsilon \iota \nu$. Leo Meyer (Vergl. Gr. ii. 284) proposed to read $\beta a\lambda \acute{\epsilon} - \mu \epsilon \nu$, &c. But, as Renner points out (l. c.), the change from - $\epsilon \epsilon \nu$ to - $\epsilon \epsilon \nu$ is very much slighter, indeed is a mere matter of spelling. Original $\beta a\lambda \acute{\epsilon} \mu \epsilon \nu$, &c. would probably have been retained.

(3) The Aor. in -σα forms -σαι, as στη-σαι.

(4) The Inf. Middle is formed by $-\sigma\theta\alpha$: $\beta\lambda\hat{\eta}-\sigma\theta\alpha$, $\pi\epsilon\phi\hat{\alpha}-\sigma\theta\alpha$,

The Infinitive is originally a Case-form of an abstract Noun (nomen actionis). Thus -μεναι consists of the Nominal Suffix -μεν (§ 114) with the Dative ending -αι: ἴδ-μεν-αι 'for knowing'

(Sanser. vid- $m\acute{a}n$ -e). Similarly $\delta o \hat{v} vai$ is δo - $f \epsilon v$ -ai ($d\bar{a}$ - $v\acute{a}n$ -e) 'for giving.' Probably the Infinitives in - σai and - $\sigma \theta ai$ also are Datives (Max Müller, l.c.). Infinitives in - $\mu \epsilon v$ and - ϵv appear to be Locatives formed without Case-ending (§ 99). If so, the Infinitives in - $\mu \epsilon v$ and - ϵv (- ϵiv) originally differed in meaning from those in - $\mu \epsilon v ai$, - $\epsilon v ai$, &c. In Greek, however, the sense of the Inf. as a Case-form is lost, so that the different forms are all construed in exactly the same way.

86.] The Participle. The Aorist, the Present, and the Future Tense Stems form the Active Participle by the Suffix $-\nu\tau$: thus we have, Non-Thematic $\sigma\tau\alpha$ - $\nu\tau$ -, $\tau\iota\theta\epsilon$ - $\nu\tau$ -; Thematic $\beta\alpha\lambda\sigma$ - $\nu\tau$ -, $\sigma\tau\eta$ - $\sigma\sigma$ - $\tau\tau$ -, &c.

The vowel before ντ is always short, as γνο-ντ-, μιγε-ντ-.

The Perfect Stem takes -στ or -σσ (originally -Γστ, -Γσσ), Fem.
-υιά (for -νσ-ιά, the -σσ originally a weak form for -Γσσ). The
Middle Participle is formed by -μενος, which in the Perfect is
accented -μένος.

For the Verbal Adjectives in -70-s, see § 114. The Verbal in

-тéos is post-Homeric.

CHAPTER IV.

ACCENTUATION OF THE VERB.

87.] The general rule is that the accent is thrown back as far as possible; and the chief departures from this rule are found in the Infinitives and Participles, which are in reality Nouns. In the forms of the Verb properly so called the following exceptions have to be noted:—

1. εἰμί and φημί. The 2 Sing. Imper. φα-θί is oxytone.

The disyllabic forms of the Pres. Indicative, $\epsilon l\mu l$, $\epsilon \sigma \sigma l$, $\phi \eta \mu l$, $\phi \eta \sigma l$, &c., are enclitic, and, when they do not lose the accent altogether, are oxytone; but $\epsilon \sigma \tau l$ is accented in the ordinary way when it occurs at the beginning of a sentence, or after certain words $(ov \kappa, \kappa a l, \dot{\omega} s)$.

Such was the commonly accepted account; but the ancient grammarians were not agreed as to the enclitic character of the Dual and Plural forms (on ἐστόν see Charax 1151; on φαμέν, φατέ, φασί, ibid.; on ἐσμέν, ἐστέ, εἰσί, Eust. 1457, 48). Again, one grammarian denies that φημί was ever enclitic (Charax 1152); another holds that it should be written φῆμι, at least in such instances as φῆμι γὰρ οὖν κατανεῦσαι, κτλ. (Tyrannio ap. Eust. 1613, 18). In all likelihood the original forms were, Sing. ἔστι, φῆμι, Plur. ἐσμέν, φαμέν, and we may suppose that φημί and ἐστί are not properly oxytone, but are unaccented forms made oxytone as enclitics (ἀξύνθη διὰ τὴν ἐποῦσαν αὐτοῖς

čγκλισιν Apoll. Synt.). The Sanscrit Verbs of the same kind follow the rule of accenting the Stem in the Sing., the Ending in the Dual and Plur.; and this must be connected with the difference of quantity between strong and weak Stems (§ 6). See Benfey, Vedica und Linguistica, pp. 90 ff.

The 2 Sing. ϵi_s is enclitic, though the corresponding Attie form $\epsilon \hat{i}$ is not; but see § 5. As to $\phi \dot{\eta} \dot{s}$ there is a contradiction; it is not enclitic according to Arc. 142, 8, but enclitic according to Schol. A. Il. 17. 147—both notices being supposed to rest on the authority of Herodian (ed. Lentz, i. 553, 4 and ii. 105, 5).

The 3 Plur. ἱστᾶσι, τιθεῖσι, διδοῦσι, δεικνῦσι, are properispomena (Herodian, i. 459, ed. Lentz).

This can hardly have been the original accentuation, since they are not contracted forms, but represent $\tilde{\imath}\sigma\tau\alpha-\nu\tau\iota$, &c. Probably it comes from the Attie $i\sigma\tau\tilde{a}\sigma\iota$ (contracted from $i\sigma\tau\tilde{a}-a\sigma\iota$, ep. $\tau\iota\theta\dot{\epsilon}-a\sigma\iota$, &c.). The Doric forms are written $\tau\iota\theta\dot{\epsilon}\nu\tau\iota$, &c. by Eustath. Od. 1557, 45; but we do not know that this represents the usage of any living dialect.

3. Subjunctives such as $\phi a \nu \hat{\eta}$, $\delta a \hat{\omega} \mu \epsilon \nu$ are circumflexed, as being contracted forms (for $\phi a \nu \dot{\eta} \eta$, $\delta a \dot{\eta} o \mu \epsilon \nu$). On $\epsilon l \delta \dot{\epsilon} \omega$, $\epsilon l \delta \hat{\eta} s$, $\epsilon l \delta \dot{\ell} \eta$, $\epsilon l \delta \dot{\epsilon} \omega \sigma \iota$ see § 80.

Optatives in which -in- becomes -i- before Heavy Endings are

accented on the ι throughout, as διακρινθείτε, δαμείεν.

But Middle forms to which there is no corresponding Active follow the general rule: δύνωμαι, δύνηαι (so Herodian, but Tyrannio wrote δυνῶμαι, δυνῆαι, Schol. Il. 6. 229), κέρωνται (Il. 4. 260), ἐπίστηται (§ 280); ἐπίσταιτο, ὄναιο, ὄνοιτο.

4. The Imperatives $\epsilon i\pi \dot{\epsilon}$, $\dot{\epsilon}\lambda\theta \dot{\epsilon}$, are oxytone (and so in Attic $\epsilon \dot{v}\rho \dot{\epsilon}$, $i\delta \dot{\epsilon}$, $\lambda a\beta \dot{\epsilon}$). Similarly Tyrannio wrote $\pi \iota \theta \dot{\epsilon}\sigma\theta \dot{\epsilon}$, $\lambda a\beta \dot{\epsilon}\sigma\theta \dot{\epsilon}$ (Schol. V. Il. 18. 266); cp. the Attic $\beta a\lambda o\hat{v}$, &c.

The rule in Sanscrit is that the Verb loses the accent, except in subordinate clauses, or when it begins the sentence. Hence the verbs $\epsilon i\mu i$ and $\phi \eta \mu i$ in fact retain the original accentuation, which was doubtless that of the Indo-European language. The Imperatives $\epsilon i\pi i$, $\epsilon \lambda \theta i$, &c., are evidently words that would often be used to begin a sentence.

The ordinary accent of a Greek verb, the so-called 'recessive' accent, represents the original enclitic condition. The Opt. $\phi a \iota \dot{\gamma} \nu$, for example, is originally oxytone. On the Sanscrit rules it loses its accent, and we should have (e.g.) $\dot{\epsilon} \gamma \dot{\omega} - \dot{\phi} a \iota \gamma \nu$. But owing to the Greek rhythmical law this is impossible. Accordingly the accent goes back as far as the Greek rules will allow, and we have $\dot{\epsilon} \gamma \dot{\omega} - \dot{\phi} a \iota \gamma \nu$.

- 5. The final -aı of the Endings -µaı, -σaı, -τaı, -ντaı, and of the Inf. is treated as short. These are all cases in which -aı represents the original final sound of the word. But the -aı of the Opt., which is for original -aıτ, counts as long.
- 88.] Accent in Composition. Unaugmented forms of Compound Verbs are accented as though the Verb were an enclitic

following the Preposition: hence $\sigma \acute{\nu} \nu - \epsilon \chi o \nu$, $\pi \rho \acute{o} - \epsilon s$, $\pi a \rho \acute{a} - \theta \epsilon s$, $\pi \epsilon \rho \acute{\iota} - \kappa \epsilon \iota \tau a \iota$, $\grave{a} \pi \acute{o} - \sigma \chi \omega \nu \tau a \iota$. If the final syllable of the Preposition is lost by elision or apocope the accent falls on the first syllable; hence $\mathring{\nu} \phi - \epsilon \lambda \kappa \epsilon$, $\kappa \acute{a} \tau - \theta a \nu \epsilon$.

But the accent falls if possible upon the Augment: hence $\pi\rho\sigma\sigma$ - $\epsilon\beta\check{a}v$, $\epsilon\pi$ - $\epsilon\sigma\chi\sigma v$, $\epsilon\pi$ - $\hat{\eta}\lambda\theta\epsilon$. In other words, the Augment is

treated in accentuation as a Preposition.

The form έσται keeps the accent (παρ-έσται, &c.); perhaps

because it is formed by syncope from έσεται.

The Subj. ξυμ-βληται (Od. 7. 204) ought to be properispomenon, if it is a contracted form; cp. βλήεται (Od. 17. 472). The grammarians however wrote $\partial \pi \delta \cdot \theta \omega \mu a\iota$ (in spite of $\partial \pi \delta \cdot \theta \omega \mu a\iota$, Il. 18. 409) and $\partial \iota \partial \cdot \theta \omega \mu a\iota$ (Herodian, i. 469, 7, ed. Lentz). We have to recognise in such cases the encroachment of the common Thematic type, though we may doubt whether the change reaches back to the earliest form of the text of Homer.

According to Herodian, the 2 Sing. Imperative ἐνί-σπεε is paroxytone, but the other Imperative form ἔνι-σπε, and the Indic. forms ἔνι-σπε-ς, ἔνισπε, are proparoxytone; see Schol. on Il. 24. 388. That is to say, the Imper. ἐνί-σπε-s is regular, the others are accented as if compounds of ἴσπω.

The Imperative ἐπισχε in Hes. Seut. 446 may be divided ἔπ-ισχε or ἐπι-σχε, and in the latter case we may write ἐπίσχε (with the MSS.), or ἔπισχε, like

the ἔνισπε of Herodian.

The MSS. vary between (Imper.) ενίσπες and ενίσπε: in the two places of the Iliad (11.186., 14.470) the Venetus has ενίσπες: on the other hand in the only Homeric passage in which the metre gives any help (Od. 4.642) it is decisive for ενίσπε. The accent in the MSS. nearly always follows Herodian's rule.

89.] The Infinitive and Participle. Infinitives in -ειν and -μεναι follow the general rule: those in -μεν have the same accent as the corresponding forms in -μεναι, as φευγέ-μεν. On

the Aor. Inf. in -eîv, see § 85, 2.

The forms in -ναι, -σαι accent the penultimate, as lέναι, ἀλῶναι, τερίσσαι. The Middle forms of the Thematic Aorist and Perfect are also paroxytone, as πιθέσθαι, λελαθέσθαι, κεκλῆσθαι, τετύχθαι. The ancient grammarians doubted between ἀκάχησθαι, ἀλάλησθαι and ἀκαχῆσθαι, ἀλαλῆσθαι. The former were adopted in the common texts, and were explained as Æolic forms of the Pres.

Infinitive (Herodian, ii. 111, 21, ed. Lentz).

It may be conjectured that the forms in -μεναι and -μεν were originally accented on the suffix, like Sanser. vidmane, dāvane. If so, this is one of the cases in which the accent of an archaic form in Homer has been lost.

Active Participles, except the Thematic Present and Future, accent the Suffix, as διδούς, στρεφθείς, μεμαώς, λαβών, τεταγών. So the Presents είων, λών.

The Part. of the Pf. Middle is paroxytone. But ἀκαχήμενος

follows ἀκάχησθαι.

In Composition the Infinitive and Participle retain the accent of the simple word; in other words, they do not become enclitic. Hence we have Impf. σύν-εχον, but Neut. Part. συν-έχον.

CHAPTER V.

Nouns and Pronouns.

90.] The words to which we now proceed are incapable of

forming Sentences except in combination with a Verb.

The relation of such words to the Verb is shown in general either by a Case-Ending—as in the words which are said to be 'declined,'—or by an Adverbial Ending (such as -ως, -θεν, &c.). The Ending in either case is suffixed to a Stem or Theme. Thus, λογο- is the Stem of the Case-forms, Nom. λόγο-ς, Acc. λόγο-ν, Gen. λόγο-ιο, &c.: αὐτο- is the Stem of the Case-forms αὐτό-ς, αὐτό-θι, αὐτό-θι, αὐτο- ιο, and also of the Adverbs αὐτό-θεν, αὐτό-θι, αὕτως, &c.

The Stems now in question belong to two great classes, those of *Nouns* and of *Pronouns*, called *Nominal* and *Pronominal* Stems respectively. The term 'Noun' includes Substantives and Adjectives. The other 'parts of speech'—Adverbs, Prepositions, Conjunctions—may ultimately be resolved into Case-forms or Adverbial forms either of Nouns or Pronouns.

The distinction between Nouns and Pronouns brings before us in a new form the fundamental antithesis involved in the division of a Verb into a Stem which 'predicates,' and a Person-Ending which marks the Subject. A Noun either denotes a single object or group of objects (i.e. when it is a 'proper name'), or denotes objects through their permanent attributes, as belonging to a class; whereas a Pronoun denotes an object by its local position, or momentary relation to something else, as 'this' or 'that,' 'here' or 'there,' 'same' or 'other.' This contrast is shortly expressed by saying that Nominal Stems are Predicative, and Pronominal Stems Demonstrative; the former name or describe, the latter only 'point out' what is intended. Accordingly, Nominal Stems are in general either identical with, or formed from, the Stems of Verbs: Pronouns are found to contain the same elements as those which furnish the Person-Endings of Verbs. The simplest forms obtained by analysis are thus of two kinds. They were first clearly distinguished by Bopp, and called by him Verbal and Pronominal Roots respectively (Vergl.-Gr. § 105).

The Cases.

91.] Declensions. The main distinction is that between the Consonantal Declension (including that of Stems in -, and -,)

which forms the Genitive in -os, and the Vowel Declensions, of which three may be distinguished:—

- (1) Stems in -o (chiefly Masc. and Neut.): Gen. -o.o.
- (2) ,, -ā, -η (chiefly Fem.): Gen. -as, -ηs.
- (3) ,, -ε (Personal Pronouns): Gen. -ειο.

92.] Vocative. A Noun used in addressing a person by his name or title has properly no Case-Ending. Accordingly the Vocative Case consists in general of the simple Stem; e.g. Zεῦ βασιλεῦ, Αἷαν (for Αἰαντ-), διόγενες, ὧ ἄνα (for ἀνακτ-).

In II. 1. 86 Κάλχαν (Voc. of Κάλχαs) was read by Aristarchus, Κάλχα by Zenodotus. On the other hand in II. 12. 231 Ar. read Πουλυδάμα, but Zen. Πουλυδάμαν. The form Λαοδάμα in

Od. 8. 141 probably has the authority of Aristarchus.

Stems in -o form the Voc. in -ε, as φίλε ἐκυρέ. Some Stems in - $\bar{a}(\eta)$ shorten the final vowel, as νύμφἄ, Voc. of νύμφη, and the Masc. συβῶτἄ, $\mathring{η}περοπευτἄ$, τοξότᾶ, κυνῶπᾶ, &c. But the long vowel of the Stem is used in the Voc. Έρμεία, 'Ατρεΐδη, $\mathring{ν}ψαγόρη$, αἰναρέτη (II. 16. 31). Feminines in -ω or - φ form the Voc. in -οι, as Λητοῖ (II. 21. 498). Evidently - φ : -οι:: η: α.

The words of address, πάππα, ἄττα, τέττα, μαῖα, may be ranked

as Vocatives. So $\eta\theta\epsilon i\epsilon$, as to which see the note on § 96.

93.] Case-Endings. These are given in the following Table. The Endings of the Consonantal Declension are in larger type: the two Vowel Declensions of Nouns are numbered (1), (2), and the Pronominal Declension (3).

	Sing.	Dual.	Plur.
Nom.	-ç	-6	-es, Neută
	(1) -o-s, Neuto- ν (2) - $\bar{a}(\eta)$, - $\mu\check{a}$; - η -s	-ω	-01
	(2) $-\bar{a}(\eta)$, $-\mu\ddot{a}$; $-\eta$ -s	-ā	-at
Acc.	-v, -a	-6	-ăs, Neută
		$\begin{pmatrix} 1 \end{pmatrix} - \omega$ $\begin{pmatrix} 2 \end{pmatrix} - \bar{\alpha}$	-ovs (for $-o-vs$)
		(2) $-\bar{a}$	$-\bar{a}s(-a-\nu s)$
Gen.	-05	-oüv	$-\omega \nu$
	(1) -010, -00, -00	-oüv	$-\omega \nu$
	(1) -0.00 , -0.00 , -0.00 (2) $-\eta s$; $-\tilde{\alpha}0$, $-\epsilon \omega$ (3) $-\epsilon \iota 0$, $-\epsilon 0$, $-\epsilon v$		$-\tilde{a}\omega\nu$, $-\epsilon\omega\nu$
	(3) - $\epsilon\iota o$, - ϵo , - ϵv	$-\breve{\iota}(v)$	$-\epsilon \iota \omega \nu$, $-\epsilon \omega \nu$
Dat.	-6	- $o\iota\ddot{\iota} u$	$-\sigma\iota(\nu)$, $-\epsilon\sigma\sigma\iota(\nu)$
	(1) -φ (Locοι) (2) -η (Locαι?) (3) -οι	-οιϊν	$-o\iota\sigma\iota(v)$, $-o\iota s$
	(2) -n (Locai?)		$-\eta \sigma \iota(\nu)$, $-\eta s$
	(3) -01	$-\breve{\iota}(\nu)$	$-\bar{\iota}\nu$, $-\check{\iota}(\nu)$
Instru	$m\phi \iota(\nu)$		$-\phi\iota(\nu)$

- 94.] Stems ending in ι, υ, and σ are liable to lose the final letter before the Case-Endings which begin with a vowel.
 - 1. Stems in -ηυ, -ευ: e. g.—

80

νηῦ-ς, Gen. rη-ός (for rη-r-ός), rarely νε-ός. The ε arises by shortening from η; so νε΄ες, νεῶν, νε΄εσσι, νε΄ας—all less common than the corresponding forms with η-, νη̂ες, νηῶν, νη̂εσσι, νη̂ας.

The forms $\nu\eta\hat{v}$ -s, $\nu\eta\nu$ -σί are irregular, since original $\bar{a}u$ before a consonant would appear in Greek as $\check{a}u$ (cp. $Z\epsilon\acute{v}s$ for original $dy\bar{e}us$). Hence the true Greek form is preserved in the Instrum, $\nu\alpha\hat{v}$ - $\dot{\phi}\nu$ (§ 104) and the Compounds $\nu a\nu\sigma\iota$ - $\kappa\lambda\nu\tau\acute{v}s$, $N\alpha\nu\sigma\iota$ - $\kappa\acute{a}a$, &c. The η of $\nu\eta\hat{v}$ -s and $\nu\eta\nu$ -σί is taken by analogy from the other Cases.

βασιλεύ-s, Gen. βασιλή-os (but Dat. Plur. βασιλεῦ-σι).

Πηλεύ-s, Gen. Πηλη̂-os and Πηλέ-os. In oblique Cases of Stems in -ευ the ε seems to be nearly confined to proper names; cp. Τυδέος Τυδέα, 'Ατρέος 'Ατρέϊ, Θησέα, Νηλέα, &c.

On $Z\epsilon \acute{v}s$, $\beta o\hat{v}s$ see § 106, 2.

- 2. Stems in -1 and -1 form the same Cases in two ways :-
 - (1) Retaining the Stem-vowel, as $\kappa \acute{o}\nu \iota$ -s $\kappa \acute{o}\nu \iota$ -os, $\Pi \acute{a}\rho \iota$ -s $\Pi \acute{a}\rho \iota$ -os, $\iota \lambda \acute{v}s$ $\iota \lambda \acute{v}os$, $\iota \chi \theta \acute{v}$ - ϵs , $\sigma \acute{v}$ - ϵs , $\sigma \acute{v}$ - ϵs , $\sigma \acute{v}$ - ϵs .

It is probable that this form of declension was originally confined to monosyllables.

(2) Inserting ε and dropping ι or υ: as πόσι-s, Dat. πόσε-ϊ, ἄστυ ἄστε-οs, πῆχυ-s πήχε-οs, πολύ-s πολέ-οs. Here the Stem of the oblique Cases ends in -ει, -ευ: hence Gen.

-eos for - $\epsilon \iota$ -os, - ϵF -os, &c.

πόλις forms several of its Cases in three ways:

(1) Gen. πόλι-οs, Dat. πόλι (for πόλι-ι, § 99), Plur. Nom. πόλι-εs, Gen. πολί-ων, Dat. πολί-εσσι, Acc. πόλι-as and

πόλις (§ 100).

(2) Gen. πόλεος (so Bekk. reads in Il. 2. 811., 21. 567, with the scanning o -; cp. πόλευς in Theognis), Dat. πόλει, πτόλεϊ (Il. 17. 152, perhaps should be πτόλιι, cp. the Cyprian form πτολιγι).

(3) Gen. πόλη-ος, Dat. πόλη- $\ddot{\iota}$, Plur. Nom. πόλη- ϵ ς, Acc.

πόλη-ας.

The stem $\pi o \lambda \eta$ - which furnishes the last of these three forms of inflexion has been traced by Joh. Schmidt (K. Z. xxvii. p. 287) to a primitive Locative in $-\eta$ (ep. Sanser. agni, Loc. agnā), to which the ordinary Loc. $-\tilde{\iota}$ was suffixed. From this new Loc. $\pi \delta \lambda \eta$ - $\tilde{\iota}$ the other Cases were then formed by analogy.

The Nouns in $-\ddot{\alpha}$ (from $-\dot{\alpha}$) answer to the original Stems in $-\bar{\tau}$, as $l \delta v \hat{\iota} a$, for $l \delta v \sigma - \iota a$, Sanser. $vidush - \bar{\iota}$.

ἠΰ-s or ἐΰ-s good makes Gen. ἐῆ-os, perhaps by transference of quantity for ἠέ-os. Other Adjectives in -ύs form -έ-os, -έ-ι, &c.

3. Stems in -εσ, -ασ, -οσ drop the σ, as ἔπε-ος, κέρα-ος, alδό-ος.

95.] Original $\bar{\alpha}$ as the final vowel of the Stem becomes η ; except (1) after ϵ , ϵ_i , $\bar{\alpha}$, as in $\theta \epsilon \dot{\alpha}$, and the proper names $E_{\rho\mu\epsilon}(as, Alv\epsilon(as, Alv\epsilon(as, Navoikáa, Peía (Ar. on Il. 14. 203), <math>\Phi\epsilon_i\dot{\alpha}$ (Il. 7. 135, Od. 15. 297), and (2) in the Gen. in $-\bar{\alpha}o$ and $-\bar{\alpha}\omega_i$.

Other exceptions to the scheme given above will be best

treated under the separate Cases.

96.] Nominative Singular. The final -s is retained after vowels and mutes, but lost with Stems ending in ρ, as πατήρ, μήστωρ.

Stems ending in ν either (1) take final -ς (with loss of ν), as εἶs (for έν-s), θίς Acc. θῖν-α, μέλας Gen. μέλαν-ος, or (2) do not take -ς, but lengthen a preceding vowel, as χθών Gen. χθον-ός, Τωνωήν Gen. ποιμέν-ος. So with Stems in -ντ: δούς Gen. δόντ-ος, Τωνωήν θυτ ἰδών. Originally it seems that all monosyllables took -ς and all others -ν (J. Schmidt, K. Z. xxvii. 392). If so, χθών, φρήν, &c. are forms due to the -ν of the oblique Cases: and on the other hand διδούς, τιθείς, &c. have followed the analogy of corresponding monosyllable words, δούς, θείς, &c.

There is a remarkable group of Masc. Stems in $-\bar{a}(\eta)$, with

Nom. Sing. in -a, viz.-

Titles of gods: νεφεληγερέτα, στεροπηγερέτα, μητίετα, εὐρύοπα (Ζεύs); ἀκάκητα (Ἑρμείας ἀ.); κυανοχαῖτα (Ποσειδάων).

Titles of heroes: ἱππότα, ἱππηλάτα, αἰχμητά; ἠπύτα (κῆρυξ).

One proper name, Θυέστα (Il. 2. 107).

Except Θυέστα these words are only found as adjectives: thus we have αἰχμητὰ Λυκάων, κυανοχαῖτα Ποσειδάων, but αἰχμητής,

κυανοχαίτης when the same words are substantives.

The accent generally follows the forms in -η-s where such forms exist; thus $l\pi\pi \dot{\sigma} \tau a$, $al\chi\mu\eta\tau \dot{a}$, like $l\pi\pi \dot{\sigma} \tau \eta s$, $al\chi\mu\eta\tau \dot{\eta} s$. But it is thrown back in $\epsilon \dot{\nu}\rho \dot{\nu} \sigma \pi a$, $\mu\eta\tau \dot{\iota}\epsilon\tau a$, $d\kappa \dot{\alpha}\kappa\eta\tau a$,—ancient epithets only known from the traditional Homeric use.

These are in reality Vocatives which have been turned into Nominatives. That is to say, they belonged originally to certain established forms of address—μητίετα Ζεῦ, κυανοχαῖτα Ποσείδαον, ἱππότα Πηλεῦ, &c.—and were not inflected when the names to which they were attached came to be used in the Nom. In this way the rhythm, which doubtless had a traditional sacredness, remained unaltered, and the whole phrase retained something of its vocative character. The feeling which might lead to this is that expressed by Eumaeus in Od. 14. 145 ff.—

τὸν μὲν ἐγών, ὧ ξεῖνε, καὶ οὐ παρεύντ' ὀνομάζειν αἰδέομαι περὶ γάρ μ' ἐφίλει καὶ κήδετο θυμῷ· ἀλλά μιν ἡθεῖον καλέω καὶ νόσφιν ἔόντα.

I call him by the title $\dagger \theta \epsilon \tilde{n} o s$ even in his absence,—the word $\dagger \theta \epsilon \tilde{n} o s$ being only used as a form of address. Cp. also § III (2). The Nominatives in - \tilde{a} are evidently part of the archaic and conventional style of Epic poetry. They are commoner in the Iliad than in the Odyssey in the proportion of 3 to I. The ancient grammarians regarded them as Æolie, but without sufficient reason.

The form εὐρύοπα also appears as an Acc., and has accordingly been explained from a Nom. εὐρύ-οψ. It is improbable however that it is a different word from the Nom. Voc. εὐρύοπα. Probably the fact that it had the appearance of an Acc. of one of the numerous Compounds in -ou led to an extension of use *.

97. Accusative Sing. The Ending -a is found after consonants and the diphthongs no, eu; as vnv-s vna (for vnva, vnFa), βασιλεύ-s βασιληα, Τυδεύ-s Τυδέα †. Otherwise the Acc. takes -ν; e. g. $\pi \delta \lambda \iota - \nu$, $l_{X}\theta \acute{v} - \nu$, $\beta o \hat{v} - \nu$.

But εὐρύ-ς makes εὐρέα in the phrases εὐρέα πόντον, εὐρέα

κόλπον: the common form being εὐρύ-ν.

82

The original Ending is -m, which becomes -v after a vowel and -a (for m) after a consonant. The preference for a after nv, ev is due to the semiconsonantal nature of the v in these combinations. We may compare the Aorists έκηα (for έκηυ-α), έχευα (also έχεα), &c., and on the other hand έδυ-ν, έφυ-ν.

Several Stems form the Acc. in -iv and also in -ida: ¿ριδα and ξριν (Od.), φυλόπιδα (Od. 11. 313) and φύλοπιν, γλαυκώπιδα (Il. 8. 373) and γλαυκώπιν (Od. 1. 156), ἀνάλκιδα and ἄναλκιν (Od. 3. 375), ὅπιδα and ὅπιν, Κύπριδα and Κύπριν; θοῦριν, Ἱριν, αθλιν, Θέτιν. Cp. also χάρι-ν (for χάριτ-α), and κόρυ-ν (for κόρυθ-α), found in the line Il. 13. 131 (= 16. 215),—

άσπὶς ἄρ' ἀσπίδ' ἔρειδε, κόρυς κόρυν, ἀνέρα δ' ἀνήρ.

In Attic there are many more such forms; Jovev, &c. Note that no oxytones form the Acc. in -iv.

The Accusatives ζαῆν (Od. 12. 313), "Αρην, Μέγην are probably formed directly from the Nom. ζαής, "Αρης, Μέγης, on the analogy of Masc. Nouns in -η-s. On the other hand Zην (Ζεύς), βων (βοῦς), are very ancient forms, Thomps 31. answering to the Sanser. dyâm, gâm (Joh. Schmidt in K. Z. xxv. 17): see \$ 106, 2.

A final δ is lost in the Neut. Pronouns ő, τό, τοῦτο, ἐκεῖνο, ἄλλο (Lat. id, is-tud, illud, aliud), and in $\tau \ell$ (Lat. quid): perhaps also in the Personal Pronouns, Acc. Sing. ἐμέ (με), σέ, ἔ, Dual νώ, σφώ, σφῶε, Plur. ἄμμε, ὔμμε, σφέ (Curt. Stud. vi. 417 ff.; Max Müller, Chips, iv. 44). Trany 5,53 55

see Nauck, Mel. gr.-rom. iii. 222.

^{*} It will be shown hereafter (§ 116, 2) that the Masc. Nouns in -Tys are probably derived from Feminines in -τη, of abstract or collective meaning. Hence it is possible that the Homeric Nominatives in -75 come directly from these Feminines: so that (e.g.) μητίετα meant literally Counsel rather than Counsellor. The abstract word may have been used as a title, like Bin Πριάμοιο and the like. According to Joh. Schmidt (Pluralb. p. 400) εὐρύοπα is originally a Neuter: see § 107, 2.

+ The forms Τυδη̂ (Il. 4. 3) and Μηκιστη̂ (Il. 15. 339) are probably false:

- 98.] Genitive Singular. The Stems in -o form the Gen. in -o10, -o0, -ou. Of these forms only -o10 and -ou are read in the existing text of Homer; but there are sufficient traces of -oo, and indeed several places where it is called for by the metre. Thus we must read _ Much product the first from the first
 - ΙΙ. 2. 518 υίέες Ἰφίτοο μεγαθύμου.

15. 66 (=21. 104) Ἰλίοο προπάροιθεν.

22. 313 ἀγρίοο, πρόσθεν δὲ κτλ.

Od. 10. 36 δώρα παρ' Αλόλοο μεγαλήτορος. 60 βην είς Αλόλοο κλυτά δώματα.

Il. 9. 440, &c. δμοιΐοο πτολέμοιο (for δμοιΐου πολέμοιο).

2. 325 δο κλέος οὖποτ' ολεῖται Od. 1. 70 δο κράτος ἔσκε μέγιστον } (for δου).

ΙΙ. 2. 731 'Ασκληπίοο δύο παίδε.

15. 554 ἀνεψιόο κταμένοιο.

5. 21 αδελφεόο κταμένοιο: so in-

6. 61 (=7. 120., 13. 788) ἀδελφεόο φρένας ήρως.

Od. 14. 239 χαλεπή δ' έχε δήμοο φημις.

Also in the two lines - bane,

ΙΙ. 6. 344 είνεκ' έμειο κυνός κακομηχάνου δκρυοέσσης.

9. 723 165 πολέμου έραται επιδημίου δκρυόευτος, since δκρυόεις does not occur elsewhere, but κρυόεσσα (Il. 5. 740), κρηόεντος (Il. 9. 2), κρυερός &c., we should probably read—

> . . . κακομηχάνοο κρυοέσσης. ... ἐπιδημίοο κρυόευτος.

A trace of -oo may also be found in the fact that Nouns in -aos sometimes form the Gen. in -εωο, which is for -aoo; e.g.

Πετέ-ωο, Πηνελέ-ωο. Ξ489 8562

Masc. Stems in -ā(η) form the Gen. in -āo (original -āσιο), less commonly -εω (by transference of quantity). This -εω is often scanned as one syllable; after another vowel it is written -ω, as Βορέ-ω (for Βορέ-εω), Έρμει-ω, Αίνει-ω, ἐϋμμελί-ω. (So in Ionie, Curt. Stud. v. 294., viii. 172.)

The Pronominal Stems in $-\epsilon$, viz. $\dot{\epsilon}\mu\epsilon$ ($\mu\epsilon$), $\sigma\epsilon$ (for $\tau F\epsilon$), and $\dot{\epsilon}$ or έε, form the Gen. in -ε-ιο, -εο and (by contraction) -εν. Thus we find $\epsilon \mu \epsilon \hat{i} \hat{o}$, $\epsilon \mu \epsilon \hat{o}$ (Il. 10. 124), $\epsilon \mu \epsilon \hat{v}$; $\sigma \epsilon \hat{i} \hat{o}$, $\sigma \epsilon \hat{o}$, $\sigma \epsilon \hat{v}$; $\epsilon \hat{i} \hat{o}$, $\epsilon \hat{o}$, $\epsilon \hat{v}$. For $\sigma \epsilon i \delta \delta$ there is also a longer form $\tau \epsilon \delta i \delta \delta$ (II. 8. 37=468), and

for ξ_0 in one place (II. 19. 384) Zenodotus read ξ_0 .

99. Dative Singular. In Homer the of the Dat. is sometimes long (as in Latin), chiefly in forms which otherwise could not be easily brought into the verse; in the Iliad, 'Αχιλληϊί, ύπερμένεϊ, κράτεϊ, σάκεϊ, πτόλεϊ, σθένεϊ, ἔριδι; in the Odyssey, 'Οδυσσηϊ, έτεϊ, δέπαϊ, ὕδατι, But we find also Ζηντ μενεαίνομεν (Il. 15. 104), πάρ νηΐ τε μένειν (Od.) See § 373.

The Dat. of Neuters in -as was commonly written -a; but the long a is anomalous, and -a is now read by La Roche from good MSS. (in $\sigma \epsilon \lambda a \iota$, $\kappa \epsilon \rho a \iota$). The forms in -a appear to have become established in later Greek (Hdn. II, 316, 10, ed. Lentz).

Stems in -i, Gen. -i-os, form the Dat. in -ī, as κόνι, μήτι, μάστι, κνήστι, Θέτι, νεμέσσι (with v. l. νεμέσσει II. 6. 335). So Bekker restored the forms $\pi \delta \lambda \iota$ (II. 5. 686, &c.), ἀγύρι (II. 16. 661), ὄψι, ὕβρι, δυνάμι, $\pi \delta \sigma \iota$, for which the common texts give forms in -ει.

Stems in -u, Gen. -u-os, form the Dat. in -u (a diphthong which in later Greek can only occur before a vowel), $\pi\lambda\eta\theta\nu\hat{\imath}$ (II. 22. 458), $\nu\dot{\epsilon}\kappa\nu\imath$, $\dot{\delta}\rho\chi\eta\sigma\tau\nu\hat{\imath}$, $\dot{\delta}\ddot{\imath}\dot{\xi}\nu\hat{\imath}$, $\dot{\ell}\dot{\xi}\nu\hat{\imath}$, $\theta\rho\dot{\eta}\nu\nu\imath$. But $\delta\rho\hat{\nu}$ -s, $\sigma\hat{\nu}$ -s form the disyllables $\delta\rho\nu$ -t, $\sigma\nu$ -t.

It is possible, however, that the Datives in -ī are Instrumental forms, and similarly that the Datives in -ū have taken the place of Instrumentals in -ū. For the Vedic and Zend Instrum. in -ī, -ū see Osthoff, M. U. ii. 139.

Sanscrit Nouns in -an and -as sometimes form the Locative from the Stem without any Case-ending Whitney, 425, c). Traces of this are to be found in Greek in the form alév (cp. alei), and the Inf. in -µev and -ev (§ 85).

Stems in -o sometimes form a Locative in -oı, as well as the true Dat. in - φ , e. g. oĭκο-ι. So $\chi a\mu a$ -ί and perhaps $\pi \dot{a}\lambda a$ -ι. Cp. the adverbial ending - ϵ ι (§ 110).

Pronominal Stems in $-\epsilon$ form $-\omega$; $\epsilon \mu o i$ (enclitic $\mu \omega i$), $\sigma o i$ (encl. $\tau \omega i$), $\epsilon o i$ and δi . For $\sigma o i$ there is another form $\tau \epsilon i \nu$ (Il. 11. 201): so in Doric we find $\epsilon \mu i \nu$ and $\epsilon i \nu$, $\epsilon \nu$.

- 99*.] Plural. Several Stems in -o which are Masc. (or Fem.) in the Sing. form a Neut. Plur.: κέλευθος, Plur. κέλευθοι and more commonly κέλευθα; μηρός, Plur. μηροί and μῆρα; κύκλος, Plur. κύκλοι and κύκλα; lός, Plur. loί and lά: Τάρταρος, Plur. Τάρταρα (Hes.). There is probably a slight change of meaning, the Neuter expressing vague mass or quantity rather than plurality: cp. δρυμά thicket, and post-Homeric δεσμά, θεσμά, σῖτα, Lat. loca, joca. Thus κέλευθα means a group of paths, and could not be used (e. g.) in such a passage as Il. 10. 66 πολλαὶ γὰρ ἀνὰ στρατόν εἰσι κέλευθοι. So κύκλα of a set of wheels, Τάρταρα of one place so called, &c.
- 100.] Accusative Plural. Stems in -ι and -υ which admit an Acc. Sing. in -ν often form the Plur. in -īs, -ūs (for -ινs, -υνs): thus δίς (Il. 11. 245), ἀκοίτις (Od. 10. 7), βοῦς ἤνις (Il. 6. 94). So we should read πόλις (with Bekker) for πόλεις. Again we have δρῦς, γένυς, κλιτῦς, γραπτῦς, σῦς and σύ-as, ἰχθῦς and ἰχθύ-as (Od. 22. 384), ὀφρῦς (Il. 16. 740) and ὀφρύ-as (Od. 9. 389), νέκυς (Od. 24. 417) and νέκν-as, βοῦς and βό-as.

Stems in -u, Gen. - ϵ os, have only - ϵ as in Homer: except π o λ \hat{v} s, read by Zenodotus in Il. 2. 4, perhaps in other places (Il. 1. 559., 13. 734., 15. 66., 20. 313., 21. 59, 131, Od. 3. 262., 4. 170), where the MSS. have π o λ $\hat{\epsilon}$ as or π o λ $\hat{\epsilon}$ is.

The MS. of Schol. A in Il. 2. 4 gives $\pi o \lambda \hat{\epsilon} \hat{s}$ as read by Zen., but the context shows that the true reading of the scholium is $\pi o \lambda \hat{v} \hat{s}$. But there is no trace of this form in any of the other places.

The Personal Pronouns have $\eta\mu\epsilon as$ (once $\eta\mu as$), $\dot{\nu}\mu\epsilon as$, $\sigma\phi\epsilon as$ (once $\sigma\phi\check{a}s$ encl., Il. 5. 567), as well as $\check{a}\mu\mu\epsilon$, $\check{\nu}\mu\mu\epsilon$, $\sigma\phi\epsilon$. The forms in $-\check{a}s$ are later, the result of adding the common ending of the Acc. Plur.: see on the Acc. Sing.

101.] Genitive Plural. Stems in $-\bar{\alpha}(\eta)$ and $-\check{\alpha}$ form the Gen. Plur. in $-\bar{\alpha}\omega\nu$, less commonly $-\epsilon\omega\nu$. The $-\epsilon\omega\nu$ is generally scanned $-\bar{\epsilon}\omega\nu$, and after a vowel is written $-\hat{\omega}\nu$, as κλισι- $\hat{\omega}\nu$, παρει- $\hat{\omega}\nu$, τρνφαλει- $\hat{\omega}\nu$, Σκαι- $\hat{\omega}\nu$ (cp. the Gen. Sing. in $-\bar{\alpha}$ 0, $-\epsilon\omega$).

The Pronominal Stems ήμε-, ὑμε-, σφε- form ἡμείων and ἡμέων,

ύμείων and ύμέων, σφείων σφέων (encl.) and σφών.

These forms are plausibly explained by supposing that originally the Gen. was in $-\epsilon \iota o$, as in the Singular. Then $*\mathring{a}\mu\mu\epsilon\hat{\iota}o$, $*\mathring{v}\mu\mu\epsilon\hat{\iota}o$, were assimilated to the Gen. Plur. in $-\omega v$; and $\sigma\phi\epsilon\ell\omega v$ followed the same analogy later (Brugmann, K. Z. xxvii. 397).

102.] Dative Plural. The two Endings of the Dat. Plur. are $-\sigma\iota(\nu)$ and $-\epsilon\sigma\sigma\iota(\nu)$. Many Nouns in Homer form the Case in both ways, e. g. $\beta o\nu - \sigma\iota$ and $\beta \acute{o} - \epsilon \sigma \sigma\iota$ (for $\beta o\acute{v} - \epsilon \sigma \sigma\iota$), $\chi \epsilon \rho - \sigma\iota$ and $\chi \epsilon \acute{\iota} \rho - \epsilon \sigma \sigma\iota$, $\pi o\sigma\sigma \acute{\iota}$ or $\pi o\sigma\iota$ (for $\pi o\eth - \sigma\iota$) and $\pi \acute{o}\eth - \epsilon \sigma\sigma\iota$, $\mathring{\alpha}\nu \eth \rho \acute{\alpha} - \sigma\iota$ and $\mathring{\alpha}\nu \eth \rho - \epsilon \sigma\sigma\iota$, $\mu\nu\eta\sigma\tau\mathring{\eta}\rho - \sigma\iota$ and $\mu\nu\eta\sigma\tau\mathring{\eta}\rho - \epsilon\sigma\sigma\iota$. The accent is often different, the forms in $-\epsilon\sigma\sigma\iota$ being always proparoxytone. The ending $-\sigma\iota(\nu)$ originally belongs to the Locative Plur. (Sanser. -su).

A final dental or $-\sigma$ with $-\sigma$ forms $-\sigma\sigma$, and this $\sigma\sigma$ may be reduced to σ , as in $\pi \circ \sigma \circ \iota$ and $\pi \circ \sigma \iota$, $\check{\epsilon} \pi \in \sigma - \sigma \iota$ and $\check{\epsilon} \pi \in \sigma \iota$, $\delta \check{\epsilon} \pi \circ \sigma - \sigma \iota$ and $\delta \check{\epsilon} \pi \circ \sigma \circ \iota$. But $-\epsilon \circ \sigma \iota$ for the ending $-\epsilon \circ \sigma \circ \iota$ is very rare: $\chi \in \iota \circ \rho - \epsilon \circ \iota$,

ἴν-εσι, αἴγ-εσι, οἴ-εσι, ἀνάκτ-εσι occur once each.

An ending $-\sigma\sigma\iota$ (instead of $-\sigma\iota$) occurs in a few stems in $-\upsilon$ (Gen. $-\upsilon\sigmas$): $\gamma\acute{e}\nu\upsilon-\sigma\sigma\iota$ (Il. 11. 416), $\nu\acute{e}\kappa\upsilon-\sigma\sigma\iota$ (Od.), $\pi\acute{\iota}\tau\upsilon-\sigma\sigma\iota$ (Od.). This is an extension of the type $\acute{e}\pi\epsilon\sigma-\sigma\iota$, &c.: ep. $\acute{\iota}\rho\iota\sigma\sigma\iota$ (Il. 13. 27) for $\acute{\iota}\rho\iota\eth-\sigma\iota$. Or possibly, as Brugmann suggests (G. G. p. 62), these are forms in $-\ddot{\upsilon}\sigma\iota$, $-\ddot{\iota}\sigma\iota$, the vowel retaining its original quantity (ep. § 116, 3 and 4).

Final ι or υ of the Stem becomes ϵ in $\epsilon \pi d\lambda \xi \epsilon - \sigma \iota$, $\pi o\lambda \epsilon - \sigma \iota$ ($\pi o\lambda \upsilon - s$), from the analogy of the other Cases, as $\epsilon \pi d\lambda \xi \epsilon - os$, $\pi o\lambda \epsilon - os$. Similarly on the analogy of forms with $-\epsilon \sigma \sigma \iota$ (as in $\epsilon \pi \epsilon \sigma \sigma \iota$) we have the rare forms $\pi o\lambda - \epsilon \sigma \sigma \iota$ ($\pi o\lambda - \upsilon s$), $\pi \epsilon \lambda \epsilon \kappa - \epsilon \sigma \sigma \iota$ ($\pi \epsilon \lambda \epsilon \kappa - \upsilon s$).

The Ending -εσσι(ν) is itself the result of a similar analogy. In ἐπεσσι, βέλεσσι, &c. the -εσσι was felt as characteristic of the

Case, and then combined with other Stems; hence $\kappa \acute{v}v - \epsilon \sigma \sigma \iota$, $\sigma \acute{v} - \epsilon \sigma \sigma \iota$, &c. Thus forms like $\epsilon \acute{\pi} \acute{\epsilon} - \epsilon \sigma \sigma \iota$ (for $\epsilon \acute{\pi} \epsilon \sigma - \epsilon \sigma \sigma \iota$) really contain the Suffix $\epsilon \sigma$ twice over. (Bopp, Vergl. Gr. § 292 of the

first edition; Meyer, G. G. p. 355.)

Stems in -0 and $-\bar{\alpha}$ (η) form the Dat. Plur. in -0 $\iota\sigma\iota(\nu)$ and - $\eta\sigma\iota(\nu)$ respectively, also in -0 ι s and -0 ι s or - η s. The latter forms are common in the existing text of Homer, but (as was pointed out by Gerland, K. Z. ix. 36, and again by Nauck, Mél. gr.-rom. iii. 244) in the great majority of instances the loss of ι may be regarded as due to elision: e.g. for σois $\epsilon\tau\dot{\alpha}\rho\sigma\iota\sigma\iota$ we may write $\sigmaoi\sigma'$ $\epsilon\tau\dot{\alpha}\rho\sigma\iota\sigma\iota$. The Fem. -0 ι s appears only in the forms $\theta\epsilon\alpha\iota$ s (Od. 5. 119), $\dot{\alpha}\kappa\tau\alpha\iota$ s (Il. 12. 284), and $\pi\dot{\alpha}\sigma\alpha\iota$ s (Od. 22. 471). Hence it is a question whether the forms in -0 ι s, -0 ι s are Homeric.

The Endings -οισι, -ησι are those of the Locative (Sanser. -ēshu, -āsu). Originally -ησι was without ι (as in the adverbial 'Αθήνησι, θύρᾶσι). The Endings -οις, -αις are probably not to be derived from -οισι, -ησι, but from the original Instrumental of Stems in -ο. This was in Sanser. -āis, in Greek *-ωις, becoming -οις: and from this again by an easy analogy the corresponding Fem. -αις was formed.

The Pronouns of the First and Second Person use two forms, viz. (1) $-i\nu$ in $\hat{\eta}\mu\hat{\iota}\nu$ (encl. $\hat{\eta}\mu\iota\nu$) and $\hat{\iota}\mu\hat{\iota}\nu$ (encl. $\hat{\iota}\mu\iota\nu$), and (2) $-i(\nu)$ in $\check{\iota}\mu\mu\iota(\nu)$, $\check{\iota}\mu\mu\iota(\nu)$, also $\hat{\eta}\mu\check{\iota}\nu$, $\check{\iota}\mu\check{\iota}\nu$. This is evidently the same Suffix as in $\check{\epsilon}\mu\check{\iota}\nu$, $\tau\epsilon\check{\iota}\nu$, $\check{\epsilon}\check{\iota}\nu$, and the form $-i\nu$ is presumably the older (for which $-i\nu$ was perhaps adopted from the analogy of the Dat. in $-\sigma\check{\iota}\nu$).

The 3 Plur. $\sigma\phi i(\nu)$ is originally in all probability the Instrum. Plur. of the Stem $\sigma f \epsilon$ - (for σf - $\phi \iota \nu$): cp. Lat. sibi, for s-bi. If so, the other Case-forms $\sigma\phi \dot{\epsilon}$, $\sigma\phi \dot{\epsilon} \iota \omega \nu$, $\sigma\phi \dot{\epsilon} - \sigma \iota$ as well as the

corresponding Duals σφώ, &c. are the result of analogy.

103.] Dual. The Nom. Acc. in $-\bar{\alpha}$, from Stems in $\bar{\alpha}$, η is only found as a Mase.: ᾿Ατρεΐδα, κορυστά (Il. 18. 163), ἀκυπέτα (Il. 8. 42): but Fem. προφανέντε, πληγέντε (of two goddesses, Il. 8. 378, 455).

The Genitive and Dative Ending in all Nouns is -οιϊν, as ποδ-οῖιν, ἴππ-οιϊν. The contracted form -οιν and the Fem. -αιν

do not occur. The Personal Pronouns have:-

- Nom. Acc. νῶϊ, νώ (νῶϊν Π. 16. 99, σφῶϊν Od. 23. 52?);
 Gen. Dat. νῶϊν.
 - 2. Nom. Acc. σφῶϊ, σφώ; Gen. Dat. σφῶϊν (σφῷν Od. 4. 62).
 - 3. Acc. σφωέ (encl.); Dat. σφωίν (encl.).
- 104.] Instrumental. The Homeric poems have preserved many instances of an Ending -φι(ν); e.g. ὅρεσ-φιν, στήθεσ-φι,

ναῦ-φιν, ζυγό-φι, βίη-φι, κοτυληδον-ό-φιν (Od.): probably also the Pronoun σ -φι(ν), Lat. si-bi. These are relies of an original Instrumental Case.

- 105.] Contraction, &c. The loss of ι , ι and σ between vowels (§ 94) does not generally lead to contraction in the Homeric dialect: note that—
- τ. The Dat. Sing. of Stems in $-\epsilon\sigma$ and $-\upsilon$ (Gen. $-\epsilon\sigma$ s) often forms $\epsilon\iota$ (for $-\epsilon-\bar{\iota}$), but nearly always before a vowel, so that the $\epsilon\iota$ is scanned as a short syllable (§ 380); e.g. $\tau\epsilon\iota(\chi\epsilon\iota\ \tilde{\nu}\pi\sigma\ T\rho\omega\omega\nu,\ \hat{\eta}\ \tilde{\epsilon}\pi\epsilon\iota\ \hat{\eta}\ \tilde{\epsilon}\rho\gamma\varphi$, &c. No such rule will be found to hold for the Dat. Sing. of Stems in $-\iota$, as $\pi\delta\lambda\epsilon\iota$, $\dot{\alpha}\gamma\acute{\nu}\rho\epsilon\iota$ &c.—either because $-\epsilon\iota$ from $-\epsilon\iota$ became monosyllabic earlier than $-\epsilon\iota$ from $-\epsilon\sigma-\iota$ or $-\epsilon F-\iota$; or because, as has been suggested (§ 99), the true form of the Dat. is $\pi\delta\lambda\bar{\iota}$, $\dot{\alpha}\gamma\acute{\nu}\rho\bar{\iota}$, &c.

Exceptions, real or apparent, to this rule are-

II. 6. 126 $\sigma\hat{\varphi}$ θάρσει (read θάρσει $\sigma\hat{\varphi}$, cp. II. 7. 153 θάρσει $\hat{\psi}$).

17. 647 ἐν δὲ φάει καὶ ὅλεσσον (read ἐν φάεϊ).

23. 515 οὖ τι τάχει γε (read οὐ τάχετ γε).

23. 639 πλήθει (read πληθυΐ).

Also οὖδει, Ďat. of οὖδας (Il. 5. 734., 8. 385., 14. 467., 17. 92., 23. 719., 24. 527), for which read οὖδαι or οὖδα (§ 99).

- The combinations -εα, -εο, -εω are often scanned as one syllable by 'Synizesis,' as θεοί (Il. 1. 18), σάκεα (Il. 4. 113), τεύχεα (Il. 7. 207, &c.); so with the Pronouns ἡμέας, ὑμέας, σφέας.
- In Il. 1. 18 ὑμῦν μὲν θεοὶ δοῖεν Ὀλύμπια δώματ' ἔχοντες the word θεοί is not certain, since Ὀλύμπια δώματ' ἔχοντες the lords of Olympus is used as a Substantive, and θεοί is therefore unnecessary (Fick, Ilias p. 75).
- 3. The Gen. Sing. has -eus for -e-os in a few words; 'Epé β evs, β e β evs, β evs,

On -eu in è μ e \hat{v} , σ e \hat{v} , ϵ \hat{v} , τ e \hat{v} see § 378*.

4. Nouns with Stems in -εεσ (as κλέος, δέος) and some Nouns in -äs are liable to 'Hyphaeresis,' or dropping a vowel before another vowel: as κλέα (for κλέε-α), and so δυσκλέα, ἀκλέα, ἀκλέα-ες; νηλής, νηλέι, νηλέα (Neut. Sing. νηλείς); θεουδής, θεουδέα (for θεο-δΓής god-fearing), ὑπερδέα (Il. 17. 330); γέρα, δέπα, κέρα, κρέα, σφέλα (for γέρα-α, &c.), χρέα debts (Hes. Op. 647). Cp. δαt (for δαϊ-ι), Dat. of δάϊ-ς; also ἀποαίρεο for ἀποαιρέ-εο (§ 5).

The forms κλέα (ἀκλέα, δυσκλέα), δέπα, κέρα, σφέλα are only found before hiatus; e.g. κλέα only occurs in the phrase κλέα ἀνδρῶν: so that we must either suppose -ā to be shortened by the hiatus, or (better) read κλέε ἀνδρῶν, &c. But γέρα occurs before a consonant (II. 2. 237 γέρα πεσσέμεν, and so

9. 334, Od. 4. 66). κρέα occurs in the phrase κρέα έδμεναι, and in one or two other places before a vowel; but more frequently it is followed by a consonant, and is to be scanned κρέᾶ or κρέᾶ (necessarily so in Od. 9. 347, where it ends the line). Possibly the ᾶ is shortened by the analogy of the ordinary Neut.

Plur. forms in -ἄ (Meyer, G. G. p. 348). Or, as is now maintained by Joh. Schmidt (Pluralb. p. 321 ff.), κρέα, γέρα, &c. are stems in -ἄ, originally distinct from the corresponding stems in -ἄσ, and are therefore properly Singular, but capable of being used in a collective sense. On this view κρέᾶ meant flesh, κρέαα pieces of flesh: cp. μῆρα and μηροί (§ 99*). Schmidt does not admit hyphaeresis in most of these words, holding that it only occurred when three vowels came together in the oldest Greek: so that (e.g.) we may have δέα for δΓέεα (δΓειεσ-α), but not κλέα for κλέΓεα.

There are also several contracted forms from Stems in -εεσ which offer some difficulty: ἀκληεῖς (II. 12. 316), ἀκλειῶς (Od. 1. 241., 14. 371), ἐϋκλειῶς (II. 22. 110), ἐϋκλείῶς (II. 10. 281, Od. 21. 331; al. ἐϋκλῆας), ἀγακλῆος (ἀγακλεῖος Hesych.), Πατροκλῆος, Πατροκλῆα, 'Ηρακλῆος, 'Ηρακλῆα, 'Ηρακλῆα, 'Ηρακλῆα, Διοκλῆας, Διοκλῆας, ζαχρηεῖος (also ζαχρηῶν Hesych.); ἐϋρρεῖος; δείους (II. 10. 376., 15. 4); σπείους, σπῆῖ, σπέσσι and σπήεσσι.

But the η or $\epsilon \iota$ always occurs where it can be resolved into $\epsilon \epsilon$, as $\Pi \alpha \tau \rho \sigma \kappa \lambda \epsilon \epsilon' - \sigma s$, $\delta \nu \rho \rho \epsilon \epsilon' - \sigma s$, $\delta \kappa \lambda \epsilon \epsilon' - \sigma s$, &c.; moreover the long final syllable so lost (e. g. in writing $\delta \kappa \lambda \epsilon \epsilon' - \epsilon s$, $\delta \epsilon \epsilon - \sigma s$, $\sigma \pi \epsilon \epsilon - \sigma s$) is never necessary to the metre. Hence we can hardly doubt that these are the true Homeric forms. So $\kappa \rho \epsilon \iota \delta \nu$ (Gen. Plur. of $\kappa \rho \epsilon \delta s$) should be $\kappa \rho \epsilon \delta - \omega \nu$ (as in H. Merc. 130), or perhaps $\kappa \rho \epsilon \epsilon \delta \nu$ (see § 107, 3); and $\zeta \alpha \chi \rho \eta \epsilon \iota s$, $\zeta \alpha \chi \rho \epsilon \iota \delta s$. For $\sigma \pi \epsilon' \sigma \sigma \iota$ we can read $\sigma \pi \epsilon' \epsilon \sigma \iota \epsilon' \delta s$.

The Voc. of Πατροκλέηs should be written in the uncontracted form Πατρόκλεες in the phrase Πατρόκλεες $i\pi\pi\epsilon\hat{v}$ (which ends the line in Il. 16. 20, 744, 812, 843), and also whenever it comes before the Bucolic Diaeresis (§ 368). When it stands at the beginning of the line (Il. 16. 693, 859) we should perhaps read Πάτροκλοs: see § 164.

- 6. The Case-forms of Nouns in -ωs and -ω (Gen. -oos) ought generally to be written without contraction; thus ἠώs, Dat. ἠόi, Acc. ἠόa (see § 368); alδώs, Dat. alδόi, Acc. alδόa: ἱδρώs, Acc. ἱδρόa (Il. 10. 574). But the Genitive in -oûs (ἠοῦs, Λητοῦs, &c.) is required by the metre in several places. Naturally the contraction of oo was earlier than that of two unlike sounds, as ot, oa. See L. Meyer, Decl. 23.
- 106.] Variation of the Stem. The phonetic influence of the Ending on the form of the Stem, which plays so large a part in the inflexion of Non-Thematic Tenses, was originally no less important in the Nouns. In Sanscrit a Nominal Stem of the consonantal Declension appears in general in at least two forms,

a 'strong' and a 'weak' form; the strong form being used in the Nom. and Acc. Sing. and Dual and the Nom. Plur., the weak form in other Cases. The weak form, again, may have two degrees, which are then called the 'weak' or 'middle' and the 'weakest' form. A few traces of these variations remain in the Greek Declension:—

I. In the words of relationship, $\pi \alpha \tau \eta \rho$, $\mu \eta \tau \eta \rho$, &c. and in $\partial \nu \eta \rho$. Thus we find Nom. $\pi \alpha \tau \eta \rho$, Acc. $\pi \alpha \tau \epsilon \rho - \alpha$, but Gen. $\pi \alpha \tau \rho - \delta s$ ($\pi \alpha \tau \epsilon \rho - \delta s$ only Od. 11. 500), Dat. $\pi \alpha \tau \rho - \delta s$ (sixty times in Homer, $\pi \alpha \tau \epsilon \rho - \delta s$ thrice); $\mu \eta \tau \eta \rho$, Acc. $\mu \eta \tau \epsilon \rho \alpha s$ (only), Gen. and Dat. $\mu \eta \tau \rho - \delta s$, $\mu \eta \tau \rho - \delta s$, less commonly $\mu \eta \tau \epsilon \rho - \delta s$, $\mu \eta \tau \epsilon \rho - \delta s$, $\mu \eta \tau \epsilon \rho - \delta s$ almost promiseuously; the latter is also seen in the Dat. Pl. $\partial \alpha \rho \delta \sigma \delta \sigma \delta s$ (for $\partial \alpha \rho \delta \rho \delta \sigma \delta s$). The Gen. Plur. $\partial \alpha \delta \rho \delta \sigma \delta s$ is seanned as a spondee: it should probably be written $\partial \alpha \delta \rho \delta \rho \delta s$ to $\partial \alpha \delta \rho \delta s$ (Ebel, K. Z. i. 293).

2. $Z\epsilon \dot{\nu}s$, for $\delta_k \eta \dot{\nu}s$ (Sanser. $dy \hat{a}us$) forms the Gen. and Dat. from the Stem $\delta \iota F$. The original Acc. is $Z\hat{\eta}\nu$, Sanser. $dy \hat{a}m$ (with loss of u): $\Delta \iota a$ follows the analogy of $\Delta \iota \dot{\nu}s$, $\Delta \iota \iota \iota$. Similarly $\beta o \hat{\nu}s$, for * $\beta \omega \hat{\nu}s$ (Sanser. $g \hat{a}us$), Gen. $\beta o F - \dot{\nu}s$, Acc. in Hom. $\beta \hat{\omega}\nu$ (Sanser. $g \hat{a}m$).

κύων, Voc. κύον, forms the other Cases from the Stem κὔν-. Cp. Sanser. gvan, Acc. gván-am, Gen. gun-as, &c. The Acc. κύν-a (like Δία) follows the analogy of the Gen. and Dat.

Similarly, *Γρήν a lamb (surviving in πολύ-ρρην-ες) forms Gen.

àpv-ós (for Frv-ós), &c.

3. Adjectives in $-\epsilon \iota s$, Gen. $-\epsilon \iota \tau \circ s$ (Stem $-F \epsilon \iota \tau - \iota$), form the Dat. Plur. in $-\epsilon \sigma \sigma \iota$, $-\epsilon \sigma \iota$. To explain this we must first suppose the weak Stem in $F \check{\alpha} \tau - \iota$ (with $\check{\alpha}$ for $\epsilon \iota$, cp. § 31, 5 and § 37), which would give a Dat. Plur. in $-\alpha \sigma \sigma \iota$, $-\check{\alpha} \sigma \iota$; this form then was assimilated to the other Cases by change of $\check{\alpha}$ to ϵ . A form in $-\alpha \sigma \iota$ has survived in $\phi \rho \alpha \sigma \iota^*$ for $\phi \rho \epsilon \sigma \iota$ ($\phi \rho \check{\alpha}$: $\phi \rho \epsilon \nu = F \check{\alpha} \tau$: $F \epsilon \iota \tau$). In the same way $\delta \alpha \iota \iota \iota \iota \iota \iota$ and $\delta \iota \iota \iota \iota$ are not for $\delta \alpha \iota \iota \iota \iota \iota \iota$. The Adverb $\delta \alpha \iota \iota \iota \iota$ has been explained $\delta \iota \iota \iota$ as $\delta \iota \iota \iota \iota$ as $\delta \iota \iota \iota \iota$ the true Dat. Plur. of $\delta \iota \iota \iota \iota$ has been explained

4. The primitive variation sometimes gives rise to parallel forms of a word: e.g. $\pi\tau\omega\xi$ and $\pi\tau\dot{\alpha}\xi$ a hare $(\pi\tau\dot{\eta}\sigma\sigma\omega)$, which originate in the declension $\pi\tau\omega\xi$, Acc. $\pi\tau\dot{\omega}\kappa$ -a, Gen. $\pi\tau\alpha\kappa$ -\decsired some from $\pi\sigma\dot{\omega}s$ and Lat. $p\bar{e}s$, ped-is we may infer original $\pi\sigma\dot{\omega}s$ (or

from $\pi o \dot{v}_s$ and Lat. $p \bar{e}s$, p e d - i s we may infer original $\pi o \dot{v}_s$ (or rather $\pi \dot{\omega}_s$), Acc. $\pi \dot{o} \delta a$ or $\pi \hat{\omega} \delta a$, Gen. $\pi \dot{e} \delta - \dot{o} s$: and so in other cases \dagger .

* Found in Pindar, also in an Old Attic inscription given by Joh. Schmidt, K. Z. xxv. p. 38.

[†] Much, however, remains uncertain in the attempts that have been made to reconstruct the primitive declension of these and similar words. The Sanscrit forms would furnish a fairly complete key, but for two defects: (1)

- 107. Heteroclite Nouns. This term is applicable to Nouns that employ distinct Stems. The chief variations are-
- 1. Between the vowel Declension (Stems in -o and $-\tilde{a}$, - η) and the corresponding consonantal forms:

δίπτυχο-ς; Acc. δίπτυχ-a. $\epsilon \rho (\eta \rho o - s)$; Plur. $\epsilon \rho (\eta \rho - \epsilon s)$, $\epsilon \rho (\eta \rho - as)$. (ἀνδράποδο-ν post-Hom.); Dat. Plur. ἀνδραπόδ-εσσι. $\dot{a}\lambda\kappa\dot{\eta}$: Dat. $\dot{a}\lambda\kappa$ - $\dot{\iota}$. ύσμίνη; Dat. ύσμιν-ι.

λωκή: Acc. *λωκ-α*.

'Atôn-s, Gen. 'Atôα-o; also "Aïô-os, Dat. "Aïô-ι. φυλάκους (or φυλακούς, as Aristarchus accented the word); also φύλακ-ας, Dat. Plur. φυλάκ-εσσι. όσσε, Dat. Plur. όσσοισι (Hes. Sc. 426).

πολλό-s and πολύ-s are both declined throughout: so δάκρυο-ν and δάκρυ.

2. With forms in -τ or -ἄτ:—

γόνυ, Gen. γουνός (for γου Ε-ός), Plur. γοῦν-α, γούν-ων, γούν-εσσι; also γούνατ-ος, &c. επικός ρουνετ μα / γουνέται !! δόρυ, Gen. δουρός (for δορ -os), &c.; δούρατ-os, &c.

ονειρο-ς; Plur. ονείρατ-α.

πρόσωπο-ν; Plur. προσώπατ-α, Dat. προσώπασι. Hence the form ὧπα (εἰς ὧπα ἰδέσθαι, κατ' ἔν-ωπα ἰδών) may be a Neut. Sing.: cp. Æolic ὅππατα eyes *.

οὖs; Gen. οἴατ-ος, Dat. Plur. οἴασι and ὧσί.

 $\tilde{\eta}\mu\alpha\rho$ (cp. $\tilde{\eta}\mu\epsilon\rho$ - α); $\tilde{\eta}\mu\alpha\tau$ - α 0, &c. (cp. $\tilde{\eta}\mu\alpha\tau$ - α 0). (πείρατ-α), ήπαρ, οὖθαρ, εἶδαρ, ὄνειαρ, φρεῖαρ, κτέαρ, άλειφαρ, στέαρ.

ύδωρ, ύδατ-os. See § 114*, 8, d.

 $\chi \acute{a}\rho \iota s$, Acc. $\chi \acute{a}\rho \iota - \nu$ (cp. $\chi a\rho \acute{\iota} - \epsilon \iota s$); Plur. $\chi \acute{a}\rho \iota \tau - \epsilon s$, &c.

μέλι (μείλι-νος, μελι-ηδέα); μέλιτ-ος, &c.

χρώς, χρο-ός. χρο-ί, χρό-α; also χρωτ-ός (Il. 10. 575) and $\chi \rho \hat{\omega} \tau - a$ (Od. 18. 172, 179).

We should add the whole class of Nouns in - µa, Gen. - µar-os: home 24 since the -μα of the Nom. Acc. is not for -ματ, but answers to the Latin -men, Gen. -min-is.

3. Between $-\alpha\sigma$ - and $-\epsilon\sigma$ -:—

τέρας, τέραα, τερά-ων, τερά-εσσι; but τείρεα (in the sense of 'stars,' Il. 18. 485).

the Sanscr. a may represent either ϵ or o, so that (e.g.) padás may be modós or $\pi\epsilon\delta\acute{o}s$, and similarly \bar{a} may be η or ω : and (2) Sanscr. \bar{a} often answers to Greek o, so that (e.g.) pādam may point to either πόδα or πῶδα. See Joh. Schmidt, K. Z. xxv. 23 ff., Brugmann, Grundr. i. § 311, p. 251.

* The old explanation of ὅππα from ὁπ-μα, by 'progressive assimilation,'

seems to be groundless.

οὖδας, οὖδε-ος, &c.: so κῶας, κώε-α, κτέρας, κτέρε-α (and New Ionic γέρεα, &c.; Attic βρέτους, κνέφους).

This variation doubtless arose from the Ionic change of ἄο, ἄω into ϵο, ϵω. Thus the ϵ first appeared in the Gen., giving (e. g.) τέρας, τέρεος, τέρεος, τέραι, Plur. τέραα, τερέων, τέρασι οτ τερά-ϵσσι. Then ϵ was extended to other Cases, and on the other hand α was sometimes restored, as in τεράων, κρεάων. See § 106, 4, and Joh. Schmidt, Pluralb. p. 325.

4. Comparatives in $-\omega\nu$ (Gen. $-o\nu$ -os) sometimes form Cases as if by contraction with a Stem in $-o\sigma$; $\partial_{\mu}\epsilon i\nu\omega$ (for $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$, $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$), $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$, $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$), $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$ (for $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$), $\partial_{\mu}\epsilon i\nu\sigma - \partial_{\nu}$

5. Other variations are—

Alθίοπ-ες, &c., but Acc. Alθιοπη-as.

'Αντιφάτη-ς, Acc. 'Αντιφατη-α.

*Aρηs, Voc. 'Aρεs; Gen. 'Aρη-os and 'Aρε-os, &c.; Acc. 'Aρηa and once 'Αρη-ν (II. 5. 909).

ζαής, Acc. ζαη-ν (Od. 12. 313): see § 97.

λâa-s, Acc. λâa-v; Gen. λâ-os, Dat. λâ-ï, Dual λâε, Plur. λâ-εs, λά-ων, λά-εσσι. The latter forms are doubtless by hyphaeresis (§ 105, 4) for λάα-os, &c.

γρηυς, Dat. γρηt, as if from a monosyllabic γρηυς.

μέγα (for μεγη, cp. magn-us), Masc. μέγα-s, μέγα-v; the other Cases from the derivative stem μ εγα-λο-.

Three apparently distinct Stems are used in viós son, viz.—

- (1) vió-s, Voc. viέ; the forms vioῦ, νίῷ, νίοῖσι are very rare in Homer.
- (2) (viv-), Acc. viέ-a, Gen. viέ-os, Dat. viέ-ï, Plur. viέ-ες,
 viέ-as: and from these by hyphaeresis—
- (3) Acc. vi-a, Gen. vi-os, Dat. vi-ι, Dual vi-ε, Plur. vi-ες, vi-as, viá-σι; cp. γρηνς, λâas.

The form viáσι (instead of viν-σι) follows the type πατράσι, &c.

The Neut. κάρη head forms—

- (1) Gen. καρήατ-ος, κάρητ-ος, Dat. καρήατ-ι, κάρητ-ι.
- (2) Gen. κράατ-ος, Dat. κράατ-ι, Plur. κράατ-α(āa).
- (3) Acc. Sing. κρᾶτ-α (Od. 8. 92), Gen. κρᾶτ-ός, Dat. κρᾶτ-ί, Plur. Gen. κρᾶτ-ων, Dat. κρᾶσί. The Dat. Sing. form κράτεσφι (Il. 10. 156) is quite anomalous*.

^{*} We might add the stem $\kappa \rho \eta$ -, in $\kappa \alpha \tau \hat{\alpha} \kappa \rho \hat{\eta} \theta \epsilon \nu$ down from the head, ep. $\kappa \rho \hat{\eta}$ - $\delta \epsilon \mu \nu \sigma \nu$, $\kappa \rho \hat{\eta}$ - $\nu \eta$. The relations of these forms have hardly yet been satisfactorily cleared up: see especially Joh. Schmidt, Pluralb. p. 363 ff. It is highly probable that $\kappa \hat{\epsilon} \rho \alpha s$ is originally the same word, so that the original declension, answering to Sanser. $\epsilon i r \alpha s$, $\epsilon \kappa \rho s$, $\epsilon \kappa \rho s$, Gen. $\epsilon \kappa \rho \alpha \sigma s$ ($\epsilon \kappa \rho \alpha \sigma s$) Gen. $\epsilon \kappa \rho \alpha \sigma s$ ($\epsilon \kappa \rho \alpha \sigma s$). The form $\epsilon \alpha \rho \sigma s$ must

The declension of $\tilde{\epsilon}\rho\omega s$, $\gamma \hat{\epsilon}\lambda\omega s$ and $\hat{\epsilon}\delta\rho\omega s$ in Homer is open to some doubt; it is clear however that the Stems in $-\tau$ are post-Homeric.

Nom. έρος occurs in Il. 14. 315, Acc. έρον in the phrase ἐξ ἔρον ἕντο put away desire, Dat. ἔρφ in Od. 18. 212; Nom. ἔρως is read in Il. 3. 442., 14. 294, but the metre allows ἔρος in both places. ἔρωτ-α occurs first in H. Merc. 449.

Nom. γέλως occurs in Il. 1. 599, Od. 8. 326, 343, 344: in the two last passages (in the Song of Demodocus) the metre is rather against γέλος. The Dat. γέλω occurs in Od. 18. 100 (most MSS. γέλω); the Acc. γέλον or γέλω in Od. 18. 350., 20. 346 (MSS. γέλων, γέλον, and γέλω). Thus the word may be either γέλο-ς (Gen. -ου, or γέλως, Acc. γέλω (for γέλω-α or γέλο-α): cp. αἰδῶ for αἰδώα. The Stem γέλοσ- appears in γελοῖος, cp. αἰδοῖος, ἡοῖος.

From $\mathfrak{i}\delta\rho\omega$ s we have Acc. $\mathfrak{i}\delta\rho\hat{\omega}$; but this must be read $\mathfrak{i}\delta\rho\hat{\omega}$ in one place II. 10. 574 $\mathfrak{i}\delta\rho\hat{\omega}$ mohhov at the end of the line), and always may be so read. The Dat. is $\mathfrak{i}\delta\rho\hat{\varphi}$ (II. 17. 385, 745), possibly to be written $\mathfrak{i}\delta\rho\hat{\omega}$. Hence $\mathfrak{i}\delta\rho\omega$ is

probably like χρώς.

92

Two other Case-forms of this type are ixŵ (II. 5. 416), Acc. of iχώρ, and κυκειῶ (II.) οr κυκεῶ (Od.), Acc. of κυκεών. Cp. also αἰῶ (Aesch. fr. 413), Acc. of αἰών.

The history of all these instances is very similar. The original Stem ended with a spirant (commonly σ), the loss of which in the oblique Cases caused hiatus (-oos, -oī, -oa, &c.): then these forms were replaced by adopting Stems in - τ and -v. Cp. § 114*, 6-8.

108.] Heteroclite Pronouns. The following points remain to be noticed:—

The stems ἐμε (με) and ἐε, ἐ do not form a Nom. Sing.

It is evident that the original Nom. coalesced at a very early period with the Stem of the Verb, becoming the ending $-\mu$; just as the French je has ceased to be used except in a fixed place before the Verb, so that it is hardly a separate word.

In the Plural also the Nom. was not originally formed from the same Stems as the oblique Cases. Both $\tilde{a}\mu\mu\epsilon$ -s, $\tilde{\nu}\mu\mu\epsilon$ -s and $\hat{\eta}\mu\dot{\epsilon}$ - ϵ s, $\hat{\nu}\mu\dot{\epsilon}$ - ϵ s are comparatively late, and due to the analogy of the Nominal declension (Meyer, G. G. p. 388).

- 2. The Interrogative and Indefinite τis is declined from three Stems, viz.
- (1) τ_i -, giving Neut. τi (for $\tau i \delta$), also the Plur. Neut. traceable in $\tilde{a}\sigma\sigma a$ (for $\tilde{a}\tau_i a$). The Indef. $\tilde{a}\sigma\sigma a$ occurs in Od. 19. 218 $\delta\pi\pi o i$ $\tilde{a}\sigma\sigma a$, where it would be better to write $\delta\pi\pi o i a$ (for $\tau_i a$).
- (2) τε-, giving Gen. τέο, τεῦ (cp. ἐμέο, &c.), Dat. τέω, τψ (II. 16.
 227, H. Apoll. 170).

Gen. $\tau \in \omega \nu$ ($\overline{\epsilon}\omega$), Dat. in $\delta - \tau \in \omega \nu$ ($\overline{\epsilon}\omega$), Il. 15. 491.

(3) τω-, giving Acc. τίν-a, Dat. (very rarely) τίν-ι, Plur. Nom. τίνες (only in the Od.).

have been originally a derivative, introduced to mean head when $\kappa \epsilon \rho as$ had come to be limited to the sense of horn. From it again $\kappa a \rho \eta - a \tau os$, &c. were obtained by analogy.

In the Compound $\tilde{o}\sigma$ - $\tau\iota s$ the first part is sometimes declined as $\tilde{o}s$, $\tilde{\eta}$, \tilde{o} , sometimes undeclined, giving \tilde{o} - $\tau\iota s$, \tilde{o} - $\tau\epsilon v$, &c. The Neut.

Plur. is once 6-711-a (Il. 22. 450), usually arga.

In the forms with $\tau\tau$, $\pi\pi$ (as $\delta\tau\tau\iota$, $\delta\pi\pi\omega$ s) we have to recognise the original Neuter $\delta\delta$ (Sanser. yad). Thus $\delta\delta$ $\tau\iota$ becomes $\delta\tau$ $\tau\iota$ (not $\delta\sigma\tau\iota$, since $\tau\iota$ is a distinct word, not a Suffix). In $\delta\tau\tau\epsilon$ 0, which occurs in the Odyssey (1. 124., 17. 121., 22. 377), $\delta\delta$ - is indeclinable (cp. δ - $\tau\iota$ s), and so in $\delta\pi\pi\omega$ s, $\delta\pi\pi\sigma\sigma\sigma$ s, $\delta\pi\pi\sigma\bar{\sigma}\sigma$ s, &c. For the assimilation we may compare $\kappa\lambda\delta$ $\delta\epsilon$, $\kappa\lambda\pi$ $\pi\epsilon\delta(\delta\nu)$, &c. (for $\kappa\lambda\tau$ $\delta\epsilon$, $\kappa\lambda\tau$ $\pi\epsilon\delta(\delta\nu)$.

3. The Article is declined from two Stems:-

 δ -, Fem. δ -, which gives δ , $\hat{\eta}$, $o\hat{\iota}$, $a\hat{\iota}$: perhaps also $\tilde{\omega}s$ thus, if it is distinct from the Relatival $\hat{\omega}s$ as.

το-, Fem. τā-, which gives the other Cases, and second forms

of the Nom. Plur. τοί, ταί: also the Adverb τώς thus.

The Compound $\tilde{\sigma}$ - $\delta\epsilon$ uses the Stem $\tilde{\sigma}$ - for the forms $\tilde{\sigma}$ - $\delta\epsilon$, $\tilde{\eta}$ - $\delta\epsilon$, $o\tilde{t}$ - $\delta\epsilon$, $a\tilde{t}$ - $\delta\epsilon$, and the Adverb $\hat{\omega}$ - $\delta\epsilon$. The second part is sometimes declined in the Dat. Plur., $\tau ol\sigma$ - $\delta\epsilon \sigma \sigma \iota \nu$ or $\tau ol\sigma$ - $\delta\epsilon \sigma \iota \nu$ (Il. 10. 462 and Od.). The - $\delta\epsilon$ is enclitic: hence the accent, $\tilde{\eta}$ - $\delta\epsilon$, not $\tilde{\eta}\delta\epsilon$. Strictly, therefore, it should be written $\tilde{\sigma}$ $\delta\epsilon$, $\tilde{\eta}$ $\delta\epsilon$, &c.

The forms $\hat{\epsilon}\mu a \nu \tau \hat{\sigma} \nu$, $\sigma \epsilon a \nu \tau \hat{\sigma} \nu$, &c. are post-Homeric. The earliest instance of a Compound of this kind is the word $\hat{\epsilon}a \nu \tau \hat{\eta}$, in Hes.

Th. 216.

Adverbial Suffixes.

109.] The Suffixes employed in Homer to form Adverbs are as follows:—

-θι expresses the place where: the chief instances are—from Pronouns and Prepositions, $\tau \acute{o}-\theta \iota$, $\ddot{o}-\theta \iota$, $\alpha \acute{o}-\theta \iota$, $\alpha \mathring{v}-\theta \iota$,

-θα place; $\tilde{\epsilon}v$ -θα, $\tilde{\epsilon}v$ τα \hat{v} -θα, \tilde{v} παi-θα (cp. also $\delta\eta\theta\dot{a}$, $\mu\dot{\iota}vvv\theta\dot{a}$). -θε(v) place, from Prepositions; $\pi\rho\dot{o}\sigma$ -θε(v), $\check{\sigma}\pi\iota\sigma$ -θε(v) and $\check{\sigma}\pi\iota$ -

 $\theta \epsilon(\nu)$, $\vec{v} \pi \epsilon \rho - \theta \epsilon(\nu)$, $\pi \dot{\alpha} \rho o \iota - \theta \epsilon(\nu)$, $\dot{\epsilon} \nu \epsilon \rho - \theta \epsilon(\nu)$.

-θεν place whence, used with nearly the same Stems as -θι; Γρονωρι \ddot{o} -θεν, πό-θεν, \ddot{e} ν-θεν, κε \ddot{e} -θεν, \ddot{a} λλο-θεν, \dot{v} ψό-θεν, \ddot{a} ντο-θεν, \ddot{a} μφο-τέρω-θεν, \ddot{e} τέρω-θεν. From Nouns, $\ddot{\eta} \hat{\omega}$ -θεν, $\Delta \iota \acute{o}$ -θεν (II.), οὐρανό-θεν, \ddot{a} ππό-θεν, &c.

This Suffix is often used with the Prepositions $\xi \xi$ and $\delta \pi \delta$, as $\xi \kappa \Delta \iota \delta - \theta \epsilon \nu$, $\delta \pi'$ où $\rho a \nu \delta - \theta \epsilon \nu$, &c. With the Stems $\xi \mu \epsilon$, $\sigma \epsilon$, ξ , it forms a Genitive; as II. 1. 280 $\sigma \xi \theta \epsilon \nu$ $\delta' \xi \gamma \omega$ où $\kappa \delta \lambda \epsilon \gamma \ell \zeta \omega$. The form $\xi \theta \epsilon \nu$ is only found in the Iliad.

-θοι, only in ένταν-θοῦ there (Od.).

-τος place; ἐν-τός. ἐκ-τός. Originally, perhaps, it expressed the place whence, as Lat. caeli-tus, divini-tus. είντος

-τις, in av-τις back, again (Attic av-θις).

-σε place whither; πό-σε, όππό-σε, κεί-σε, ἐτέρω-σε, ἀμφοτέρωσε, ὁμό-σε. From Nouns, πάντο-σε, κυκλό-σε.

-φι(ν), -φις, in νόσ-φι(ν) apart, λικρι-φίς sideways (II. 14. 463).

This may be the Instrumental Ending $-\phi \iota(\nu)$.

-φα, in $\mu \epsilon \sigma$ -φα until, lit. meanwhile (II. 8. 508).

-χι, in η-χι where (lit. which way, Lat. quā).

-χα, with Numerals; δί-χα two ways, τρί-χα, πέντα-χα, έπτα-χα.

 $-\chi\theta\alpha$, in the same sense, $\tau\rho\iota-\chi\theta\acute{\alpha}$, $\tau\epsilon\tau\rho\alpha-\chi\theta\acute{\alpha}$.

-κις, -κι; with Numerals, in δεκά-κις, τετρά-κις, εἰνά-κις, εἰκοσάκις; and with similar meaning πολλάκις and πολλάκι, δοσάκι, τοσσάκι.

The original Suffix is -κις or -κι (not -ἄκις), but in consequence of its having been used at first with Stems ending in -ἄ (τετρά-, ἐπτά-, δεκά-, εἰνά-՝, the combination -α-κις came to be felt as the Suffix, and was extended to other words by analogy. A similar explanation applies to the ἄ of πέντα-χα.

-κας expresses manner; ἀνδρα-κάς = Lat. viritim.

-δε place whither, suffixed to the Accusative; οἶκόν-δε, πόλε-μόνδε, ἄλαδε. This Suffix is peculiar in being an enclitic; in strictness we should write οἶκόν δε, πόλεμόν δε, &c.

-δις expresses direction or manner; χαμά-δις, ἄμυ-δις, ἄλλυ-δις,

επαμοιβα-δίς (Od. 5. 481).

110.] Case-forms as Adverbs. The Suffixes which follow have been explained, with more or less probability, as Case-Endings.

-α manner ; ἄρ-α (lit. fittingly), ἄμ-α, μάλ-α, θάμ-α, τάχ-α, σάφ-α, κάρτ-α, ρεῖ-α οτ ρέ-α. ὧκ-α, ἦκ-α, αἶψ-α, λίγ-α, σῖγ-α, ρίμφ-α, πύκ-α,

λίπ-a; in Attic κρύφ-a, ἢρέμ-a.

The Adverbs in -\$\tilde{\alpha}\$ belong to an early stage of Greek, most of them being confined to Homer. They have generally been taken to be primitive Instrumental forms (so Brugmann, M. U. ii. 158, G. G. § 83). It is a question, however, whether the original Instr. ending was -\$\tilde{\alpha}\$ or -\$\tilde{\epsilon}\$: see Joh. Schmidt, K. Z. xxvii. 292. Those which answer to adjectives in -\$\tilde{\epsilon}\$, viz. \$\ta \delta \alpha \al

-η or -η way, direction; $\hat{\eta}$, $\tau \hat{\eta}$, $\pi \hat{\eta}$, $\tilde{\sigma} \pi \eta$ (or $\pi \hat{\eta}$, $\tilde{\sigma} \pi \eta$), $\pi \dot{\alpha} \nu \tau$ -η, $\lambda \dot{\alpha} \theta \rho \eta$. These forms represent the Instrumental of the way by which (Lat. $qu\bar{a}$, &c.).

It is a question whether they should be written with iota subscr. or not. The ancient grammarians prescribed iota (Apoll. de Adv. 625, 1), and this is

confirmed by the forms \$\hat{q}\$, \$\delta π\hat{q}\$, \$\delta λ\hat{q}\$, παντ\$\tilde{q}\$ on Doric inscriptions (Ahrens, ii. 369). In Homer however the final vowel of πάντη (or -η) is frequently shortened before another vowel, which is rarely done in the case of final -n (§ 380). It is not unlikely therefore that the original Instrum. Fem. -n took iota subser, from the analogy of the Dat. Fem. in -n. There were also Doric adverbs of place in -η or η (πή ποκα, ἐκατερῆ, see Ahrens, ii. 362, Brugmann, M. V. ii. 244), in which η is of course pan-Hellenic; but Ionic πη, &c. are connected by the meaning with the Doric forms in -q. Cp. also λάθρη (-η) with Attic λάθρα (or -q). The form πάντ-η is an extension of the ending -η to the consonantal declension (as with the adverbs in -ws).

-ει, -ι time, manner; αὐτο-νυχ-εί (or -ī) that very night, II. 8. 197; τρι-στοιχ-ί in three rows, ἀναιμωτ-ί ($\bar{\iota}$) bloodlessly, ἀμογητ-ί, άμαχητί, ανουτητί, ανιδρωτί, ανωϊστί, εγρηγορτί: with i, εκητι with the will, aeknt-1 without the will, mereiot-i limb by limb, μεγαλωστί in mighty fashion.

Short - is certain in ἔκητι, ἀέκητι, μελεϊστί, μεγαλωστί, and is not excluded Thomas 17 by the metre in ἀμογητί and ἀμαχητί. Where the syllable is long the MSS. are usually divided between -et and -t. The evidence of inscriptions is strongly in favour of -et (H. W. Smyth, The reduction of et to t in Homer, p. 10); but -t can hardly be due to mere itacism, and we have further to explain the forms in -t. The generally accepted view is that -et is the original Locative ending of the o-declension, which is preserved in the Doric adverbs εί, πεί, τουτεί, τηνεί, &c., also in οἴκει (Menander fr. 456). On this view short t must be the corresponding ending of the consonantal declension, and the analogy of forms of that declension must have been extended so as to create a new adverbial ending -τ (cp. ἐγερτ in Soph.). The -τ of ἀναιμωτί, &c., if not a mere error, may be due to contamination between -et and -T.

aisí has been taken to be a Loc. from the stem aifeo- (of which the Doric aiés is the Acc.). Mr. H. W. Smyth (l. c.) justly objects to this that the Homeric form would be alféi: and this form, we may add, would become aiei, not aiei. Hence he derives it from the stem aifo-, Lat. aevo-m.

A different account of the Adverbs in -et and -t is given by Mahlow (Die langen Vocale, p. 121). Noticing that they are mainly compounds, especially with & priv., he compares the numerous Latin adjectives such as ex-animi-s, in-ermi-s, im-belli-s, and shows that change to an I-stem is found in similar words in other European languages. This I- stem in the Acc. Neut. gives the adverbs in -t, in the Loc. those in -et or -t. On this view the doubt between -et and -ī is the same that we meet with in the Dat. of Nouns in -L-s (§ 98).

-ws manner; a Suffix of which there are comparatively few Thoma plb examples in Homer: the commonest are from Stems in -o, viz. τῶς, ῶς, πῶς, οὕτ-ως (also οὕτ-ω), όμ-ῶς, φίλ-ως, αἰνῶς, καρπαλίμως, ἀσπασίως, ὁηϊδίως, ἐκπάγλως, κρατερῶς, μεγάλως (rare); from other Stems, ἀφραδέ-ως, περιφραδέ-ως.

-ω, chiefly from Prepositions; εἴσ-ω, ἔξ-ω, πρόσσ-ω, ὀπίσσ-ω, ἄν-ω, κάτ-ω, προτέρ-ω (further on), έκαστέρ-ω, έκαστάτ-ω (farther, farthest), ἀσσοτέρ-ω nearer.

Two others are Adverbs of manner, &-δε, ούτ-ω (for which ούτωs is only written when a vowel follows in the same sentence).

The ending $-\omega s$ has long been considered to be the Greek form of the original Ablatival $-\delta t$ (Lat. $-\delta d$) of o- stems. In Greek, however, a final -d would disappear (as in $\check{\alpha}\lambda\lambda o$, Lat. atiu-d, &c.) and consequently the theory applies only to the forms without -s, viz. & δs and $o\check{\omega}\tau\omega$. The difficulty was met by Curtius (Curt. Stud. x. 219) with the suggestion that $-\tau$ would pass into -s before a dental or σ : e. e. $o\check{\omega}\tau\omega$ σot , $o\check{\omega}\tau\omega$ $\tau t\theta\eta\mu$ for $o\check{\omega}\tau\omega$ σot , $o\check{\omega}\tau\omega$ $\tau t\theta\eta\mu$. When two forms $o\check{\omega}\tau\omega$ and $o\check{\omega}\tau\omega$ had thus come into existence as 'sentence-doublets' like $o\check{\omega}$ and $o\check{\omega}\kappa$, $i\xi$ and $i\kappa$), it would be natural to use $o\check{\omega}\tau\omega$ sweet its explanation was rejected by later scholars (as Brugmann and G. Meyer), and is certainly not quite satisfactory. If Curtius is right we should expect $\check{\omega}\tau$ $\delta\epsilon$ to become $\check{\omega}\sigma\delta\epsilon$ rather than $\check{\omega}\delta\epsilon$. His view is however defended by Joh. Schmidt (Pluralb. p. 352).

The ending $-\omega$ in $\delta\nu-\omega$, &c. may be either the Ablatival $-\delta t$, or (more probably) an Instrumental ending $-\delta$ (Mahlow, Die langen Vocale, p. 86). In Latin, as Mahlow shows, it is probable that the Instrum, is represented by the adverbs in $-\delta$, as modo, cito, the Abl. by archaic $-\delta d$, later $-\delta$. If $-\omega$ and $-\omega$ were alternative Ablative endings—sentence-doublets—it seems possible that the adoption of $-\omega$ s rather than $-\omega$ in the Adverbs of manner was partly determined by the circumstance that $-\omega$ was already familiar in the Instrumental use.

The extension of $-\omega s$, $-\omega$ to the consonantal declension presents no difficulty. It may be observed, perhaps, that the proper Ablat. of that declension was unsuited for adverbial use, because it was the same in form as the Genitive: e.g. $\tau a \chi \acute{e} o s$ was already = of a swift, and accordingly a new word $\tau a \chi \acute{e} \omega s$ swiftly was coined on the model of $\phi \acute{a} \lambda \omega s$, &c.*

-ου place; ποῦ, ὁμοῦ, ἀγχοῦ, τηλοῦ, ὑψοῦ, αὐτοῦ,—all perispomena. They are the same in meaning as the corresponding Adverbs in -όθι.

-δον, -δην, -δα, forming Adverbs of manner, are evidently Accusatives from Stems in -δο-, -δη- (§ 114); e.g. σχε-δόν nearly, lit. holding-wise, ἀποστα-δόν aloof, ἐμβα-δόν on foot, ἀμφα-δόν openly, ἱλα-δόν in crowds; so βοτρν-δόν, πνργη-δόν, ρνδόν, σννωχα-δόν, &c.; βά-δην steppingly, τμή-δην, κρύβ-δην, κλή-δην, ἐπιγράβ-δην, &c. (all from Verbs), also a peculiar group in -ά-δην, as ἐπιστροφά-δην wheeling about, προτροπά-δην headlong, ἐπιτροχά-δην, μεταδρομά-δην, ἀμβολά-δην; μίγ-δα, κρύβ-δα, ἀποσταδά, ἀμφα-δά, ἀναφαν-δά, αὐτοσχε-δά. It is evident that these are much more numerous than the Noun-Stems in -δο, -δη can ever have been. In such cases we have to explain, not the derivation of the individual forms, but the origin of the type.

Other Adverbs obtained from Accusatives are: aknv in silence,

^{*} As adverbs of the Gen. Abl. form $(\tau \alpha \chi \acute{\epsilon} os, \&c.)$ must have existed at one time alongside of those in $\cdot \omega \tau$ from o- stems, the conjecture may be hazarded that this adverbial -os was one of the influences which determined the choice of $-\omega s$ rather than $-\omega$ for original $-\bar{o}t$. If so, such a form as $\pi \acute{\alpha} \nu \tau - \omega s$ is a sort of contamination of the Gen. Abl. $\pi \alpha \nu \tau - \acute{\omega} s$ and the forms in $-\omega(s)$.

ἄντην (ἀντίον, ἐναντίον, &c.) opposite, πάλιν backwards, δηρόν long, σχεδίην hand to hand, ἀμφαδίην openly, ἀπριάτην without purchase; perhaps also ἄγχι near, ὕψι aloft, ἵφι mightily. The form τφι is generally taken as the Instrum. of t-s force (§ 104): but this does not explain how it comes to be used as a Stem in the Adj. τφι-α (μῆλα), as well as in Compounds, Ἰφι-άνασσα, &c. (Bekker,

97

H. B. i. 160). 4. day Tshed-1-MANS

Many Adverbs are formed with a final -s, which is liable to be lost before a word beginning with a consonant, as οΰτω(s) and the Adverbs in -κι(s) already mentioned; other Homeric instances are, ἄχρι(s) and μέχρι(s) until, ἱθύ(s) straight towards, μεσσηγύ(s) between, ἀτρέμα(s) quietly: also the Prep. ἀμφί, Adv. ἀμφίs, and Homeric ἀντικρύ, later ἀντικρύs. Similar Adverbs in which -s is not lost are, ἄλι-s, μόγι-s, χωρί-s; ἀγκάs, ἐκά-s, πέλα-s, ἔντυπάs (Il. 24. 163); ἔγγύ-s; χθέ-s; and those in -δι-s, as ἄλλνδιs, ἀμοιβηδίs. Note also the group formed by -s subjoined to a monosyllabic Verbal Stem; πύξ with the fist, ἔπί-μιξ in confusion, ἄ-παξ once, μάψ idly, δ-δάξ with the teeth (δάκ-νω). The nature of this -s is obscure. Brugmann (K. Z. xxiv. 74) connects it with the -s of the Prepositions ἔξ, ἄψ, ἀμφί-s, holding that it is Ablatival. Joh. Schmidt (Pluralb. 357) supposes a group of Neuter stems, like the nouns in -as, -εs, &c.

Accentuation of Case-forms.

111.] For the purpose of accentuation Nouns may be divided into those in which the accent remains on the Stem (and as far as possible on the same syllable of the Stem), and those in which it access in the Consend Date to the Cose English.

it passes in the Gen. and Dat. to the Case-Ending.

Nouns of the Vowel-Declensions generally belong to the first of these groups. The last syllable if accented has the acute in the Nom. and Acc., the circumflex in the Gen. and Dat., and in the Adverbs in -ου and -ωs: e.g. καλός, καλοῦ, καλοῦ, καλοῦ &c., Adv. καλοῦς; but Acc. Plur. καλούς. On the Nouns in -α, see § 96.

One or two Feminines with Nom. Sing. in -α accent the Ending in those Cases in which the last syllable is long, as μία, Gen. μιῆς; ἴα, Dat. lῆ; ταρφύς thick, Fem. ταρφέια, but Plur. ταρφειαί, Acc. ταρφειάς; ἄγυια street, Gen. ἀγυιῆς, Plur. ἀγυιαί, ἀγυιάς. So θαμειαί and θαμειάς answer to a Nom. Sing. θαμεία, Masc. *θαμύς (cp. θαμέ-ες, θαμέας); and κανστειρῆς (Il. 4. 342, &c.) is Gen. of καύστειρα.

αὕτως in the very way (from αὐτός), is made barytone by the authorities. The word is only Homeric, and the original accentuation αὐτῶς had evidently been lost, perhaps by a confusion with οὕτως.

The oxytone Adverbs in -ει and -ι, as αὐτονυχεί, ἀσπουδί, μελειστί, may date from a time when the Loc. of the o- declension was regularly oxytone—the accent determining the appearance of ε for o.

The second group consists of-

(1) Nouns with monosyllabic Stem, as πούς, ποδ-ός, ποδ-ί, ποδ-οῖιν, ποδ-ῶν, ποσσί; κύων, κυν-ός, κυν-ί, κυν-ῶν, κυσί; θήρ, θηρ-ός, θηρ-ί, θηρ-ῶν, θηρ-σί.

(2) The words πατήρ, μήτηρ, θυγάτηρ, ἀνήρ, γαστήρ; Gen.

πατρ-ός, μητρ-ός, θυγατρ-ός, ανδρ-ός, γαστρ-ός &c.

The accent of $\mu\eta\tau\eta\rho$ and $\theta\nu\gamma\dot{\alpha}\tau\eta\rho$ is anomalous: cp. the Accusatives $\mu\eta\tau\dot{\epsilon}\rho$ -a, $\theta\nu\gamma\alpha\dot{\epsilon}\rho$ -a. Probably the Nom. Sing. was originally oxytone. The change of accentuation may be explained by supposing that the Nom. was influenced by the accent of the Vocative—that in fact the Voc. pro tanto took the place of the Nom. (cp. § 96). It is evident that the Voc. of these words would be especially familiar to the ear.

The Dat. ending $-\epsilon\sigma\sigma\iota$ never takes the accent; hence $\pi\delta\delta-\epsilon\sigma\sigma\iota$, $\nu\dot{\eta}-\epsilon\sigma\sigma\iota$, $\dot{\alpha}\nu\delta\rho-\epsilon\sigma\sigma\iota$, $\kappa\dot{\nu}\nu-\epsilon\sigma\sigma\iota$, &c. The reason doubtless is that these are forms that have followed the analogy of the Stems in

-εσ, as $\xi \pi \epsilon \sigma$ -σι, $\beta \xi \lambda \epsilon \sigma$ -σι, &c.

The Genitives παίδ-ων, δάδ-ων, Τρώ-ων, δμώ-ων, θώ-ων, are barytone; perhaps because the Stems are originally disyllabic.

It appears that in an earlier stage of the language the shifting of the accent to the Case-Ending was always accompanied by 'weakening' of the Stem (§ 106). The few instances of the type of $\kappa\acute{\nu}\nu$, Gen. $\kappa\nu\nu$ -ós, and $\pi\alpha\tau\acute{\eta}\rho$, Gen. $\pi\alpha\tau\rho$ -ós, are to be regarded as surviving examples of the older declension.

112.] The Vocative in the Consonantal Declension sometimes retracts the accent, as $\pi \alpha \tau \eta \rho$, Voc. $\pi \dot{\alpha} \tau \epsilon \rho$; $\delta \alpha \dot{\eta} \rho$, Voc. $\delta \hat{\alpha} \epsilon \rho$; $\delta \omega - \dot{\gamma}$

γενής, Voc. διόγενες.

Proper Names with a long vowel in the penultimate are often properispomena, as Σαρπηδών, Voc. Σαρπηδόν; 'Αντήνωρ, Voc. 'Αντήνορ; Μαχάων, Voc. Μαχάον. Otherwise they are mostly proparoxytone, as 'Αγάμεμνον, 'Απολλον.

Οχytones in -εύς form the Voc. in -εῦ, as Ζεῦ, 'Οδυσεῦ. This

Oxytones in $-\epsilon \hat{v}_s$ form the Voc. in $-\epsilon \hat{v}_s$, as $Z \epsilon \hat{v}_s$, O $\delta v \sigma \epsilon \hat{v}_s$. This may be regarded as a retraction of the accent, since the circumflex stands for a double accent, viz. an acute followed by a

grave in the same syllable $(Z_{\epsilon}\hat{v} = Z_{\epsilon}\hat{v})$.

Originally the Vocative, unless it stood at the beginning of a sentence, was enclitic. Hence the barytone accent is to be explained as in the case of the Verb (§ 87), viz. as the result of an original loss of accent.

CHAPTER VI.

FORMATION OF NOUNS.

113.] Nominal Stems. Some Nouns are formed with Stems identical with Verb-Stems; $\pi\tau\dot{\nu}\chi$ - ϵs folds $(\pi\tau\dot{\nu}\sigma\sigma\omega)$ for $\pi\tau\nu\chi$ - $\iota\omega)$, $\sigma\tau\dot{\iota}\chi$ - ϵs ranks $(\sigma\tau\dot{\epsilon}(\chi\omega), \dot{\epsilon}-\sigma\tau\dot{\iota}\chi-o\nu)$, $\phi\lambda\dot{\delta}\xi$ flame $(\phi\lambda\dot{\epsilon}\gamma\omega), \pi\tau\dot{\omega}\kappa$ -a cowering $(\pi\tau\dot{\eta}\sigma\sigma\omega, \dot{\epsilon}-\pi\tau\alpha\kappa-o\nu)$, $\delta\dot{\omega}$ house, for $\delta\omega\mu$, cp. $\delta\ddot{\alpha}$ -(dm) in $\delta\dot{\alpha}-\pi\dot{\epsilon}\delta o\nu$ (lit. house-floor), $\dot{\rho}\dot{\omega}\pi$ -as twigs $(\dot{\rho}\dot{\epsilon}\pi-\omega)$, $\dot{\rho}\dot{\omega}\gamma$ -as clefts, openings $(\dot{\rho}\dot{\eta}\gamma-\nu\nu\mu\iota)$, $\dot{\theta}\dot{\omega}s$ jackal $(\dot{\theta}\dot{\epsilon}\omega)$, $\ddot{\sigma}\pi$ -a voice $(F\dot{\epsilon}\pi$ -), $\dot{\phi}\rho\dot{\iota}\xi$, $\Sigma\tau\dot{\iota}\xi$. In these Nouns the Stem is usually either in the weak form or in the O-form $(\S~38)$.

Originally the Stem was long (and accented) in the Nom. and Acc., weak (with the accent on the Case-Ending) in the Gen. and Dat. Instances of this variation have been given in § 106; cp. § 114*.

Commonly however a Nominal Stem is formed from a Verb-Stem by means of one or more Suffixes, which we may call Nominal Suffixes. These are of two kinds:—

- 1. Primary, by which Nouns are formed from Verb-Stems; as -o in $\partial \gamma \delta s$ leader, $-\tau i$ in $\phi \partial \alpha \tau i s$ saying. Nouns so formed are called Primitive (sometimes Verbal: but this term is better known in a more restricted sense, § 84).
- 2. Secondary, by which Nouns are formed from other Nouns; as $-\iota_0$ in $\delta(\kappa_0 \iota_0 s)$ just, $-\epsilon_0$ in $i\pi\pi \epsilon \acute{v} s$ horseman. These Nouns are called Denominative.

The Suffixes which mark the Feminine Gender might be classified as Secondary; thus the Stem $\kappa \alpha \lambda \eta$ - might be said to be formed by a fresh suffix from $\kappa \alpha \lambda o$ -, the Stem $\delta \mu \eta \tau \epsilon \iota \rho \tilde{\alpha}$ - (for $\delta \mu \eta - \tau \epsilon \rho - \iota \tilde{\alpha}$) from $\delta \mu \eta - \tau \epsilon \rho$ -, &c. But it is more convenient to treat the Feminine Endings as mere *inflexions*, along with the corresponding Masc. forms.

In the same way we might treat Suffixes like -τρο (in $l\eta$ -τρό-s healer, ἄρο-τρο-ν plough) as compounded of -τηρ or -τερ ($l\eta$ -τήρ healer, ἀρο-τήρ ploughman), and a secondary -o. Practically, however, -τρο is a single Primary Suffix: and this applies also to -μνο (in β έλε-μνο-ν dart), which might be resolved into μο + εν + ο,

and to many similar cases.

Primitive Nouns.

114.] Primary Suffixes. The form of the Verb-Stem in Primitive Neuns is liable to the same variations as in the Tenses (§ 38). It will be seen that these variations are connected with the accent; but this part of the subject will be best treated separately (§ 115).

The chief Primary Suffixes are as follows:-

-0, Fem. $-\bar{\alpha}$, $-\eta$; the Verb-Stem taking three forms—

(1) The weak form; as $\partial \gamma - \delta - s$ leader, $\zeta v \gamma - \delta - v$ yoke, $\phi v \gamma - \eta$ flight: with reduplication, $\partial \alpha \chi \dot{\gamma}$ (Fi-Fax- $\dot{\gamma}$) cry, $\ddot{v} - \sigma \tau o - s$ ($\sigma \tau a - v c b - s$) web.

(2) The O-form; as $\tau \acute{o}\kappa - o - s$ ($\tau \acute{\epsilon}\kappa - s$) offspring, $d\rho \omega \gamma - \acute{o} - s$ ($d\rho \acute{\eta} \gamma - \omega$)

helper, $\sigma\pi\sigma\nu\delta$ - $\dot{\eta}$ ($\sigma\pi\dot{\epsilon}\nu\delta$ - ω) libation, $\pi\sigma\tau$ - $\dot{\eta}$ flight, $\dot{\rho}$ $\dot{\phi}$ $\dot{\eta}$ flow.

- (3) Attic reduplication; as $\partial \gamma \omega \gamma \dot{\eta}$ leading, $\partial \kappa \omega \kappa \dot{\eta}$ point, $\partial \kappa \omega \delta \dot{\eta}$ eating, $\partial \kappa \omega \kappa \dot{\eta}$ sight, $\partial \delta \omega \delta \dot{\eta}$ smell. The radical vowel appears as ω .
- -t: as $\tau \rho \dot{\phi} \phi \iota \left(\tau \rho \dot{\epsilon} \phi \omega\right)$ thick, $\tau \rho \dot{\phi} \pi \iota s$ keel of a ship, $\phi \rho \dot{\phi} \nu \iota s$ understanding (with the Verb-Stem in the O-form).
- -ια : seldom with Stems of clearly Verbal meaning, as in ϕ ύζα $(\phi \nu \gamma \iota a)$ flight, $\sigma \chi \iota \zeta a$ $(\sigma \chi \iota \delta \iota a)$ chip; more often with roots used as Nouns, as δια $(\delta \iota F \iota a)$, $\pi \dot{\epsilon} \zeta a$ $(\pi \epsilon \delta -)$, $\mu \nu \iota a$ $(\mu \nu \sigma -)$, $\pi \iota \sigma \sigma a$ $(\pi \iota \kappa -)$; and as a Fem. suffix in Adjectives (infra).

The Greek-1a takes the place of -ī, the original declension of which is lost in Greek: see Brugmann, *Grundr*. ii. § 109, p. 313; Joh. Schmidt, *Pluralb*. p. 42.

-v: with two forms of declension—

(1) Gen. - ϵ -os, with the weak Stem; chiefly in Masc. and Neut. Adjectives, as $\tau a \chi - \dot{v}$ -s swift, $\tau a \rho \phi - \dot{v}$ -s ($\tau \rho \dot{\epsilon} \phi - \omega$) thick; $\beta a \theta - \dot{v}$ -s, $\lambda \iota \gamma - \dot{v}$ -s, $\gamma \lambda v \kappa - \dot{v}$ -s, $\beta a \rho \dot{v}$ s, $\beta \rho a \delta \dot{v}$ s, $\kappa \rho a \tau \dot{v}$ s, $\tau a \chi \dot{v}$ s, $\epsilon \dot{v} \rho \dot{v}$ s (for ϵ - $\Gamma \rho v$ -, root $\Gamma \epsilon \rho$ -). But $\dot{\eta} \delta \dot{v}$ -s has the strong Stem: and $\dot{\omega} \kappa \dot{v}$ -s the O-form.

Fem. -ειὰ (for -εF-ἰα), -εὰ, as ἡδεῖα, ἀκέα.

(2) Gen. -υ-ος; in Substantives (chiefly Fem.), as πληθ-ύ-ς multitude, lθ-ύ-ς path, aim, lλύς mud, νέκ-υ-ς (Masc.) corpse, γενύ-ς chin, γῆρυ-ς voice, cry.

As to the declension of Nouns in -is, Gen. -ios, and -vs, Gen. -vos, see § 94.

 $-\epsilon \sigma$, with the strong form of the Stem, as $\tau \epsilon i \chi$ -os wall, $\tau \epsilon i \chi$ - ϵ -a arms, $\epsilon \pi$ -os word, $\pi \epsilon \nu \theta$ -os suffering, $\beta \epsilon \nu \theta$ -os depth (cp. $\beta a \theta - \nu \nu$ -s), $\theta \epsilon \rho$ -os warmth, summer, $\tilde{\eta} \delta$ -os pleasure.

Fem. -ειὰ (for -εσ-μα), as ἢριγένεια.

The O-form of the Stem is found in $\delta\chi$ -os chariot (cp. the Pf. $\delta\kappa\omega\chi a$, § 26, 5); the weak form in $\theta\delta\lambda$ -os blossom (but cp. $\nu\epsilon$ 0- $\theta\eta\lambda$ - η s), $\kappa\delta\rho\tau$ 0s (also $\kappa\rho\delta\tau$ 0s), $\theta\delta\rho\sigma$ 0s (cp. $\Theta\epsilon\rho\sigma$ - $\iota\tau\eta$ s, $\lambda\lambda$ 1- $\theta\epsilon\rho\sigma$ - η s), $\delta\chi$ -os grief. The forms $\pi\delta\theta$ -os, $\beta\delta\theta$ -os are not Homeric.

Note however that in Homer the Substantive is 8ápoos (for which 8págos occurs only once, Il. 14. 416, the Adj. always θρασύς; so that a distinction of quantity is kept up in place of the original distinction between * θέρσος and θρασύς. On θέρσος as the original Greek form see Osthoff, M. U. ii. 49.

ī and ū appear in these Stems as in the Present tense (§ 29): e.g. δίγ-os cold, ψύχ-os warmth, κύδ-os glory.

-ωσ, -οσ; in ηως (Sanser, ush-ás) dawn, albώs shame, and in the older declension of γέλως, ίδρως, αιών, ἰχώρ (§ 107 ad fin.). The Stem is probably in the weak form; see § 30.

-aσ; as δέμ-as 'build.' The Stem is in the strong form; indeed the Stem-vowel is always ϵ , except in $\gamma \hat{\eta} \rho \alpha s$ old age, κωας fleece, and ουδας floor; cp. γέρας, δέπας, κέρας, κνέφας, κρέας, κτέρας, πέρας, σέβας, σέλας, σκέπας, σφέλας, τέρας: also *έρας (ἐραννός for ἐρασ-νός) and *γέλας (ἐ-γέλασ-σα).

- $\epsilon \nu$, - $\alpha \nu$, - $\alpha \nu$; e.g. $\tau \epsilon \rho - \eta \nu$, Gen. - $\epsilon \nu$ -os ($\tau \epsilon i \rho \omega$) soft, $\alpha \rho \sigma - \eta \nu$ male, αὐχ-ήν neck; πέπ-ον (Voc.) tender one, ἀρηγ-όν-ες defenders, τέκτων, περι-κτίονες; άγκ-ών, Gen. -ων-ος elbow, άγών, αίθων.

Fem. -awa (-av-ya), in Aéawa: imitated by way of sarcasm in

 $\theta \dot{\epsilon}$ -aiva (II. 8. 5).

-ντ, -οντ, in Participles, and in a few Substantives, as δράκ-ων a serpent, lit. the 'staring' animal (δέρκ-ομαι), τέν-ων, γέρων.

-ăr, in oblique Cases of Neuter Nouns as (νδωρ), νδατ-ος, &c. The a of this Suffix represents the weak form of a nasal syllable; see § 38, and § 114*, 8, c.

-art, notably in Compounds, as ἀκάμας, ἀδάμας, πολύτλας.

-αν, in τάλας, μέλας: perhaps originally Stems in -αντ, which have followed the analogy of $-\epsilon \nu$, $-o\nu$ (Meyer, G. G. p. 304).

- $\epsilon \rho$, - $\omega \rho$, - $\ddot{\alpha} \rho$; as $\dot{\alpha} \dot{\eta} \rho$ ($\dot{\alpha} F - \dot{\eta} \rho$) air, $al\theta - \dot{\eta} \rho$ ($a \dot{\imath} \theta - \omega$) bright sky, δα-ήρ husband's brother (levir); έλ-ωρ booty, ὕδ-ωρ water; μάκ-αρ great (Il. 11. 68), ¿ap spring.

-op in the Homeric aoρ sword, ήτορ breast is perhaps only the Æolic form of -ap (-r). As to the Nom. and Acc. Neut. forms

in -wp see § 114*, 8, d.

-10, -10 is very rare in Greek as a Primary Suffix: Brugmann gives έρείπ-ια ruins and (post-Hom.) άγ-ιος, στύγ-ιος, σφάγ-ιον, πάγ-ιος. We may add ταμ-ίη dispenser, πεν-ίη poverty: also δίος ($\delta\iota F$ - ιo -s) bright, $\pi\epsilon \zeta \acute{o}s$ ($\pi\epsilon \delta$ -) on foot, $\kappa\rho\alpha\delta$ - $\iota \eta$ ($\kappa \eta\rho$ for $\kappa \eta\rho$ - δ) heart, in which the Stem is a Root-Noun.

The word α-οσση-τήρ helper pre-supposes a Stem οσσο- for σοκ-ιο-, answering to Latin soc-iu-s (seq-, Gr. έπ-).

In ἄλλος (al-ius), μέσσος (medius), δεξιός the Suffix appears to give the force of

a Comparative: see Brugmann, Grundr. ii. § 63, p. 125.

-ιοσ, -ιοσ, -ισ: the Comparative Suffix, as $\pi\lambda\epsilon\omega$ ($\pi\lambda\epsilon$ -ιοσ- α) $\pi\lambda\epsilon$ ιστος ($\pi\lambda\epsilon$ -ισ-τος): see § 114*, 7.

-FO: $\kappa \epsilon \iota \nu \acute{o}s$ ($\kappa \epsilon \nu - F\acute{o}s$) empty, $o \tilde{v} \lambda o s$ ($\delta \lambda - Fos$) whole, $\lambda a \iota - \acute{o}s$ laerus, $\delta \rho \theta \acute{o}s$ ard-uus.

-Fεν, -Fον, -Fων, -Fν: πίων fat, aἰών age, life (Loc. aἰέν, see § 99), \mathring{a} -πείρων (\mathring{a} -περ-Fων, cp. πειραίνω for περ-Fν- ι ω): -Fεν appears in the Inf. in -εν-aι, as εἰδέναι for Fιδ-Fέν-aι (§ 84).

-fωσ, -fοτ, Fem. -υιὰ; in the Pf. Part., and in the Nouns ὄργ-υια fathom, ἄρπ-υια storm-wind, ἄγ-υια street.

-Faρ; as πîαρ (for πī-Faρ) fatness, ὄνειαρ (ὀνη-Faρ?) help, είδαρ (ἐδ-Faρ) food, είλαρ shelter, &c.; -Fερ in πίειρα, Fem. of πίων fat. The ancient grammarians noticed that the Stem before -αρ is long (Herodian ii. 769 ed. Lentz).

- μo ; with the O-form, as $\pi \acute{o}\tau$ - μo -s ($\pi \acute{e}\tau$ -) fall, κορ- $\mu \acute{o}$ -s ($\kappa \acute{e}\acute{\iota}\rho \omega$) a trunk, $\~{o}\lambda$ - μo -s ($\digamma \acute{e}\lambda$ -) a rolling stone, $\r{o}\omega \chi$ - $\mu \acute{o}$ s ($\r{o}\eta \gamma$ -) gully.

-μι; in $\phi \hat{\eta}$ -μι-ς report, δύνα-μι-ς power.

-μιν in βηγ-μιν beach on which the waves break, Dat. ύσμιν-ι

fight: also Nom. ὑσμίνη.

-μεν, -μον, -μων; $\pi v\theta$ -μήν (Gen. -μέν-ος) base, ἀΰτ-μήν breath, λιμήν haven, π οιμήν shepherd, δεί-μων (-μον-ος) fearing, μνή-μων mindful, $\tilde{\eta}$ -μων shooter, τέρ-μων end, $\theta \eta$ -μῶν-α (Acc.) a heap. Also the Infinitives in -μεν-αι (Dat.) and -μεν (Loc.): see § 84.

-μάτ; as δει-μα, Gen. -ματ-ος, fear, ὄνομα name, &c.

Of these Suffixes - μον and - ματ go with the strong form of

the Stem, - uev with the weak form.

With -0, -η are formed -μενο (in Participles), and -μνο, -μνη, as βέλε-μνο-ν a dart, λί-μνη a marsh; -μνὰ (-μν-μὰ), in μέρι-μνα care. -μαρ, -μωρ; as τέκ-μαρ and τέκ-μωρ a device; -μερο, in ε-μερο-ς desire.

-νο, -ἄνο; as δει-νό-s fearful, πτη-νός flying, τέχ-νη art, ποι-νή atonement; ὅχ-ανο-ν handle, δρεπάνη sickle, τρύπ-ανον auger, στέφ-ανος.

-νεσ; τέμε-νος enclosure, ἴχ-νος imprint, γλη-νος jewel.

-vu; $\theta \rho \hat{\eta}$ -vv-s a foot-stool.

-ρο, -λο; generally with the weak Stem; $\pi\iota\kappa$ -ρό-s bitter, $\tilde{a}\kappa$ -ρο-s point, $\tilde{\epsilon}\delta$ -ρη seat: also with an auxiliary \tilde{a} , $\sigma\theta\epsilon\nu$ -aρό-s strong, $\tilde{a}\pi$ aλόs tender, $\sigma\tau\iota\beta$ aρόs, $\lambda\iota\pi$ aρόs.

-ρι; in ἴδ-ρι-s knowing, ἄκ-ρι-s mountain-top. -ρυ, -λυ: δάκ-ρυ tear, θῆ-λυ-s female (θῆ-σθαι).

- τ : θής θη- τ -ός, νύξ νυκ- τ -ός; but chiefly in Compounds, as $\pi \rho o$ - $\beta \lambda \eta \varsigma$, \dot{a} - $\gamma \nu \dot{\omega} \varsigma$.

-ετ, -ητ: Acc. ἀργ-έτ-a white (II. 21. 127), also ἀργῆτα (II. 8. 133), Dat. ἀργέτι and ἀργῆτι (II. 11. 818), κέλ-ης, λέβ-ης.

-70; found with Stems-

(1) In the O-form, as $\kappa o\hat{\imath}$ - τo -s, $\kappa o\hat{\imath}$ - $\tau \eta$ ($\kappa e\hat{\imath}$ - $\mu a\imath$) lair, $\phi o\hat{\rho}$ - τo -v burden, $v o\hat{\sigma}$ - τo -s going, return ($v e\hat{\sigma}$ -u e), $v e\hat{\sigma}$ -u e), v e-u e), v e-u e0, v e0,

(2) In the weak form, as στα-τό-s stalled, δρα-τό-s flayed;

ἀκ-τή beach; δέκ-τη-s beggar, παραι-βά-τη-s.

For the use of -70 to form Superlatives and Ordinal Numerals see §§ 121 and 130.

- $\tau \iota$, - $\sigma \iota$; generally with the weak Stem, as $\phi \acute{a}$ - $\tau \iota$ -s saying, $\pi \acute{a} - \tau \iota$ -s (for $\pi \iota \theta$ - $\tau \iota s$) trust, $\tau \acute{\iota}$ - $\sigma \iota$ -s vengeance, δόσιs, βόσιs, βρωσιs, γένεσιs, νέμεσιs, ἄννσιs, ἄροσιs.

-σιη, as κλισίη a tent, ὑπο-σχε-σίη promise.

-τινη in δω-τίνη (from δω-τις) gift.

 $-\tau \bar{\upsilon}$; $\beta \rho \omega - \tau \dot{\upsilon} - s$ food, κλ $\bar{\iota}$ -τ $\dot{\upsilon}$ -s a slope, $\mu \nu \eta \sigma$ -τ $\dot{\upsilon}$ -s wooing, δαι-τ $\dot{\upsilon}$ -s feasting, έδη-τ $\dot{\upsilon}$ -s eating. This Suffix is especially common in Homer: ἀγορητ $\dot{\upsilon}$ s, ἀλαωτ $\dot{\upsilon}$ s, βοητ $\dot{\upsilon}$ s, γραπτ $\dot{\upsilon}$ s, έλεητ $\dot{\upsilon}$ s, κιθαριστ $\dot{\upsilon}$ s, ἀκοντιστ $\dot{\upsilon}$ s, ὀαριστ $\dot{\upsilon}$ s, ὀρχηστ $\dot{\upsilon}$ s, ὀτρυντ $\dot{\upsilon}$ s, ρ $\dot{\upsilon}$ υστακτ $\dot{\upsilon}$ s, ταν $\dot{\upsilon}$ στ $\dot{\upsilon}$ s.

-τερ, in πατήρ, μήτηρ, θυγάτηρ, εἰνά-τερ-ες, γαστήρ, ἀστήρ.

-τηρ, -τορ, -τωρ; as δο-τῆρ-α and δώ-τορ-α (Acc.) giver, βοτῆρ-ες and βώτορες herdsmen, ἴστωρ witness, ἀφ-ήτωρ shooter, ἐπ-ακτήρ 'driver,' huntsman, δι-οπτήρ spy, ληϊστήρ spoiler, κοσμήτωρ arrayer, μήσ-τωρ-α (μήδ-ομαι) adviser: also of things, with a touch of personification, κρητήρ, ζωστήρ, λαμπτήρ. Fem. -τειρα (-τερ-μα), as δμή-τειρα subduer.

-τρ-ο, as $l\eta$ -τρός healer, ἄρο-τρο-ν plough, σκ $\eta\pi$ -τρον, λέκτρον.

 $-\delta$, -ιδ, -αδ; as Acc. ϵλπ-ίδ-α hope; λϵνκ-άδ-α white.

 $-\delta o$, $-\delta \eta$: κέλα-δο-s noise (κέλ-ομαι), κομί-δη tending, κλά-δοs branch, ὅμαδοs, χρόμαδοs, ῥάβδοs.

This Suffix is chiefly seen in the Adverbs in -80 ν , -8 $\eta\nu$, as $\sigma\chi\epsilon$ -8 δ - ν near, $\beta\dot{\alpha}$ -8 η - ν at a walk, &c.: see § 110, and cp. the

secondary forms στά-δ-ιος, &c. (§ 118).

The Suffixes -θ-ρο, -θ-λο, -θ-μο are produced by combining the Verbal suffix or Root-determinant -θ (§ 45) with -ρο, -λο, -μο: thus $\delta\lambda\epsilon$ -θ-ροs, $\gamma\epsilon\nu\dot{\epsilon}$ -θ-λη, $\sigma\tau\alpha$ -θ-μόs presuppose the Verbs * $\delta\lambda\dot{\epsilon}$ -θω, * $\gamma\epsilon\nu\dot{\epsilon}$ -θω, * $\sigma\tau\dot{\alpha}$ -θω (cp. $\dot{\epsilon}\ddot{v}$ - $\sigma\tau\alpha\theta$ - $\dot{\eta}$ s, also $\sigma\tau\dot{\eta}$ -θos) formed like $\pi\lambda\dot{\eta}$ -θω, $\phi\lambda\epsilon\gamma\dot{\epsilon}$ -θω, $\mu\nu\dot{\nu}$ -θω, &c. Practically, however, they are single Primary Suffixes: -θμο is especially common in Homer, cp. $\dot{\alpha}\rho$ -θμόs, $\dot{\alpha}\rho\iota$ -θμόs, $\kappa\eta\lambda\eta$ -θμόs, $\dot{\epsilon}\lambda\kappa\eta$ -θμόs, $\dot{\epsilon}\rho\kappa\eta$ -θμόs, $\kappa\nu\nu\zeta\eta$ -θμόs: $\lambda\dot{\nu}$ -θρον, $\dot{\epsilon}\dot{\epsilon}\epsilon$ -θρα, $\mu\dot{\epsilon}\lambda\pi\eta$ -θρα, $\mu\dot{\epsilon}\lambda\alpha$ -θρον, $\dot{\epsilon}\dot{\epsilon}\rho$ -θρον. Cp. also -θμα in $\ddot{\epsilon}$ -θμα- $\tau\alpha$ going. $\pi\tau_{\delta}$

Similarly from Verb-Stems with the suffix $-\tau$ we have $\lambda \alpha \hat{\iota} - \tau - \mu \alpha$ gulf (ep. $\lambda \alpha \iota - \mu \delta s$ throat), $\mathring{a}\mathring{v} - \tau - \mu \mathring{\eta}$ breath, also $\mathring{a}\mathring{v} - \tau - \mu \mathring{\eta} \nu$ (root av-), $\mathring{\epsilon} \rho \epsilon - \tau - \mu \mathring{\eta} s$ oar, $\mathring{\epsilon} \varphi - \epsilon - \tau - \mu \mathring{\eta} s$ injunction.

114*. Variation of Suffixes.

1. Primary Suffixes were originally liable to variation of the kind already noticed (§ 106). From the Sanserit declension, in which the variation is preserved with singular fidelity, it appears that a Suffix in general has three different forms or degrees of quantity, called by Sanserit grammarians the strong, the middle, and the weakest form. Just as in the declension of dyaus, Gr. Zevs, we find (1) dyāu- in the Nom., (2) dyāu- in the Loc. dyūr-i (Lat. Jövi for diēv-i), and (3) dīv- or diu- in other Cases, so in dā-tá 'giver' we have (1) -tār- in the Acc. dā-târ-am, (2) -tar- in the Loc. dā-târ-i, and (3) -tr- in the Dat. dā-tr-é, Instrum. dā-tr-â.

Similarly we have the series $-\bar{a}r$, $-\bar{a}r$, -r; $-m\bar{a}n$, $-m\bar{a}n$, -mn; $-v\bar{a}n$, $-v\bar{a}n$, $-v\bar{a}n$, $-\bar{a}n$

In the combinations -va, -ia the a is lost and the semivowel

becomes a vowel, thus giving -u, -i.

2. In Greek we find the same Suffixes as in Sanscrit, with the further distinction that the vowel may be η or ω , ϵ or o. Thus we may have $-\tau\omega\rho$, $-\tau\rho\rho$, $-\tau\rho\rho$, $-\tau\rho$, $-\tau\rho$; $-\mu\omega\nu$, $-\mu\nu\nu$, $-\mu\nu$

The interchange of o and ε in the Suffix -o (as φίλο-s, Voc.

 $\phi(\lambda\epsilon)$ belongs to this head.

The three forms of a Suffix are hardly ever to be seen in the Greek declension; one of them being usually taken as the Stem of all the oblique Cases. Thus the strong form is generalised in $\mu\dot{\eta}\sigma$ - $\tau\omega\rho$, $-\tau\omega\rho$ -os, the second in $\delta\dot{\omega}$ - $\tau\omega\rho$, $-\tau\sigma\rho$ -os, to the exclusion of the original * $\mu\eta\sigma\tau\rho$ - δs , * $\delta\omega\tau\rho$ - δs , &c. The 'weakest' form, however, often appears in derivatives; e.g. $\pi o\iota\mu\dot{\eta}\nu$, $\pi o\iota\mu\dot{\epsilon}\nu$ -os, $\pi o\iota\mu\nu$ - η : $\delta\epsilon\dot{\iota}\mu\omega\nu$, $\delta\epsilon\dot{\iota}\mu\sigma\nu$ -os, $\delta\epsilon\iota\mu\alpha\iota\nu\omega$ (for $-\mu\dot{\alpha}\nu$ - $\iota\omega$): $\theta\epsilon\rho\dot{\alpha}\pi\omega\nu$, Fem. $\theta\epsilon\rho\dot{\alpha}\pi\nu$ - η , also $\theta\epsilon\rho\dot{\alpha}\pi\alpha\iota\nu\alpha$ (for $-\pi\nu$ - $\iota\alpha$): $\iota\eta$ - $\tau\dot{\eta}\rho$, $\iota\alpha\tau\rho$ - $\iota\sigma$: $\iota\sigma$ 0 × $\iota\sigma$ 0 ×

3. The relation of the forms $-\omega\nu$ ($-\mu\omega\nu$, $-F\omega\nu$), $-\omega\rho$ ($-\tau\omega\rho$), &c. to $-\eta\nu$, $-\mu\eta\nu$, $-F\eta\nu$, $-\eta\rho$, $-\tau\eta\rho$, &c. has been the subject of much controversy. It is generally agreed that the difference is not original, but arises in each case by differentiation from a single

4. The Nouns of Relationship (the group πατήρ &c.) with one Thomas 954 or two similarly inflected words (ἀστήρ, γαστήρ) are distinguished from the Nouns of the Agent in $-\tau\eta\rho$ $(-\tau\omega\rho)$ by the use of the shorter form -τερ in the Accusative: πατέρ-α, Sanser. pitár-am, but δοτήρ-a, Sanser. dātār-am. Similarly among Stems in -n ἄρσην, ἄρσεν-α answer to Sanser. vṛsh-a, vṛshan-am (instead of -an-am). This peculiarity has been explained as the result of an original difference of quantity. That is to say, the form pitar (Gr. $\pi \alpha \tau \epsilon \rho$ -) has been taken to be the strong Stem, because it is the Stem of the Acc. If so, the n of the Nom. has to be explained as due to the analogy of the -ηρ of δοτήρ, &c. But this view cannot well be reconciled with the fact that the Stem pitar- occurs not only in the Acc. pitáram but also in the Loc. pitár-i. The Loc. is a Case which regularly takes the middle Stem; cp. dātār-am, Loc. dātār-i, acmān-am, Loc. áçman-i. Hence we must recognise a group of Stems in -r and -n forming the Acc. with the middle form. Thus the original declension would be (e. g.), Strong form, Nom. πα-τήρ,—Middle form, Acc. $\pi a - \tau \epsilon \rho - a$, Loc. $\pi a - \tau \epsilon \rho - \iota$, Voc. $\pi \alpha - \tau \epsilon \rho$,—Weakest form, Gen. πα-τρ-ός. The cause of this difference in the treatment of the Accusative has still to be found *.

5. The Stems in -ant, -mant, -vant, (Gr. -ovt, &c.) interchange Thems p 43 with shorter forms in -at, -mat, -vat, Gr. -ăt, -µăt, -Făt. In Greek the Suffix -ovt is used to form the Part. Pres., as $\phi \not\in \rho ovt$ -a. The chief trace of -ăt is the Doric $\not\in a\sigma\sigma a$ ($\not\in \sigma$ -ăt- $\not\circ a$) for $\not\in ov$ 0 a. The forms -µăt, -Făt are found in the Neuters, such as $\delta \not\in l$ -µat-os, $\pi \not\in l \rho a\tau os$, ($\pi \not\in \rho$ -Făt-os), &c. So in Latin n ove men, n ove minis, for n ove-mn-is (Sanser. n ove-mn-as).

On the other hand some Stems in $-\nu$ take $-\nu\tau$ in the oblique Cases: $\lambda \dot{\epsilon} \omega \nu$, $\lambda \dot{\epsilon} o \nu \tau - o s$, but Fem. $\lambda \dot{\epsilon} a \iota \nu a$ (for $\lambda \dot{\epsilon} - F \nu - \iota a$, cp. Lat. leō, leōn-is): $\theta \dot{\epsilon} \rho \dot{a} \pi \omega \nu$, $-o \nu \tau o s$, but $\theta \dot{\epsilon} \rho \dot{a} \pi - \nu - \eta$: $\pi \rho \dot{o} \dot{\phi} \rho \omega \nu$, Fem.

πρόφρασσα for προφρα-τιά. Cp. § 107, 2. Τοιμνι

6. The Suffix of the Pf. Part. Act. presents anomalies, both in Sanscrit and Greek, which are not yet satisfactorily explained. The Sanscr. -vāns, -vas, -us and Greek -Fωσ, -Fοσ, -υσ (in -υια for

* Collitz in Bezz, Beitr. x. 37 ff.

- $\check{v}\sigma$ - \check{v} σ seem to represent the original gradation; but the τ of the Masc. and Neut. oblique cases is peculiar to Greek, as the nasal to Sanserit. If we suppose a primitive declension (e.g.) $f\iota\delta$ - $f\check{\omega}s$, Acc. $f\iota\delta$ - $f\check{\omega}\sigma$ -a, Gen. $f\iota\delta$ - $f\check{\omega}\sigma$ -os, &c. this might become Acc. $f\iota\delta$ - $f\acute{\omega}\sigma$ -a, Gen. $f\iota\delta$ - $f\acute{\omega}\tau$ -os, &c. (by the same levelling which we have in $\delta\check{\omega}$ - $\tau\omega\rho$, Acc. $\delta\check{\omega}$ - $\tau\rho\rho$ -a, Gen. $\delta\check{\omega}$ - $\tau\rho\rho$ -os), then Acc. $f\iota\delta$ - $f\acute{\omega}$ -a, Gen. $f\iota\delta$ - $f\acute{\omega}$ -os &c. At this stage the endings - $\acute{\omega}\tau$ -os, - $\acute{\omega}\tau$ -a &c. may have been introduced through analogy—perhaps of the Pres. Part. However this may be, this is one of several instances in Nominal Declension of τ creeping in to form a Stem for the oblique Cases.

7. A Suffix which originally was closely parallel to the $-F\omega s$ of the Pf. is to be seen in the $-i\omega v$ or $-i\omega v$ of the Comparative; Sanser. $-y\bar{\alpha}ms$, -yas, (-is), Greek $-i\omega v$, $-i\sigma$ (in $-i\sigma$ - τos). Here the v, in spite of the Sanser. nasal, is as difficult to explain as the τ of the Pf. However the older endings $-o-\alpha$, $-o-\epsilon s$ (for $-o\sigma-\alpha$, $-o\sigma-\epsilon s$) are preserved in the Acc. Sing. Masc. and Nom. and Acc. Plur. Neut. $(\hat{a}\mu\epsilon i\nu \omega for \hat{a}\mu\epsilon i\nu -o\sigma-a)$, and the Nom. Plur. $(\hat{a}\mu\epsilon i\nu v s, \&c.)$. In the Latin $-i\bar{o}r$, $-i\bar{o}r$ -is, &c. there is no trace of a nasal. We may compare the variation in $al\omega v$,

κυκεών (§ 107 ad fin)*.

8. Heteroclite forms occur when different Suffixes are brought into a single declension. In particular—

- (a) Suffixes ending in $-\nu$ interchange with Suffixes in $-\rho$. Thus we find $\pi \ell \omega \nu$, Gen. $\pi \ell \omega \nu$ os fat, but Fem. $\pi \ell \epsilon \iota \rho a$ ($\pi \bar{\iota} F \epsilon \rho \iota a$) and the Neut. Substantive $\pi \ell a \rho$ fatness. Also $\chi \epsilon \iota \mu \dot{\omega} \nu$, but $\chi \epsilon \iota \mu \dot{\epsilon} \rho \iota o s$. (Cp. the Lat. femur, femin-is, and jec-ur, jecin-or-is, which is for an older jecin-is.)
- (b) Similarly along with ἡώς we have ἡέρ-ιος at dawn, and the Adv. ἡρι (Sanser. ushás and ushár).
- (c) Final τ is introduced in the Suffix; as in ηπα-τ-ος (for τα ark) ηπν-τ-ος, cp. the Sanser. yakrt, Gen. yakn-as, and the other radio for the final to the said of the said

^{*} The suffixes of the Pf. Part. Act. and the Comparative have lately been the subject of much controversy: see Brugmann, K. Z. xxiv. 79 ff., Grundr. §§ 135, 136, pp. 403, 417; Joh. Schmidt, K. Z. xxvi. 341 ff., 378 ff., Pluralb. p. 157; Collitz, Bezz. Beitr. x. 25, 63. The chief difficulty lies in the nasal of the Sanserit strong Cases. Such a gradation as -vons (or -vons), -ves, -us, or -vons, -ios (or ies), -is, is unexampled. Joh. Schmidt takes the nasalised forms (Sanscr. -vāms, -iāms) as his point of departure, but has been unable to explain -vas, -ias, -us, -is to the satisfaction of other scholars. Those who assume a primitive -vos, -vāms and Greek -vow. The explanation of the \tau of -o\tau-o\tau, &c. is also difficult, but there it is at least certain that it is of secondary origin. It is to be noted that the traces of -voo in the Comparative are confined to strong Cases, as Acc. Sing. -o\tau-o\tau. Nom. Plur. -o\tau-e\tau. Hence the Gen. -vov-o\tau, Dat. -vov-o\tau, &c. perhaps did not take the place of middle forms -vo\tau-o\tau, -vo\tau-o\tau, but of the primitive weak forms (-vo\tau-o\tau, -vo\tau-?).

Neuters in -ἄρ, -ωρ, Gen. -ἄτ-ος, as $\pi\epsilon$ \hat{i} ραρ, -ἄτος (for $\pi\epsilon\rho$ -Γάρ, -Γν-τ-ος): also in Neuters in -μἄ, Gen. -μᾶτ-ος (for -μν-τ-ος).

107

- (d) It is probable that the Neuters in $-\omega \rho$ —viz. $\~δδωρ$, $\~δλωρ$, εϵλωρ, τϵκμωρ, νϵκτωρ (Acc. used adverbially)—were originally Collective or Abstract nouns (Joh. Schmidt, Pluralb. p. 193). On this view $\~δδωρ$ waters (Germ. gewässer) is properly a different word from the stem γϵδωρ which we infer from the oblique Cases: τϵκμωρ is originally a Collective or Abstract from τϵκμαρ: and similarly Ϝλωρ, ϵϵλωρ, πϵλωρ, νϵκτωρ (cp. ννκτϵρ-ϵς), which only occur in the Nom. Acc., are nouns formed like χϵιμων (χϵιμων (χϵιμω), δλως (λωρ), δλως), δλως (λωρ), δλως), δλως0 (λωρ), δλως1 (λωρ), δλωρ0 (λωρ), δλωρ0 (λωρ), δλωρ0 (λωρ0), δλωρ0 (λωρ0), δλωρ0 (λωρ1) (λωρ
- 115.] Accentuation. The accent is often connected with the form of the Suffix, and sometimes varies with the meaning. But the rules that can be given on this subject are only partial.
- 1. Stems in -o are generally oxytone when they denote an agent, barytone when they denote the thing done; e.g. φορό-s bearer, but φόρο-s that which is brought; ἀγό-s leader, ἀρωγό-s helper, σκοπ-όs watcher, τροφό-s nurse, τόκο-s offspring. But νομό-s pasture, λοιγό-s pestilence (perhaps thought of as an agent, 'destroyer').
- 2. Stems in $-\eta$ are generally oxytone, but there are many exceptions (as $\delta(\kappa-\eta, \mu \dot{\alpha}\chi-\eta)$).
- 3. Most stems in -ιδ, and all in -αδ, are oxytone. But those which admit an Acc. in -ιν are all barytone.
- 4. Adjectives in -u-s are oxytone; except θηλ-v-s and the isolated Fem. θάλεια. Substantives in -u-s are mostly oxytone; but see § 116, 4.
- 5. Neuters with Stems in -εσ (Nom. Acc. -os) are barytone, but Adjectives in -ηs, and Fem. Nouns in -ωs, Gen. -oos, are oxytone. Jos Tralles composita par -ηs accorden tilbage xxxxxnings

6. Nouns in -ηρ and -ην are oxytone, except μήτηρ, θυγάτηρ

(but see § 111, 2), ἄρσην, τέρην.

Nouns in -ωρ and -ων are mostly barytone, but there are many exceptions, esp. the Abstract Nouns in -δων, the Substantives in -μων, as δαιτυμών, ἡγεμών, κηδεμών, and most Nouns in -ων, Gen. -ωνος, as ἀγών, ἀγκών, χειμών, τελαμών.

7. Stems in -70 with the O-form are barytone, with the weak

form oxytone; e. g. κοῦ-το-ς, νόσ-το-ς, but στα-τό-ς, &e.

8. Stems in -τη are mostly oxytone. Accordingly the Prim-

itive Masculines in -77-s, which are Nouns of the Agent, can generally be distinguished from the Denominatives in -7ns (§ 117): e. g. ἀγορητής a speaker, but ναύτης a ship-man.

Q. Abstract Nouns in -τι, -σι are barytone; in -τυ oxytone.

It will be seen that, roughly speaking, when the Verbal Stem is in the weak form, the Suffix is accented, and vice versa: also that words with an active meaning (applicable to a personal agent) are oxytone, those with a passive meaning (expressing the thing done) are barytone.

116.] Gender. The Gender of Nouns is determined in most cases by the Suffix. The following rules do not apply to Compounds, as to which see § 125.

1. Stems in -o are Masc. or Neut., with some exceptions, as όδός, ἀταρπός, κέλευθος, νήσος, φηγός, ἄμπελος, νόσος, ταφρός, ψήφος, σποδός, ψάμαθος, ράβδος, δοκός, ρινός, πρό-χοος. these the change of gender seems to be due to the meaning.

κλυτός is used as a Fem. in Il. 2. 742 κλυτός 'Ιπποδάμεια. Od. 4. 406 $\pi \iota \kappa \rho \delta \nu$ $\delta \pi \sigma \nu \epsilon i \sigma \nu \sigma \alpha \iota$. . $\delta \delta \mu \eta \nu$ it is best to take

πικρόν as an adverb, not with $\partial \delta \mu \dot{\eta} \nu$: cp. Il. 6. 182.

 $\Pi \dot{\nu} \lambda os$ has the two epithets $\dot{\eta} \mu \alpha \theta \dot{\delta} \epsilon_{is}$ and $\dot{\eta} \gamma \alpha \theta \dot{\epsilon} \eta$, and is probably therefore of both Genders.

2. Stems in -η (for -ā) are mainly Fem.; but—

Stems in -τη denoting an agent are Masc., as δέκ-τη-s a beggar, alxμη-τή-s a warrior. Also, πόρκη-s the ring of a spear, έτη-s comrade, ταμίη-s dispenser, νεηνίη-s a youth, perhaps άγγελίη-s a messenger; also the proper names Βορέα-s, Ερμεία-s, Αἰνεία-s, Αὐγεία-s, Τειρεσία-s, 'Αγχίση-s, 'Αίδη-s.

The Masc. Nouns in -as, -ns are probably formed originally from Feminine abstract or collective Nouns in -ā, -η. The first step is the use of the word as a concrete: cp. Od. 22. 209 1/4% δμηλικίη δέ μοί έσσι thou art one of the same age (δμηλιξ) with me; Il. 12. 213 δημον εόντα being one of the common people. So in Latin magistratus, potestas (Juv. 10. 100), optio: English a relation (= a relative). The next step is the change to the Masc., which leads to the use of the Endings -ns, Gen. -ao on the analogy of the Masc. -os, Gen. -oto. We may compare Fr. un trompette bearer of a trumpet, Italian il podestà the magistrate, where the change of meaning is marked by the gender only. So έτη-s is probably from a word σ ε-τη kindred, νεηνίη-s from a Fem. νεηνίη youth, ἀγγελίη-s (if the word exists, see Buttmann, Lexil. s. v.) from ἀγγελίη. The Masc. ταμίη-s may be formed from the concrete Fem. ταμίη, the office of household manager being generally filled by a woman (γύνη ταμίη Od.). the Nouns in -7 s owe their origin to the older abstract or collective Nouns in $-\tau \eta$, as $d\kappa - \tau \dot{\eta}$, $\beta \rho o \nu \tau \dot{\eta}$, $d\rho \epsilon - \tau \dot{\eta}$, $\gamma \epsilon \nu \epsilon - \tau \dot{\eta}$, $\pi \iota \nu \nu - \tau \dot{\eta}$, &c. See Delbrück, Synt. Forsch. iv. pp. 7-13.

3. Stems in -ιἄ, -ἴδ, -ἄδ are Fem.; also most Stems in -ι. But μάν-τι-s is Mase., and some Adjectives— ἴδ-ρι-s, τρόφ-ι-s,

evvi-s-are of all genders.

Mase. Nouns in -o sometimes form a Fem. in -ι, -ιδ, -ἄδ: as $\theta o \hat{v} \rho o - s$, Fem. $\theta o \hat{v} \rho \iota - s$ (Acc. $\theta o \hat{v} \rho \iota - \nu$, Gen. $\theta o \hat{v} \rho \iota \delta - o s$); $\phi \delta \rho - \tau o - s$ burden, $\phi \delta \rho - \tau \iota - s$ (Gen. $\phi \delta \rho \tau \iota \delta - o s$) a ship of burden; $\tau \delta \kappa - o s$, Fem. $\tau o \kappa \delta \delta - \epsilon s$; $\lambda \epsilon \nu \kappa \delta - s$, Fem. $\lambda \epsilon \nu \kappa \delta \delta - a$ ($\pi \epsilon \tau \rho \eta \nu$).

Originally (as in Sanscrit) the chief Feminine Suffix was -τ. The metre Thoma p 25 shows that the long ι should be restored in ηνι-ς (βοῦν ηνιν εὐρυμέτωπον II. 10. 292, Od. 3. 382), βλοσυρῶπις (II. 11. 36), and βοῶπις (II. 18. 357, where Ven. A has βοῶπι πότνια ήρη). The τ appears also in ἀψίδ-ος, κνημίδ-ας, ἐϋπλοκαμῶδ-ες.

4. Adjectives in -ĕ generally form the Fem. in -εiα or -εα (for -εΓ-iα), as ἡδεῖα, ἀκέα. But θῆλυ-s as a Fem. is commoner than θήλεια; and we also find ἡδὺs ἀϋτμή (Od. 12. 369), πουλὺν

 $\epsilon \phi' \dot{v} \gamma \rho \dot{\eta} v$ (II. 10. 27).

On the other hand most Substantives in -u-s are Fem. (and oxytone), and this \mathbf{u} is frequently long, as in $i\theta\dot{\nu}$ -s aim (whereas the Adj. $i\theta\dot{\nu}$ -s straight has $\check{\mathbf{u}}$), $\pi\lambda\eta\theta\dot{\nu}$ -s multitude, $i\lambda\dot{\nu}$ -s mud, 'Eριν $\dot{\nu}$ -s, and the Abstract Nouns in $-\tau\bar{\mathbf{u}}$ -s, as $\beta\rho\omega$ - $\tau\dot{\nu}$ -s, $\dot{\rho}\rho\chi\eta\sigma$ - $\tau\dot{\nu}$ -s, $\kappa\lambda\iota$ - $\tau\dot{\nu}$ -s. But there are a few Masc. Substantives in -u-s, viz. $\theta\rho\hat{\eta}\nu\nu$ -s, $\sigma\tau\dot{\alpha}\chi\nu$ -s, $\beta\acute{o}\tau\rho\nu$ -s, $\nu\acute{\epsilon}\kappa\nu$ -s, $l\chi\theta\acute{\nu}$ -s.

5. The Suffix -εσ is almost confined in Homer to Neut. Substantives of abstract meaning: the only clear example of an Adjective is δγιής (Il. 8. 524). For ἐλεγχέ-ες (Il. 4. 242., 24. 239) we should probably read ἐλέγχεα. In Il. 4. 235 (οὐ γὰρ ἐπὶ ψευδέσσι πατὴρ Ζεὺς ἔσσετ' ἀρωγός) we may equally well read ψεύδεσσι (Zeus will not help falsehood). The Gen. φραδέ-ος (Il. 24. 354) may come from φραδής or φραδύς.

It seems very probable that these words are to be accounted for in much the same way as the Masculines in -της, viz. as abstract turned into concrete Nouns by a simple change of gender. The transition to a concrete meaning may be observed in ψεῦδος in such uses as Il. 9. II5 οὐ γὰρ ψεῦδος ἐμὰς ἀτὰς κατέλεξας not falsely (lit. not falsehood) hast thou related my folly. So ἐλέγχεα reproaches!

6. Suffixes which are used to express an abstract or a collective meaning are generally Feminine; e.g. κακό-s coward, κάκη cowardice; ὁσίη piety; φύζα, φυγ-ή flight; βουλή counsel, also the body of counsellors, a council; φρόν-ι-s understanding; νιφ-άs (-άδ-οs) a snow-storm; πληθ-ύ-s multitude (collective and abstract); and the Nouns in -τις (-σις), -τυς, -ως, -δων.

It is probable that all the Collective Nouns in $-\omega \nu$, $-\omega \rho$, $-\omega \rho$ (§ 114, 8, d) were originally Feminine. The change of gender may be traced in $al\omega\nu$ (Fem. in Homer), and $i\delta\rho\omega$ s (Fem. in Æolic). In the case of $\xi\rho\omega s$, $\gamma\epsilon\lambda\omega s$ it may be connected with the confusion between $-\omega\sigma$ -stems and $-\sigma$ -stems (§ 107 ad fin.). It is to be noted that no nouns in $-\mu\omega\nu$ form the Fem. with $-\iota a$.

Denominative Nouns.

117.] Secondary Suffixes. The following are the chief Secondary or 'Denominative' Suffixes. (Note that -o and -n of the Primitive Stem disappear before Secondary Suffixes beginning with a vowel*.)

-ιο, -ιη; as δίκα-ιο-s just, ἀρμον-ίη a joining, ἄρθμ-ιο-s friendly, alδοῖο-s (for alδοσ-ιο-s) reverenced, γελοΐο-s (probably to be written γελώ-ϊο-s) laughable, ὥρ-ιο-s in season, σοφ-ίη skill, σκοπ-ιή watch, ἀναγκα-ίη necessity.

-ειο, -εο (chiefly used to denote material, especially the animal which furnishes the material of a thing); e. g. $\[i\pi\pi$ -ειο-s, $\[\tau\alpha\dot{\nu}\rho$ -ειο-s, $\[a\dot{\nu}\rho$ -ε

-ευ; $i\pi\pi$ -εύ-s horseman, ἀριστ-εύ-s one who does best, χαλκ-εύ-s, $i\epsilon\rho$ -εύ-s, νομ-εύ-s, Σ μινθ-εύ-s, &c.—all from Nouns in -o.

- $\iota \delta \eta$, - $\iota \tilde{\alpha} \delta \eta$; in patronymies, as 'Ατρε- $\iota \delta \eta$ -s, Πηλη- $\iota \tilde{\alpha} \delta \eta$ -s, 'Ασκλη $\pi \iota$ - $d \delta \eta$ -s. Cp. the compound - $\iota \delta$ - $\iota \iota \iota \iota \iota \iota$ (§ 118).

-ρο, -ερο; as λιγυ-ρό-s shrill, δυοφ-ερόs dark; μέγα-ρο-υ.

-ἴμο; ἀοίδ-ιμο-s matter of song, μόρ-ιμο-s fated, &c.

-νο, -ἴνο; as φαεινός (φαεσ-) shining, ἐρεβεννός (ἐρεβεσ-) dark, ἐραννός lovely; φήγ-ινο-ς oaken, εἰαρ-ινό-ς of spring, &c.

-īvo; δπωρ-īvόs of autumn, άγχιστ-îvos.

- $\eta \nu o$; πετε- $\eta \nu o$ s flying (πετ-εσ-).

 $-\sigma \ddot{\upsilon} \nu o$, $-\sigma \dot{\upsilon} \nu \eta$; $\gamma \eta \theta \dot{o} - \sigma \upsilon \nu o - s$ joyful; $i\pi \pi o - \sigma \dot{\upsilon} \nu \eta$ horsemanship, &c.

 $-\epsilon \nu \tau$ (for $-\epsilon \nu \tau$), Fem. $-\epsilon \sigma \sigma a$; $\dot{\nu} \lambda \dot{\eta} - \epsilon \nu \tau - a$, Fem. $\dot{\nu} \lambda \dot{\eta} - \epsilon \sigma \sigma - a$ wooded, διν $\dot{\eta} - \epsilon \nu \tau - a$ full of eddies, λειριό- $\epsilon \nu \tau - a$ like the lily, &c, δΗΙΘΣΕΤΑ

- $\check{\iota}\kappa o$; only found in $\delta \rho \phi a \nu - \iota \kappa \dot{o}$ -s orphan, $\pi a \rho \theta \epsilon \nu - \iota \kappa \dot{\eta}$ virgin, and a few Adjectives from proper names, as $T \rho \omega - \ddot{\iota} \kappa \dot{o}$ -s, 'Aχαι- $\ddot{\iota}\kappa \dot{o}$ -s, Πελασγ- $\iota \kappa \dot{o}$ -s. In these words it is evident that there is no approach to the later meaning of the Suffix.

^{*} This is probably not the result of an 'elision,' but analogous to the weakening of a Suffix (cp. § 114, 1). Thus the Stem of $\sigma o \phi \delta$ -s, Voc. $\sigma o \phi \delta$, is related to the form $\sigma o \phi$ - (in $\sigma o \phi$ - $\delta \eta$) as $\pi \acute{a} \tau \epsilon \rho$ to $\pi a \tau \rho$ - δs , $\pi \acute{a} \tau \rho$ - δs ,

-τη; ναύ-τη-s, ἱππό-τα, τοξό-τα (Voc.), ἀγρό-ται, αλχμη-τή-s, κορυνή-τη-s, ὑπηνή-τη-s, πολιή-τη-s and πολί-τη-s, ὁδί-τη-s. Some of these are perhaps Primitive: e.g. aλχμη-τή-s may come from an obsolete *aλχμάω to wield the spear: see § 120.

-τητ; φιλό-τητ-a love, δηϊο-τῆτ-a battle.

-ιγγ; φόρμιγξ a lyre, σύριγξ a reed-pipe, σάλπιγξ a trumpet, λάϊγγ-εs pebbles, στροφάλιγξ eddy, βαθάμιγγ-εs drops.

The $\mathfrak t$ of $-\iota \delta \eta$, $-\iota \mu o$, $-\iota \nu o$, $-\iota \kappa o$ was probably not part of the original Suffix, but was the final vowel of the Stem. We may either suppose (e.g.) that $\mu \delta \rho -\iota -\mu o s$ was formed directly from a Stem $\mu o \rho -\iota$ (cp. $\mu o i \rho a$ for $\mu o \rho -\iota a$), or that it followed the analogy of $\check{a} \lambda \kappa \iota -\mu o s$, $\check{\phi} \iota \check{\xi} \iota -\mu o s$, &c. Cp. the account given in § 109 of the \check{a} of $-a \kappa \iota s$. It is remarkable that o, which is regular as a 'connecting vowel' of Compounds, is extremely rare before Suffixes (except $-\tau \eta$, $-\tau \eta \tau$, $-\sigma \nu \nu o$).

Note that the -εϊ- of the Patronymics 'Ατρε-ΐδης, Πηλε-ΐδης, &c. does not become a diphthong in Homer.

Of the use of Secondary Suffixes to form *Diminutives* there is no trace in Homer. It may be noted here as another difference between Homeric and later Greek that the Verbals in -τέος are entirely post-Homeric.

118.] Compound Suffixes. There are some remarkable instances in Homer of a Secondary amalgamating with a Primary Suffix. E.g.—

-ἄλ-εο; ἀζ-αλέο-s dry, ἀργ-αλέο-s (for ἀλγ-αλέο-s) painful, θαρσ-αλέο-s, καρφ-αλέο-s, κερδ-αλέο-s, λευγ-αλέο-s, μυδ-αλέο-s, ρωγ-αλέο-s, σμερδ-αλέο-s. It is used as a Secondary Suffix in λεπτ-αλέο-s thin, ὀπτ-αλέο-s roast.

-ἄλ-ιμο; κ \bar{v} δ-άλιμο-s glorious, καρπ-άλιμο-s swift, πευκ-άλιμο-s shrewd.

-εινο (for -εσ-ινο or -εσ-νο); φα-εινό-ς shining, $al\pi$ -εινό-ς lofty, $al\pi$ -εινό-ς painful; Secondary in ell-εννό-ς, κελαδ-εινό-ς, ell-εννό-ς. This Suffix takes the form -εννο in ell-εννό-ς shining and ell-εννό-ς murky.

-δ-ιο, -ιδ-ιο, -αδ-ιο: στά-διο-ς, ἀμφά-διος, σχε-δίη (σχε-δό-ν), παν-συ-δίη; also as a Secondary Suffix in κουρίδιος, μαψ-ιδίως, ρη-ίδιος, ἐπινεφρ-ίδιον: κρυπτ-άδιος, διχθ-άδιος, μινυνθ-άδιος.

-δ-ον, in τηκε-δόν-ι (Dat.) wasting, ἀηδών nightingale: -δωνη in μελε-δώναι cares.

-δ-ανο, in ριγε-δανός horrible, ηπεδανός, πευκεδανός, οὐτιδανός.

118*.] Suffixes of different Periods. In the great variety of Suffixes discovered by the analysis of the Greek Noun it is important to distinguish those which are 'living' in the period of

formation.

the language with which we are concerned, and those which only survive in words handed from an earlier period. Thus in Homer the oldest and simplest Suffixes, as -o, -i, -u, -eo, -ao, -ev, -ep, -fo, evidently belong to the latter class. They are no longer capable of being used to form new words, because they are no longer separable in meaning from the Stems to which they are attached. On the other hand the Nouns in -μο-ς, -μων, -μα, -τηρ, -τρο-ν, -σι-ς, -τυ-s, and the Denominatives in -ιο-s, -ερο-s, -ινο-s, -τη-s, &c. are felt as derivatives, and consequently their number can be indefinitely increased by new coinage. Again the use of a Suffix may be restricted to some purpose which represents only part of its original usage. Thus -m ceased, as we have seen, to form abstract Nouns, but was largely used to form Masculine Nouns of the Agent. So too the Suffix -80, -8n survived in two isolated uses, (1) in Adverbs in -80-v, -8n-v and (2) in Patronymics. Compare in Latin the older use of -tus in the adjectives cautus, certus, &c. with the living use in amā-tus, &c. Sometimes too a Suffix dies out in its original form, but enters into some combination which remains in vigour. Thus -vo survives in the form -ivo, and in -eivo (- $\epsilon\sigma$ - $\nu\sigma$).

The distinction of Primary and Secondary Suffixes is evidently one which grew up by degrees, as the several forms came to be limited to different uses. In this limitation and assignment of functions it is probable that the original meaning of the Suffix seldom had any direct influence*. The difference between the Suffixes of the two great classes is mainly one of period. The elements which go to form them are ultimately much the same, but the Primary Suffixes represent on the whole earlier strata of

119.] Gender. The rules previously given (§ 116) apply to Denominative Nouns; the exceptions are few. Note II. 18. 222 ὅπα χάλκεον (χαλκέην Zenod.), 19. 88 ἄγριον ἄτην (the 22 2 2 passage is probably corrupt, since it appears that the Homeric form of ἄτη is the uncontracted ἀάτη, ἀΓάτη), 20. 259 (= Od. 5. 410) ἁλὸς πολιοῦο, Od. 3. 82 πρῆξις . . δήμιος, 4. 442 ὀλοώτατος ἀδμή, 23. 233 ἀσπάσιος γη (al. ἀσπασίως).

The origin of the Masc. patronymics in -δη-s may be explained in the same way as the Nouns of the Agent in -τη-s (§ 116, 2). We may suppose them to be derived from a group of Collective Nouns in -δη: e.g. Άτρείδη meaning the family of

Atreus, 'Ατρείδη-s would mean one of the 'Ατρείδη †.

^{*} On this point see Brugmann (Grundr. ii. § 57, p. 99). It will be seen that he gives no countenance to the view (which has been put forward in Germany and elsewhere) that the Suffixes were originally without meaning.

† It may be conjectured that the epithets in -ιων, such as Κρονίων, Ύπερίων,

120.] Denominative Verbs. Some apparent anomalies in the Denominative Verbs may be explained by the loss of an intermediate step of formation. Thus, there are many Verbs in -euw not formed from Nouns in -eu-s, as β ou λ e $\dot{\omega}$ (β ou λ - $\dot{\eta}$), $\dot{\alpha}\gamma$ o ρ e $\dot{\omega}$ ($\dot{\alpha}\gamma$ o ρ $\dot{\eta}$), θ η ρ e $\dot{\omega}$ (θ $\dot{\eta}\rho$); so that, instead of the three stages—

νομό-s, Denom. Noun νομ-εύ-s, Denom. Verb νομ-εύ-ω ἄριστο-s, ,, ,, ἀριστ-εύ-s ,, ,, ἀριστ-εύ-ω the language goes directly from any Noun to a Verb in -ευω.

Again, the Verbs in -ιαω (§ 60) presuppose Nouns in -ιη, which are seldom found in use: δηριάο-μαι (cp. δῆρι-s from which an intermediate δηρί-η might be formed), μητιάω (cp. μῆτι-s), κυδιόων, ἀοιδιάουσα, ἐδριόωντο, μειδιόων, θαλπιόων, φυσιόωντες, φαληριόωντα, ἐψιάασθαι (Od. 21. 429), δειελιήσας.

Similarly, a Primitive Noun may appear to be Denominative because the Verb from which it is formed is wanting. E.g. if

in the series-

ἀνί-η vexation, ἀνι-άω, ἀνι-η-ρό-ς διζύ-s grief, διζύ-ω, διζυ-ρό-ς

the Verb were passed over, we should appear to have a Denominative Noun in - ρ o-s. Again, if the Primitive Noun in - η and the Verb in - $\alpha\omega$ were both wanting, we should practically have the Compound Suffix - η - ρ o: and this accordingly is the case (e.g.) in $al\psi$ - $\eta\rho$ ó-s $(al\psi a)$ swift, θv - $\eta\lambda \acute{\eta}$ $(\theta\acute{v}$ - $\omega)$, $\acute{v}\psi$ - $\eta\lambda$ ó-s $(\dddot{v}\psi_l)$, $\phi\acute{v}\xi$ - $\eta\lambda_l$ -s.

In this way are formed the peculiar Homeric $-\omega\rho\eta$, $-\omega\lambda\eta$, which are used virtually as Primary Suffixes (forming abstract Nouns); $\xi\lambda\pi-\omega\rho\dot{\eta}$ hope, $\theta a\lambda\pi-\omega\rho\dot{\eta}$ comfort, $\dot{a}\lambda\epsilon\omega\rho\dot{\eta}$ ($\dot{a}\lambda\epsilon F$) escape, $\tau\epsilon\rho\pi-\omega\lambda\dot{\eta}$ delight, $\dot{\phi}\epsilon\iota\delta-\omega\lambda\dot{\eta}$ sparing, $\pi a\nu\sigma-\omega\lambda\dot{\eta}$ ceasing. Note that the difference between $-\omega\rho\eta$ and $-\omega\lambda\eta$ is euphonic; $-\omega\rho\eta$ is found only

when there is a preceding λ in the Stem.

The Verb-Stem in Denominative Verbs is not always the same as that of the Noun from which it is formed: in particular—

1. Verbs in $-\epsilon \omega$, $-\omega$ lengthen the final $-\omega$ of the Noun-Stem to $-\eta$ and $-\omega$; as $\phi \dot{\omega} \partial \omega - \dot{\omega}$, $\dot{\omega} \partial \omega - \dot{\omega}$, $\dot{\omega} \partial \omega - \dot{\omega}$.

The ground of this peculiarity must be sought in the fact that the Denominative Verbs were originally confined (like the Tenth Class of Sanscrit) to the Present Tense and its Moods. Consequently the other Tenses, the Fut., the Aor., and the Pf., were formed not directly from the Noun, but from the Stem as it appeared in the Present Tense. Hence such forms as

Oὐρανίωνες, are derived from Collectives in -ων (§ 116, 6). Thus from οὐρανίων (Sing. Fem.) the heavenly powers we might have οὐρανίων sheavenly ones, and finally οὐρανίων as a Sing. Masc. Cp. φυγάs originally 'a body of exiles,' then φυγάδες 'exiles,' then φυγάς 'an exile.' So in French, first la gent 'people,' then les gens, finally un gens-d'armes.

φοβή-σω, $\dot{\epsilon}$ -φόβη-σα, $\pi\epsilon$ -φόβη-μαι go back to a period when the Pres. was either φόβη-μι or φοβή-ω.

- 2. Verbs in $-\zeta \omega$ form Tenses and derivative Nouns as if from a Verb-Stem in $-\delta$; as $i\beta \rho \iota s$, $i\beta \rho \iota \zeta \omega$, $i\beta \rho \iota \sigma \tau \eta s$ (as if $i\beta \rho \iota \delta \tau \eta s$, although there is no δ in the declension of $i\beta \rho \iota s$).
- 3. Verbs in $-i\omega$ from Nominal Stems in $-\rho$ 0, $-\lambda$ 0, $-\nu$ 0 often suppress the final -0, as $\kappa a\theta a\rho \phi'$ -s, $\kappa a\theta a'\rho\omega$ (for $\kappa a\theta a\rho$ - $i\omega$); $\pi oi\kappa \lambda \lambda \omega$ (for $\pi oi\kappa \lambda \lambda \omega$), $\pi oi\kappa \lambda \lambda \omega$. So perhaps $\lambda \alpha \omega \omega$ from $\lambda \alpha \omega \omega$ from $\lambda \alpha \omega \omega$, and even $\lambda \alpha \omega \omega$ from $\lambda \alpha \omega \omega$. We may compare the loss of -0, -0 before a Suffix such as $-\omega$: see § 117 (foot-note).

Comparatives and Superlatives.

121.] The Suffixes which express comparison—either between two sets of objects (Comparative) or between one and several others (Superlative)—are partly Primary, partly Secondary. Hence it is convenient to treat them apart from the Suffixes of which an account has been already given.

The Comparative Suffix -LOV is Primary: the Positive (where there is one) being a parallel formation from the same (Verbal)

Root. The Homeric Comparatives of this class are:—

γλυκ-ίων (γλυκ-ύ-s), αἴσχ-ιον (αἰσχ-ρό-s), πάσσων (for παχ-ίων, παχ-ύ-s), βράσσων (βραχ-ύ-s), θάσσων (ταχ-ύ-s), κρείσσων (for κρετ-ίων, κρατ-ύ-s). κακ-ίων, ὑπ-ολίζον-εs better written ὑπολείζονες, ὀλίγ-ο-s), μείζων (μέγ-α-s), μᾶλλον (μάλ-α), ἄσσον (ἄγχ-ι), ἐλάσσων (ἐλαχ-ύs), ῆσσων (ῆκα), χείρων and χερε-ίων, ἀρε-ίων (ἀρε-τή), κέρδ-ιον (κέρδ-οs), ρίγ-ιον (ρῖγ-οs), κάλλ-ιον (κάλλ-οs), ἄλγ-ιον (ἄλγ-οs), πλε-ίων, μείων, φιλ-ίων, ἀμείνων, βέλτ-ιον, λώ-ιον, βραδίων (Hes.).

The Stem is properly in the strong form, as in κρείσσων (but κρατ-ύς, κάρτ-ιστος); but it is assimilated to the Positive in πάσσων, βράσσων, γλυκίων. In θάσσων, ἐλάσσων the $\bar{\alpha}$ points to forms *θαγχ-ιων, *έλαγχ-ιων, in which the nasal of the original *θεγχ-ιων, *έλεγχ-ιων was retained, but the ϵ changed into $\bar{\alpha}$.

The Superlative -1070 is used in the same way; we have :-

ἥδ-ιστο-s (ἡδ-ύ-s), ἄκ-ιστο-s (ἀκ-ύ-s), βάρδ-ιστο-s (βραδ-ύ-s), κύδ-ιστο-s (κῦδ-οs), κήδ-ιστο-s (κῆδ-οs), ἔχθ-ιστο-s (ἐχθ-ρό-s), ἔλέγχ-ιστο-s (ἔλεγχ-οs), οἴκτ-ιστο-s (οῖκτ-ο-s), μήκ-ιστα (μῆκ-οs), βάθ-ιστο-s (βαθ-ύ-s), ῥή-ιστο-s (ῥεῖα, for ῥήϊ-α), φέρ-ιστο-s (φέρ-ω); also, answering to Comparatives given above, αἴσχ-ιστο-s, πάχ-ιστο-s, τάχ-ιστο-s, κάρτ-ιστο-s, κάκ-ιστο-s, μέγ-ιστο-s, μάλ-ιστα, ἄγχ-ιστα, ῆκ-ιστο-s, ἄρ-ιστο-s, κέρδ-ιστο-s, ῥίγ-ιστα, κάλλ-ιστο-s, ἄλγ-ιστο-s, πλε-ιστο-s: finally the anomalous πρώτ-ιστο-s.

The Suffix -ior has taken the place of -ior (§ 107, 9); the weakest' form may be traced in -ior-tos. The middle form -ier

perhaps appears in the two Comparatives $\pi\lambda \epsilon \epsilon s$ more (II. 11. 395, Acc. $\pi\lambda \epsilon as$ II. 2. 129) and $\chi \epsilon \rho \epsilon u$ worse (Acc. Sing. and Neut. Plur., also Dat. Sing. $\chi \epsilon \rho \eta \bar{\iota}$, Nom. Plur. $\chi \epsilon \rho \eta \epsilon s$). Original $\pi\lambda \epsilon \epsilon s$ (for $\pi\lambda \epsilon - \iota \epsilon \sigma - \epsilon s$) became $\pi\lambda \epsilon \epsilon s$ by Hyphaeresis (§ 105, 4): and so $\chi \epsilon \rho \epsilon u$ is for $\chi \epsilon \rho \epsilon - \iota \epsilon \sigma - a^*$. The weakest form of $-\iota \iota \sigma v$ would be $-\iota v$, which may be found in $\pi \rho \ell v$ (cp. Lat. pris-cus), and the Attic $\pi\lambda \epsilon - \hat{\iota} v$. Evidently $\pi\lambda \epsilon \circ \sigma - : \pi\lambda \epsilon \iota \sigma - : \pi\lambda \epsilon - \hat{\iota} v = prios : pris-: <math>\pi \rho \bar{\iota} v$.

Traces of a Comparative Suffix - eps appear in Ev-epoi those

beneath (Lat. inf-eru-s, sup-eru-s).

The Suffix $-\tau \sigma$ or $-\alpha \tau \sigma$ is found in the Ordinals $\tau \rho (-\tau \sigma - s, \&c.)$, and with the Superlative meaning in $\tilde{v}\pi - a\tau \sigma - s$, $v \in -\alpha \tau \sigma - s$, $\pi \dot{v}\mu - a\tau \sigma - s$. $\mu \dot{\epsilon} \sigma \sigma - a\tau \sigma s$, $\dot{\epsilon} \sigma \chi - a\tau \sigma - s$, and $\pi \rho \hat{\omega} \tau \sigma s$ (for $\pi \rho \dot{\sigma} - a\tau \sigma - s$); also combined with Ordinal Suffixes in the Homeric $\tau \rho (-\tau - a\tau \sigma - s)$, $\dot{\epsilon} \beta \delta \dot{\omega} - a\tau \sigma - s$, $\dot{\sigma} \dot{\gamma} \delta \dot{\sigma} - a\tau \sigma - s$. The form $-\alpha \dot{\tau} \sigma$ is probably due to the analogy of the Ordinals $\tau \dot{\epsilon} \tau \rho a - \tau \sigma - s$, $\dot{\epsilon} v a - \tau \sigma - s$, $\dot{\sigma} \dot{\epsilon} \kappa a - \tau \sigma - s$, in which the $\alpha \dot{\sigma}$ is part of the Stem \dagger .

A Suffix -μο may be recognised in πρό-μο-s foremost man (Lat.

infi-mu-s, sum-mu-s, pri-mu-s, ulti-mu-s, mini-mus).

^{*} So G. Mahlow and J. Schmidt, K. Z. xxvi. 381. A different analysis is given by Collitz in Bezz. Beitr. ix. 66 and Brugmann (Grundr. ii. § 135, p. 402), who explain $\pi\lambda \acute{\epsilon} \epsilon$ as plē-is-es, i. e. from the weakest form of the Stem. This view does not apply so well to $\chi \acute{\epsilon} \rho \epsilon \iota$ - α , since it leaves unexplained the divergence between it and the Superl. $\chi \acute{\epsilon} \rho \iota \sigma$ - τo s. It may be noticed as an argument for the supposition of Hyphaeresis that we do not find the Gen. $\pi\lambda \acute{\epsilon} o$ s, $\chi \acute{\epsilon} \rho \epsilon \iota o$ s, just as we do not find Hyphaeresis in the Gen. of Nouns in - ϵo s, - $\epsilon \eta$ s (§ 105, 4). Cp. however, the absence of trace of a Gen. $\mathring{a} \mu \acute{\epsilon} \iota v o$ -os (§ 114, 7, foot-note).

⁺ Ascoli in Curt. Stud. ix. p. 339 ff.

This very probable etymology is given by Brugmann, K. Z. xxv. p. 298.

[§] According to Brugmann the ω of σοφώτερος, &c. is not a metrical lengthening, but comes from the adverbs * σοφῶ, &c. (related to σοφῶς as οὕτω to οὕτως, § 110), like the later κατώ-τερος from κάτω, &c.

later forms like $\kappa \alpha \tau \omega - \tau \epsilon \rho o - s$. $\delta \nu \omega - \tau \alpha \tau o - s$, &c.; so probably in $\pi \alpha \lambda \alpha i - \tau \epsilon \rho o s$ and $\delta \pi \epsilon \rho - \tau \epsilon \rho o s$. On the analogy of $\delta \pi \epsilon \rho - \tau \epsilon \rho o s$ we can explain $\delta \nu \epsilon \rho - \tau \epsilon \rho o s$ (cp. $\delta \pi \epsilon \rho - \theta \epsilon$; $\delta \nu \epsilon \rho - \theta \epsilon$, &c.). The form $\nu \epsilon \rho \alpha i - \tau \epsilon \rho o s$, again, may be suggested by $\pi \alpha \lambda \alpha i \tau \epsilon \rho o s$, through the relation $\nu \epsilon \rho \alpha i o s$; $\pi \alpha \lambda \alpha i o s$ and the likeness of meaning (Meyer, G. G. p. 372). The words $\delta \epsilon \xi \iota - \tau \epsilon \rho o s$, $\delta \rho \iota \sigma \tau \epsilon \rho o s$ are formed like Comparatives, but are distinguished by their accent.

The Suffix -τερο is combined with the Suffix -ιον in ἀσσοτέρω (Adv.) nearer, ἐπ-ασσύτεροι drawing on, χειρό-τερο-s and

χερειό-τερο-ς worse.

-τερο, -τάτο are combinations of -το (in $\tau \rho i$ -το-s, &c.) with the Suffixes -ερο and -άτο respectively. The tendency to accumulate Suffixes of comparison is seen in $\dot{\epsilon}\nu$ - $\dot{\epsilon}\rho$ -τεροs (-τατοs), $\dot{\nu}\pi$ - $\dot{\epsilon}\rho$ -τεροs (-τατοs), $\dot{\epsilon}\sigma$ οσο-τέρω, χειρό-τεροs and χερειό-τεροs; $\tau \rho i$ -τ-ατοs, $\dot{\epsilon}\beta\delta\dot{\nu}$ - μ -ατοs, $\tau \rho \dot{\omega}\tau$ -ιστοs; Lat. -issimu-s (for -is-ti-mu-s), mag-is-ter, min-is-ter.

122.] Comparative and Superlative Meaning. The Stem is often that of a Substantive, as κύν-τερο-ς more like a dog, βασιλεύ-τατο-ς most kingly; so that the Adjectival character is given by the Suffix.

The meaning is often, not that an object has more of a quality than some other object or set of objects, but that it has the quality in contradistinction to objects which are without it. Thus in $\pi\rho\dot{o}$ - $\tau\epsilon\rho o$ -s the meaning is not more forward, but forward, opposed to $\ddot{v}\sigma$ - $\tau\epsilon\rho o$ -s behind. So $\dot{v}\pi\dot{\epsilon}\rho$ - $\tau\epsilon\rho o$ -s and $\dot{\epsilon}v\dot{\epsilon}\rho$ - $\tau\epsilon\rho o$ -s, $\delta\epsilon\dot{\xi}\iota$ - $\tau\epsilon\rho o$ -s, and $\dot{a}\rho\iota\sigma$ - $\tau\epsilon\rho o$ -s, $\delta\epsilon\dot{v}$ - $\tau\epsilon\rho o$ -s, &c. The same thing appears in the Pronouns $\dot{\eta}\mu\dot{\epsilon}$ - $\tau\epsilon\rho o$ -s, $\dot{v}\mu\dot{\epsilon}$ - $\tau\epsilon\rho o$ -s, $\ddot{\epsilon}$ - $\tau\epsilon\rho o$ -s, $\dot{a}\mu\phi\dot{o}$ - $\tau\epsilon\rho o$ -s, &c.; $\dot{\eta}\mu\dot{\epsilon}$ - $\tau\epsilon\rho o$ -s is not more belonging to us, but belonging to us (not you). So in the Homeric Comparatives:—

ἀγρό-τερο-s of the country (opp. to the town). ὀρέσ-τερο-s of the mountains (opp. to the valley). θεώ-τεραι, opp. to καταιβαταὶ ἀνθρώποισιν (Od. 13. 111). θηλύ-τεραι female (opp. to male).

κουρό-τεροι the class of youths.

Cp. II. 19. 63 Τρωσὶ τὸ κέρδιον that is a gain to the Trojans (rather than to us). Hence the Comparative is sometimes used as a softened way of expressing the notion of the Positive: as II. 19. 56 ἄρειον 'good rather than ill'; II. 1. 32 σαώτερος safe (as we speak of being 'on the safe side'): so θᾶσσον with an Imper. Hence too the idiomatic use of the double Comparative, Od. 1. 164 ἐλαφρότεροι πόδας εἶναι ἢ ἀφνειότεροι to be light of foot rather than wealthy.

Composition.

123.] It is a general law of Greek and the kindred languages

that while a Verb cannot be compounded with any prefix except a Preposition, a Nominal Stem may be compounded with any other Nominal Stem, the first or prefixed Stem serving to limit

or qualify the notion expressed by the other.

124.] Form of the Prefixed Stem. The instances which call for notice fall under the following heads:—

a. Stems in -0, -η:-

The great number of Nominal Stems in -o created a tendency (which was aided by the convenience of pronunciation) to put -o in place of other Suffixes. Thus we have—

-o for -η, as ύλο-τόμο-s wood-cutter, &c.* (n16 sv 7.

-o for -εσ, in είρο-κόμο-s wool-dresser, μενο-εικήs pleasing to the spirit; and for -ασ, as γηρο-κόμο-s tending old age.

-μο for -μον, as ἀκμό-θετο-ν anvil-block; and for -μα, as αίμο-

φόρυκτο-s dabbled with blood, Κυμο-δόκη, &c.

-ρο for -ρα, in πατρο-κασίγνητος, μητρο-πάτωρ, ἀνδρο-φόνος, and the like. In ἀνδρά-ποδον the short Stem (as in ἀνδρά-σι) is retained, but probably this form is due to the analogy of τετράποδον: slaves and cattle being thought of together as the two main kinds of property in early times (Brugm.).

Zeus-sprung (= $\delta \hat{\iota} o \nu \gamma \dot{\epsilon} \nu o s \dot{\epsilon} \chi \omega \nu$).

Stems in $\neg \eta$ instead of $\neg \sigma$ appear in $\theta \alpha \lambda \alpha \mu \eta - \pi \delta \lambda \sigma - s$ attendant of a chamber, $\pi \nu \rho \eta - \phi \delta \rho \sigma - s$ bearing wheat, $\epsilon \lambda \alpha \phi \eta - \beta \delta \lambda \sigma - s$, $\epsilon \kappa \alpha \tau \eta - \beta \delta \lambda \sigma - s$, $\epsilon \kappa \rho \alpha \gamma \sigma - \tau \delta \sigma - s$. We may suppose that there was a collateral Stem in $\neg \eta$ (e. g. $\theta \alpha \lambda \delta \mu \eta$ is found, but in a different sense from $\theta \delta \lambda \alpha \mu \sigma - s$ Od. 5. 432), or that the Compound follows the analogy of $\beta \sigma \nu \lambda \eta - \phi \delta \rho \sigma - s$, &c.

Fem. -a becomes either -o, as ἀελλό-πος storm-foot; or -η, as

γαιή-οχο-s earth-holder, μοιρη-γενήs born by fate.

^{*} It is possible however that Feminine Nouns in $-\eta$ were regarded as formed from Stems in $-\sigma$, the long vowel being of the nature of a Case-ending (§ 113). This is especially applicable to Adjectives: e. g. $\mathring{a}\kappa\rho\delta$ - $\pi\sigma\lambda\iota$ s comes directly from Masc. $\mathring{a}\kappa\rho\sigma$ -s (Brugm.).

The result of these changes is to make o the 'connecting vowel' in the great majority of Compounds. In later Greek this form prevails almost exclusively.

b. Stems in -i:-

The Compounds which contain these stems are mostly of an archaic stamp: $\grave{a}\rho\gamma \iota - \pi o\delta - \epsilon s$ with swift (or white) feet, $\grave{a}\rho\gamma \iota - \delta\delta ov\tau - \epsilon s$ white-toothed, $\grave{a}\rho\gamma \iota - \kappa \dot{\epsilon}\rho avvo - s$ with bright lightning, $\tau \epsilon \rho\pi \iota - \kappa \dot{\epsilon}\rho avvo - s$ hurling thunderbolts ($\tau \dot{\epsilon}\rho\pi\omega = \tau \rho \dot{\epsilon}\pi\omega$, Lat. torqueo), $\epsilon \dot{\iota}\lambda \dot{\iota} - \pi o\delta - \epsilon s$ trailing (?) the feet (of oxen), $\grave{a}\lambda \dot{\iota} - \pi \lambda oo - s$ washed by the sea, also $\dot{a}\lambda \iota - \dot{\alpha}\dot{\gamma}s$, $\dot{a}\lambda \iota - \dot{\alpha}\dot{\rho}\phi\psi\rho\sigma s$, ' $\dot{\alpha}\lambda \dot{\iota} - \alpha\dot{\rho}\sigma\sigma s$, ' $\dot{\alpha}\lambda \dot{\iota} - \alpha\dot{\rho}\sigma\sigma s$, (cp. $\dot{\alpha}\lambda \dot{\iota} - \dot{\epsilon}\dot{\gamma}s$ fisherman), $\dot{\alpha}\dot{\iota}\dot{\gamma}\dot{\iota} - \beta\sigma\sigma s$, fed on by goats, $\dot{\alpha}\dot{\gamma}\dot{\iota} - \lambda \iota \psi$ deserted by goats, $\dot{\alpha}\dot{\alpha}\dot{\iota} - \phi\rho\omega v$ of light mind, $\dot{\alpha}\dot{\alpha}\dot{\iota} - \phi\rho\omega v$ warlike (or prudent), $\dot{\alpha}\lambda \dot{\epsilon}\dot{\xi}\dot{\iota} - \kappa\alpha\kappa \sigma s$ defender against ill, $\dot{\alpha}\dot{\alpha}\iota - \kappa\eta\dot{\delta}\dot{\gamma}s$ forgetting care, $\pi\nu\kappa\iota - \mu\eta\dot{\delta}\dot{\gamma}s$ with shrewd counsel, $\kappa\dot{\alpha}\lambda\lambda\iota - \gamma\dot{\nu}\nu\dot{\alpha}\iota\kappa - a$ with beautiful women (cp. $\kappa\dot{\alpha}\lambda\lambda\iota - \mu\sigma s$), $\kappa\nu\dot{\delta}\iota - \dot{\alpha}\nu\dot{\epsilon}\iota\rho\alpha$ glorifying men (cp. $\kappa\dot{\nu}\dot{\delta}\iota - \dot{\alpha}\nu\dot{\epsilon}\iota\rho\alpha$); with the Proper Names, $\dot{\alpha}\dot{\ell}\dot{\ell}-\sigma\tau - \epsilon s$, $\Pi\dot{\epsilon}\iota\dot{\ell}-\theta\sigma\sigma - s$, ' $\dot{\alpha}\lambda\kappa\dot{\ell}-\nu\sigma\sigma - s$, ' $\dot{\alpha}\lambda\kappa\iota - \mu\dot{\epsilon}\dot{\delta}\omega\nu$ (cp. $\dot{\alpha}\nu - \alpha\lambda\kappa\iota - s$), and the words beginning with $\dot{\alpha}\rho\iota - \alpha\dot{\ell}\dot{\epsilon}\dot{\ell}-\tau\dot{\ell}\dot{\epsilon}\dot{\ell}-\tau\dot{\ell}\dot{\epsilon}\dot{\ell}-\tau\dot{\ell}\dot{\epsilon}\dot{\ell}-\tau\dot{\ell}-\tau\dot{\ell}\dot{\epsilon}\dot{\ell}-\tau$

The meaning of several of these words is very uncertain, owing to the merely ornamental and conventional way in which they are used in Homeric poetry. It seems to follow that they are survivals from an earlier period, one in which the number of Stems in -1 was probably greater than in Homeric times.

Loss of o may be recognised in $d\rho\tau\ell$ -πος (= $d\rho\tau$ ιος τοὺς πόδας), ζεί-δωρος grain giving (ζειά), κραται-γύαλος of strong pieces, $\Delta\eta$ t-φοβος, perhaps also μιαι-φόνος, 'Αλθαι-μένης, ταλαί-πωρος: cp. γεραί-τερος from γεραιό-ς.

c. Stems in -oĭ:

This group is mainly Homeric: $\epsilon \rho \nu \sigma l - \pi \tau \sigma \lambda \iota$ (Voc.) deliverer of the city (with v. l. ρῦσί-πτολι Il. 6. 305), ἀερσί-ποδ-ες lifting the feet (i. e. with high action), πλήξ-ιππο-ς smiter of horses, λυσιμελής loosening the limbs (of sleep), ταννσί-πτερο-ς, ταλασί-φρων, ἀεσί-φρων, ταμεσί-χρως, φαεσί-μβροτο-ς, φυσί-ζοος, φθισί-μβροτο-ς, τερψί-μβροτο-ς, Τερψι-χόρη (Hes.), ἐνοσί-χθων (ἐννοσί-γαιος, εἰνοσί-ψυλλος, &c.), πηγεσί-μαλλο-ς, ἀλεσί-καρπο-ς, ἀλφεσί-βοιος, ἐλκεσίπεπλο-ς, φθισ-ήνωρ, πλησ-ίστιο-ς, ἐρνσ-άρματ-ες, ρηξ-ήνωρ, γαμψ-ῶννξ; and Proper Names, Πρωτεσί-λαο-ς, 'Αρσί-νοο-ς, Δεισ-ήνωρ, Λύσ-ανδρος, Πεισ-ήνωρ, Πεισί-στρατο-ς, 'Ορσί-λοχο-ς, 'Αναβησί-νεως, 'Ησί-οδος (Hes.), &c.

There are a few Stems in -τ ; βωτι-άνειρα feeding men, Καστι-

άνειρα (cp. κε-κασ-μένος).

We may add the Hesiodic φερέσ-βιος life-bearing, and φερεσ-

σακής shield-bearing with φερεσ- apparently for φερεσι-.

These Stems were originally the same as those of the abstract Nouns in $-\tau\iota$ -s, $-\sigma\iota$ -s: cp. $T\epsilon\rho\psi\iota$ - $\chi\delta\rho\eta$, $\tau\epsilon\rho\psi\iota$ - $\mu\beta\rho\sigma\tau$ os, &c. with

τέρψι-s, πλήξ-ιππος with πλῆξι-s. But in many cases new Stems have been formed under the influence of the sigmatic Aorist, with a difference of quantity, as in $\phi\bar{\nu}\sigma\ell$ -ζοο-s life-giving ($\phi\dot{\nu}\sigma\iota$ -s), λ $\bar{\nu}\sigma\iota$ -μελής, $\phi\theta\bar{\iota}\sigma\ell$ -μβροτο-s. Compare also ταμεσ ℓ -χρως with τμῆσι-s, Πεισ ℓ -στρατο-s with π $\ell\sigma\tau\iota$ -s, &c.

The group of Compounds is also to be noticed for the distinctly Verbal or participial meaning given by the first part of

the word; cp. the next group, and § 126.

d. Stems in $-\epsilon$:

These are nearly all Verbal, both in form and meaning: $\hat{\epsilon}\lambda\kappa\epsilon-\chi(\tau\omega\nu-\epsilon_S)$ trailing the chiton, $\mu\epsilon\nu\epsilon-\delta\eta$ io-s withstanding foemen (so $\mu\epsilon\nu\epsilon-\chi\delta\rho\mu\eta-s$, $\mu\epsilon\nu\epsilon-\pi\tau\delta\lambda\epsilon\mu$ o-s, $M\epsilon\nu\epsilon-\lambda\alpha$ o-s, $M\epsilon\nu\epsilon-\sigma\theta\epsilon\nu$ s, &c.): $\hat{\epsilon}\chi\dot{\epsilon}-\theta\nu\mu$ o-s restraining passion, $\hat{\epsilon}\chi\dot{\epsilon}-\phi\rho\omega\nu$ possessing judgment, $\hat{\epsilon}\chi\epsilon-\pi\epsilon\nu\kappa\dot{\epsilon}s$ carrying sharpness, ' $E\chi\dot{\epsilon}-\pi\omega\lambda$ o-s, ' $E\chi\dot{\epsilon}-\nu\eta$ os, ' $E\chi\epsilon-\kappa\lambda\dot{\eta}s$; $\dot{\alpha}\gamma\epsilon-\lambda\epsilon\dot{\eta}\eta$ driving spoil, $\dot{\alpha}\rho\chi\dot{\epsilon}-\kappa\alpha\kappa$ o-s beginning mischief, $\dot{\alpha}\gamma\chi\dot{\epsilon}-\mu\alpha\chi$ o-s fighting close, $\lambda\epsilon\chi\epsilon-\pi$ oi η with beds of grass: ' $\lambda\rho\chi\dot{\epsilon}-\lambda$ o λ o-s, $\lambda\epsilon\dot{\epsilon}-\kappa\dot{\epsilon}$ o, $\lambda\epsilon\dot{\epsilon}-\kappa\dot{\epsilon}$ o

Stems in -σε; ἀκερσε-κόμη-s with unshorn hair, Περσε-φόνεια. With the Stems in -ε may evidently be placed ταλα-, in ταλά-φρων with enduring mind, ταλα-εργό-s enduring in work, ταλαύρινος (for ταλα-Γρινο-s) bearing a shield of hide, ταλα-πενθής bearing sorrow, ταλα-πείριος bearing trial; and τλη- in Τλη-πόλεμος &c.: also τανυ-, in τανύ-γλωσσος with outstretched tongue, long-tongued,

έρυ- in 'Ερύ-λαος, defender of the host.

e. Stems in -v :-

α for η appears in δνομά-κλυτος of famous name, κυνά-μυια for κυα-μυια on the analogy of κύν-α.

τανύ-φυλλος long-leaved, τανυ-γλώχινες long-notched (arrows), and

f. Case-forms:-

Nom. Acc. in Numerals, as ξυ-δεκα, δυώ-δεκα.

The Dative is probably to be recognised in $d\rho\eta t$ -φατο-s slain in war (and so 'Aρηt-θοο-s, 'Aρηt-λυκο-s), πυρι-ηκής sharpened by fire (πυρί-καυστο-s, Πυρι-φλεγέθων), διϊ-πετής falling in the sky; the Dat. Plur. in κηρεσσι-φόρητο-s brought by the fates, δρεσί-τροφο-s nursed in mountains, έγχεσί-μωρο-s great with spears, έντεσι-εργό-s working in harness, τειχεσι-πλητα (Voc.) drawing near to (assailing) walls, Ναυσι-κάα, Μηδεσι-κάστη, Πασι-θέη, Χερσι-δάμας; α Locative form in χαμαι-εύνης sleeping on the ground, όδοι-πόρο-s a wayfarer, χοροι-τυπίη figuring in the dance, Πυλοι-γενής born at Pylus, παλαί-φατο-s of ancient fame, and perhaps (to express manner) in $l\theta$ αι-γενής duly born, δλοοί-τροχο-s rolling. Cp. έμ-πυρι-βήτης made to stand over the fire, i. e. a kettle.

This use of the Dative may have been suggested by the Stems in $\ddot{\iota}$ and $-\sigma t$. Compounds such as $\dot{\epsilon}\lambda\kappa\epsilon\sigma\dot{\iota}-\pi\epsilon\pi\lambda\sigma$, $\dot{\omega}\lambda\epsilon\sigma\dot{\iota}-\kappa\alpha\rho\pi\sigma$, $\dot{\alpha}\lambda\phi\epsilon\sigma\dot{\iota}-\beta\sigma\iota\sigma$, containing forms which sounded like the Dat. Plur. of Stems in $-\epsilon\sigma$, may have served as types for the group $\dot{\epsilon}\gamma\chi\epsilon\sigma\dot{\iota}-\mu\omega\rho\sigma$, $\tau\epsilon\iota\chi\epsilon\sigma\iota-\pi\lambda\dot{\eta}\tau\eta$, $\dot{\nu}\rho\epsilon\sigma\dot{\iota}-\tau\rho\sigma\phi\sigma$, &c. in which the Dat. Plur. takes the place of the Stem. Cp. $\Pi\rho\omega\tau\epsilon\sigma\dot{\iota}-\lambda\alpha\sigma$ s.

Conversely, φερέσ-βιο-s life-bearing, and φερεσ-σακήs (Hes.) ought to be *φερεσί-βιο-s, but have followed the type of δρέσ-βιο-s, τελεσ-φόρο-s, &c.

The forms διί-φιλο-ς, ἀρηί-φιλο-ς, ἀρηϊ-κτάμενο-ς, δαϊ-κτάμενο-ς, δουρι-κλυτό-ς, δουρι-κλειτό-ς, ναυσι-κλυτό-ς, should probably be written as separate words, Διὶ φίλος, Ἄρηϊ κτάμενος, &c. As to-κτάμενος see § 125, 6: as to -κλυτός, -κλειτός, cp. § 128.

The Genitive is very rare: οὐδενόσ-ωρο-s not worth caring for,

Έλλήσ-πουτος.

An ending -η (for -α) may be seen in $v\epsilon\dot{\eta}$ -φατος new-slain, δλιγη-πελέων. This is perhaps an Instrum., as πάντη (§ 110).

125.] Form of the second Stem. 1. The use of a Root-Noun, i.e. a Verbal Stem without a distinct Nominal Suffix (§ 113), is more common in Composition than in simple Nouns: as, $\delta i - \zeta v \gamma - \epsilon s$ yoked in a pair, $\delta i - \pi \lambda \alpha \kappa - a$ two-fold, $\chi \epsilon_p - v \iota \beta - a$ handwashing, $\delta v - \sigma - a$ wine-like, $v \eta i \delta a$ ($v \eta - \Gamma \iota \delta - a$) ignorant, $a l \gamma l - \lambda \iota \pi - o s$ (Gen.) left by goats, $\pi \circ \lambda v - \hat{\alpha} i \xi$ much starting, $\beta \circ v - \pi \lambda \eta \xi$ an ox-whip. The Stem, it will be seen, is in the Weak form.

2. Nouns in -ως (Gen. -o-os) and in -os (Gen. -ε-os) form the Compound in -ης, Neut. -εs, as αν-αιδής without shame (αιδως),

θυμ-αλγής grieving the spirit (ἄλγος).

The Stem in these Compounds is often weak, though in the simple Neuters in -os it is strong (§ 114): e.g. alvo- $\pi a\theta \dot{\eta}s$ (as well as $\tau a\lambda a - \pi \epsilon \nu \theta \dot{\eta}s$, $\nu \eta - \pi \epsilon \nu \theta \dot{\eta}s$, from $\pi \dot{\epsilon} \nu \theta os$), $\dot{\alpha} \gamma \chi \iota - \beta a\theta \dot{\eta}s$ ($\beta \dot{\epsilon} \nu \theta os$, $\pi o\lambda \nu - \beta \epsilon \nu \theta \dot{\eta}s$), olvo- $\beta a\rho \dot{\eta}s$, $\pi \rho \omega \tau o - \pi a\gamma \dot{\eta}s$, $\dot{\alpha} - \sigma \iota \nu \dot{\eta}s$, $\theta \nu \mu o - \delta a\kappa \dot{\eta}s$, $\dot{\alpha} \rho \iota - \phi \rho a\delta \dot{\eta}s$, $\dot{\epsilon} \tau \dot{\epsilon} \rho - a\lambda \kappa \dot{\eta}s$, $\tau \eta \lambda \dot{\epsilon} - \phi a\nu \dot{\eta}s$, &c. So we find $\dot{\alpha} \ddot{\iota} \kappa \dot{\omega}s$ (Il. 22. 336) as Adv. to $\dot{\alpha} \dot{\epsilon} \iota \kappa \dot{\eta}s$, and $\dot{\alpha} \lambda \lambda o - \ddot{\iota} \dot{\delta} \dot{\epsilon}a$ (Od. 13. 194) alongside of $\theta \dot{\epsilon} o - \epsilon \iota \dot{\delta} \dot{\eta}s$, $\mu \nu \lambda o - \epsilon \iota \dot{\delta} \dot{\eta}s$, &c.

This weakening of the Stem, accompanied by shifting of the accent to the suffix, apparently represents the original rule—words like ταλα-πενθής being formed afresh from the Simple Noun. Conversely, the analogy of the Compounds has given rise to the forms πάθος, βάθος, βάρος, &c. and also to the simple Adjectives such as ψενδής, σαφής.

3. Stems in $\eta \nu$ ($\epsilon \nu$ -) usually take $\omega \nu$ ($\epsilon \nu$ -) in Composition: as $\phi \rho \dot{\eta} \nu$ (Gen. $\phi \rho \epsilon \nu$ - δs) forms $\pi \rho \dot{\delta} - \phi \rho \omega \nu$, Gen. $\pi \rho \dot{\delta} - \phi \rho \rho \nu$ - δs : and

Neuters in -μα form Compounds in -μων, Gen. -μον-ος, as ἀν-αίμον-ες (αΐμα) bloodless. Cp. ἀπείρων boundless (πεῖραρ, περαίνω). So too πατήρ, μήτηρ, ἀνήρ, &c. form -ωρ (Gen. -ορ-ος), as μητρο-πάτωρ, εὐ-ήνωρ.

4. Some Stems take a final $-\tau$, as $\dot{a}-\beta\lambda\hat{\eta}-\tau-a$ (Acc. Sing.) unthrown, $\dot{a}-\kappa\mu\hat{\eta}-\tau-\epsilon s$ unwearied; so $\dot{\epsilon}\pi\iota-\beta\lambda\hat{\eta}s$, $\dot{a}-\delta\mu\hat{\eta}s$, $\dot{a}-\gamma\nu\hat{\omega}s$.

5. In Adjectives the Suffix is often replaced by one ending in -o; as ŏ-πατρο-s of one father, βαρβαρό-φωνο-s with strange voice (from φώνη), χρυσ-ηλάκατο-s with golden distaff (ἢλακάτη), δυσ-ώνυμο-s of evil name (ὄνομα), ἄ-σπερμο-s without seed (σπέρμα), &c. In other cases the Suffix is retained, and thus we find in Compounds (contrary to the general rules of Noun-formation)—

Masc. Stems in -η, as ἀργυρο-δίνη-ς, and -ιδ, as λευκ-άσπιδ-ες.

Mase. and Fem. Stems in $-\epsilon \sigma$, as $\mu \epsilon \lambda \iota - \eta \delta \dot{\eta} s$ honey-sweet, $\dot{\eta} \rho \iota - \gamma \dot{\epsilon} \nu \epsilon \iota a$ (for $-\epsilon \sigma - \iota a$) early born.

Fem. Stems in -o, as χρυσό-θρονο-ς ("Ηρη), ροδο-δάκτυλο-ς

('Hω's), and many other adjectives 'of two terminations.'

A Masc. Stem in -μάτ, viz. ἐρυσ-άρματ-ες (ἵπποι).

6. The use of a Participle in the second part is rare: it is found in some Proper Names, as Οὐκ-αλέγων, Πυρι-φλεγέθων, Θεο-κλύμενος: also where it is a mere Adjective without any Tense-meaning, as πολύ-τλας, cp. ἀ-δάμας. In other cases we can write the words separately, as πάλιν πλαγχθέντας, δάκρυ χέων, πᾶσι μέλουσα, κάρη κομόωντες, εὖ ναιετάων, εὐρὺ ῥέων, ἐਚ κτίμενος, πάλιν ὅρμενος, γΑρηϊ κτάμενος, δαὶ κτάμενος, &c.

7. Abstract Primitive Nouns are not used in the second part: thus we do not find $\hat{\epsilon}\pi\epsilon\sigma$ - β o λ $\hat{\eta}$, but $\hat{\epsilon}\pi\epsilon\sigma$ - β o λ $\hat{\eta}$ (through a concrete $\hat{\epsilon}\pi\epsilon\sigma$ - β o λ o-s): and so β o- $\eta\lambda$ a σ (η (not β o- $\dot{\eta}\lambda$ a σ (-s), $\dot{a}\nu$ o $\dot{\rho}$ o- $\kappa\tau$ a σ (- η , ϵ \dot{v} - δ i κ - $(\eta$, $\dot{a}\mu$ a- τ po χ i $\dot{\eta}$, $\dot{a}\lambda$ ao- σ κ σ πi $\dot{\eta}$. Except after Prepositions; as $\dot{a}\mu\phi$ (- β a σ (-s), $\dot{\epsilon}\pi$ (- $\kappa\lambda$ η σ (-s), π po- λ o $\dot{\eta}$, π po- δ ο κ $\dot{\eta}$.

Note however $\pi \alpha \lambda i \omega \xi is$ (for $\pi \alpha \lambda i - i \omega \xi i - s$), $\beta ov - \lambda v \tau o - s$ the time

of unyoking, βού-βρωστι-s.

8. When the latter part of a Compound is derived from a disyllabic Verbal Stem beginning with a vowel, its initial vowel is often lengthened: as—

έλα- drive, ίππ-ηλάτα, έξ-ήλα-τος, βο-ηλα-σίη.

έρα- love, έπ-ήρα-τος, πολυ-ήρα-τος.

άμελγ- milk, αν-ήμελκτος, Ίππ-ημολγοί.

ἀρό-ω plough, ἀν-ήρο-τος.

αλέγ-ω care, δυσ-ηλεγ-έος (Gen.), απ-ηλεγ-έως.

ἐρέφ-ω cover, κατ-ηρεφ-ής, ἀμφ-ηρεφ-ής, ὑπ-ωρόφ-ιος.

ἀμείβ-ω change, ¿ξ-ημοιβ-ός.

έρετ- του, φιλ-ήρετ-μος, δολιχ-ήρετμος.

ένεκ- carry, δι-ηνεκ-ής, ποδ-ηνεκ-ής, δουρ-ηνεκ-ής.

 $\epsilon \lambda \upsilon(\theta)$ - come, $\nu \epsilon - \dot{\eta} \lambda \upsilon \delta - \epsilon s$.

122

 $\dot{\alpha}$ γερ- assemble, $\dot{\delta}$ μ-ηγερ- $\dot{\epsilon}$ ες, θ υμ-ηγερ- $\dot{\epsilon}$ ων (= θ υμὸν $\dot{\alpha}$ γείρων).

έριδ- strive, αμφ-ήριστος striven about.

So ποδ-ήνεμος, εὖ-ώνυμος (πολυ-ώνυμος, &c.), εὖ-ήνωρ (ἀνερ-), εὖ-ηφενής (from ἄφενος wealth), γαμψ-ῶνυξ, πεμπ-ώβολον, ἀν-ήκεστος, ἀν-ώϊστος, ἐρι-ούνης (ἀνα- help), ὑπ-ώρεια (ὄρος), δι-ηκόσιοι and τρι-ηκόσιοι (ἐκατόν), χλλλ-ήρης (ἐρ-μ).

Similar lengthening is found, but less frequently, in the first part of the Compound; ὧλεσί-καρπος, ἢλιτό-μηνος, ˙Ωρεί-θυια. Also in other derivatives, as ἢνεμό-εις, ἢνορ-έη, τηλεθόωσα (θἄλέθω), Ἦμει ΙΙΙΙ

ηγερέθονται (άγερ-). he in the both bet fit & avaketos (ds 386)

126.] Meaning of Compounds. The general rule is that the prefixed Stem limits or qualifies the meaning of the other: as δμο-γέρων hale old man, δημο-γέρων elder of the people, τρι-γέρων (Aesch.) thrice aged; ἱππό-δαμο-s tamer of horses, ἱππό-βοτο-s pastured by horses, ἱππό-κομος with plume of horse-hair, ἱππο-κέλευθος making way with horses; βαθυ-δινήεις deep-eddying.

The prefixed Stem may evidently express very different relations—that of an Adjective, as $\partial \mu_0 - \gamma \epsilon \rho \omega \nu$, $\beta a \theta \nu - \delta i \nu \eta s$, or a Genitive, as $\delta \eta \mu_0 - \gamma \epsilon \rho \omega \nu$, $i \pi \pi \delta - \kappa o \mu o s$, or an Object, as $i \pi \pi \delta - \delta a \mu o s$, or an Adverb of manner or place or instrument, as $\delta \mu - \eta \gamma \epsilon \rho \epsilon \epsilon s$, $\delta \epsilon \rho - \phi o \epsilon \tau s$, &c.—and various attempts have been made to classify Compounds according to these relations. Such attempts are usually unsatisfactory unless the differences of meaning upon which they are based are accompanied by differences of gram-

matical form.

In respect of form an important distinction is made by the fact that in the second part of many Compounds a Substantive acquires the meaning of an Adjective without the use of a new Suffix; e.g. $\dot{\rho}$ 000- $\dot{\rho}$ 04 $\kappa\tau\nu\lambda$ 0-s, literally rose-finger, means not a rosy finger, but having rosy fingers; so $i\pi\pi\dot{0}$ - $\kappa\omega\mu$ 05 with a horse-plume, $i\pi\pi\iota$ 0- κ 04 π 1-s with horse's mane (as a plume), κ 04 π 0- κ 06 π 1-s (= κ 04 π 0- κ 06 π 1-s), &c. Such Compounds are called by Curtius Attributive. The formation is analogous to the turning of abstract into concrete Nouns by a mere change of Gender (instead of a Suffix), \$\frac{1}{2}\$ 116. Thus κ 00- κ 0- κ 00 folsehood.

Among the meanings which may be conveyed by a Stem in a Compound, note the poetical use to express comparison: as ἀελλό-πος storm-foot, i.e. with feet (swift) as the storm, μελί-γηρυ-s honey-voiced, ροδο-δάκτυλο-s, κυν-ῶπι-s, &c. So too ποδ-ήνεμο-s

like the wind in feet, $\theta v \mu o - \lambda \dot{\epsilon} \omega v$ like a lion in spirit.

The order of the two Stems may be almost indifferent; i. e. it may be indifferent which of the two notions is treated as qualifying the other; e. g. $\pi o\delta - \omega \kappa \eta s$ swift of foot $(=\omega \kappa v)s$ τovs $\pi \delta \delta as)$

is the same in practical effect as ἀκύ-πους swift-foot, with swift

feet (ἀκεῖς πόδας ἔχων).

In the Compounds called by Curtius Objective, i.e. where the relation between the two parts is that of governing and governed word, the general rule requires that the governed word should come first, as in $i\pi\pi\delta$ - $\delta\mu$ -s horse-taming. This order appears to be reversed in certain cases in which the first Stem has the force of a Verb. The Stems so used are—

- 1. Stems in $-\epsilon$ (§ 124, d), as ϵ λκ ϵ -χίτων ϵ s, ϵ χ ϵ -φρων, &c.
- 2. Stems in -σι (§ 124, c), as έλκε-σί-πεπλος, φθι-σ-ήνωρ, &c.
- 3. Some of the Stems in -ι, as $\epsilon l\lambda l-\pi o\delta \epsilon s$, κυδι-άνειρα, ἁμαρτίνοος (Hes.), λαθι-κηδής, λαθί-φρων, τερπι-κέραυνος (§ 124, b); and in -0, as φιλο-πτόλεμος loving war, φιλο-κέρτομος, φιλο-κτέανος, φυγο-πτόλεμος flying from war, ἁμαρτο-επής blundering in speech, ήλιτό-μηνος astray as to the month: also the Compounds of ταλα-, τλη-, as ταλα-πενθής enduring sorrow, Τλη-πόλεμος, &c., and τανυ-, as τανύ-πτερος (Hes.), which is = the Homeric τανυσί-πτερος.

In most of these cases the inversion is only apparent. For instance, $\delta\lambda\kappa\epsilon\sigma(l-\pi\epsilon\pi\lambda)$ means trailing the robe as distinguished from other ways of wearing it; the notion of trailing is therefore the limiting one. So $\tau\alpha\nu\nu\sigma(l-\pi\tau\epsilon\rho)$ means long-winged; $\mu\epsilon\nu\epsilon-\pi\tau\delta\lambda\epsilon\mu$ os, $\phi\nu\gamma o-\pi\tau\delta\lambda\epsilon\mu$ os, $\tau\lambda\eta$ - $\tau\lambda\delta\lambda\epsilon\mu$ os, $\tau\lambda\eta$ - $\tau\lambda\delta\lambda\epsilon\mu$ os, $\tau\lambda\eta$ - $\tau\lambda\delta\lambda\epsilon\mu$ os, $\tau\lambda\eta$ - $\tau\lambda\delta\lambda\epsilon\mu$ os describe

varieties of the genus 'warrior.'

Nevertheless we must recognise a considerable number of Compounds in which the Prefixed Stem is Verbal in form as well as in meaning. A similar group has been formed in English (e.g. catch-penny, make-shift, do-nothing, &c.), and in the Romance languages (French vau-rien, croque-mitaine, Italian fa-tutto, &c.). These groups are of relatively late formation, and confined for the most part to colloquial language. The corresponding Greek forms represent a new departure of the same kind.

The process by which the second part of a Compound passes into a Suffix cannot often be traced in Greek. An example may be found in $-\alpha\pi\sigma$ -s $(\pi\sigma\delta-\alpha\pi\delta s, \dot{\eta}\mu\epsilon\delta-\alpha\pi\delta s, \dot{\alpha}\lambda\lambda\delta\delta-\alpha\pi\delta s)$, = Sanser. $-a\tilde{n}c$, Lat. -inquu-s (long-inquus, prop-inquus). In the adjectives in $-\omega\psi$, as $o\tilde{l}vo\psi$, $a\tilde{l}\theta o\psi$, $\dot{\eta}vo\psi$, $v\tilde{\omega}\rho\sigma\psi$, $\mu\dot{\epsilon}\rho\sigma\psi$, the original sense of the Stem $-\omega\pi$ is evidently very faint. In the proper names $Al\thetalo\pi\epsilon s$, $\Delta\delta\lambda\sigma\pi\epsilon s$, $T\epsilon\lambda\lambda\sigma\pi\epsilon s$, $T\epsilon\lambda\sigma\psi$, &c. it becomes

a mere Suffix.

127.] Stems compounded with Prepositions. These are of two readily distinguishable kinds:—

1. The Preposition qualifies; as ἐπι-μάρτυρος witness to (something), περι-κτίον-ες dwellers around, ἀμφί-φαλο-ς with crest on both sides, πρό-φρων with forward mind. Forms of this kind are

sometimes obtained directly from Compound Verbs: e.g. $\xi \xi o \chi o s$ from $\xi \xi - \xi \chi \omega$, not from $\xi \xi$ and $\delta \chi o s$.

2. The Preposition governs, i. e. the Compound is equivalent to a Preposition governing a Noun; $\epsilon v - v \acute{\chi} - \iota o - s$ in the night, $\kappa \alpha \tau a - \chi \theta \acute{v} v - \iota o - s$ under-ground, $\delta \pi o - \theta \acute{v} \mu - \iota o - s$ displeasing (lit. away from the mind), &c.; also (but less commonly) without a Secondary Suffix, as $\epsilon \gamma - \kappa \acute{e} \phi \alpha \lambda o - s$ brain (lit. within the head), $\epsilon \pi - s \acute{e} \gamma - \kappa \acute{e} \phi \alpha \lambda o - s$ brain (lit. within the head), $\epsilon \pi - s \acute{e} \gamma - \kappa \acute{e} \phi \alpha \lambda o - s$ brain (lit. within the head), $\epsilon \pi - s \acute{e} \gamma - \kappa \acute{e} \phi \alpha \lambda o - s$

άρουρο-s attached to the soil.

The placing of the Preposition before the governed Stem is a departure from the general rule stated above. It may be held, however, that the Preposition serves (in some of these Compounds at least) as the limiting or qualifying member of the word. Compare $\imath \acute{\nu} \chi - \iota o - s$ by night, $\grave{\epsilon} \nu - \nu \acute{\nu} \chi - \iota o - s$ within the night: it is evident that the $\grave{\epsilon} \nu$ limits the sense of $\imath \acute{\nu} \chi \iota o - s$ in essentially the same way as $\pi a \nu - i n \pi a \nu - \nu \acute{\nu} \chi - \iota o - s$ all the night. So $\kappa a \tau a - \chi \theta \acute{\nu} \nu - \iota o - s$ is nearly equivalent to $\chi \theta \acute{\nu} \nu - \iota o - s$; the Preposition merely makes it clear in what sense the Suffix ιo is to be understood—' belonging to the earth ' by being under it.

- 128.] Accentuation. The Accent generally falls on the last syllable of the prefixed Stem, or if that is impossible, then as far back as possible; $\chi\rho\nu\sigma\dot{o}-\theta\rho\nu\nu\sigma$, $\dot{a}\epsilon\lambda\lambda\dot{o}-\pi\sigma$, $\dot{\epsilon}\pi-\dot{\eta}\rho\alpha\tau\sigma$ -s ($\dot{\epsilon}\rho\alpha\tau\dot{o}$ -s), $al\nu-a\rho\dot{\epsilon}\tau\eta$ -s ($\dot{a}\rho\epsilon\tau\dot{\eta}$), &c. The chief exceptions are the following:—
- 1. When the second Stem ends in -o and has the force of an Active Participle, it is oxytone, or, if the penult is short, paroxytone; as \mathring{v} - $\phi o \rho \beta \acute{o}$ -s, $\delta \eta \mu \iota o \epsilon \rho \gamma \acute{o}$ -s, $\tau o \mathring{\xi} o \phi \acute{o} \rho o$ -s. Except Compounds with Prepositions, as $\mathring{\epsilon}\pi \acute{\iota}$ - $\kappa \lambda o \pi o$ -s, $\pi \rho \acute{o}$ - $\mu a \chi o$ -s, $\mathring{v}\pi \acute{o}$ - $\tau \rho o \pi o$ -s; also those in -oxo-s, and one or two more, $\pi \tau o \lambda \acute{\iota}$ - $\pi o \rho \theta o$ -s, $\mathring{a} \gamma \chi \acute{\iota}$ - $\mu o \lambda o$ - ν , $\mathring{\iota} \pi \pi \acute{o}$ - $\delta a \mu o s$.
- 2. Adjectives in -ης (Stems in - $\epsilon \sigma$), Nouns in - $\epsilon \nu$ - ς , Nouns of the agent in - η ρ and - η η- ς , and Abstract Nouns in - η and - ι η retain their accent; οἰνο-βαρής, ἡνι-οχεύ- ς , μηλο-βοτῆρ- $\alpha \varsigma$, ἱππο-κορυστή- ς , ἐπ- ι ωγή, ἀρμα-τροχιή, ἀλαοσκοπιή.

But a few Adjectives in -ης are barytone, as ὑψι-πέτης, ποδώκης, χαλκ-ήρης, τανυ-ήκης; also the Fem. forms ἠρι-γένεια, ληϊ-

βότειρα, δυσ-αριστο-τόκεια, μισγ-άγκεια.

- 3. When the second Stem is a long monosyllable, it is accented: $\beta ov \pi \lambda \dot{\eta} \dot{\xi}$, $\dot{\alpha} \pi o \rho \rho \omega \dot{\xi}$, $\pi a \rho a \beta \lambda \hat{\omega} \pi \epsilon s$, $\pi a \rho a \pi \lambda \hat{\eta} \gamma a s$, $\dot{a} \beta \lambda \dot{\eta} s$, &c. (§ 125, 2). Hence the Fem. forms $\beta o \hat{\omega} \pi \iota s$, $\gamma \lambda a \nu \kappa \hat{\omega} \pi \iota s$, &c. (as if from $\beta o \omega \psi$, $\gamma \lambda a \nu \kappa \omega \psi$, &c.).
- 129.] Proper Names in Greek are generally Compounds; the exceptions are chiefly names of gods, as $Z\epsilon \dot{\nu}s$, " $H\rho\eta$, ' $A\theta\dot{\eta}\nu\eta$, &c., and of certain heroes, as $\Pi\dot{\alpha}\rho\iota s$, $\Pi\rho\dot{\iota}\alpha\mu\sigma s$, Aias, $T\epsilon\dot{\imath}\kappa\rho\sigma s$, &c.

Note that the gods whose names are Compound, as Διό-νυσος,

 $\Delta \eta$ -μήτηρ, Περσε-φόνεια, are less prominent in Homer.

The second part of a Proper Name is liable to a peculiar shortening; $\Pi \dot{\alpha} \tau \rho o - \kappa \lambda o - s$, $\Phi \dot{\epsilon} \rho \dot{\epsilon} - \kappa \lambda o s$, for $\Pi \alpha \tau \rho o - \kappa \lambda \dot{\epsilon} \eta s$, $\Phi \dot{\epsilon} \rho \dot{\epsilon} - \kappa \lambda \dot{\epsilon} \eta s$, $\Sigma \theta \dot{\epsilon} \nu \dot{\epsilon} - \lambda o s$ for $\Sigma \theta \dot{\epsilon} \nu \dot{\epsilon} - \lambda a o - s$, $\lambda i \nu - \sigma \theta o s$ for $\lambda i \nu - \sigma \theta \dot{\epsilon} \nu \eta s$, $\lambda i \nu - \delta o s$ for $\lambda i \nu - \delta o s$, $\lambda i \nu - \delta o s$ for $\lambda i \nu - \delta o s$, $\lambda i \nu - \delta o s$ for $\lambda i \nu - \delta o s$, λi

In general, however, the 'pet' name is formed by dropping one of the two Stems altogether: the other Stem taking a Suffix in its place*. Thus we have in Homer the names—

in -το-s, as Έκα-τος (for έκατη-βόλος), Εὔρυ-τος (Εὐρυ-βάτης,

Εὐρύ-αλος, &c.), $^{\prime}$ Ιφι-τος, $^{\prime\prime}$ Εχε-τος, Λήϊ-τος.

in -τωρ, as $\mathring{A}\kappa$ -τωρ (for $\mathring{A}\gamma\dot{\epsilon}$ -λαος or some other name beginning $\mathring{A}\gamma\epsilon$ -), $\mathring{E}\kappa$ -τωρ ($\mathring{E}\chi\epsilon$ -), $\mathring{M}\dot{\epsilon}\nu$ -τωρ ($\mathring{M}\dot{\epsilon}\nu\epsilon$ -), $\mathring{K}a\lambda\dot{\eta}$ -τωρ, $\mathring{A}\mu\dot{\nu}\nu$ -τωρ, &c.

in -τη-s, as Θερσί-της (cp. Θερσί-λογος, &c.), Πολί-της, 'Ορέσ-

της, Θυέσ-της, Μέν-της (cp. Μέν-τωρ).

in -ων, as $\Delta \acute{o}\lambda$ -ων, ' $\dot{A}\gamma \ddot{a}\theta$ -ων (cp. $\dot{\Lambda}\acute{a}\kappa\omega\nu = \Lambda a\kappa\epsilon\delta a\iota\mu\acute{o}\nu\iota os$).

in -ευ-s, as Περσ-εύς (from Περσε-φόνος), Οἰν-εύς (cp. Οἰνόμαος, &c.), Πρωτ-εύς, Λεοντ-εύς, &c.

in -ιο-s; Δολ-ίοs (Δόλ-οψ, &c.) 'Οδ-ίοs, Τυχ-ίοs, Φήμ-ιοs,

Καλήσ-ιος, and many more.

in -ια-ς, -εια-ς; Πελ-ίης, Τειρεσ-ίας; 'Ερμείας, Alveίας, Alveίας, Alveίας, In these names the Suffix is not used with its proper force, but merely in imitation of the corresponding groups of Common Nouns. This is evident from the fact that so many of these words are inexplicable as Simple Nouns. Note especially the names in -το-ς and -ων from Adjectives, as Εύρν-το-ς, 'Ιφι-το-ς, 'Αγάθ-ων; and those in -ευ-ς from Nouns of the consonantal declension (§ 118), as Λεοντ-εύ-ς, Αlγ-εύ-ς, and even from Verbs, as Περσ-εύ-ς.*

The first part of the Compound has probably been dropped in

Κλυμένη (cp. Περι-κλύμενος), Θόων (cp. ${}^{\epsilon}1\pi\pi\sigma$ -θόων), &c.

130.] Numerals. Although the Numerals are not properly to be counted as 'Nouns,' it will be convenient to notice here the chief peculiarities of formation which they exhibit.

I. There are two Fem. forms for $\epsilon \hat{s}_s$, viz. $\mu \ell a$ and ℓa ; also a Neut. Dat. $\ell \hat{\varphi}$ (II. 6. 422). The Stem δ - (for s m-) in $\delta - \pi a \xi$, $\delta - \pi \lambda o o s$, &c. is to be regarded as a weak form of the Stem $\epsilon v - (sam)$. The weak form s m- is to be traced in $\mu \ell a$, for $\sigma \mu - \iota \tilde{a}$.

2. The forms δύο and δύω are equally common in Homer.

^{*} Aug. Fick, Die griechischen Personennamen nach ihrer Bildung erklärt, Göttingen, 1874.

For the number 12 we find the three forms δυώδεκα, δώδεκα, and δυοκαίδεκα; also the Ordinals δυωδέκατος and (rarely) δωδέκατος.

3. Besides τέσσαρ-ες there is a form πίσυρ-ες, applied to horses in Il. 15. 680 and 23. 171, to other objects in Il. 24. 233 and

three times in the Odyssey (5. 70., 16. 249., 22. 111).

The Stem $\tau\epsilon\tau\rho\tilde{a}$ - appears in the Dat. $\tau\epsilon\tau\rho a$ - $\sigma\iota$, also in the Ordinal ($\tau\epsilon\tau\rho a$ - τos) and $\tau\epsilon\tau a\rho$ - τos), and most derivatives, as $\tau\epsilon\tau\rho\dot{a}$ - $\kappa\iota s$, $\tau\epsilon\tau\rho a$ - $\chi\theta\dot{a}$, $\tau\epsilon\tau\rho\dot{a}$ - $\varphi a\lambda os$ four-crested, &c. (but ep. $\tau\epsilon\sigma\sigma a\rho\dot{a}$ - $\beta o\iota os$ worth four oxen): also with loss of the first syllable in $\tau\rho\dot{a}$ - $\pi\epsilon\zeta a$.

The variation in the Stem of this Numeral has been fully discussed by Joh. Schmidt K.Z.xxv. p. 47 ff.). He shows that the Stem had three forms (§ 114*). The strong form is seen in Sanser. catràras, which would lead us to expect Greek * $\tau\epsilon\tau f\hat{\omega}\rho\epsilon$ s hence perhaps Dor. $\tau\epsilon\tau o\rho\epsilon$ s); the weakest in the Sanser. Ordinal tariya, for ktur-iya, in which the shortening affects both syllables, and the first is consequently lost. This weakest Stem appears in $\tau\rho v - \phi a\lambda\epsilon ua$ a four-ialged helmet, and is not derived from the form $\tau\epsilon\tau\rho\tilde{a}$. It probably fell into disuse owing to its unlikeness to $\tau\epsilon\sigma\sigma\alpha\rho\epsilon$ s; accordingly it has only survived in words in which the meaning 'four' had ceased to be felt.

The form $\pi i \sigma v \rho \epsilon s$ may be akin to Lesbian $\pi \epsilon \sigma \sigma v \rho \epsilon s$ or $\pi \epsilon \sigma v \rho \epsilon s$, but there is no decisive ground for regarding it as Æolic.

- 4. ὀκτώ, like δύω, is a Dual in form. The primitive ending -ωυ (Sanser. ashtāu) may be traced in ὄγδοος (ὄγδωΓ-ος, ὄγδωος, Lat. octāvus).
- 5. Under ἐννέα note the varieties ἔνα-τος and εἴνα-τος ninth, probably for ἐνΓα-τος; so εἰνά-κις, εἰνά-νυχες, εἰνά-ετες; also ἐνν-ημαρ (for ἐννέ-ημαρ), ἐννέ-ωρος of nine seasons, ἐννήκοντα (for ἐννε-ήκοντα, cp. τρι-ήκοντα, &c.) and ἐνενήκοντα—the last a form difficult to explain.

The numbers above ten are generally denoted by Compounds of the kind called Copulative (Sanscr. dvandva): δυώ-δεκα two and

ten.

The analogy of the Numerals ending in $-\ddot{\alpha}$ ($\xi\pi\tau\dot{\alpha}$, $\delta\epsilon\kappa a$, with the Stems $\tau\epsilon\tau\rho\dot{\alpha}$ -, $\epsilon\dot{\imath}\nu\dot{\alpha}$ -) has led to the use of $\ddot{\alpha}$ as a connecting vowel in Numerals generally; hence $\pi\epsilon\nu\tau\dot{\alpha}$ - $\epsilon\tau\epsilon$ s and $\dot{\epsilon}\xi\dot{\alpha}$ - $\epsilon\tau\epsilon$ s (Od. 3. 115), $\dot{\epsilon}\kappa\tau\dot{\alpha}$ - $\kappa\nu\eta\mu\sigma$ s, $\tau\epsilon\sigma\sigma\sigma\rho\dot{\alpha}$ - $\beta\sigma$ ios, $\dot{\epsilon}\epsilon\kappa\sigma\sigma\dot{\alpha}$ - $\beta\sigma$ ios. But inversely σ is found for $\ddot{\alpha}$ in $\pi\epsilon\nu\tau\eta\kappa\sigma\nu\tau\dot{\alpha}$ - $\gamma\nu\sigma$ s (II. 9. 579); ep. § 124, α .

CHAPTER VII.

USE OF THE CASES.

Introductory.

131.] The Case-Endings and Adverbial Endings serve (as has been said in § 90) to show the relation in which the words to which they are suffixed (Nouns, Pronouns, Adverbs, &c.) stand to the Verb of the Sentence.

This relation may be of three kinds:-

- 1. The Noun or Pronoun may express the Subject of the Verb: or rather (since a Subject is already given by the Person-Ending) it may qualify or define the Subject so given. E. g. in the sentence $\beta a \sigma \iota \lambda \epsilon \dot{\nu} s$ $\delta \delta \delta \omega \sigma \iota$ the-king he-gives $\beta a \sigma \iota \lambda \epsilon \dot{\nu} s$ explains the Subject given by the Ending $-\sigma \iota$.
- 2. The Noun &c. may qualify the Predicate given by the Stem of the Verb. E.g. in $\tau a \hat{v} \tau a \delta (\delta \omega \sigma \iota, \dot{\epsilon} \mu o) \delta (\delta \omega \sigma \iota, \kappa a \lambda \hat{\omega} s \delta (\delta \omega \sigma \iota, \dot{a} \pi o \delta (\delta \omega \sigma \iota) the Noun (Pronoun, Adverb, Preposition) qualifies the meaning expressed in the Stem <math>\delta \delta \omega$.

Constructions of these two kinds are found in Sentences which involve the addition of one word only to the Verb. Those of the second kind might be called 'Adverbial'—using the term in the widest sense, for a word construed with a Verb-Stem.

Note that a Nominative may be used 'adverbially': e.g. βασιλεύς ἐσ-τι may mean he-is king (as well as the king he-is). See § 162.

3. The Noun &c. may be connected with, and serve to qualify, another Noun or Adverbial word. E.g. in the sentences $\beta a\sigma \iota - \lambda \epsilon \omega s$ vides $\delta \ell \delta \omega \sigma \iota$, $K \ell \rho \sigma v \beta a \sigma \iota \lambda \epsilon \omega s$ is not connected with the Verb, but with a Noun.

If the former constructions are 'Adverbial,' these might be called 'Adnominal' or 'Adjectival.' The Sentences in which they are found must contain at least two words besides the Verb; they are therefore of a higher order of structure than the two former kinds.

From these relations, again, more complex forms of structure are derived in several ways, which it will be enough to indicate in the briefest manner.

A Verb compounded with a Preposition becomes for the purposes of construction a new Verb, with a syntax of its own.

Similarly, the phrase formed by a Verb and a Noun (Caseform or Adverb) may be equivalent in the construction to a single Verb, and may take a further Adverb, or govern Cases of Nouns accordingly. E. g. in κακὰ ῥέζει τινά he does evil to some

one the Acc. τινά is governed by the phrase κακὰ ρέζει: in τίεν τοα τέκεσσι honoured like his children the Dat. τέκεσσι is governed

by τίεν ίσα.

Again, the new Case-form or Adverb so 'governed' by a Verb and Noun may belong in sense to the Noun. Thus in the sentence $\mu \dot{\epsilon} \gamma' \, \dot{\epsilon} \dot{\xi} o \chi o s \, \dot{\epsilon} \pi \lambda \epsilon \tau o \, he \, is \, greatly \, eminent$, since $\dot{\epsilon} \dot{\xi} o \chi o s \, \dot{\epsilon} \pi \lambda \epsilon \tau o \, he \, is \, greatly \, eminent$, since $\dot{\epsilon} \dot{\xi} o \chi o s \, \dot{\epsilon} \sigma \lambda \epsilon \tau o \, he \, is \, greatly \, eminent$, since $\dot{\epsilon} \dot{\xi} o \chi o s \, \dot{\epsilon} \sigma \lambda c \, \dot{\epsilon} \lambda$

In a strictly scientific treatment of the Cases the various constructions with the Verb should come before the constructions with Nouns and Prepositions. Such a treatment, however, would have the inconvenience of frequently separating uses of the same Case which are intimately connected. E. g. the construction $\dot{\alpha}\lambda\gamma\epsilon\hat{i}\ \tau\dot{\eta}\nu\ \kappa\epsilon\phi\alpha\lambda\dot{\eta}\nu\ (2)$ cannot well be separated from the extension of the same construction in $\mu\dot{\epsilon}\gamma\alphas\ \dot{\epsilon}\sigma\tau\dot{l}\ \tau\dot{\delta}\ \sigma\hat{\omega}\mu\alpha\ (3)$. The Nominative, too, is used not only as the Subject, but also as the Predicate, or part of it. It will be best therefore to take the several Cases in succession, and to begin with the 'oblique' Cases.

The Accusative.

132.] Internal and External Object. The uses of the Accusative have been divided into those in which the Acc. repeats, with more or less modification, the meaning given by the Verb, and those in which the action of the Verb is limited or directed by an 'Object' wholly distinct from it. E. g. in the sentence $\tilde{\epsilon}\lambda\kappa$ os $\tilde{\delta}$ $\mu\epsilon$ o $\tilde{\nu}\tau a\sigma\epsilon$, lit. the wound which he wounded me, $\tilde{\delta}$ ($\tilde{\epsilon}\lambda\kappa$ os) qualifies o $\tilde{\nu}\tau a\sigma\epsilon$ by a word which expresses to some extent the same thing as the Verb o $\tilde{\nu}\tau a\sigma\epsilon$: whereas $\mu\epsilon$ qualifies it in a different way. As the latter kind of Acc. had been known as the Acc. of the External Object, so the former has more recently been termed the Acc. of the Internal Object. We shall take first the different uses which fall under the description of the 'Acc. of the Internal Object.'

The foundation of this division (as Delbrück observes, Synt. Forsch. iv. p. 29) is the circumstance that all Accusatives which

^{*} In later Greek Adverbs are constantly used to qualify substantives: as δ del $\beta a \sigma \iota \lambda \epsilon \dot{\nu} s$, δ $\pi \rho l \nu$ $\chi \rho \dot{\nu} \nu s$, &c. But this use only becomes possible when we have the Article to show how the Adverb is to be understood,

do not express the external Object of an action may be explained in nearly the same way. The real difficulty arises when we try to find a principle which will explain these different Accusatives and at the same time exclude the relations expressed by other Cases or Adverbial forms. No such principle can be laid down. The fact seems to be that the Accusative originally had a very wide 'Adverbial' use, which was encroached upon by the more specific uses of other Cases. The different constructions included under the 'Internal Object' have all the appearance of fragments of an earlier more elastic usage.

133.] Neuter Pronouns may be used in the Accusative 'adverbially,' i. e. to define the action of the Verb: as II. 1. 289 å τιν' οὐ πείσεσθαι ὀτω in which I think that some one will not obey; II. 14. 249 ἄλλο ἐπίνυσσεν gave another lesson; Od. 23. 24 τοῦτο ὀνήσει will do this benefit; Od. 10. 75 τόδ' ἰκάνεις comest as thou dost; II. 5. 827 μήτε σύ γ' Άρηα τό γε δείδιθι fear not Ares as to this; τόδε χώεο be angry at this; τάδε μαίνεται does these mad things (=is mad with these acts).

This use includes the Adverbial $\tau \ell$ why? (e.g. $\tau \ell$ $\mathring{\eta}\lambda\theta$ es in regard to what have you come? = what means your coming?): $\tau \acute{o}$ therefore (§ 262, 3), \acute{o} , $\acute{o}\tau \iota$ because, that (§ 269): $\tau \iota$ in any way, oddév not at all, $\mathring{a}\mu\phi\acute{o}\tau\epsilon\rho\sigma\nu$ for both reasons (II. 7. 418), $\delta o\iota \acute{a}$ in two ways (Od. 2. 46), $\pi \acute{a}\nu\tau a$ altogether, &c.; also the combination of Pronoun and Adverb in $\tau \acute{o}$ $\pi\rho\ell\nu$, $\tau \acute{o}$ $\pi\acute{a}\rho\sigma$ s, &c. the

time before (see § 260, b).

134.] Neuter Adjectives are often used in this way; as εὐρὺ ρέει flows in a broad stream, ὀξέα κεκληγώς uttering shrill cries; so πρῶτον, πρῶτα in the first place, πολύ, πολλόν, πολλά much, μέγα greatly, ὀλίγον, τυτθόν little, ἴσον, ἴσα equally; ὅσον, τόσον, τοῖον; ἀντίον, ἐναντίον; ὕστερον, ὕστατα, μᾶλλον, μάλιστα, ἄσσον, ἄγχιστα; εῦ (Neut. of ἠΰς or ἐΰς), ἡδύ, δεινόν, δεινά, αἰνά, καλόν, καλά, πυκνά, μακρά, ἀδινά, βαρύ, βαρέα, ὀξύ, ταρφέα, ὑπέρμορα, ἐνδέξια, ὅχα, ἔξοχα; and many more.

In general there is no difference perceptible between the Neut. Sing. and Neut. Plur. But compare τυτθόν for a little space,

and τυτθά κεάσαι split into little pieces (Od. 12. 388).

Note the combination of Pronoun and Adjective in τὸ πρῶτον, τὰ πρῶτα, τὸ τρίτον, τὸ τέταρτον: also in τὰ ἄλλα in other respects.

This construction is very common in Homer, and may almost be said to be the usual Homeric mode of forming an Adverb. It has been already observed that Adverbs in -ws are comparatively rare in Homer (§ 110).

is construed with a Substantive in the Acc. of 'cognate' form,

or at least of equivalent meaning.

A Cognate Acc. is generally used to introduce the Adjective or Pronoun which really qualifies or defines the predication contained in the Verb: e.g. ἄπρηκτον πόλεμον πολεμίζειν to wage a war without result (cp. the adverbial use of a Neut. Adj. in δλληκτον πολεμίζειν to war without ceasing); ὅς κεν ἀρίστην βουλὴν βουλεύση who shall give the best counsel (= ἄριστα βουλεύση); ἐφίλει παιτοίην φιλότητα treated with all manner of love; lέναι την αὐτὴν ὁδόν to go the same way. So ἐπί-κλησιν καλέουσι call by way of surname: and with a Noun in the Plural, βουλὰς βουλεύειν to give counsel (from time to time); δάσσαιτο μοίρας divided into the several shares; αἰχμὰς αἰχμάσσουσι νεώτεροι (with repetition for the sake of emphasis), &c.

With a Pronoun referring to a cognate Noun; λώβης... ην ἐμὲ λωβήσασθε, ἔλκος ὅ με βροτὸς οὕτασεν, ὑπόσχεσις ην περ ὑπέ-

στην, &c.

136.] Other Adverbial Accusatives. The following uses may be placed here as more or less analogous to the Cognate Accusative:

(1) Substantives expressing a particular sphere or kind of the

action denoted by the Verb: as-

II. 6. 292 ήγαγε Σιδονίηθεν . . τὴν ὁδὸν ἡν Ἑλένην περ ἀνήγαγε the voyage on which he brought back Helen: (cp. Od. 6. 164 ήλθον γὰρ καὶ κεῖσε . . τὴν ὁδὸν ἢ δὴ κτλ.); so ὁδὸν οἴχεσθαι, ὁδὸν ἡγήσασθαι to lead on the way; and again ἐξεσίην ἐλθεῖν to go on an expedition (and in Od. 21. 20 ἐξεσίην πολλὴν ὁδὸν ἢλθεν went a long way on an expedition), ἀγγελίην ἐλθόντα going on a mes*age; βουλὰς ἐξάρχων ἀγαθάς taking the lead in good counsels; Od. 8. 23 ἀέθλους . . τοὺς . . ἐπειρήσαντ' 'Οδυσῆος; Od. 19. 393 οὐλὴν τήν ποτέ μιν σῦς ἤλασε. So δαινύντα γάμον holding a wedding-feast, δαίνν τάφον gave a funeral feast (whereas the cognate δαίτην δαινυμένους means holding an ordinary feast); ξυνάγωμεν ''Αρηα let us join battle, ἔριδα ῥήγνυντο βαρεῖαν broke in grievous strife.

So probably we should explain II. 1. 31 ἐμὸν λέχος ἀντιόωσαν, like II. 15. 33 φιλότης τε καὶ εὐνὴ ῆν ἐμίγης (cp. Pind. N. 1. 67 ὅταν θεοὶ . . γιγάντεσσιν μάχαν ἀντιάζωσι). Also Od. 6. 259 ὄφρ' ἃν μέν κ' ἀγροὺς ἴομεν καὶ ἔργ' ἀνθρώπων 80 long as our way is

through fields and tillage of men, - appous = obov ev appois.

Note that this construction is chiefly applied to the familiar spheres of action—battle, council, feasting, &c.

(2) Abstract Nouns expressing an attribute of the action.
 Il. 9. 115 οῦ τι ψεῦδος ἐμὰς ἄτας κατέλεξας with no falsehood

hast thou recounted my folly : Od. 7. 297 ταῦτά τοι . . ἀληθείην κατέλεξα.

So δέμας (in phrases like δέμας πυρός like fire), and the Adverbs ἄκην, ἄδην, λίην, with many others (see § 110), are originally the Accusatives of Abstract Nouns.

Add the poetical expressions such as πῦρ ὀφθαλμοῖσι δεδορκώς with look of fire, μένεα πνείοντες breathing martial fury.

The phrase $π\hat{ν}ρ$ δεδορκών is a boldness of language (compared e.g. with δεινλν δερκώμενοι) analogous to that which we observed in Compounds such as ἀελλόπον with storm-(like) feet, as compared with ἀκύ-ποδες, &c.; see § 126.

(3) The words έργον, έπος, μῦθος, with Pronouns, are used

nearly as the Neuter of the same Pronouns: as-

II. 1. 294 πᾶν ἔργον ὑπείξομαι I shall yield in every matter (πᾶν ἔργον = πάντα): 5. 757 οὐ νεμεσίζη *Αρει τάδε καρτερὰ ἔργα (constr. like τόδε χώεο); cp. 9. 374.

Od. 3. 243 έπος άλλο μεταλλησαι to ask another question.

II. 5. 715 ή ρ' άλιον τὸν μῦθον ὑπέστημεν our promise was idle.

(4) Words expressing the sum or result of an action are put in the Acc.; as II. 4. 207 ξβαλεν...τῷ μὲν κλέος ἄμμι δὲ πένθος;
24. 735 ῥίψει χειρὸς ἐλὼν ἀπὸ πύργου λυγρὸν ὅλεθρον: Od. 6. 184.
So ποινήν in compensation, πρόφασιν on the pretence, ἐπίκλησιν nominally, χάριν as a favour (only in II. 15. 744).

The use of Substantives to qualify a Verb evidently bears the same relation to the use of Neut. Adjectives as Nouns in Appo-

sition bear to ordinary Adjectives qualifying Nouns.

Note. Many of these constructions have been treated as varieties or extensions of the 'Cognate Accusative.' Ε.g. from δδον ἐλθεῖν have been explained, on the one hand, όδον ἡγήσασθαι, όδον ἀνήγαγε, &c., on the other, άγγελίην έλθεῖν, &c.; so δαίνυντο γάμον, δαίνυ τάφον, have been regarded as modelled on δαίτην δαίνυσθαι; μῦθον ὑπέστημεν as justified because a promise is a μῦθος, ψεῦδος κατέλεξας because ψεῦδος = a false tale, and so on. It must not be supposed, however, that these analogies explain any of the uses in question, or that the 'Cognate' Acc. is prior to the others, either in simplicity or in the order of development. If we compare the Cognate Acc. with the use of Neuter Adjectives and Pronouns, we see that (e.g.) ἄριστα βουλεύειν is simpler, and doubtless earlier in type, than ἀρίστην βουλήν βουλεύειν, ἄ περ ὑπέστην than ύπόσχεσιν ήν περ ὑπέστην, τὰ ὑπέστημεν than τὸν μῦθον ὑπέστημεν. δαίνυσθαι γάμον is probably an earlier phrase than the tautologous δαίνυσθαι δαίτην, τὸν μῦθον ὑποστῆναι than ὑπόσχεσιν ὑποστῆναι, &c. The repetition in the Noun of the Stem already given in the Verb is a feature of complexity which itself needs explaining. The Cognate Acc., in short, is only a special form of the use of the Acc. as a defining or qualifying word. Grammarians have explained other constructions by its help because it is familiar; but in so doing they have fallen into the error of deriving the simple from the complex.

137.] Accusatives of the 'part affected.' Many verbs that are Intransitive or Reflexive in sense take an Acc. restricting

the force of the Verb to a part or attribute of the subject: as $\kappa \dot{\alpha} \mu \nu \epsilon \iota \chi \dot{\epsilon} \hat{\iota} \rho a \ his \ hand \ is weary, \pi \nu \rho \iota \chi \dot{\epsilon} \hat{\iota} \rho as \ \dot{\epsilon} \circ \iota \kappa \epsilon \ his \ hands \ are \ as \ fire, \beta \lambda \hat{\eta} \tau \circ \kappa r \dot{\eta} \mu \eta \nu \ was \ wounded \ in \ the \ shin, \dot{a} \lambda \lambda \dot{a} \omega \nu \ \pi \dot{\epsilon} \rho \dot{\epsilon} \iota \iota \mu \ \nu \dot{o} \circ \nu \ I$ am beyond others in understanding; $\dot{\phi} \rho \dot{\epsilon} \nu a \ \tau \dot{\epsilon} \rho \pi \dot{\epsilon} \tau'$ $\dot{a} \kappa \dot{o} \dot{\omega} \dot{\nu} \nu \ was \ pleased \ at \ heart \ listening; où \lambda \hat{\eta} \gamma \dot{\epsilon} \ \mu \dot{\epsilon} \nu os \ ceased \ not \ in \ his \ fury; \gamma \dot{\epsilon} \nu \circ s \ \delta' \dot{\eta} \nu \ \dot{\epsilon} \kappa \ \pi \sigma \tau a \mu o io \ in \ descent \ he \ was \ from \ the \ river, \gamma \dot{\epsilon} \nu \dot{\epsilon} \dot{\nu} \kappa \dot{\epsilon} \iota \ (Il. \ 14. \ 474) \ was \ like \ in \ descent, \ i. e. \ bore 'a \ family \ likeness'; <math>\dot{a} \theta a \nu \dot{a} \tau \dot{\eta} \sigma \iota \ \delta \dot{\epsilon} \mu as \ \kappa \dot{a} \dot{\epsilon} \dot{\delta} \dot{\delta} os \ \dot{\epsilon} \rho \dot{\iota} \dot{\zeta} \dot{\epsilon} \iota \nu \ to \ rival \ the \ immortals \ in$

form and feature. See § 141.

These uses differ from other Accusatives of the sphere of an action in the distinctly concrete nature of the words employed. The Acc. does not express the notion of the Verb, or an attribute of it, but merely denotes a thing by reference to which it is limited or characterised. Thus in $\kappa \acute{a}\mu\nu\epsilon\iota$ $\chi \epsilon \acute{i}\rho a$ the Acc. limits the action $\kappa \acute{a}\mu\nu\epsilon\iota$ —'feels hand-weariness.' The relation is local or instrumental, though not so expressed. The meaning 'in or with the hand' is conveyed, because it is the only one possible—the only way in which the notion hand can qualify the notion weariness.

The 'Acc. of the part affected,' or 'Acc. of reference,' is characteristic of Greek: hence it is called Accusativus Graecus by the Latin grammarians. It is unknown, or nearly so, in Sanserit. We cannot infer, however, that it originated with the Greeks, especially as it is found in Zend (Delbrück, Synt. Forsch. iv. 33): but it may have been extended in Greek. The alternative Case is generally the Instrumental: cp. Il. 3. 194 εὐρύτερος ὤμοισιν ἰδὲ στέρνοισιν ἰδέσθαι, but 2. 478 ὅμματα καὶ κεφαλὴν ἵκελος Διί. Or the sense may be further defined by a Preposition: πρὸς στῆθος, κατὰ φρένα, &c.

138.] Accusative of Time and Space. The word expressing duration of time is put in the Acc., as ξva $\mu \hat{\eta} va$ $\mu \hat{\epsilon} v\omega v$ waiting a month, $\chi \hat{\epsilon} \hat{\iota} \mu a$ $\hat{\epsilon} \hat{v} \delta \hat{\epsilon} \iota$ sleeps through the winter, $\tau \rho \hat{\iota} s$ $\hat{a} v \hat{a} \xi a \sigma \theta a \iota \gamma \hat{\epsilon} v \hat{\epsilon}$ $\hat{a} v \hat{\delta} \rho \hat{\omega} v$ to reign for three generations of men.

The Accusative of Space expresses the extent of an action, as

Il. 23. 529 λείπετο δουρός έρωήν was a spear's throw behind.

These Accusatives are to be compared with the Neuter Adjectives of quantity, as πολύ, ὀλίγον, τυτθόν, τόσον, &c.

139.] Accusative with Nouns. The chief uses are:—

- (1) Neut. Adjectives, as μέγ' έξοχος greatly surpassing.
- (2) Cognate Accusative, as Il. 15. 641 ἀμείνων παντοίας ἀρετάς better in every kind of excellence. This is rare in Homer.
- (3) Acc. of the 'part affected'; ὅμματα καὶ κεφαλὴν ἴκελος like in eyes and head, (cp. χεῖρας ἔοικε), βοὴν ἀγαθός good in shouting,

γένος κακὸς καὶ ἄναλκις a coward by right of descent. With a Substantive: χ εῖράς τ αl χ μητὴν ἔμεναι.

- 140.] Accusative of the External Object. Under this head it is unnecessary to do more than notice one or two points:—
- (1) The ceremonial words $\mathring{a}\pi \acute{a}\rho\chi\omega$, $\kappa a\tau \acute{a}\rho\chi o\mu a\iota$, &c. are construed according to the acquired meaning: as $\tau \rho \iota \chi as \mathring{a}\pi \acute{a}\rho\chi\epsilon\iota\nu$ to cut off hair as a preliminary, ep. Od. 3. 445 (with the note in Riddell and Merry's edition). So II. 24. 710 $\tau \acute{o}\nu$. $\tau \iota \lambda \lambda \acute{e}\sigma \theta \eta\nu$ mourned him by tearing their hair: and $\mathring{o}\rho\kappa\iota a$ $\tau \acute{e}\mu\nu\epsilon\iota\nu$ to make a treaty (by slaying a victim).
- (2) The Verbs εἶπον, αὐδάω, &c. may take an Acc. of the person spoken to: Il. 5. 170 ἔπος τέ μιν ἀντίον ηὕδα: Il. 13. 725 Πουλυδάμας θρασὺν Ἦκτορα εἶπε. Cp. Il. 9. 59., 17. 651, Od. 4. 155. But this construction is rare with the simple Verbs: it is found passim with Compounds (προσηύδα, προσέειπε, &c.).
- (3) An Acc. may be used of the person about whom something is told, known, thought, &c.—
- (a) If a person or a thing is treated as the thing said, known, &c. (not merely spoken or known about): as II. 1. 90 οὐδ' ἢν ᾿Αγαμέμνονα εἴπης not even if you say Agamemnon (cp. οὖνομα εἶπεῖν); 3. 192 εἴπ' ἄγε μοι καὶ τόνδε tell me this man too. So with οἶδα when it means only to know what a thing is: as II. 6. 150 ὄφρ' ἐψ εἰδης ἡμετέρην γενεήν, πολλοὶ δέ μιν ἄνδρες ἴσασιν: and with μέμνημαι, as II. 9. 527 μέμνημαι τόδε ἔργον; II. 23. 361 ὡς μεμνέφτο δρόμους that he might remember the courses (i.e. remember how many there were); II. 6. 222 Τυδέα δ' οὐ μέμνημαι (of remembering his existence). The Acc. implies that the person is the whole fact remembered. But with a Gen. μέμνημαι means I remember something about, I bethink myself of (§ 151, d).
- (b) If the real Object of the Verb is a fact expressed by a limiting word or clause: as II. 2. 81 ψεῦδός κεν φαῖμεν we should call it false; II. 6. 50 αἴ κεν ἐμὲ ζωὸν πεπύθοιτο if he heard of me alive (of my being alive); II. 5. 702 ἐπύθοντο μετὰ Τρώεσσιν Ἄρηα heard of Ares (as) among the Trojans. Especially with a Participle, as Od. 17. 549 εἴ κ' αὐτὸν γνώω νημερτέα πάντ' ἐνέποντα if I find him telling (that he is telling) nothing but truth (§ 245, 2). And with a subordinate clause, as II. 2. 409 ἤδεε γὰρ κατὰ θυμὸν ἀδελφεὸν ὡς ἐπονεῖτο; II. 8. 535 αὔριον ἡν ἀρετὴν διαείσεται εἴ κ' ἐμὸν ἔγχος μείνη ἐπερχόμενον he will know about his valour, whether he will withstand my spear (i.e. whether his valour is such that &c.); cp. 13. 275., 18. 601., 20. 311.
- (4) The Acc. of the object to which motion is directed (terminus ad quem) is common with ἰκνέομαι, ἵκω, ἰκάνω (which always

imply reaching a point), but is comparatively rare with other simple Verbs, such as $\epsilon \tilde{\iota} \mu \iota$, $\tilde{\epsilon} \rho \chi o \mu a \iota$, $\nu \acute{\epsilon} o \mu a \iota$, $\tilde{a} \gamma \omega$, $\tilde{\eta} \gamma \acute{\epsilon} o \mu a \iota$. The words so used with these Verbs are mostly Nouns denoting house (δω, Il. 7. 363, &c.; δόμον, Od. 7. 22, Il. 22. 482; οἶκον, Od. 14. 167), city (Od. 6. 114., 15. 82), native land (Il. 7. 335., 15. 706): cp. also Il. 1. 322 $\tilde{\epsilon} \rho \chi \epsilon \sigma \theta o \nu \kappa \lambda \iota \sigma (\tilde{\eta} \nu)$; 6. 87 ξυνάγουσα γεραιὰς νηόν; 21. 40 Λ $\tilde{\eta} \mu \nu o \nu \dot{\epsilon} \pi \acute{\epsilon} \rho \alpha \sigma \sigma \epsilon \nu$; Od. 4. 478 Αλγύπτοιο ὕδωρ $\tilde{\epsilon} \lambda \theta \eta s$.

Compound Verbs—esp. with the Prepositions εls, ἐπί, πρός, ὑπό,

παρά—usually take an Acc. of this kind,

There is no reason to infer from these and similar instances that the Accusative is originally the Case of the terminus ad quem. It is natural that a Verb of motion should be defined or qualified by a Noun expressing place, and that such a Noun should generally denote the place to which the motion is directed. But this is not necessary. The Acc. is used with Verbs denoting motion from, as φεύγω, νοσφίζομαι, ὑποείκω (Il. 15. 228); and even with other Verbs of motion it may express the terminus a quo if the context suggests it, as ἀνεδύσετο κῦμα rose from the wave, ὑπερώϊα κατέβαινε came down from the upper chambers.

The uses with Prepositions are treated of in the sections dealing with the several Prepositions (181-218).

141. Double Accusatives. It is needless to enumerate the different circumstances in which a Verb may be construed with two Accusatives. Many examples will be found among the passages already quoted; and it will be seen that the combination of an Acc. of the External Object with one of the various 'Accusatives of the Internal Object' is especially frequent. Thus with Verbs of saying the Acc. of the thing said may be combined with an Acc. of the person spoken to: as Il. 5. 170 έπος τέ μιν αντίον ηύδα (so 9. 58., 16. 207, Od. 23. 91). Again, with Verbs of taking away there may be an Acc. of the thing taken and the person from whom it is taken: as Il, 8. 108 οῦς ποτ' ἀπ' Αἰνείαν έλόμην, ΙΙ. 6. 70 έπειτα δε και τὰ έκηλοι νεκρούς αμ πεδίον συλήσετε (cp. 16. 58., 17. 187). So with Verbs of cleansing; Il. 16. 667 κελαινεφες αίμα κάθηρον έλθων εκ βελέων Σαρπηδόνα (cp. 18. 345); also Od. 6. 224 χρόα νίζετο δίος 'Οδυσσεύς άλμην, and (with three Accusatives) Il. 21. 122 οί σ' ωτειλήν αίμ' απολιχμήσονται. such cases the Verb almost seems to be used in different senses cleanse Sarpedon, cleanse away the blood, &c.

In some cases the two Accusatives are not to be explained independently, but one is construed with the phrase formed by the Verb in combination with the other. Thus we cannot say ρέζειν τινά to do to a person, but we may have κακὸν ρέζειν τινά to

do evil to a person or thing: e.g. - Made 25.3

II. 9. 540 δε κακὰ πόλλ' ἔρδεσκεν ἔθων Οἰνῆος ἀλωήν. 647 ὥε μ' ἀσύφηλον ἐν ᾿Αργείοισιν ἔρεξεν. The notion 'doing' given by $\hat{\rho} \epsilon \zeta \omega$ is so vague that an Acc. of the person would be ambiguous: but the more definite notions of doing evil, &c. become susceptible of the construction. So with $\epsilon l \pi \epsilon l \nu$, as Od. 1. 302 $l \nu a \tau l s$ $\sigma \epsilon \epsilon l \epsilon l \pi \eta$ may speak well of thee:

cp. Il. 6. 479.

A similar account is to be given of the 'Accusative of the Whole and Part,' which is very common in Homer; e.g. $\tau \delta \nu$ $\beta \delta \lambda \epsilon \kappa \nu \eta \mu \eta \nu him$ he smote on the shin, $\sigma \epsilon \delta \nu \nu \epsilon \nu \epsilon \nu \epsilon \delta \delta \delta \nu \tau \omega \nu has$ escaped you over the fence of teeth. The second Acc. has been sometimes explained as parallel in construction to the first, the part being added 'epexegetically' or in 'Apposition' to the whole. But it is impossible to separate $\tau \delta \nu \beta \delta \lambda \epsilon \kappa \nu \eta \mu \eta \nu$ from $\beta \lambda \hat{\eta} \tau \sigma \kappa \nu \eta \mu \eta \nu$: in both the Acc. of the part is a limiting Accusative. The difference between this and a double Acc. arising from Apposition appears if we consider that

Τρῶας δὲ τρόμος αἰνὸς ὑπήλυθε γυῖα ἔκαστον is equivalent to Τρῶες ἔτρεμον τὰ γυῖα ἕκαστος, where ἕκαστος is (as before) epexegetic of Τρῶες, but γυῖα is an Acc. qualifying the Verb.

The Dative.

- 142.] Comparison of the Case-system of Greek with that of Sanscrit shows that the Greek Dative does the work of three Sanscrit Cases, the Dative, the Instrumental, and the Locative. There is also reason to think that distinct forms for these three Cases survived down to a comparatively late period in Greek itself. This is made probable (1) by the traces in Homeric Greek of Instrumental and Locative Case-forms, and (2) by the readiness with which the uses of the Greek Dative (especially in Homer) can be re-apportioned between the three Cases—the original or true Dative, and the two others.
- 143.] The true Dative expresses the person to or for whom something is done, or who is regarded as chiefly affected or interested: e.g.—

II. 1. 283 'Αχιλληϊ μεθέμεν χόλον to put away his anger for (in

favour of) Achilles; ep. Od. 11. 553.

Od. 1. 9 τοισιν ἀφείλετο took away for (i. e. from) them.

Il. 21. 360 τί μοι ξριδος καὶ ἀρωγῆς; what is there for me (that concerns me) in strife and help?

Od. 7. 303 μή μοι τούνεκ' αμύμονα νείκεε κούρην chide not for me

on that account the blameless maiden; cp. Il. 14. 501.

Od. 9. 42 ώς μή τίς μοι ἀτεμβόμενος κίοι ἴσης that for me no one should go away wronged (i. e. that I might see that no one &c.).

II. 1. 250 τῷ δύο γενεαὶ ἐφθίατο he had seen two generations pass.

Il. 12. 374 ἐπειγομένοισι δ' ἵκοντο they came for them when hard pressed, i.e. their coming was (what such a thing is) to hard pressed men. So Il. 14. 108 ἐμοὶ δέ κεν ἀσμένφ εἴη it would be for me when welcoming it, i.e. would be what I welcome: Od. 21. 115 οὕ κέ μοι ἀχνυμένφ κτλ.

The Dat. with Verbs of giving, showing, telling (a fact), praying, helping, pleasing, favouring, being angry, &c., and the corresponding

Adjectives ($\phi i \lambda o s$, $\epsilon \chi \theta \rho o s$, &c.), is evidently of this kind.

The so-called *Dativus commodi*, 'Ethical Dative,' &c. need not be separated from the general usage. Note however that—

- 1. The Dative of the Personal Pronouns is very often used where we should have a Possessive agreeing with a Noun in the Clause; as Il. 1. 104 ὅσσε δέ οἱ πυρὶ ἐἰκτην his eyes were like fire; Od. 2. 50 μητέρι μοι μνηστῆρες ἐπέχραον the suitors have assailed my mother; so Il. 1. 55, 150, 188, 200, &c.
- 2. δέχομαι with the Dat. means to take as a favour: Il. 15. 87 Θέμιστι δέκτο δέπας accepted the cup from Themis (as a compliment); or to take as an attendant does, Il. 2. 186., 13. 710., 17. 207, Od. 15. 282. For the Gen. see § 152.
- 3. ἀκούω with the Dat. means to hear favourably; Il. 16. 515 ἀκούειν ἀνέρι κηδομένω; and so κλύθί μοι in prayers (Il. 5. 115, Od. 2. 262). See § 151, d.
 - 4. The Dat. with Verbs meaning to give commands (κελεύω, σημαίνω, &c.), and to lead the way (ἄρχω, ἡγέομαι, ἡγεμονεύω) is apparently the true Dat. But this does not apply to Verbs meaning to have power, to be king (as κρατέω, ἀνάσσω): e.g. ἀνασσέμεν ᾿Αργείοισι probably means to be king among the Argives (Loc.). See § 145 (7, a).
 - 5. The 'Dat. of the Agent' with Passive Verbs seems to be a special application of the true Dat.; cp. II. 13. 168 ő οἱ κλισίηφι λέλειπτο which for him was (=which he had) left in the tent, ἔχεθ' Ἑκτορι was had as wife by Hector. So Τρωσὶν δαμναμένους, Πηλείωνι δαμείς, &c. because the victory is gained by the victor; and so in Attic, ἤθροίσθη Κύρφ τὸ Ἑλληνικόν 'Cyrus got his Greek force collected.' The restriction to Past Tenses is intelligible, because the past fact is thought of as a kind of possession or advantage (cp. the English auxiliary have of past events). This view is strongly supported by the Latin Dat. of the Agent, which is not common except with Verbals and Past Participles (Roby, § 1146). Evidently nobis facienda='things for us to do,' nobis facta='things we have got done.'

The true Dat. of Nouns denoting things is rare in Greek (perhaps only used when the thing is regarded as an agent, or

stands for a person, as Πριάμοιο βίη for Πρίαμος).

In this respect Latin offers a marked contrast; cp. the various uses, especially of abstract Substantives, explained by Mr. Roby under the headings 'indirect object' (1143, n. 11), 'work contemplated' (1156), 'predicative dative' (1158 ff.). The source of the difference evidently is that the Datis not liable, as in Greek, to be confounded with the Loc. and Instrum. It will be seen however that the Greek Infinitive is in fact the Dat. of an abstract Substantive.

144.] The Instrumental Dative. The so-called Instrumental Case appears to have been employed to express whatever accompanies or shares in an action:—not only the instrument or cause, but any attendant object or circumstance. Hence it covers the ground of the Datives of 'circumstance,' 'manner,' &c.

κερδοσύνη in his cunning; γενεή by descent.

In Homer it often expresses the reason or occasion (for which Madds 4/διά with the Acc. is regular in later Greek): Od. 3. 363 φιλότητι ξπονται accompany out of friendship (propter amorem); Od. 9. 19 δε πασι δόλοισιν ἀνθρώποισι μέλω who am regarded by men for my craft (cp. 13. 299); Il. 16. 628 ὀνειδείοιε ἐπέεσσι χωρήσουσι will give way for reviling words; Od. 14. 206 τίετο . . ὅλβω τε πλούτω τε καὶ νίάσι; Od. 17. 423 οἷσίν τ' εὖ ζώουσι καὶ ἀφνειοὶ καλέονται things because of which men live well and are called opulent. So of an almost personal agent, Od. 14. 299 ἡ δ' ἔθεεν Βορέη ἀνέμω the ship coursed on with (driven by) the North wind.

The 'comitative' or 'sociative' sense is chiefly found in the Made 42 Plural, which denotes attendants, surroundings, adjuncts, &c.; Il. 18. 506 τοίσιν ἔπειτ' ἤϊσσον with these (the sceptres) they started up; Od. 4.8 ίπποισι καὶ άρμασι πέμπε sent with horses and chariots (cp. 4. 533); Od. 11. 161 νηί τε καὶ ετάροισι with a ship and comrades; Il. 12. 28 κύμασι πέμπε let go with the waves; Il. 2. 818 μεμαότες εγχείησι ardent with their spears; Il. 6. 243 ξεστής αλθούσησι τετυγμένον built with smooth porticoes (cp. Od. 9. 185, &c.): Îl. 2. 148 ἐπί τ' ἡμύει ἀσταχύεσσι bends forward with the ears (of a field of corn): Il. 6. 513 τεύχεσι παμφαίνων glittering with his armour; similarly 11. 100 στήθεσι παμφαίνοντας shining with (naked) breasts. For the corresponding Sing. cp. Od. 10. 140 vnt κατηγαγόμεσθα; Od. 9. 68 ἐπῶρσ' ἄνεμον Βορέην λαίλαπι θεσπεσίη; Od. 12. 242 ύπένερθε δε γαία φάνεσκε ψάμμω κυανέη the ground showed beneath with its dark sand; Il. 15. 282 ἐπιστάμενος ἄκουτι.

This Dative is idiomatically used with αὐτός: as II. 8. 24 αὐτῆ κεν γαίη ἐρύσαιμ' αὐτῆ δὲ θαλάσση with the earth and sea as well

(without their losing hold): Od. 14. 77 θέρμ' αὐτοῖς δβελοῖσι hot

with the spits as they were *.

The Dative with Verbs meaning to be with, to follow, to join, to agree with, to be like, &c., and again with the Prepositions σύν and ãµa, and the various Pronouns and Adjectives meaning the same, equal, like, &c., is generally Instrumental.

The Dat. with Verbs meaning to fight, strive, &c. may be the Instrumental or (more probably) the true Dat. Words meaning to trust &c. probably take an Instrumental Dat. of the ground of trust, a true Dat. of the person trusted or obeyed: cp. the Lat.

construction of confidere with a Dat. or Abl.

With Verbs meaning to be pleased the Dat. is doubtless Instrumental: as II. 21. 45 ἐτέρπετο οἶσι φίλοισι had pleasure with his friends (so Od. 14. 245). This is still more clear in II. 5. 682 χάρη δ' ἄρα οἷ προσιόντι and II. 23. 556 χαίρων 'Αντιλόχω ὅτι κτλ. 'rejoiced at the fact (of his coming, &c.).'

The Instrum. is used in Sanscrit of the space over which action extends. The nearest approach to this in Greek is the Dat. of the way by which: ep. the Adverbs \hat{y}_i , $\tau \hat{y}_i$, $\tau \hat{y}_i \delta \epsilon$, $\pi \hat{y}_i$, $\delta \pi \eta$, $\pi \delta \nu \tau \eta$.

But see § 158, note.

The Dat. is probably Instrumental (not Locative) in Od. 1. 197 κατερύκεται εὐρέϊ πόντφ (by, not on, the sea). Also with δέχομαι, &c., as Il. 6. 136 ὑπεδέξατο κόλπφ, Od. 16. 70 ὑποδέξομαι οἴκφ. In later Greek δέχομαι is construed with οἴκφ, πόλει, &c. without a Preposition.

Note the occasional use of the Instrumental Dat. with Verbs of buying, as II. 7. 475 οἰνίζοντο ἄλλοι μὲν χαλκῷ κτλ., Od. 15. 483 πρίατο κτεάτεσσιν ἑοῖσιν (ep. II. 4. 161 σύν τε μεγάλφ ἀπέτισαν): with Verbs of abounding, II. 17. 56 βρύει ἄνθεϊ λευκῷ (§ 151, e):

^{*} Delbrück (Synt. Forsch. iv. p. 58) notices the difficulty of finding a special explanation of the 'sociative' use of the Dat. in combination with abros. It may help towards such an explanation to observe that the use of a Case-form in a particular sense not unfrequently depends upon the presence of a qualifying word in agreement with it. E. g.—

έμοι βουλομένφ ἐστί it is for me what I desire, τοίχου τοῦ ἐτέρου by the wall on the other side. μέσσου δουρός ἐλών taking the spear by the middle.

εί τεθνεώτος ἀκούσαι if he were to hear of his being dead.

ἥχθετο Τρωσὶν δαμναμένουs he was rexed at their being subdued by Trojans. In each of these instances the qualifying word indicates the sense in which the Case is used, and so makes the use possible. The 'ethical Dat.' is suggested by βουλομένω, the Gen. of place by ἐτέρου, the Gen. of part by μέσσου, the fact about the person by τεθνεῶτος, the cause of feeling by δαμναμένους. Now, in such a phrase as αὐτοῖς ἐβελοῖσι spits and all, the force of αὐτός is 'without change,' 'as before,' and so the phrase means with the meat sticking to the spits as before (cp. αὐτως, αὐτοῦ, αὖθε). Thus the sociative sense is emphasised by the addition of αὐτοῖς. Without such an addition there would generally be nothing to decide between the different possible meanings of the Dative, and consequently a Preposition (σύν or ἄμα) would be needed.

also with a Verb of 'cognate' meaning, as θάνον οἰκτίστω θανάτω (Od. 11. 412), ῥέον ὕδατι (Od. 5. 70).

- 145.] The Locatival Dative. The Dative without a Preposition denoting the *place* of an action is much commoner in Homer than in later Greek, though already restricted to a comparatively narrow range. It is used—
- (1) Of towns and countries: Ἰλίφ εἰσί are in Ilios, Φρυγίη ναίεσκε dwelt in Phrygia: so Οὐλύμπφ, Λακεδαίμονι, Δήλφ. Σχερίη, Κυθήροισι, Θήβη, Κρήτη, Ἄργεϊ, Ἑλλάδι, &c. So too Ἄϊδι.
- (2) Of the great divisions of the world, the chief spheres of action, &c., as alθέρι, οὐρανῷ, οὔρεσι, ἀγρῷ afield, δόμφ in the house, νομῷ at pasture, πόντφ out at sea, alγιαλῷ on the shore, χέρσφ on dry land (II. 4. 424–5), οὕδει on the ground, πεδίφ, χθονί; χορῷ at the dance, μάχη, βουλῆ, ἀγορῆ, τραπέζη at table (Od. 21. 35), σέλαι πυρόs in the fire light.

But the Dat. in ἔριδι ξυνέηκε μάχεσθαι (II. 1. 8), ὕσμῖνι μάχεσθαι (II. 2. 863), &c. is one of manner (Instr.), rather than of

place.

(3) Of the parts of a thing, especially of the body; ὅμφ and ὅμοισι, κεφαλῆ, χροτ'; καρδίη, φρεσί, θυμῷ; ἀκροτάτη κορυφῆ, ἐσχατίη πολέμοιο, μύχφ ᾿Αργεος (θαλάμοιο, &c.), μέσφ ἔρκεϊ, πρώτησι πύλησι, γουνῷ ἀλωῆς, βένθεσι λίμνης, τάρφεσιν ὕλης, &c.

- (4) With some Verbs that imply locality, ναίω, τίθημι, κείμαι, ημαι (Od. 20. 22 πτυχὶ Οὐλύμποιο ημενος); esp. κλίνω, as Il. 11. 371 στήλη κεκλιμένος, and (in the derived sense) Il. 5. 709 λίμνη κεκλιμένος.
- (5) Of time: ἡματι τῷ ὅτε κτλ. on the day when &c., θέρεϊ in summer, ὅρη χειμερίνη in the season of winter, &c.
- (6) After a Verb of motion (where we expect els or πρός with the Acc.): as II. 5. 82 πεδίω πέσε fell on the plain; II. 7. 187 κυνέη βάλε threw into the helmet; II. 3. 10 εὖτ' ὅρεος κορυφῆσι Νότος κατέχευεν ὁμίχλην has spread a mist over the tops of the mountains; προκαλέσσατο χάρμη called out (to meet) in combat. This idiom helps to show that the use of the Accusative for the terminus ad quem of motion does not represent the original force of that Case.

The Dat. after the Prepositions ἐν, ἐπί, παρά, μετά, ὑπό, ἀνά, περί, ἀμφί, and the Verbs compounded with them, is generally Locatival. It is used (like the simple Dat.) after Verbs of

motion: see §§ 194, 198, 202, 206.

The sense may admit or require a true Dat.: ep. II. I. 174 πάρ' ἐμοί γε καὶ ἄλλοι others are at haul with me (Loc.), or I have others at my command (true Dat.). So II. 7. 73 ὑμῖν ἐν γὰρ ἔασι may mean there are among you (Loc.), or you have (true Dat.) among you. Cp. Lat. inesse alicui or in aliquo.

- (7) The Locatival Dat. of persons is chiefly found in the Plural:—
- (a) with κρατέω, ἀνάσσω, βασιλεύω: Il. 2. 669 θεοῖσι καὶ ἀνθρώποισιν ἀνάσσει is king among gods and men; Od. 1. 71 ὅου κράτος ἐστὶ μέγιστον πᾶσιν Κυκλώπεσσι; Il. 13. 217 ὃs πάση Πλευρῶνι καὶ αἰπεινῆ Κσλυδῶνι Αἰτωλοῖσιν ἄνασσε. Cp. the equivalent constructions with Prepositions, as Il. 1. 252 μετὰ δὲ τριτάτοισιν ἄνασσε, Od. 7. 62 ὃs ἐν Φαίηξιν ἄνασσε, and the compound ἐμβασιλεύω. This group of uses is almost confined to Homer.
- (c) meaning 'in the sight of,' 'in the opinion of,' &c. as Il. 2. 285 πᾶσιν ἐλέγχιστον θέμεναι μερόπεσσι βροτοῖσι: 11.58 δs Τρωσὶ θεὸs ὡς τίετο δήμω. Cp. Il. 23. 703 ἐνὶ σφίσι τῖον. So in Sanscrit the Loc. is used of the person with or before whom conduct is judged: 'may we be guiltless before Varuṇa' (Delbrück, A. S. p. 118).
- (1) occasionally with Adjectives implying eminence &c., as II.
 477 ἀριπρεπέα Τρώεσσι distinguished among the Trojans, Od. 15.
 227 Πυλίοισι μέγ' ἔξοχα δώματα ναίων.

The Genitive.

146.] The Greek Genitive, as appears at once by comparison with Latin or Sanscrit, stands for the original or 'true' Genitive, and also for the Ablative. The uses of the Gen. may therefore be divided (theoretically at least) between these two Cases. The distinction however is more difficult than in the case of the Dative; partly, perhaps, because the Case-forms of the Ablative were earlier lost than those of the Locative and Instrumental, but also from the peculiar syntactical character of the Genitive.

The Ablative (like the cases already treated of) belongs originally to the second group of constructions distinguished in § 131, i. e. it is construed with

the predicate given by a Verb. The Genitive is originally of the third group; and properly qualifies a Noun. Hence the Ablative and Genitive uses are generally distinguished partly in meaning, partly in grammatical structure. But they are not always distinguished by the structure, since (1) the Ablative (like the Acc. and Dat.) may be construed with an Adjective, and (2) the true Gen. may be predicative (like an Adj.), and thus apparently construed with a Verb. To give a single example: $\theta\epsilon\hat{\omega}\nu$ $\gamma\acute{\nu}\nu$ os $\dot{\epsilon}\sigma\tau\acute{\iota}$ might be (theoretically) = he is offspring from-gods (Abl.), and on the other hand $\theta\epsilon\hat{\omega}\nu$ $\gamma\acute{\epsilon}\gamma \nu\epsilon$ may be = he is offspring of-gods (Gen., see § 148).

147.] The Genitive with Nouns. The manner in which a Genitive serves to define or qualify the 'governing' Noun may be very various. E. g. Τρώων χόλος may mean anger of (i. e. felt by) the Trojans, or (as in Il. 6. 335) anger at the Trojans, or anger on account of the Trojans (as in Il. 15. 138 χόλον νίὸς έῆος means anger about the death of his son). Compare also—

έρκος πολέμοιο a bulwark in (or against) war. έρκος δδόντων the fence (made) of teeth. τέρας μερόπων ανθρώπων a sign to men. λάθρη Λαομέδοντος with secrecy from Laomedon. Bin aekortos with force used to one unwilling. κύματα παντοίων ανέμων the waves raised by all winds. όμφαλοι κασσιτεροίο bosses made of tin. Ίλίου πτολίεθρον the town of Ilios. Oïlinos taxus Alas swift Ajax son of Oileus. δαιμόνιε ξείνων unaccountable stranger! νομός ύλης pasture ground in the wood. νόστος γαίης Φαιήκων return to the land of the Phaeacians. ύπόψιος άλλων suspected by others. ἐπίστροφος ἀνθρώπων going about among men. άφνειος βιότοιο rich in substance. lθύς Διομήδεος straight for Diomede.

The different uses of the Genitive often answer to the different meanings given by the Suffixes which serve to form Adjectives from Nouns (§ 117). Compare, for instance, Il. 2. 54 Νεστορέη παρὰ νηὶ Πυλοιγενέος βασιλῆος by the ship of Nestor the Pylian king; Il. 6. 180 θεῖον γένος οὐδ' ἀνθρώπων the offspring of gods, not of men; τόξον αἰγός (Il. 4. 105) a bow of goat's horn, but ἀσκὸς αἴγειος a bag of goatskin; 'Οϊλῆος ταχὺς Αἴας and Αἴας 'Οϊλιάδης; Τελαμώνιος υἰός the son of Telamon; and so in the Pronouns, ἐμεῖο ποθή (Il. 6. 362), but σῆ ποθή (Il. 19. 321).

These uses have been classified as Objective and Subjective, Possessive, Partitive, Material, &c. In many cases however the variety of relations expressed by the Gen. eludes this kind of analysis. Such classifications, moreover, are apt to lead us into the fallacy of thinking that relations which are distinct to us, because expressed by different language, were distinctly conceived by those who expressed them all in the same way;—the fallacy, in

short, of supposing the distinctions of thought to be prior to the language which embodies them.

The relation of the Genitive to the governing Noun is in many ways analogous to the relation of the Accusative to the Verb, and also to that which subsists between the first part of a Compound Noun and the second. In each of these cases the relation is that of a defining or qualifying word to the notion defined or qualified, and it is one which may be of various kinds, as may be suggested by particular combinations of meaning.

Notice, as especially frequent in Homer—

(1) the use of a Gen. after Nouns meaning grief, anger, &c., to express the object or cause of the feeling: as ἄχος ἡνιόχοιο grief for the chariot-driver (Il. 8. 124, 316, &c.), ἄχος σέθεν (Il. 4. 169); δόντη Ἡρακλῆος (Il. 15. 25); πένθος παιδὸς ἀποφθιμένοιο (Il. 18. 88); κήδε ἐμῶν ἐτάρων (Il. 22. 272, Od. 11. 382); and so in the much-disputed phrase Ἑλένης ὁρμήματά τε στοναχάς τε (Il. 2. 356, 590), which can only mean efforts and groans about Helen.

(2) the 'partitive' use after τ (Interrog.) and τ (Indef.), often with several words interposed: as II. 1. 8 τ (τ) τ (τ

 $\tau\omega\nu$ $\Delta a \nu a \hat{\omega} \nu$ no one shall . . . of all the Greeks.

The partitive Gen. is also seen in the Homeric phrases δία θεάων bright one among goddesses, δία γυναικῶν, δαιμόνιε ξείνων, πάντων ἀριδείκετον ἀνδρῶν (Il. 14. 320): where the governing word implies some kind of distinction or eminence. So when there is a contrast, as—

ΙΙ. 11. 761 πάντες δ' εὐχετόωντο θεῶν Διὶ Νέστορί τ' ἀνδρῶν.

148.] Genitive in the Predicate. Among the various uses of the Gen. in construction with a Verb the first to be noticed are those in which the Case evidently retains its attributive or adjectival character. This use is rare in Homer: examples are,— $a \tilde{\iota} \mu a \tau \delta \delta \epsilon i s \ a \gamma a \theta o \hat{\iota} \delta \delta thou \ art \ of \ good \ blood$, $\hat{\epsilon} \pi o i \eta \sigma \epsilon v \ \sigma a \kappa o s \ a l \delta \lambda o v \ \epsilon \pi \tau a \beta \delta \epsilon \iota o v \ \tau a \dot{\iota} \rho \omega v \ \delta a \tau \rho \epsilon \phi \dot{\epsilon} \omega v \ made \ a \ shield \ seven \ hides \ thick, \ of \ (hides \ of) \ goodly \ bulls.$ In classifying the Greek uses of the Gen. the chief object is to separate constructions of this kind (in which the Case is ultimately the adjectival or 'true' Gen.) from those in which it represents an Ablative, and therefore is essentially akin to the Adverbs.

^{*} Prof. Max Müller (Lectures, I, p. 103) shows how the Genitive Ending -owo (for -o-o-o-o) may be explained as a Suffix of the same kind as those which form Adjectives from Nouns. If his hypothesis is admitted, the Genitive is simply 'an Adjective without Gender,' in respect of form as well as use. And even if the identification on which he chiefly relies (of the Case-ending -sya and Suffix -tya with the Pronoun syas, sya, tyad) should be thought open to question, there can be little doubt that the Case is originally 'adnominal' or adjectival in character.

This use of the Gen. is singularly common in Latin: see Roby, § 1282. The reason for this difference between Greek and Latin evidently is that in Latin the Gen. is not confounded with the Abl. The same explanation has been given of the free use which Latin makes of the predicative Dative (§ 143, note).

149.] Genitive of Place. A Gen. expresses a vague local relation (within, in the sphere of, &c.), in the following uses:—

(1) After a negative—

ΙΙ. 17. 372 νέφος δ' οὐ φαίνετο πάσης γαίης οὕτ' ὀρέων.

Od. 3. 251 ή οὐκ Αργεος ἡεν Αχαιϊκοῦ. Cp. 14. 98., 21. 109.

(2) When two sides or alternative places are contrasted—

Π. 9. 219 αὐτὸς δ' ἀντίον ἶζεν 'Οδυσσῆος θείοιο τοίχου τοῦ ἐτέροιο. Cp. 24. 598.

Od. 1. 23 Αλθίσπας, τοὶ διχθὰ δεδαίαται, ἔσχατοι ἀνδρῶν, οἱ μὲν δυσομένου Ὑπερίονος, οἱ δ᾽ ἀνιόντος, and so perhaps Od. 12. 27 $\hat{\eta}$ άλὸς $\hat{\eta}$ έπὶ γ $\hat{\eta}$ s, and Od. 4. 678 αὐλ $\hat{\eta}$ s

and so perhaps Od. 12. 27 η αλός η έπι γης, and Od. 4. 678 αὐλης εκτὸς εων in the court outside (ep. 9. 239).

(3) With Verbs of motion, to express the space within which the motion takes place, as II. 2. 785 διέπρησσον πεδίοιο made their way over the plain: so ίων πολέος πεδίοιο, ἵππω ἀτυζομένω πεδίοιο, πεδίοιο διώκειν, κονίοντες πεδίοιο, &c.; 10. 353 ἐλκέμεναι νειοῖο βαθείης πηκτὸν ἄροτρον: 24. 264 ἵνα πρήσσωμεν ὁδοῖο, cp. Cd. 1-369 Od. 2. 404., 3. 476. This use of the Gen. is almost confined to set phrases; accordingly it is only found with the Gen. in -οιο

(the archaic form).

The difference of meaning between this Genitive and the Accusative of Space (§ 138) seems to be that the Acc. measures the action of the Verb, whereas the Gen. only gives a local relation in which the action stands. When an Acc. of quantity and a Gen. are both used, the Acc. often seems to govern the Gen.; e.g. δμίλου πολλὸν ἐπελθών advancing far in the throng, παρεξελθεῖν πεδίοιο τυτθόν, to go a short space of plain beyond. 'So with Adverbs: ἔνθα καὶ ἔνθ' ἴθυσε μάχη πεδίοιο: ἄδην ἐλάσαι πολέμοιο; and with a negative: οὖκ Ἦργεος ἦεν = he was nowhere in Argos. Thus the Gen. has a partitive character.

150.] Genitive of Time. This Gen. expresses a period of time to which the action belongs, without implying anything as

to its duration; e.g.—

Od. 14.161 τοῦδ αὐτοῦ λυκάβαντος ἐλεύσεται he will come (sometime in) this very year. So Il. 5. 523 νηνεμίης in calm weather; 8. 470 ἠοῦς in the morning; 11. 691 τῶν προτέρων ἐτέων in former years; 22. 27 ἀπώρης εἶσι goes in autumn.

It appears from the corresponding construction in Sanser, and

Zend that this is the true Genitive (Delbrück, Synt. Forsch. iv. p. 45).

For the 'Gen. Absolute'—which is akin to the Gen. of time—

see § 246.

151.] The quasi-partitive Genitive. Under this term we may include a number of constructions in which the Gen. is used (in preference to some other Case) because the action of the Verb does not affect the person or thing in a sufficiently direct and unqualified way: e.g. in $\lambda\omega\tau$ oîo ϕ ay $\acute{\omega}v$ eating of the lotus (not cating up the lotus); $\pi\tau\acute{e}\rho v\gamma os$ $\lambda\acute{a}\beta \epsilon$ took by the wing (not took the wing); $\lambda o\acute{v}\epsilon\sigma\theta a\iota$ $\pi o\tau a\mu$ oîo to bathe in a river (but $\lambda o\acute{v}\epsilon v$ $\eth \delta a\tau\iota$ to bathe with water).*

The chief uses to which this view may be applied are:-

(a) With Verbs that imply fastening to, holding by, &c.: Il. 1.

197 ξανθης δε κόμης έλε Πηλείωνα took Achilles by the hair.

So χειρὸς έλών taking by the hand (but δεξιτερὴν έλε χεῖρα took the right hand), ποδὸς έλκε dragged by the foot, δῆσεν ποδός fastened by the foot, κόνιος δεδραγμένος clutching the dust, λισσέσκετο γούνων entreated by seizing the knees, ἐρείσατο γαίης propped himself against the earth (i.e. his hand touching it), μέσσον δουρὸς έλών taking his spear by the middle; and with a metaphorical sense, περίσχεο παιδός take charge of thy child, σέο ἔξεται will depend upon thee.

^{*} Delbrück (Synt. Forsch. iv. p. 39) aptly quotes from J. Grimm the saying that 'the Accusative shows the fullest, most decided mastering of an object by the notion contained in the Verb of the sentence. Less "objectifying" is contained in the Gen.; the active force is tried and brought into play by it, not exhausted.' The contrast, however, is to be traced not merely between the Gen. and the Acc., but generally between the Gen. and all the Cases which are used primarily with Verbs. Thus the Gen. of Space and Time may be compared with the Locative, the Gen. of Material with the Instrumental; and perhaps other Genitives with the Abl. (§ 151, e, note, § 153, note).

It is important to observe here, expecially since we have adopted the term

It is important to observe here especially since we have adopted the term 'quasi-Partitive' for these uses) that the partitive relation is not the only one which may lie at the root of the construction. The Gen. expresses any relation, however indefinite, in which one Noun may stand to another.

I. The Gen. of Place noticed in § 149 (2) is not partitive; for duorphyou Therefores $[e,g_*]$ does not mean within smost, but on the side of, belonging to, smost, The Gen. is like the Latin 'novarum rerum esse' to be on the side of change; cp. Liv. 22. 50 ad Cannas fugientem consulem vix septuaginta secuti sunt, alterius morientis prope totus exercitus fuit.

^{2.} The Gen. of Time is similar. Such a Gen. as $\mathring{\eta}o\mathring{v}s$ in the morning is to be compared with the use of the Adj. in $\mathring{\epsilon}\sigma\pi\acute{\epsilon}\rho\iota\sigma$ definor they came in the evening, lit, belonging to the evening, as men of the evening. It differs from the Dat. of Time negatively, in the want of a distinct Locative meaning.

^{3.} The Gen. of the person with Verbs of hearing, &c. (§ 151, d) is clearly not partitive. The thing heard is not part of, but something belonging to, the person. But the Gen. of the sound heard may be partitive; and so is doubtless the Gen. of material, § 151, e.

As to the Gen. of price, see § 153. If a true Gen., it is not partitive.

The Gen. in this group of uses is probably akin to the Gen. of the space within which action takes place, § 149. Compare, for example, $\epsilon \rho \epsilon (\sigma a \tau \sigma) \gamma a (\eta s)$ with $\ell \zeta \epsilon \tau \sigma (\chi \sigma \sigma) \tau \sigma \sigma \delta \tau \epsilon \rho \sigma \sigma$ —passages given under the same head by Kühner (§ 418, 8, a). Or it may be Ablatival: ep. $\pi \rho \psi \mu \nu \eta \theta \epsilon \nu \lambda \dot{\alpha} \beta \epsilon$, § 159.

- (b) With Verbs meaning to touch, to hit (an object aimed at), to reach (a person), to put in or on (a chariot, ship, wall, &c.), with the derivative meanings, to attain to, get a place or share in, &c.; as ἀλλήλων ἐφίκοντο got at each other; τύχε γάρ β' ἀμάθοιο βαθείης he happened to fall in deep sand; so νεκροὺς πυρκαϊῆς ἐπενήνεον heaped the corpses on the funeral pile; so metaphorically, κακῶν ἐπιβασκέμεν to bring into mischief; ἀντιάαν πολέμοιο to join in war, ἀντιόων ἑκατόμβης (but II. I. 3I ἐμὸν λέχος ἀντιόωσαν because λέχος is the whole object, ep. § 136, 1).
- (c) With Verbs meaning to aim at, strive after, desire, care for, complain of, grieve for, be angry about, &c.; as Αἴαντος ἀκόντισε threw a dart at Ajax, οὖ παιδὸς ὀρέξατο held out his arms for his child, σκοπέλων ἐπιμαίεο feel for the rocks (but ἐπέμαίετο ἵππους touched up the horses), ἐπειγόμενος Ἄρηος hasting to (eager for) battle, τῶν οὕ τι μετατρέπη οὐδ' ἀλεγίζεις these you do not regard or heed, Κύκλωπος κεχόλωται is enraged on behalf of the Cyclops; and many similar instances.

Kühner (§ 416, Anm. 9) quotes II. 5. 582 χερμαδίω ἀγκωνα τυχών μέσον as a use of τυγχάνω with the Acc. But it is possible to construe ἀγκωνα with βάλε in the earlier part of the sentence.

- (d) With Verbs meaning to hear, perceive, know of, remember, and the like; the Gen. expressing—
 - (1) the person from whom sound comes;
 - (2) the person about whom something is heard, known, &c.
 - (3) the sound heard (but the Acc. is more usual).

The particular thing heard or known is often indicated by a Participle agreeing with the Genitive: e.g.—

Il. 1. 257 εἰ σφῶϊν τάδε πάντα πυθοίατο μαρναμένοιϊν (=if they

heard of all this fighting on your part).

II. 4. 357 ως γνω χωομένοιο (=ως έγνω αὐτοῦ ὅτι ἐχώετο). Od. 2. 220 εἰ δέ κε τεθνηῶτος ἀκούσω: so 4. 728, &c.

The Verb οίδα, when it means to know about, to be skilled in, takes a Gen., as Il. 11. 657 οὐδέ τι οΐδε πένθεος knows nothing of the sorrow. So Od. 21. 506 φόρμιγγος ἐπιστάμενος καὶ ἀοιδῆς: Il. 16. 811 διδασκόμενος πολέμοιο.

So μέμνημαι takes a Gen. when it means I bethink myself of, am affected by the memory (II. 2. 686, Od. 15. 23): see § 140, 4, a. Cp. Lat. memini with the Gen. or Acc., perhaps with a

similar difference of meaning (Roby, § 1332).

(e) The Gen. of material, &c. The construction so termed is found with Verbs that imply the use of a material (especially one of indefinite quantity), a stock drawn upon, &c. E.g.—

Il. 1. 470 κούροι μεν κρητήρας επεστέψαντο ποτοίο filled up the cups to the brim with liquor; 9. 214 πάσσε δ' άλός sprinkled with salt. So πυρός in the phrases πρήσαι πυρός to burn with fire, Bus πυρος μειλισσέμεν to propitiate (the dead) with fire.

Il. 18. 574 χρυσοιο τετεύχατο were made of gold.

Od. 3. 408 ἀποστίλβοντες ἀλείφατος shining with fat.

And with a distinctly partitive force:

Od. 1. 140 χαριζομένη παρεόντων favouring him (with good things) from her store; Q. 102 λωτοίο φαγών eating of the lotus; and so with yevw to give a taste of.

Il. 5. 268 της γενεής έκλεψε stole (a strain) from the brood.

9. 580 πεδίοιο ταμέσθαι to cut off (a τέμενος) from the plain. 14. 121 'Αδρήστοιο δ' έγημε θυγατρών married (one) from the

daughters of Adrastus (so Od. 9. 225., 12. 64., 15. 98).

The Gen, with Verbs meaning to stint, grudge, spare is pro-

bably of the same nature (to stint being = to give little).

The Genitives in λούεσθαι ποταμοῖο to bathe in a river, χείρας νιψάμενος πολιης άλός washing his hands in the sea, &c. are intermediate between this group and the Genitives of Space (§ 149).

A Gen. of the person may be used with Verbs meaning to gain profit from; e.g. Il. 1. 410 ίνα πάντες ἐπαύρωνται βασιλήος: 16. 31 $\tau i \sigma \epsilon v \, \tilde{a} \lambda \lambda o s \, \tilde{o} v \tilde{n} \sigma \epsilon \tau a i$; Od. II. 452 $v lo s \, \tilde{\epsilon} v i \pi \lambda n \sigma \theta \, \tilde{n} v a i (v lo s = the$ company of his son): also with πειράομαι to try (Od. 8. 23); cp. the Gen. with γεύω.

Note also the elliptical expression, Il. 21. 360 τί μοι έριδος καὶ

aρωyηs what (share) have I in combat and aid !

Most of these Genitives are clearly 'partitive,' and all of them can be explained as 'true' Genitives. There is a similar use of the Gen. in Sanscrit with Verbs meaning to enjoy, &c. (Delbrück, A. S. § 109). Some however may be Ablatives. In particular, the Gen. of material with τεύχω, ποιέω, &c. is so regarded by Delbrück (Synt. Forsch. iv. p. 48) on the ground of the Sanscrit use. It may be that in certain cases the original usage allowed either Gen. or Abl., according to the shade of meaning to be expressed; just as with Verbs of filling Latin employs the Gen. or the Abl.

(f) With Verbs meaning to rule, be master; viz.—

aνάσσω, Gen. of the place or thing, as Il. 1. 38 Τενέδοιό τε ίφι ἀνάσσεις: Od. 24. 30 τιμής ής περ ἄνασσες: of the people, only II. 10. 32, Od. 11. \$76. The Gen. of the thing and Dat. of the people combined, Il. 20. 180 Τρώεσσιν ανάξειν τιμής τής Πριάμου.

βασιλεύω: Od. 1. 401., 11. 285.

κρατέω: Il. 1. 79 'Αργείων κρατέει has power over the Argives.

σημαίνω: Il. 14. 85 στρατοῦ ἄλλου σημαίνειν: so ἡγοῦμαι, &c. θεμιστεύω: Od. 9. 114 θεμιστεύει δὲ ἔκαστος παίδων ἠδ' ἀλόχων. It is probable, from the analogy of Sanscrit, that this is the true Gen.; but the original force of the Case is obscure.

152.] The Ablatival Genitive. The Ablative expressed the object (person, place, or thing) from which separation takes place, and is represented by the Gen. in various uses: as—

ἀνέδυ πολίῆς ἀλός rose from the grey sea.

χάζοντο κελεύθου gave way from the path.
ἔσχοντο μάχης were stayed from the fight,
παιδὸς ἐέργει μυῖαν keeps off a fly from her child.
διώκετο οἷο δόμοιο was chased from his house.
κακότητος ἔλυσαν delivered from ill.
ἀτεμβόμενος ἴσης defrauded of a share.
παιδὸς ἐδέξατο received from her son.
πίθων ἡφύσσετο οἷνος wine was drawn from casks.
'Αντιλόχοιο λείπετο was left behind Antilochus.
γόνυ γουνὸς ἀμείβων exchanging knee past knee (= putting them in front by turns).

ἄρχομαι I begin from (a point), Il. 9. 97, Od. 21. 142.

άμαρτάνω I miss, lose, fail in.

Τρῶας ἄμυνε νεῶν keep off the Trojans from the ships: so with ἀλαλκεῖν.

ἀκούω, πυνθάνομαι, ἔκλυον hear from : see § 151, d. τεύχω, ποιέω I make of (material) : see § 151, e.

For the Gen. with Verbs of buying, selling, &c., see § 153.

Adjectives implying separation (want, freedom, &c.) may take an Ablatival Gen. by virtue of their equivalence to Verbs of similar meaning; or they may be construed as Nouns, that is to say, with a true Gen. E.g. $\lambda \epsilon \hat{\iota} os \pi \epsilon \tau \rho \hat{\iota} \omega \nu$ might be smooth (i. e. cleared) from rocks, or smooth as to rocks. Cp. the similar Latin Adjectives which take either Abl. or Gen.

The Gen. with Adjectives of comparison represents the Ablative (cp. the Latin construction). It expresses the point from which the higher degree of a quality is separated: cp. the Gen. with Verbs of excelling and falling behind, and with Adjectives of similar meaning, as Od. 21. 254 βίης ἐπιδενέες εἰμὲν Ὀδυσῆσς

we are wanting in strength behind (compared with) Ulysses.

In Sanscrit the Abl. is used with numerals to express the point from which we count. A trace of this may be seen in the elliptical form δωδεκάτη ὅτε κτλ. the twelfth day (from the day) when &c. (Il. 21. 81, cp. Od. 3. 180).

The Gen. with $\xi\xi$, $\delta\pi\delta$, $\pi\alpha\rho\delta$, $\pi\rho\delta$, $\pi\rho\delta$, $\delta\pi\epsilon\rho$, $\delta\pi\epsilon\rho$ (beyond), $\delta\pi\delta$ (from under), $\kappa\alpha\tau\delta$ (down from), and the Verbs compounded with them, is Ablatival; with some of the 'improper Prepositions,' as

χωρίς, ἄνευ. τῆλε, ἄτερ. rόσφι, ἀμφίς. ἐκάς, ἐκτός. ἄψ. πάλιν, it may be either the Ablative or the true Genitive. When motion from is not implied, the Case is probably the true Gen.; see § 228.

It should be observed that the use of the Ablatival Gen. with simple Verbs is comparatively restricted in Homer. It is not used, as it is in Sanscrit, with simple Verbs of going, coming, bringing (e. g. we could not substitute the Gen. for the form in $-6\epsilon \nu$ in such phrases as $\kappa \lambda \iota \sigma (\eta \theta \epsilon \nu) \iota \delta \sigma \alpha$, $\delta \gamma \rho \delta \theta \epsilon \nu \ell \rho \chi o \rho \ell \nu \eta$, oiko $\theta \epsilon \nu$ in such phrases as $\kappa \lambda \iota \sigma (\eta \theta \epsilon \nu) \iota \delta \sigma \alpha$, deprove $\delta \rho \chi o \rho \ell \nu \eta$, oiko $\theta \epsilon \nu$ in such phrases as $\delta \iota \delta \rho \nu \eta \rho \delta \rho \nu \eta$, but only with Verbs which imply separation or distance from a point, or which are compounded with Prepositions such as $\delta \xi$, $\delta \sigma \delta$, &c.

Later poets seem to be more free in this respect (probably because they treated the usage as an archaism, adopted as being poetical,: e.g. Soph. O.T. 142 βάθρων ἴστασθε, Ant. 418 χθονὸς ἀείρας, Phil. 630 νεὼς ἄγοντα, &c. Further extensions are,—the use for the place from which something is seen, as Soph. El. 78, 324, and for the agent, Eur. Or. 497, El. 123.

153.] Gen. of Price. Verbs meaning to change places with take an Ablatival Gen., as γόνν γουνὸς ἀμείβων (quoted in the last section); hence the constructions—

Il. 6. 235 τεύχε' ἄμειβε χρύσεα χαλκείων exchanged armour,

golden (passing in exchange) for bronze.

II. 1. 111 Χρυσηίδος ἀγλά ἄποινα ... δέξασθαι to accept a splendid ransom for Chryseïs; so Od. 11. 327 ἡ χρῦσον φίλου ἀνδρὸς ἐδέξατο who took gold for (to betray) her husband.

Il. 11. 106 ἔλυσεν ἀποίνων released for a ransom.

Hence we may explain the construction with Verbs meaning to value at, set off against (a price); as Il. 23. 649 τιμῆς ης τέ μ' ἔοικε τετιμῆσθαι; so with the Adjectives ἀντάξιος, &c.

It is possible however that a word expressing value or price may be construed as a Gen. with a Noun. As we can say τεύχεα ἐκατύμβοια armour worth a hundred oxen, we might have τεύχεα ἐκατὺν βοῶν (as in Attic prose, e. g. δέκα μιῶν χωρίον a plot worth ten minue); cp. the Latin magni emere, magni facere, &c.

Case-forms in $-\phi\iota(\nu)$.

154.] The Case-Ending $-\phi\iota(\nu)$ is found in a number of Homeric forms which appear to be construed indifferently as Datives or Genitives. It will be shown, however, that there is ground for believing these forms to have been used for the Dat. only in the instrumental and locatival senses (the latter being comparatively rare), and for the Gen. only in the ablatival sense. They formed, therefore, a 'mixed Case,' composed of the same elements as the Latin Ablative, viz. the original Instr. Abl. and Loc.

In respect of usage these forms are archaic: that is to say, they are confined for the most part to lines and phrases of a fixed conventional type. In several instances the survival is evidently due to the influence of the metre: thus δακρυόφι, στήθεσφι take the place of $\delta \alpha \kappa \rho \nu \omega \nu$, $\delta \sigma \tau \epsilon \delta \phi \nu$ and $\delta \kappa \rho \nu \omega \nu$, $\delta \sigma \tau \epsilon \delta \phi \nu$ and $\delta \kappa \rho \nu \omega \nu$, $\delta \sigma \tau \epsilon \delta \phi \nu$ από $\delta \sigma \tau \epsilon \delta \nu$, $\delta \sigma \tau \delta \nu$, $\delta \sigma$

155.] Instrumental. The forms in $-\phi_{\iota}(\nu)$ appear to have been forms of the Instrumental (Sing. and Plur.), and the majority of the Homeric examples may be referred to that Case: $\epsilon \tau \epsilon \rho \eta \phi \iota$ with the other hand (II. 16. 734, &c.), $\delta \epsilon \xi \iota \tau \epsilon \rho \tilde{\eta} \phi \iota$ (Od. 19. 480); βίηφι by force (II. 16. 826, Od. 1. 403, &c., and in the phrase κρατερῆφι βίηφι), also in strength (βίηφι φέρτερος, Od. 6. 6, &c.); ἀναγκαίηφι δαμέντας (II. 20. 143); γενεῆφι νεώτατος (II. 14. 112, &c.): δακρυόφι πλῆσθεν were filled with tears (II. 17. 696, &c.).

In the 'comitative' use, αὐτοῖσιν ὅχεσφιν chariot and all, ἵπποισιν καὶ ὅχεσφιν with horses and chariot (II. 12. 114, Od. 4. 533); with Prepositions, ἄμ' ἠοῖ φαινομένηφιν, σὺν ἵπποισιν καὶ ὅχεσφιν (often in the Iliad), also παρ' ὅχεσφιν (construed with Verbs of rest, II. 5. 28, 794., 8. 565., 12. 91., 15. 3)—unless ὅχεσφιν is a Loc. (§ 157); with words expressing agreement, likeness, &c., as παλάμηφιν ἀρήρει fitted his hand, θεόφιν μήστωρ ἀτάλαντος (II. 7. 366, &c.).

With Verbs of trusting; Il. 4. 303 ἱπποσύνη τε καὶ ηνορέηφι

πεποιθώς; so ἀγλαίηφι (Il. 6. 510), βίηφι (several times).

156.] Ablative. Forms used as Ablatival Genitives are—

Il. 2. 794 ναῦφιν ἀφορμηθείεν start from the ships.

13. 700 ναθφιν αμυνόμενοι defending the ships (§ 152).

3. 368 ἐκ δέ μοι ἔγχος ἢτχθη παλάμηφιν. 10. 458 ἀπὸ μὲν . . κυνέην κεφαλῆφιν ἔλουτο.

Od. 5. 152 δακρυόφιν τέρσοντο were dried from tears.

8. 270 καθύπερθε μελαθρόφιν έξεκέχυντο.

With the Prepositions-

έξ: as έξ εὐνἦφι, ἐκ θεόφιν, ἐκ πασσαλόφι, ἐκ ποντόφιν, ἐκ στήθεσφιν, ἐξ Ἐρέβεσφιν, &c.

ἀπό: as ἀπὸ νευρῆφιν, αὐτόφιν, χαλκόφι, στήθεσφιν, ναῦφι, &c. παρά when it means from: Π. 12. 225 παρὰ ναῦφιν ἐλευσόμεθ' αὐτὰ κέλευθα, Od. 14. 498 παρὰ ναῦφιν ἐποτρύνειε νέεσθαι. So—

18. 305 παρὰ ναθφιν ἀνέστη δίος 'Αχιλλεύς.

8. 474 πρὶν ὄρθαι παρὰ ναῦφι ποδώκεα Πηλείωνα.

 281 ἐλπόμενοι παρὰ ναῦφι ποδώκεα Πηλείωνα μηνιθμὸν μὲν ἀπορρῦψαι, φιλότητα δ' ἐλέσθαι.

In these three places the notion of leaving the ships is implied, so $\pi a \rho a \nu a \hat{\nu} \phi_i$ has the meaning of $\pi a \rho a \nu \epsilon \hat{\omega} \nu$.

κατά down from: κατ' ὅρεσφι (II. 4. 452., 11. 493). ὑπό from under: ὑπ' ὅχεσφι (II. 23. 7), ὑπὸ ζυγόφιν (II. 24. 576).

With this use of -φi we may compare the use of the Dative with έξ and ἀπό, which is one of the peculiarities of the Arcadian and Cyprian dialects (Meister, ii. 119, 296). The parallel of the Latin Abl. has been noticed.

157.] Locative. This use is found in several clear instances, as well as others of an indecisive kind:—

II. 19. 323 Φθίηφι in Phthia; II. 13. 168 κλισίηφι λέλειπτο was left in the tent; θύρηφιν out of doors, foris (Od. 9. 238., 22. 220); κεφαλῆφιν ἔθηκε put on the head (II. 10. 30,-257,-261; cp. 496, Od. 20. 94); II. 11. 474 ὡς εἴ τε δαφοινοὶ θῆρες ὅρεσφιν: 19. 376 τὸ δὲ καίεται ὕψοθ' ὅρεσφιν: 22. 139 ἢΰτε κίρκος ὅρεσφιν κτλ.; 22. 189 ὡς δ' ὅτε νεβρὸν ὅρεσφι κνὼν κτλ.; II. 2. 480 ἢΰτε βοῦς ἀγέληφι μέγ' ἔξοχος ἔπλετο πάντων: 16. 487 ἀγέληφι μετελθών coming into the herd.

With the Prepositions:—ἐν, as Il. 24. 284 ἐν χειρὶ . . δεξιτερῆφιν (= Od. 15. 148): πρός, in Od. 5. 432 πρὸς κοτυληδονόφιν (sticking) to the suckers: ἀμφί, in Od. 16. 145 φθινύθει δ' ἀμφ' ὀστεόφι χρώς: ὑπό, in ὑπ' ὄχεσφι, ὑπὸ ζυγόφι (Il. 19. 404, unless

the meaning is from under).

With $\epsilon \pi i$ on, at, in the combinations $\epsilon \pi i$ $i \kappa \rho i \delta \phi i \nu$, $\epsilon \pi' \epsilon \sigma \chi a \rho \delta \phi i \nu$, $\epsilon \pi i \nu \epsilon \nu \rho \hat{\eta} \phi i \nu$ (all in the Od.) the Case may be Loc. or Gen.

παρ' αὐτόφι occurs four times in the Iliad (12. 302., 13. 42., 20. 140., 23. 640). In three of these places there is a v.l. παρ' αὐτόθι (οr παραυτόθι), which generally gives a better sense, and which is required by the grammar in 13. 42 ἔλποντο δὲ νῆας 'Αχαιῶν αἰρήσειν κτενέειν τε παρ' αὐτόφι (=παρὰ νηυσί). So 19. 255 ἐπ' αὐτόφιν ἥατο σιγῆ where αὐτόθι (Nauck) is probably right. It seems that the Endings -θι and -φι were confused, possibly at a very early period.

158.] The true Dat. and Gen. There is only one example of the true Dat., viz. Il. 2. 363 ωs φρήτρη φρήτρηφων ἀρήγη, φῦλα δε φύλοις that phratria may bear aid to phratria, and tribe to tribe.

The instances of the true Gen. are-

- Il. 21. 295 κατὰ Ἰλιόφι κλυτὰ τείχεα λαὸν ἐέλσαι to coop up the army within the famous walls of Ilios.
- (2) Il. 21. 367 τειρε δ' ἀὐτμὴ Ἡφαίστοιο βίηφι πολύφρονος the breath of Hephaestus (Ἡφαίστοιο βίη) wore him out.
- (3) Od. 12. 45 πολὺς δ' ἀμφ' ἀστεόφιν θὶς ἀνδρῶν πυθομένων there is around a great heap of bones, of men rotting. But this may be an Instr. of material, = 'a heap (is made) of bones.'
- (4) Il. 16. 762 κεφαλῆφιν ἐπεὶ λάβεν οὐχὶ μεθίει (Gen., § 151, a); and 11. 350 οὐδ' ἀφάμαρτε τιτυσκόμενος κεφαλῆφιν (but the Gen. might be construed with ἀφάμαρτε, as an Abl.).

(5) Certain uses with Prepositions; viz. $\epsilon \pi i$ in Il. 13. 308 $\hat{\eta}$ $\hat{\epsilon}\pi i$ δεξιόφιν . . $\hat{\eta}$ $\hat{\epsilon}\pi$ αριστερόφιν towards right or left; πρόσθε in Il. 5. 107 πρόσθ' $i\pi\pi \sigma i \nu$ καὶ δχεσφιν: διά through, in διὰ δὲ στήθεσφιν έλασσεν (Il. 5. 41, &c.), also 10. 185 έρχηται δι' δρεσφι.

The first four of these references evidently do not prove much. The first would be a clear instance of the true Gen. if we could be sure of the text: but there is some probability in favour of 'Iλίοο (§ 98), proposed by Leo Meyer (Decl. p. 35). In Il. 21. 367 we may perhaps take $\beta i \eta \phi i$ as an Instr.: hot breath vexed him through (by reason of) the might of Hephaestus.

Again, the use with $\epsilon\pi$ may be locatival, with $\pi\rho\delta\sigma\theta\epsilon$ ablatival (as with $\pi\rho\delta$). The uses with $\delta\iota\delta$ are more important, because they are not isolated, but form a distinct group. It is improbable that $\delta\iota\delta$ through should take an ablatival Gen. or a Locative. The Sanscrit Instr. is used of the space or time over which an action extends (Delbrück, A. S. § 88): and so the Abl. in Latin (Roby, §§ 1176, 1189). This use appears in Greek as the Dat. of the way by which, and perhaps in the phrases $\pi\epsilon\rho\iota\tilde{\omega}b\nu\tau\iota$ $\tau\hat{\varphi}$ $\theta\epsilon\rho\epsilon\iota$, &c. It may be thought possible that $\delta\iota'$ $\delta\rho\epsilon\sigma\phi\iota$ and $\delta\iota\delta$ $\sigma\tau\hat{\eta}\theta\epsilon\sigma\phi\iota$ are fragments of this use. If so, one or two other uses assigned above to the Loc. may be really Instr.; especially $\delta\rho\epsilon\sigma\phi\iota$, Il. 11. 474., 22. 139, 189.

On the other hand, if the forms in $-\phi\iota(v)$ constitute a 'mixed Case' (Locative, Instrumental, and Ablative), there must have been a tendency to extend its sphere from the Loc. and Instr. to the Dat., and from the Abl. to the Gen. Thus the few instances of forms in $-\phi\iota(v)$ standing for the true Dat. and Gen, may be first steps towards an amalgamation of five Cases (such as we have in the Greek Dual). One or two are probably among the 'false archaisms' which doubtless exist in Homer, though not to the extent supposed by some commentators: see § 216.

Forms in -0ev and -ws.

159.] The Ending -θεν expresses the point from which motion takes place; hence it is common in construction with Verbs of motion, and after the Prepositions έξ and ἀπό. Cp. also—

II. 3. 276 Ζεῦ πάτερ Ἰδηθεν μεδέων ruling from Ida.
8. 397 Ἰδηθεν ἐπεὶ ἴδε when he saw, looking from Ida.

15. 716 Έκτωρ δὲ πρύμνηθεν ἐπεὶ λάβε when he had got hold from (i.e. in the direction from, beginning with) the stern; so ετέρωθεν on the other side, ἀμφοτέρωθεν on both sides.

Of time; ηωθεν from (beginning with) dawn.

In a metaphorical sense; of an agent (regarded as the source of action), as Il. 15. 489 Δ ιόθεν βλαφθέντα βέλεμνα: Od. 16. 447 οὐδέ τί μιν θάνατον τρομέεσθαι ἄνωγα ἔκ γε μνηστήρων θεόθεν δ' οὐκ ἔστ' ἀλέασθαι. Also, Il. 10. 68 πατρόθεν ἐκ γενεῆς ὀνομάζων naming from (on the side of) the father. And in two phrases, Il. 7. 39, 226 οἰδθεν οἶος quite alone, and Il. 7. 97 αἰνόθεν αἰνῶς quite terribly,—where the force of the Ending is indistinct.

It is to be observed that (except in the Personal Pronouns) this form is not found with Verbs meaning to deprive of, free

from, defend, surpass, or with the corresponding Adjectives and Adverbs. Hence it cannot be held to be equivalent to an Ablative (§ 152), and probably differed from the Abl. in expressing motion from rather than separation.

On the other hand, the Pronominal forms εμέθεν, σέθεν, εθεν

are freely construed-

- (1) as Ablatives: $\pi\rho\delta$ έθεν, $\delta\pi\epsilon\rho$ σέθεν, $\delta\pi\epsilon\nu$ έμεθεν; and with a Comparative, Il. 1. 114 οὖ έθεν εστι χερείων, &c. Cp. also Il. 9. 419 μάλα γάρ έθεν . . χείρα έὴν ὑπερέσχε.
- (2) as true Genitives: II. 4. 169 ἀλλά μοι αἰνὸν ἄχος σέθεν ἔσσεται I shall have terrible grief for thee; with Verbs of hearing (II. 2. 26, &c.), remembering (Od. 4. 592), caring (II. 1. 180 σέθεν δ΄ ἐγὰ οὐκ ἀλεγίζω), reaching or touching (ἀντιάζω, πειράζω, &c.): and with ἃσσον, πρόσθε, ἄντα, ἀντίον, ἕνεκα, ἕκητι.
- 160.] The Ending -ωs is generally derived from the Ablative of Stems in -o (§ 110), although -ōt would not regularly become -ωs, and the transition of meaning is not a very easy one. The chief examples in common use in Homer are—

From Pronominal Stems: ως, τως, πως, όμως, αντως, άλλως.

From Stems in -o: alvωs, ἀσπασίωs, ἐκπάγλωs, ἐπισταμένωs, θαρσαλέωs, κακωs, καρπαλίμωs, κραιπνωs, κρατερωs, ὀτραλέωs, πυκινωs, ἡηϊδίωs, στερεωs, στυγερωs, χαλεπωs, μεγάλωs, καλωs, alσχρωs, φίλωs.

From other Stems: πάντως, λιγέως, ἀτρεκέως, ἀσφαλέως, ἀφραδέως, περιφραδέως, διηνεκέως, ἐνδυκέως, νωλεμέως, προφρονέως, ἐπι-

κρατέως, ταχέως.

It will be seen that comparatively few of these Adverbs come from the short familiar Adjectives. Thus $\kappa a\lambda \hat{\omega}s$, $al\sigma \chi \rho \hat{\omega}s$, $\mu \epsilon \gamma \dot{\alpha}\lambda \omega s$, $\tau a\chi \dot{\epsilon}\omega s$, $\phi \dot{\epsilon}\lambda \omega s$ are very rare in Homer; and there is no Adverb of the kind from $\delta \epsilon \iota \nu \dot{\iota} s$, $\ddot{\iota} \sigma \sigma s$, $\dot{\delta} \rho \theta \dot{\iota} s$, $\dot{\omega} \kappa \dot{\nu} s$, $\dot{\delta} \dot{\epsilon} \dot{\nu} s$.

The Nominative.

161.] Impersonal Verbs. It is evident that in a language which distinguishes the Person and Number of the Verb by the Ending, it is not essential that there should be a distinct word as Nominative. $\dot{\epsilon}\sigma$ - τi (e.g.) stands for he is, she is, it is; the person or thing meant by the Ending may be left to be gathered from the context. In certain cases, however, the Subject meant by an Ending of the Third Person is too indefinite to be expressed by a particular Noun, such as the context could supply to the mind. For instance, in the sentence $o\tilde{v}\tau\omega s$ $\dot{\epsilon}\sigma$ - τi it is so, the real Subject given by the Ending - τi (in English by the word it) is not a particular thing already mentioned or implied, but a vague

notion—'the case,' 'the course of things,' &c.* Verbs used with a vague unexpressed Subject of this kind are called IMPERSONAL.

The vague Subject may be a Plural, as II. 16. 128 οὐκέτι φυκτὰ πέλονται the case no longer allows of flight, Od. 2. 203 ໂσα ἔσσεται

things will be even.

A Neuter Pronoun used as the Subject sometimes gives a vague meaning, not far removed from that of an Impersonal Verb; e.g. II. 1. 564 εl δ' οὕτω τοῦτ' ἐστί if this is so (cp. οὕτως ἐστί it is so); ἐσθλὸν καὶ τὸ τέτυκται it is a good thing too.

An Impersonal Verb is often followed by an Infinitive, or dependent Clause, which supplies the want of a Subject. See

\$ 234, 2.

162.] Nominative in the Predicate. In certain cases the Predicate of a sentence may be limited or modified by a Nominative in agreement with the Subject. This is especially found—

Such Adjectives seem to answer most nearly to the Gen. of time within which, but may also express duration, as πανημέριος

and παννύχιος.

- 2. In describing the attitude, manner, position, &c. in which an action is done: as παλίνορσος ἀπέστη stood off with a start backwards, ὕπτιος οδδει ἐρείσθη was dashed face upwards on the ground; so πεζὸς εἰλήλουθα, λαβρὸς ἐπαιγίζων, πρόφρων τέτληκας (cp. προφρονέως), ἀμετροέπης ἐκολψα, &c.
- 3. The Pronouns ὅδε and κεῖνος are sometimes used instead of Adverbs of place: Il. 5. 604 καὶ νῦν οἱ πάρα κεῖνος Ἄρης now too yonder is Ares at his side; 10. 434 Θρήϊκες οῖδ ἀπάνευθε here are the Thracians apart; Od. 6. 276 τίς δ' ὅδε Ναυσικάα ἔπεται; So οὖτος in Il. 10. 82 τίς δ' οὖτος κτλ.
- 4. With Verbs meaning to be, to become, to appear, to be made, called, thought, &c.; as κάρτιστοι τράφεν they were nurtured the mightiest, (i.e. to be the mightiest); είσωποὶ ἐγένοντο νεῶν they came to be in front of the ships: ἥδε ἀρίστη φαίνετο βουλή this appeared the best counsel.

In all such cases the Nominative which goes with the Verb not only qualifies the notion given by the Verb-Stem, but also becomes itself a Predicate (i. e. the assertion of an attribute). Ε. g. κάρτιστοι τράφεν implies that they were κάρτιστοι. A Noun so used is called a Secondary Predicate.

The use of eini as the 'logical copula' is merely a special or 'singular' case

^{*} See Riddell's Digest, §§ 95-100: Sigwart, Impersonalien.

of this type of sentence. The Verb has then little or no meaning of its own, but serves to mark the following Noun as a Predicate. The final stage of the development is reached when the Verb is omitted as being superfluous.

- 5. With Impersonal or half-Impersonal Verbs meaning to be, &c.; the Predicate being—
- (a) a Neuter Adjective; as μόρσιμόν ἐστι it is fated; νεμεσσητών δέ κεν εἴη it would be worthy of indignation; οὕ τοι ἀεικές it is not unmeet for thee: with a Pronominal Subject, ἐσθλὸν γὰρ τὸ τέτυκται it is a good thing.

In the Plural, οὐκέτι φυκτὰ πέλονται there is no more escaping;

cp. λοίγια έργα τάδ' έσσεται this will be a pestilent business.

In one or two instances the Adverbial form in -ωs is used in phrases of this kind: II. 11. 762 ῶs ἔον εἴ ποτ ἔον γε such I was if I was; II. 9. 55 I Κονρήτεσσι κακῶs ἦν things went ill for the Curetes; II. 7. 424 διαγνῶναι χαλεπῶs ἦν it was hard to distinguish; II. 11. 838 πῶs τ' ἄρ' ἔοι τάδε ἔργα; Od. 11. 336 πῶs ὕμμιν ἀνὴρ ὅδε φαίνεται εἶναι. This may be regarded as older than the Neut. Nominative, since it indicates that the Verb is not a mere 'copula,' but has a meaning which the Adverb qualifies. Cp. II. 6. 131 δὴν ἦν lived long (=δηναιὸs ἦν): also the Adverbial Neut. Plur., as Thuc. 1. 25. 4 ὄντες . . ὅμοια, 3. 14. 1 ἴσα καὶ ἰκέται ἐσμέν.

(b) an abstract Noun; as II. 17. 556 σοὶ μὲν δὴ Μενέλαε κατηφείη καὶ ὄνειδος ἔσσεται εἰ κτλ. to thee it will be a humbling and reproach if β·c.; οὐ νέμεσις it is no wrong; οὐκ ἄρα τις χάρις ῆεν it was no matter of thanks; εἰ δέ μοι αἶσα but if it is my fate: with a Pronominal Subject, λώβη τάδε γ' ἔσσεται this will be a shame.

The use of an abstract Noun instead of an Adjective is a license or boldness of language of which we have already had

examples; see § 116 and § 126.

It is worth while to notice the tendency to import the ideas of obligation, necessity, &c. into these phrases: e.g. où véµεσιs it is not (worthy of, a matter of) indignation, ὄνειδος ἔσσεται it will be (ground of) reproach. So in Latin vestra existinatio est = it is matter for your judyment.

The Latin idiom called the Predicative Dative (Roby, Pt. II. pp. xxv-lvi) may be regarded as a less violent mode of expression than this Nom., since the Dat. is a case which is originally 'adverbial,' i. e. construed with the Predicate given by the Verb-Stem. In other words, dedecori est is a less bold and probably more primitive way of saying it is disgraceful than dedecus est; just as κακῶς ἢν is more primitive than κακὸν ἦν.

6. The ordinary use of the Participle belongs to this head: as διαστήτην ερίσαντε parted after having quarrelled. In this use the Participle qualifies the Verb-Stem, and at the same time makes a distinct assertion: see Chapter X.

163.] Interjectional Nominative. The Nom. is not unfrequently used in Homer without any regular construction, as a kind of exclamation: e.g.—

ΙΙ. 5. 405 σοὶ δ' ἐπὶ τοῦτον ἀνῆκε θεὰ γλαυκῶπις 'Αθήνη,

νήπιος, οὐδὲ τὸ οἶδε κτλ. fool! he knows not &c. Similarly σχέτλιος cruel! δύσμορος the unhappy one! (Od. 20. 194): and so Il. 1. 231 δημοβόρος βασιλεύς! Cp. the interjectional use of alδώς shame! (Il. 5. 787., 13. 95., 16. 422).

A similar account may be given of one or two passages in which commentators generally suppose 'anacoluthon': viz.—

II. 10. 436 τοῦ δὴ καλλίστους ἵππους ἴδον ἦδὲ μεγίστους λευκότεροι χιόνος, θείειν δ΄ ἀνέμοισιν ὁμοῦοι whiter than snow they are! &c.; and so in the equally abrupt— II. 10. 547 alvῶs ἀκτίνεσσιν ἐοικότες ἦελίοιο.

2. 353 ἀστράπτων ἐπιδέξι' ἐναίσιμα σήματα φαίνων (he did so I tell you) by lightning on the right &c.

Od. I. 51 νησος δενδρήεσσα, θεὰ δ' ἐνὶ δώματα ναίει an island (it is) well wooded, and a goddess has her dwelling there!

These forms of expression, when we seek to bring them under the general laws of the grammatical Sentence, resolve themselves into Predicates with an unexpressed Subject. On the logical Propositions of this kind see Sigwart (Logik, I. p. 55). The Predicate, he shows, is always expressed in a word (or words); but the Subject, when it is of the kind which would be expressed by a Pronoun (it, this, &c.) may be indicated by a gesture. The simplest examples of the type are the imperfect sentences used by children, such as horse! for this is a horse. When such sentences are introduced into literary language, they give it an abrupt and interjectional character, as in the examples quoted. We might add the phrases such as οὐ νέμεσιs it is no wrong (§ 162), in which the want of a Verb makes the expression somewhat interjectional. Compare, for instance, οὐ νέμεσιs with alδώs, 'Αργεῖοι shame on you, Greeks! also the so-called ellipse in commands, as ἀλλ' ἄνα but up!

The Vocative.

164.] Regarding the use of the Vocative in Homer the chief point to be noticed is the curious one (common to Greek and Sanscrit) that when two persons are addressed, connected by $\tau\epsilon$, the second name is put in the Nominative.* For instance—

ΙΙ. 3. 277 Ζεῦ πάτερ Ἰδηθεν μεδέων κύδιστε μέγιστε,

'Hέλιος θ' δς κτλ.
Similarly, the Vocative is not followed by δέ or any similar Conjunction, but the Pronoun σύ is interposed; as Il. 1. 282 'Ατρείδη σὺ δὲ παῦε κτλ. but, son of Atreus, cease &·c.

The Nominative is often used for the Voc., especially, it would seem, in order to avoid the repetition of the Voc.; e.g. Il. 4. 189 ϕ iλos â Μενέλαε. On this point however it is not always possible to trust to the accuracy of the text. Cobet (Misc. Crit. p. 333) has good grounds in the metre for proposing to change a great many Vocatives into Nominatives: e.g.—

Il. 23. 493 Αΐαν Ἰδομενεῦ τε (read Aἴας Ἰδομενεύς τε).

Il. 2. 8 οὖλε ὄνειρε (read οὖλος).

Od. 8. 408 χαίρε πάτερ & ξείνε (read πατηρ).

Il. 18. 385 τίπτε Θέτι τανύπεπλε ίκάνεις (Θέτις Zenod.). σ

Adjectival Use of the Noun.

165.] Substantive and Adjective. This seems a convenient place for one or two remarks on the distinction expressed by these terms.

It will be seen from §§ 114 and 117 that there is no general difference in the mode of forming Substantives and Adjectives. Certain Suffixes, however, are chiefly or wholly employed in the formation of abstract and collective Nouns: as in the Feminine Nouns in $-\tau\iota$ -s, $-\tau\nu$ -s, $-\delta\omega\nu$, the Neuters in $-\mu\alpha(\tau)$, the Denomin-

atives in -ths (Gen. -tht-os).

In respect of meaning and use the distinction between the concrete Substantives and Adjectives is practical rather than logical. Certain Nouns are mainly used as qualifying words in agreement with other Nouns; these are classed as Adjectives. In such combinations as βοῦς ταῦρος, ἀνέρες ἀλφησταί, χαλκῆες ἄνδρες, βασιλεὺς Κῦρος, ᾿Αγαμέμνων ᾿Ατρείδης, where the qualifying word is one that is not generally used as an Adjective, we speak of the 'adjectival use' of a Substantive. Conversely, when an Adjective stands by itself to denote an individual or group of objects, the use is called 'substantival': e.g. κακός a base fellow, κακά evils, τυκτὸν κακόν a made mischief. This is a use which arises when the objects to which an Adjective applies are such as maturally form a distinct class. Thus the Suffixes which form Nouns in -τη-ς, -τηρ, -τωρ and -ευς are practically confined to Substantives.

Abstract and Collective Nouns, it is evident, are essentially Substantives. Thus there is a clear distinction, both in form and meaning, between Abstract and Concrete Nouns; but not between Substantives and Adjectives.

The common definition of an Adjective as a word that expresses 'quality' ('Adjectives express the notion of quality,' Jelf, ii. p. 7) is open to the objections (1) that an abstract Substantive may be said to express quality, and (2) that every concrete Noun of which the etymological meaning is clear

expresses quality in the same way as an Adjective. E. g. the definition does not enable us to distinguish $\mu a \chi \eta \tau \eta s$ from $\mu a \chi \eta \mu \omega \nu$.

It is evident that the use of a Nominative in the Predicate—as βασιλεύς ἐστι he is king—is strictly speaking an adjectival use.

The corresponding distinction in the Pronouns does not need much explanation. The Personal Pronouns are essentially Substantives (being incapable of serving as limiting or descriptive words); the Possessive Pronouns are essentially Adjectives. The others admit of both uses; e.g. $o\hat{v}\tau os$ this one, and $av\eta\rho$ $o\hat{v}\tau os$ (in Attie δ $av\eta\rho$ $o\hat{v}\tau os$) this man.

- 166.] Gender of Adjectives. In a few cases the Gender of the Adjective is independent of the Substantive with which it is construed.
- 1. When a person is described by a word which properly denotes a thing (viz. a Neuter, as τέκνον, τέκος, &c., or an abstract Noun, βίη Πριάμοιο, &c.), the concord of Gender is not always observed. Thus we have φίλε τέκνον (but φίλον τέκος, φίλη κεφαλή); again—

Il. 11. 690 ἐλθῶν γάρ ρ' ἐκάκωσε βίη Ἡρακληείη (= Heracles).

Od. 11. 90 ήλθε δ' έπὶ ψυχὴ Θηβαίου Τειρεσίαο

χρύσεον σκηπτρον έχων.

In such cases grammarians speak of a 'construction according to the meaning' ($\kappa \alpha \tau \hat{\alpha} \sigma \acute{\nu} \epsilon \sigma \iota \nu$). The term is unobjectionable, provided that we remember that constructions according to the meaning are generally older than those in which meaning is overridden by idiom or grammatical analogy.

2. Where an Adjective refers to more than one Noun, it follows the most prominent: or (if this is at all doubtful) the Masc. is used of persons, the Neut. of things: e.g.—

ΙΙ. 2. 136 αἱ δέ που ἡμέτεραί τ' ἄλοχοι καὶ νήπια τέκνα

ηατ' ενί μεγάροις ποτιδέγμεναι

because the wives are chiefly thought of: but—

Il. 18. 514 τεῖχος μέν β' ἄλοχοί τε φίλαι καὶ νήπια τέκνα

ρύατ' εφεσταότες, μετὰ δ' ἀνέρες οθς έχε γῆρας

because the boys and old men are also in the speaker's mind.

Od. 13. 435 ἀμφὶ δέ μιν ράκος ἄλλο κακὸν βάλεν ἦδὲ χιτῶνα, ρωγαλέα ρυπόωντα.

The Neut. Plur. is especially used of sheep and cattle: Il. 11. 244 πρῶθ' ἐκατὸν βοῦς δῶκεν, ἔπειτα δὲ χίλι' ὑπέστη, αἶγας ὁμοῦ καὶ ὅῖς; Il. 11. 696 ἐκ δ' ὁ γέρων ἀγέλην τε βοῶν καὶ πῶῦ μέγ' οἰῶν εἴλετο, κρινάμενος τριηκόσι' ἦδὲ νομῆας (three hundred head): cp. also Il. 5. 140, Od. 12. 332.

3. A Noun standing as Predicate may be Neuter, although the Subject is Masc. or Fem.: as οὐκ ἀγαθὸν πολυκοιρανίη. This

is a kind of substantival use.

167.] Gender of Pronouns. A substantival Pronoun denoting a person may retain its proper Gender although the antecedent is a Neuter, or an abstract word; as Il. 22. 87 φίλον θάλος, δυ τέκου αὐτή.

Conversely a Neuter Pronoun may be used substantivally of a

thing which has been denoted by a Masc. or Fem. word:

ΙΙ. 2. 873 δς καὶ χρῦσον ἔχων πόλεμόνδ' ἴεν ἢΰτε κούρη,

νήπιος, οὐδέ τί οἱ τό γ ἐπήρκεσε λυγρὸν ὅλεθρον. Cp. Il. 11. 238., 18. 460, Od. 12. 74 (with the note in Merry and

Riddell's edition).

On the other hand, a Pronominal Subject sometimes follows the Gender of a Noun standing as Predicate, as and $\delta(\kappa\eta) \approx \delta \sigma t$ this is the manner, $\hat{\eta}$ $\theta \neq \mu$ is $\hat{\epsilon} \sigma t$ which is right. But the Neuter is preferred if a distinct object is meant by the Pronoun; as Od. 1. 226 où κ $\hat{\epsilon} \rho a \nu$ os $\tau \hat{a} \delta \epsilon$ γ' $\hat{\epsilon} \sigma t$ what I see is not a club-feast.

168.] Implied Predication. An Adjective (or Substantive in an adjectival use) construed with a Noun in an oblique Case may be so used as to convey a distinct predication; as $oi\kappa\epsilon\tau$ èuol $\phi(\lambda\alpha \tau a\hat{v}\tau)$ à $\gamma o\rho\epsilon\hat{v}\epsilon\iota s = this$ (that you now speak) is not pleasing to me.

So after Verbs meaning to make, cause to be, call, think, &c.; λαοὺς δὲ λίθους ποίησε Κρονίων Zeus made the people (to be) stones.

This use is parallel to that of the Nominative in the Predicate (§ 162): cp. the forms of sentence $\lambda \alpha o i \epsilon \gamma \epsilon \nu \nu \nu \nu o \lambda i \theta o i$, $\lambda \alpha o i s \epsilon \nu o i \eta \sigma \epsilon \lambda i \theta o v o s$. In the latter the predicative Noun ($\lambda i \theta o v s$) is construed with an oblique Case, instead of with the Subject. A Noun so used is called a tertiary predicate: cp. § 162, 3.

CHAPTER VIII.

USE OF THE NUMBERS.

169.] Collective Nouns. The Subject of a Plural Verb may be expressed by means of a Collective Noun; as ŵs φάσαν ἡ πληθύς thus they said, the multitude (cp. Il. 15. 305., 23. 157).

Conversely, a Participle construed with a Collective Noun and Singular Verb may be Plural: as Il. 18. 604 περιΐσταθ' ὅμιλος τερπόμενοι. Cp. Il. 16. 281 ἐκίνηθεν δὲ φάλαγγες ἐλπόμενοι, also

Od. 11. 15.

In these instances, again, the construction is said to be 'according to the meaning' (§ 166). The principle is evidently that an abstract or collective word may be used in 'apposition' to a concrete word. It may be noticed however that the com-

binations such as ὅμιλος - τερπόμενοι are only found when there is some pause between the words; otherwise the Genitive would be used (construed as in Τρώων κατεδύσεθ' ὅμιλον, &c.).

170. Distributive use of the Singular. The word ξκαστος 4,40/ is often used in the Sing. with a Plural Verb, as έβαν οἶκόνδε έκαστος they went home, each one, δεδμήμεσθα έκαστος we are each one obedient. Other words in a clause may follow Exactos in respect of Number: as Il. 2. 775 ἵπποι δὲ παρ' ἄρμασιν οἶσιν έκαστος the horses each beside his chariot; Il. 9. 656 οἱ δὲ έκαστος έλων δέπας αμφικύπελλον σπείσαντες παρα νηας ίσαν πάλιν. Even the Verb is made Sing. in Il. 16. 264 οἱ δ' ἄλκιμον ήτορ ἔχοντες πρόσσω παις πέτεται και αμύνει οισι τέκεσσι: but this is a slight boldness of expression.

On the same principle we may explain the Sing. in Od. 4. 300 αί δ' ίσαν έκ μεγάροιο δάος μετά χερσίν έχουσαι (= each with a torch in her hands); Il. 13. 783 τετυμμένω κατά χείρα (each of the two) wounded in the hand; Il. 3. 235 ούς κεν εθ γνοίην καί τ' ούνομα μυθησαίμην. So in Il. 17. 260 των δ' άλλων τίς κεν . . οὐνόματ'

εἴποι we should doubtless read οὖνομα (Εείποι).

Similarly the Dual is used of a group of pairs: ΙΙ. 16. 370 πολλοί δ' έν τάφρω έρυσάρματες ωκέες ίπποι ἄξαντ' ἐν πρώτω ρυμῷ λίπον ἄρματ' ἀνάκτων

where the Dual ἄξαντε (like the Sing. ὁνμῶ) refers to one chariot. Probably, too, we should read ἄρμα ἀνάκτων (i. e. Γανάκτων). So Il. 23. 362 οἱ δ' ἄμα πάντες ἐφ' ἵπποιϊν μάστιγας ἄειραν, Od. 20. 348 όσσε δ' άρα σφέων δακρυόφιν πίμπλαντο, also Il. 9. 503, Od. 19. 444.

The Dual is often used in this way in Aristophanes: cp. Av. 622 avareivovres τω χείρε, and other instances given by Bieber (De duali numero, p. 44).

In Il. 5. 487 μή πως ως άψισι λίνου άλόντε πανάγρου, the Dual άλόντε is explained by Schol. B bueis kal at yovaikes. If so, it is a distributive use: 'see that ye be not taken, man and wife in one net.' But more probably it refers to Hector and Paris.

In speaking of the characteristics of a group or class it is common to pass from the Plural to the Singular, or vice versá; e.g. Od. 4. 691 ή τ' έστι δίκη θείων βασιλήων, άλλον κ' έχθαίρησι Βροτών κτλ. it is the way of kings, (a king) will hate one &c.; and in the same clause, Il. 10. 259 ρύεται δε κάρη θαλερών αἰζηών (of a kind of helmet); Il. 2. 355 πρίν τινα πάρ Τρώων ἀλόχω κατακοιμηθηναι beside the wife of some Trojan; Il. 19. 70 άλλά τιν' οἴω .. ὑπ' ἔγχεος ἡμετέροιο before the spear of one of us. The distributive τ_{is} is equivalent to a Plural.

Hence a peculiar vague use of the Plural, as Il. 3. 49 vvdv ανδρών αίγμητάων the bride of some warrior's son (lit. daughter-in-

law of warriors, i.e. of this or that warrior); 4. 142 παρήϊον $\xi\mu\mu\epsilon\nu$ αι ἵππων (v. l. ἵππφ); 21. 499 πληκτίζεσθ' ἀλόχοισι Διός (less directly personal than ἀλόχφ).

171.] Plural of Things. The Plural form is not confined in Greek (or indeed in any language) to the expression of 'plurality' in the strict sense, i.e. to denote a group composed of distinct individuals, but is often used (esp. in Homer) of objects which it is more logical to think of in the Singular. Many words, too, are used both in the Sing. and the Plur., with little or no difference of meaning.

Notice especially the uses of the Plural in the case of-

(1) Objects consisting of parts: τόξον and τόξα bow and arrows: ὅχος and ὅχεα, ἄρμα and ἄρματα a chariot: δῶμα, μέγαρον a hall or room, δώματα, μέγαρα a house: λέκτρον and λέκτρα a bed.

πύλαι a gate is only used in the Plur.; θύρη is used as well as

θύραι, but only of the door of a room (θάλαμος).

(2) Natural objects of undefined extent: ψάμαθος and ψάμαθοι (as we say sands), ἄλες (once ἄλς) salt, κονίη and κονίαι dust, πυρός and πυροί wheat, ῥέεθρον and ῥέεθρα, κῦμα (in a collective sense) and κύματα, δάκρυ and δάκρυα, κρέα (seldom κρέας) meat, σάρκες (once Sing.) flesh.

(3) Parts of the body: νῶτον (or νῶτος—the Nom. Sing. does not occur in Homer) and νῶτα, στῆθος and (more commonly) στήθεα, πρόσωπον and πρόσωπα the countenance, φρήν and φρένες.

The Plural in such cases is a kind of imperfect abstraction; the particular manifestations of a quality are thought of as units in a group or mass,—not yet as forming a single thing.

(5) Collective words: μῆλα flocks; so πρόβατα is only Plur, in Homer (ep. πρόβασις Od. 2. 75).

(6) Pronouns and Adjectives; see the examples of adverbial uses, §§ 133, 134; cp. also § 161.

172.] Neuter Plural. The construction of the Neut. Plur. with a Singular Verb is the commoner one in Homer, in the proportion of about three to one. When the Plural is used, it will

generally be found that the word is really Plural in meaning (i.e. that it calls up the notion of distinct units). Thus it is used with—

Nouns denoting agents; as $\xi\theta\nu\varepsilon\alpha$ applied to the men of the Greek army (Il. 2. 91, 464), to birds (Il. 2. 459), to swine (Od. 14. 73); so with $\phi\hat{v}\lambda'$ $\dot{a}\nu\theta\rho\omega\pi\omega\nu$ (Od. 15. 409).

Distinctly plural parts of the body: πτερά, χείλεα, οὔατα,

μέλεα: so πέδιλα (of the shoes of Hermes).

Numerals: δέκα στόματα (Il. 2. 489), οὔατα τέσσαρα (Il. 11. 634), τέσσαρα δέρματα (Od. 4. 437), αἰπόλια ἔνδεκα πάντα (Od. 14. 103); so with πάντα and πολλά (Il. 11. 574., 15. 714., 17. 760, Od. 4. 437, 794., 9. 222., 12. 411), and when the context shows that distinct things are meant: as Il. 5. 656 τῶν μὲν δούρατα (the spears of two warriors), 13. 135 ἔγχεα.. ἀπὸ χειρῶν.

A few instances occur in fixed phrases, which may represent an earlier syntax; λύντο δὲ γυῖα (but also λύτο γούνατα), ἀμήχανα ἔργα γένοντο, &c. Note especially the lines ending with πέλονται (τά τε πτερὰ νηυσὶ πέλονται, ὅτε τ' ἤματα μακρὰ πέλονται, φυκτὰ

πέλονται, &c.).

The exceptions to the use of the Sing. are fewest with Pronouns and Adjectives: doubtless on account of their want of a distinct Plural meaning (see the end of last section).

173.] The Dual is chiefly used (1) of two objects thought of as a distinct pair, and (2) when the Numeral δύω is used.

1. Thus we have the natural pairs χεῖρε, πήχεε, τένοντε, ὤμω, μηρώ, ὄσσε, ὀφθαλμώ, and (in the Gen. Dat.) ποδοῖιν, βλεφάροιϊν: σταθμώ door-posts; ἵππω the horses of a chariot, βόε a yoke of oxen, ἄρνε a pair of lambs (for sacrifice); δοῦρε (in Il. 13. 241., 16. 139 of the two spears usually carried, but δύο δοῦρε is more common); ποταμώ (Il. 5. 773) of the two rivers of the Troad, and so κρουνώ (Il. 22. 147). So of the two warriors in a chariot (Il. 5. 244, 272, 568), two wrestlers (Il. 23. 707), two dancers (Od. 8. 378), the Sirens (Od. 12. 52, &c.); the ᾿Ατρείδα and Αἴαντε.

The Numeral is generally added in speaking of two wild animals ($\theta\hat{\eta}\rho\epsilon$ $\delta\hat{\nu}\omega$, $\lambda\hat{\epsilon}o\nu\tau\epsilon$ $\delta\hat{\nu}\omega$, &c.): $\kappa\hat{\alpha}\pi\rho\omega$ (II. 11. 324) and $\lambda\hat{\epsilon}o\nu\tau\epsilon$ (II. 16. 756) are hardly exceptions, since the context shows that two are meant. Also $a\hat{\epsilon}\epsilon\tau\omega$ (Od. 2. 146) of two eagles sent as an omen, and $\hat{\nu}\hat{\nu}\pi\epsilon$ (Od. 11. 578) of the vultures that devoured

Tityos.

The Dual in II. 8. 185–191 (where Hector calls to four horses by name) might be defended, because two is the regular number; but probably v. 185 is spurious. In II. 23. 413, again,—ai κ' ἀποκηδήσαντε φερώμεθα χεῖρον ἄεθλον—the Dual is used because

it is the horses that are chiefly in the driver's mind, although he associates himself with them. In Il. 9. 182-195 the Dual refers

to the two envoys, Phoenix being overlooked.

Again, when two agents have been mentioned together, or are represented as acting together in any way, the Dual may be used: as Il. 1. 531 τώ γ' ω̂ς βουλεύσαντε (of Thetis and Achilles), 16. 823 (of a lion and boar fighting), Od. 3. 128., 13. 372, &c. Similarly, of the meeting of two rivers, Il. 4. 453

ές μισγάγκειαν συμβάλλετον δβριμον ύδωρ (cp. 5. 774).

The Dual Pronouns νῶτ and σφῶτ are used with comparative regularity: see Il. 1. 257, 336, 574., 5. 34, 287, 718, &c. This usage may be a matter of traditional courtesy. Hence perhaps the scrupulous use where the First Person Dual is meant; Il. 4. 407 ἀγαγόνθ' ('Diomede and I'); 8. 109 θεράποντε our attendants; Il. 313 τί παθόντε λελάσμεθα κτλ.; 12. 323 ὧ πέπον εἰ.. φνγόντε; Od. 3. 128 ἔνα θυμὸν ἔχοντε ('Ulysses and I'). In Od. 2. 78 for ἀπαιτίζοντες ἕως should be read ἀπαιτίζονθ' ἦος, since Telemachus there is speaking of his mother and himself. So with the Second Person, Il. 1. 216 (Athene and Here), 322 (the heralds), 3. 279., 7. 279.

In Il. 3. 278 καὶ οἱ ὑπένερθε καμόντας ἀνθρώπους τίνυσθου, ὅτις κ' ἐπίορκον ὀμόσση the two gods indicated by the Dual are doubtless Hades and Persephone, as appears from Il. 9. 456 θεοὶ δ' ἐτέλειον ἐπαράς, Ζεύς τε καταχθόνιος καὶ ἐπαινὴ Περσεφόνεια, and 9. 569, where Althaea beats upon the earth κικλήσκουσ' ᾿Αίδην καὶ ἐπαινὴν Περσεφόνειαν. And since these were the gods especially called upon as witnesses and avengers of wrong, it is probable that they are meant in Od. 1. 273 θεοὶ δ' ἐπιμάρτυροι ἔστων. The omission of the names may be a mark of reverence. If this view is correct, it removes the difficulty as to ἔστων (Meyer, G. G. § 577, 1).

2. Of the use with the Numeral the most significant examples are Od. 8. 35, 48 κούρω δὲ κρινθέντε δύω καὶ πεντήκοντα βήτην: where the Dual is used by a kind of attraction to the word δύω.

The Dual is never obligatory in Homer, since the Plural may always be used instead of it. Hence we often have a Dual Noun or Pronoun with a Plural Verb or Adjective, and vice versa.

The Neut. Dual (like the Neut. Plur.) may go with a Sing. Verb: thus we have $\delta\sigma\sigma\epsilon$ with all three Numbers,

Certain of the ancient grammarians—Zenodotus among them—supposed that Homer sometimes used the Dual for the Plural. But Aristarchus showed that in all the passages on which this belief was founded the Dual either had its proper force, or was a false reading.

The use of the Dual in Attic is nearly the same as in Homer: in other dialects it appears to have become obsolete. This was one of the reasons that led some grammarians to maintain that Homer was an Athenian.

CHAPTER IX.

THE PREPOSITIONS.

Introductory.

174.] Prepositions are words expressing some local relation, and capable of being used as prefixes in forming Compound Verbs. The Prepositions are also used in construction with oblique Cases of Nouns and Pronouns.

The Adverbs that are construed with oblique Cases, but do not enter into composition with Verbs, are called *Improper*

Prepositions.

The list of Homeric Prepositions is the same (with perhaps one exception, see § 226) as that of later classical Greek. In the use of Prepositions, however, there are some marked differences between the two periods (§ 229).

There are no 'Inseparable' Prepositions in Greek: see how-

ever § 221.

175.] Adverbial use. In post-Homeric Greek it is a rule (subject to a few exceptions only) that a Preposition must either (1) enter into Composition with a Verb or (2) be followed immediately by and 'govern' a Noun or Pronoun in an oblique Case. But in the Homeric language the limitation of the Prepositions to these two uses is still far from being established. A Preposition may not only be separated from the Case-form which it governs (a licence sometimes found in later writers), but may stand as a distinct word without governing any Case. In other words, it may be placed in the sentence with the freedom of an Adverb: e.g. àuφi may mean either on both sides (of an object expressed by an oblique Case) or simply on both sides; èv may mean in (taking a Dat.), or simply inside; and so of the others, e.g.—

γέλασσε δὲ πᾶσα περὶ χθών all the earth smiled round about. ὑπαὶ δέ τε κόμπος ὀδόντων γίγνετο beneath arose rattling of teeth.

These uses, in which the Preposition is treated as an ordinary 'Adverb of place,' may be called in general the adverbial uses.

176.] Tmesis. The term TMESIS is sometimes applied generally to denote that a Preposition is 'separated' from the Verb

which it qualifies, thus including all 'adverbial' uses, but is more properly restricted to a particular group of these uses, viz. those in which the meaning is the same as the Preposition and Verb have in Composition: e.g.—

οι κατά βους Ύπερίονος 'Ηελίοιο ήσθιον who ate up (κατήσθιον) the oxen of the sun.

οῦς ποτ' ἀπ' Αἰνείαν ἐλόμην which I took from (ἀφειλόμην) Aeneas. ὑπὸ δ' ἔσχετο μισθόν and promised (ὑπέσχετο) hire.

μετὰ νῶτα βαλών turning his back.

χείρας ἀπὸ ξίφει τμήξας cutting off his hands by a sword.

This is the sense in which the word $\tau\mu\eta\sigma\iota$ s was employed by the Greek grammarians, who looked at the peculiarities of Homer as deviations from the later established usage, and accordingly regarded the independent place of the Preposition as the result of a 'severance' of the Compound Verb. We may retain the term, provided that we understand it to mean no more than the fact that the two elements which formed a single word in later Greek were still separable in the language of Homer.

The distinction between Tmesis (in the strict sense) and other adverbial 'uses cannot be drawn with any certainty. The clearest cases are those in which the compound Verb is necessary for the construction of other words in the sentence; e.g. in $\dot{\alpha}\pi'$ Alveíav $\dot{\epsilon}\lambda\dot{\delta}\mu\eta\nu$ or $\dot{\nu}\pi\dot{\delta}$ $\dot{\delta}'$ $\dot{\epsilon}\sigma\chi\epsilon\tau\sigma$ $\mu\iota\sigma\theta\dot{\delta}\nu$. On the other hand, the use is simply adverbial in—

περὶ φρένας ἵμερος αἰρεῖ desire seizes his heart all round (because the Compound περιαιρέω means to strip off, to take away from round a thing).

ώς τους ήγεμόνες διεκόσμεον . . μετὰ δὲ κρείων 'Αγαμέμνων and in the midst the king Agamemnon.

ώς Τρώες πρό μεν άλλοι άρηρότες, αὐταρ ἐπ' άλλοι the Trojans, arrayed some in front, others behind.

177.] Ellipse of the Verb. In certain cases, viz. when the Verb is understood, a Preposition may represent the whole Predicate of a clause:—

οιωνοί δὲ πέρι πλέες ἢὲ γυναῖκες about (him) are more &c.

ένθ' ένι μεν φιλότης therein is love.

ου τοι έπι δέος there is no fear for thee.

àλλ' åva but up!

πάρα δ' ἀνήρ the man is at hand.

πάρ' ἔμοιγε καὶ ἄλλοι others are at my command (not are beside me, but = πάρεισι in its derived sense).

So when a Verb is to be repeated from a preceding clause; as Il. 24. 229–233 ἔνθεν δώδεκα μὲν περικαλλέας ἔξελε πέπλους . . ἐκ δὲ δύ αἴθωνας τρίποδας: Il. 3. 267 ἄρνυτο δ' αὐτίκ' ἔπειτα ἄναξ ἀνδρῶν 'Αγαμέμνων, αν δ' 'Οδυσεύς (sc. ἄρνυτο).

178.] Use with oblique Cases. Prepositions are frequently used in Greek with the Accusative, the locatival and instrumental Dative, and the ablatival Genitive; much less commonly

(if at all) with the true Genitive.

It may be shown (chiefly by comparison with Sanscrit) that the government of Cases by Prepositions belongs to a later stage of the language than the use of Prepositions with Verbs. In the first instance the Case was construed directly with the Verb, and the Preposition did no more than qualify the Verbal meaning. E. g. in such a sentence as ϵls $T\rho o i \eta \nu$ $\eta \lambda \theta \epsilon$ the Acc. $T\rho o i \eta \nu$ $\eta \lambda \theta \epsilon$ ceased to be usual except with ϵls , the Preposition would be felt to be necessary for the Acc., i. e. would 'govern' it.

In Homer we find many instances of a transitional character, in which a Case-form which appears to be governed by a Preposition may equally well be construed directly with the Verb,—

modified, it may be, in meaning by the Preposition.

Thus we have à phi with the Dat. in the recurring form-

αμφὶ δ' ἄρ' ὤμοισιν βάλετο ξίφος,

but the Preposition is not necessary for the Case, as we see from its absence in $\tau \delta \xi^{\prime}$ $\delta \mu \omega \omega \nu$, &c., and again from forms such as—

αμφὶ δὲ χαῖται | ὅμοις ἀΐσσονται, περὶ μὲν ξίφος ἀργυρόηλον | ὅμοιϊν βαλόμην

where the Preposition is best taken in the adverbial use. Cp. II. 17. 523 ἐν δέ οἱ ἔγχος | νηδυίοισι μάλ' ὀξὺ κραδαινόμενον λύε γυῖα, where ἐν is adverbial.

Again, we seem to have ἀμφί governing the Accusative in—
Il. 11. 482 ως ρα τότ' ἀμφ' 'Οδυσῆα . . Τρωες ἔπου.

But ἀμφί must be taken with ἔπον, as in II. 11. 776 σφῶι μὲν ἀμφὶ βοὸς ἔπετον κρέα. So in ὑπὸ ζυγὸν ἤγαγε brought under the yoke the supposition of Tmesis is borne out by the form ὕπαγε ζυγὸν ἀκέας ἵππους. And in the line—

ΙΙ. 1. 53 ἐννῆμαρ μὲν ἀνὰ στρατὸν ῷχετο κῆλα θεοίο

the rhythm is against taking ἀνὰ στρατόν together (§ 367, 1), and points therefore to ἀνώχετο.

Again, the ablatival Genitive in-

ηλθ' ¿ξ àλός came out from the sea

may be explained like $\tau \epsilon i \chi \epsilon o s \epsilon \xi \epsilon \lambda \theta \epsilon i \nu$, &c.; and in $\nu \eta \delta s \delta \pi \delta$ πρύμνης χαμάδις $\pi \epsilon \sigma \epsilon$ like $\nu \eta \delta s \delta \pi \delta \theta \rho \phi \sigma \kappa \omega \nu$, and numerous similar constructions.

Thus the history of the usage of Prepositions confirms the general principle laid down in a previous chapter (§ 131), that the oblique Cases, with the exception of the true Genitive, are

primarily construed with Verbs, and that consequently the construction of these Cases with Nouns and (we may now add) Prepositions is always of a derivative kind.

179.] Use with the Genitive. Where the Genitive with a Preposition is not ablatival, it may usually be explained in two ways, between which it is not always easy to choose:—

(1) It may be derived from one of the uses with Verbs discussed in §§ 149-151. E.g. the Genitive in—

ős τ' είσιν διὰ δουρός which goes through the wood

is probably the Genitive of the space within which motion takes place. For $\epsilon i \sigma \iota \nu$ $\delta \iota \dot{\alpha}$ $\delta o \nu \rho \dot{\alpha} \delta$ has the same relation to $\pi \epsilon \delta \dot{\alpha} \iota \omega$ $\delta \iota \dot{\omega} \kappa \epsilon \iota \nu$ and $\pi \epsilon \delta \dot{\alpha} \iota \omega$ $\delta \iota \dot{\alpha} \pi \rho \dot{\gamma} \sigma \sigma \epsilon \iota \nu$, that $\mathring{\eta} \lambda \theta \epsilon \nu$ $\epsilon l s$ $T \rho \iota \dot{\gamma} \nu$ has to $T \rho \iota \dot{\gamma} \nu$ $\mathring{\eta} \lambda \theta \epsilon \nu$ and $T \rho \iota \dot{\gamma} \nu$ $\epsilon l \sigma \mathring{\eta} \lambda \theta \epsilon \nu$.

(2) It may be of the same kind as the Genitive with a Noun: e.g. the construction with ἀντί may be the same as with the Adverbs ἄντα, ἀντίον, ἀντία, &c., and the Adjectives ἀντίος, ἐναντίος, &c., and this is evidently not akin to any of the constructions with Verbs, but falls under the general rule that a Noun or Pronoun qualifying a Noun is put in the Genitive (§ 147).

It is held by Curtius (Elucidations, c. 17) that the Genitive with $\partial v \tau i$, $\pi \rho \delta$, $\partial \iota d$, $\dot{v} \pi \epsilon \rho$, $\dot{v} \pi \delta$, when they do not necessarily imply motion from, is of the same kind as the ordinary Genitive with Adjectives and Adverbs, i. e. the true Genitive. This view is supported by the Improper Prepositions, which nearly all govern the Genitive, whatever their meaning: e.g. $\dot{\epsilon} \gamma \gamma \dot{v} s$ and $\dot{\epsilon} \kappa \dot{a} s$, $\dot{\epsilon} v \tau \dot{o} s$ and $\dot{\epsilon} \kappa \dot{\tau} \dot{o} s$, $\dot{a} v \tau a$, $\mu \dot{\epsilon} \chi \rho \iota$, $\dot{\epsilon} v \dot{\epsilon} \kappa a$, &c. For in these cases the construction evidently does not depend upon the local relation involved, but is of the same kind as in $\delta \dot{\epsilon} \mu a s$, $\pi v \rho \dot{o} s$, $\chi \dot{a} \rho \iota v$ $T \rho \dot{\omega} \omega v$, &c.

On the other hand, it is pointed out by Delbrück (Synt. Forsch. iv. p. 134) that such a construction of the Genitive is unknown in Sanserit, and this argument, which applies to πρό, ὑπό, ὑπέρ (Sanser. prá, ὑpa, upári), is confirmed by the Latin construction of pro, sub, super with the Abl. He would allow the supposition however in the case of ἀντί (the Sanserit ánti being an Adverb), and perhaps διά; regarding these words as having become Prepo-

sitions more recently than the others.

180.] Accentuation. The rules for the accentuation of Compound Verbs have been already given in § 88. They proceed on the general principle that (except in the augmented forms) the accent falls if possible on the Preposition; either on the last syllable (as $\dot{\alpha}\pi\dot{\phi}-\delta\sigma s$), or, if that is elided, then on the first (as $\ddot{\nu}\pi-a\gamma\epsilon$).

In regard to the other uses, and in particular the use with

Cases, the general assumption made by the Greek grammarians is that all Prepositions are oxytone. They do not recognise the modern distinction according to which èv, eis, and ès are unaccented. This distinction rests entirely on the practice of the manuscripts (Chandler, p. 254), and apparently arises from the accident of the smooth breathing and accent falling on the same letter (Wackernagel, K. Z. xxix. 137).

Disyllabic Prepositions, however, are liable in certain cases to become barytone. The exact determination of these cases was a matter of much difficulty with the ancients, and unfortunately we cannot now determine how far their *dicta* rest upon observation of usage, and how far upon analogy and other theoretical considerations. The chief points of the accepted doctrine are:—

- (1) The disyllabic Prepositions, except $\partial \mu \phi \ell$, $\partial \nu \tau \ell$, $\partial \nu \dot{\alpha}$, and $\partial \iota \dot{\alpha}$ (except also the dialectical forms $\kappa \alpha \tau \alpha \ell$, $\dot{\nu} \pi \alpha \ell$, $\pi \alpha \rho \alpha \dot{\ell}$, $\dot{\alpha} \pi \alpha \dot{\ell}$, $\dot{\nu} \pi \epsilon \ell \rho$, $\pi \rho \sigma \tau \dot{\ell}$), are liable to 'Anastrophe;' that is to say, when placed immediately after the Verb or the Case-form to which they belong, they throw back the accent; as $\lambda o \dot{\nu} \sigma \eta$ $\dot{\alpha} \pi \sigma$ (= $\dot{\alpha} \pi \sigma \lambda o \dot{\nu} \sigma \eta$), $\ddot{\epsilon} \chi \epsilon \nu$ $\kappa \dot{\alpha} \tau \alpha$, $\dot{\phi}$ $\ddot{\epsilon} \pi \iota$, $\mu \dot{\alpha} \chi \eta$ $\ddot{\epsilon} \nu$, $Z \epsilon \phi \dot{\nu} \rho \sigma \nu$ $\ddot{\nu} \pi \sigma$, &c. Some held that the insertion of $\delta \dot{\epsilon}$ before the Preposition did not prevent Anastrophe, and accordingly wrote $\dot{\omega} \sigma \epsilon$ δ ' $\dot{\alpha} \pi \sigma$, &c.
- (2) Also, according to some, if the Prep. stands at the end of a verse, or before a full stop (Schol. A on Il. 5, 283).
- - (4) Two Prepositions are barytone in the adverbial use,-

απο when it is = $\mathring{a}ποθεν$ at a distance, and πέρι when it is = περισσῶs exceedingly.

To which some added ὕπο (as τρομέει δ' ὕπο γυῖα, &c.).

(5) Monosyllabic Prepositions when placed after the governed word take the acute accent (as an equivalent for Anastrophe); but only when they come at the end of the line. Some however accented Od. 3. 137—

καλεσσαμένω άγορην ές πάντας 'Αχαιούς.

Most Prepositions, as appears from the Sanscrit accent, are originally barytone, and the so-called Anastrophe is really the retention of the accent in certain cases in which the Preposition is emphatic, or has a comparatively independent place in the sentence. Just as there is an orthotone $\epsilon \sigma \tau_{i}$ and an enclitic $\epsilon \sigma \tau_{i}$ (§ 87, 1), so there is an orthotone $\pi \epsilon \rho_{i}$ and a 'proclitic' $\pi \epsilon \rho_{i}$, written $\pi \epsilon \rho_{i}$ before a governed Noun, but in reality unaccented.

The word $\tilde{\epsilon}\tau\iota$ (Sanser. $\acute{a}ti$) is a Preposition which happens to have survived (with the original accent) in the adverbial use

only: cp. $\pi \rho \acute{o}s = besides$.

One or two suggestions may be added in reference to the Prepositions which are generally said to be incapable of Anastrophe:—

àvá was thought by some to be capable of Anastrophe, and

this view is supported by the adverbial use ava up!

ἀμφί is probably a real oxytone, like the Adverb ἀμφίς. The corresponding Sanscrit Preposition abhi is oxytone, contrary to the general rule.

The assertion that ὑπαί, παραί, προτί, &c. are not liable to Anastrophe is difficult of interpretation. It may mean only that these words are not Attic, and by consequence that later usage

furnished the grammarians with no examples.

If this is the true account of Anastrophe, it is probable that the Prepositions retained their accent in all quasi-adverbial uses, including Tmesis—not only when they followed the Verb or governed Noun. The doctrine of the grammarians is unintelligible unless it admits of this extension. For if we write $\pi \dot{\alpha} \rho$ $\dot{\epsilon} \mu o \ell$ $\gamma \epsilon$ $\kappa a \ell$ $\delta \lambda a \ell$ because $\pi \dot{\alpha} \rho a = \pi \dot{\alpha} \rho \epsilon \iota \sigma \iota$, we must also write $\pi \dot{\alpha} \rho a \gamma \dot{\alpha} \rho \theta \epsilon o \ell \epsilon \ell \sigma \iota$, where $\pi \dot{\alpha} \rho a$ is equally emphatic. In Sanserit too the Preposition when separated from its Verb is accented.

It is not so clear how far the later rules for Prepositions in Composition are to be applied to Homer. In Sanscrit there is an important difference between Principal and Subordinate Clauses. In a Principal Clause the Verb loses its accent, unless it begins the sentence (§ 87); the Preposition (which usually precedes the Verb, but is not always immediately before it) is accented. Thus we should have, on Sanscrit rules, such forms

^{*} See Wackernagel, K. Z. xxiii. 457 ff. On this view, however, the original accent would be ἄπο-δος, ἔνι-σπες, πάρα-σχες, &c. It may perhaps be preserved in the Indic. ἔνι-σπες and Imper. ἔνι-σπε (see § 88, where a different explanation of these forms was suggested).

as $\pi \epsilon \rho \iota \delta \epsilon \iota \delta \iota a$, $\pi \epsilon \rho \iota \pi \dot{a} \nu \tau \omega \nu$ olde, &c. But in Subordinate Clauses the accent is on the Verb, and the Preposition commonly forms one word with it, as in $\pi \epsilon \rho \iota \delta \epsilon \dot{\iota} \delta \iota a$. If the Preposition is separated from the Verb, both are accented. In classical Greek two changes have taken place: (1) the Preposition and Verb are inseparable, and (2) the accent is placed almost uniformly according to the 'law of three syllables' (§ 88):—if it falls on the Preposition, as in $\sigma \dot{\nu} \mu - \phi \eta \mu \iota$, $\kappa \dot{\alpha} \tau - \epsilon \chi \epsilon \iota$, or on the Verb, as in $\sigma \nu \mu - \phi \dot{\eta} \sigma \epsilon \iota$, $\kappa \alpha \tau - \dot{\epsilon} \chi \epsilon \iota$, the reason is purely rhythmical. The first of these changes had not taken place in the time of Homer. As to the second we are practically without evidence. We do not even know when the law of three syllables obtained in Greek. It may be observed however that—

(1) When a word of three syllables could not be unaccented, the form $\pi \epsilon \rho \iota$ $\delta \epsilon \iota \delta \iota a$ became impossible; but it does not follow that $\pi \epsilon \rho \iota$ lost its accent at the same time. An intermediate $\pi \epsilon \rho \iota$ $\delta \epsilon \iota \delta \iota a$ is quite admissible as a hypothesis.

(2) In many places in Homer it is uncertain whether a Preposition is part of a Compound or retains its character as a separate word. Thus we find—

II. 4. 538 πολλοὶ δὲ περὶ κτείνουτο καὶ ἄλλοι (Wolf, from Ven. A.).

16. 497 ἐμεῦ πέρι μάρναο χαλκῷ (πέρὶ sic Ven. A.).

18. 191 στεῦτο γὰρ Ἡφαίστοιο πάρ' οἰσέμεν ἔντεα καλά (so Ar.).

1. 269 καὶ μὲν τοῖσιν ἐγω μέθ' ὁμίλεον (Ar.).

with the variants περικτείνοντο, περιμάρναο, παροισέμεν, μεθομίλεον. And the existing texts contain a good many Compounds which we might write divisim without loss to the sense; as II. 18. 7 νηνσὶν ἐπικλονέονται, Od. 8. 14 πόντον ἐπιπλαγχθείς, Od. 16. 466 ἄστυ καταβλώσκοντα, II. 2. 150, 384., 3. 12., 4. 230., 5. 332, 763, 772., 6. 100, &c.

In reference to such forms we may fairly argue that the tendency of grammarians and copyists, unfamiliar with the free adverbial use of the Prepositions, would be always towards forming Compounds; hence that modern critics ought to lean rather to the side of writing the words separately, and giving the Prepositions the accent which belonged to them as Adverbs.

With regard to the accent of Prepositions in the ordinary use with Case-forms it is still more difficult to decide. A Sanserit Preposition generally follows the Noun which it governs: hence it does not furnish us with grounds for any conclusion about the Greek accent.

180*.] Apocope. Most Prepositions appear in Homer under several different forms, due to loss of the final vowel combined (in most cases) with assimilation to a following consonant.

Thus we find-

παρά and πάρ: ἀτά, ἄν, ἃμ (βωμοῖσι, φόνον): κατά, κὰδ (δέ). κά,β-(βαλε), κάτ-(θανε), κὰρ (βόον), καμ-(μονίη), κὰγ (γόνν), κὰκ (κεφαλῆς), κάλ-(λιπε), κὰπ (πεδίον): ὅπό, ὑβ-(βάλλειν): προτί, πρός (for προτ-), cp. ποτί, πός: ὑπείρ (for ὑπέρι), ὑπέρ: ἐνί, εἰν (εἰνί), ἐν: ἀπό, ἀπ-(πέμψει).

This phenomenon appears to be connected with the loss of accent which the Preposition suffers when closely connected with a Verb or Case-form. That is to say, from the adverbial forms $\pi \acute{a}\rho a$. $\pi \rho \acute{o}\tau \iota$, $\kappa \acute{a}\tau a$, $\check{\epsilon}\nu \iota$, $\check{a}\nu a$ (or $\check{a}\nu \acute{a}$), &c. were formed in the first instance the unaccented $\pi a \rho$, $\pi \rho o s$, $\kappa a \tau$ or κa , $\check{\epsilon}\nu$, $\check{a}\nu$. Then the pairs $\pi \acute{a}\rho a$ and $\pi a \rho$, &c. were used promiscuously. Finally one form was adopted as normal.

αμφί.

181.] The Preposition $d\mu\phi i$ means on both sides, or (if the notion of two sides is not prominent) all round. It is doubtless connected with $d\mu\phi\omega$ both.

The adverbial use is common; e.g. with a Verb understood, Od. 6. 292 ἐν δὲ κρήνη νάει, ἀμφὶ δὲ λειμών and around is a meadow.

It is especially used in reference to the two sides of the body: Il. 5. 310 ἀμφὶ δὲ ὅσσε κελαινὴ νὺξ ἐκάλυψε black night covered his eyes on both sides (i.e. both eyes); Il. 10. 535 ἀμφὶ κτύπος οὕατα βάλλει: Il. 18. 414 σπόγγω δ' ἀμφὶ πρόσωπα καὶ ἄμφω χεῖρ' ἀπομόργνυ: Od. 2. 153 παρεμὰς ἀμφί τε δειράς: Od. 9. 389 πάντα δέ οἱ βλέφαρ' ἀμφὶ καὶ ὀφρύας κτλ.

So II. 6. 117 ἀμφὶ δέ μιν σφυρὰ τύπτε καὶ αὐχένα δέρμα κελαινόν the shield smote him on the ankles on both sides and on the neck. Here ἀμφί is generally taken to mean above and beneath; wrongly, as the passages quoted above show.

This use of $\mathring{a}\mu\phi \mathring{\iota}$ is extended to the *internal* organs, esp. the midriff $(\phi\rho\acute{\epsilon}\nu\acute{\epsilon}s)$ regarded as the seat of feeling: as—

ΙΙ. 3. 442 οὐ γάρ πώ ποτέ μ' ὧδε ἔρως φρένας ἀμφεκάλυψε.

6. 355 ἐπεὶ σὲ μάλιστα πόνος φρένας ἀμφιβέβηκε. 16. 481 ἔνθ' ἄρα τε φρένες ἔρχαται ἀμφ' ἀδινὸν κῆρ.

Od. 8. 541 μάλα πού μιν άχος φρένας αμφιβέβηκεν.

So Hesiod, Theog. 554 χώσατο δὲ φρένας ἀμφί: Hom. H. Apoll,

273, H. Ven. 243; Mimnerm. 1. 7 φρένας ἀμφὶ κακαὶ τείρουσι μέριμναι. Hence read—

Il. 1. 103 μένεος δὲ μέγα φρένες ἀμφὶ μέλαιναι πίμπλαντ', and similarly in Il. 17. 83, 499, 573.

182.] The Dative with ἀμφί is a natural extension of the ordinary locatival Dative—the Preposition being adverbial, and not always needed to govern the Case. Compare (e.g.)—

II. 1. 45 τόξ' ὅμοισιν ἔχων (Loc. Dat., § 145, 3).
 20. 150 ἀμφὶ δ' ἄρ' ἄρρηκτον νεφέλην ὅμοισιν ἔσαντο.

 11. 527 ἀμφ' ὤμοισιν ἔχει σάκος has a shield on both sides on his shoulders, i.e. across his shoulders.

In a metaphorical sense ἀμφί is applied to the object about which two parties contend: as Il. 3. 70 ἀμφ' Ἑλένη καὶ κτήμασι πᾶσι μάχεσθαι: so of a negotiation, Il. 13. 382 συνώμεθα ἀμφὶ γάμω we shall agree about the marriage; Il. 7. 408 ἀμφὶ δὲ νεκροῖσιν as to the question of the dead; Il. 16. 647 ἀμφὶ φόνω Πατρόκλου μερμηρίζων. Cp. the use with περί (§ 186). So too in Sanserit the Loc. is used with Verbs of fighting to express the object over which the fighting is.

It is a further extension of this use when ἀμφί with the Dat. is construed with Verbs meaning to speak, think, &c., as Od. 4.

151 ἀμφ' 'Οδυσῆϊ μυθεόμην. This last variety (in which the notion of two sides disappears) is confined to the Odyssey: ep. 5. **

287., 14. 338, 364.

A true Dative may follow ἀμφί, but cannot be said to be governed by it; e.g. in Il. 14. 420 ἀμφὶ δέ οἱ βράχε τεύχεα his arms rattled about him the Dat. is 'ethical,' as in Il. 13. 439 ρῆξεν δέ οἱ ἀμφὶ χιτῶνα. So in Il. 4. 431 ἀμφὶ δὲ πᾶσι τεύχεα ποικίλ' ἔλαμπε, the Dat. is not locatival, but the true Dat. The two kinds of Dat. may be combined, as Il. 18. 205 ἀμφὶ δέ οἱ κεφαλῆ νέφος ἔστεφε.

The construction of ἀμφί with the Dat. is not found in Attic

prose. It survives in the poetical style, and in Herodotus.

183.] The Accusative with ἀμφί is used when the Verb expresses motion, as—

ΙΙ. 5. 314 ἀμφὶ δ' έὸν φίλον υἱὸν ἐχεύατο πηχέε λευκώ.

Also to express extent, diffusion over a space, &c. (ideas naturally conveyed by terms denoting motion):—

Od. 11. 419 ως αμφὶ κρητήρα τραπέζας τε πληθούσας κείμεθα as we lay (scattered) about &c.

Accordingly it is especially used in Homer-

(1) of dwellers about a place, as Il. 2. 499, 751, &c.

(2) of attendants or followers; as II. 2. 445 οἱ δ' ἀμφ' ᾿Ατρεΐωτα
 . θῦνον they bustled about Agamemnon.

The description about (a person) does not exclude the person who is the centre of the group; e.g. in II. 4. 294 (Agamemnon found Nestor) oùs έτάρους στέλλουτα.. ἀμφὶ μέγαν Πελάγουτα 'Αλάστορά τε Χρομίον τε, where Pelagon &c. are included under the word έταροι. This is an approach to the later idiom, οἱ ἀμφὶ Πλάτωνα= Plato and his school.

It should be observed that the motion expressed by the Verb when applied takes an Acc. is not motion to a point, but motion over a space. Hence this Acc. is not to be classed with Accusatives of the terminus ad quem, but with the Accusatives of Space (§ 138). This remark will be confirmed by similar uses of other Prepositions.

184.] The Genitive with ἀμφί is found in two instances,—

Il. 16. 825 μάχεσθον πίδακος ἀμφ' ὀλίγης fight over a small spring of water.

Od. 8. 267 ἀείδειν ἀμφ' "Αρεος φιλότητος κτλ.

Another example may perhaps lurk in-

ΙΙ. 2. 384 εῦ δέ τις ἄρματος ἀμφὶς ἰδών κτλ.

if we read ἀμφὶ Γιδὼν (having looked over, seen to his chariot). With this meaning compare Il. 18. 254 ἀμφὶ μάλα φράζεσθε: and for the construction the Attic use of $\pi \epsilon \rho \iota o \rho \hat{\omega} \mu a \iota$ with a Gen. = to look round after, take thought about (Thuc. 4. 124): also the Gen. with ἀμφιμάχεσθαι Il. 16. 496., 18. 20., 15. 391.

περί.

185.] The Preposition περί (or πέρι, § 180) has in Homer the two meanings around and beyond.

Both these meanings are common in the adverbial use; the second often yields the derivative meaning beyond measure, exceedingly, as—

16. 186 πέρι μὲν θείειν ταχύν exceeding swift to run.
 18. 549 πέρι θαθμα τέτυκτο was an exceeding wonder.

Od. 4. 722 πέρι γάρ μοι 'Ολύμπιος ἄλγε' ἔδωκε for Zeus has given to me griefs beyond measure.

The meaning beyond is found in Tmesis, II. 12. 322 πόλεμον περὶ τόνδε φυγόντες escaping this war: II. 19. 230 πολέμοιο περὶ στυγεροῖο λίπωνται shall remain over from war: and in Composition, περίειμι I excel, περιγίγνομαι I get beyond, surpass, περίοιδα I know exceeding well (II. 13. 728 βουλῆ περιίδμεναι ἄλλων to be knowing in counsel beyond others; cp. Od. 3. 244., 17. 317). The Gen. in such constructions is ablatival (§ 152).

- 186.] The Dative with περί (as with ἀμφί) is Locatival; as II. 1. 303 ἐρωήσει περὶ δουρί will gush over (lit. round upon) the spear; 2. 389 περὶ δ' ἔγχεϊ χεῖρα καμεῖται his hand will be weary with holding the spear; 2. 416 χιτῶνα περὶ στήθεσσι δαίξαι to tear the chiton about (round on) the breast. Also of an object of contention, over; as II. 16. 568 περὶ παιδί.. πόνος εἴη the toil (of battle) might be over his son, cp. II. 17. 4, 133, Od. 5. 310: and in a derivative sense, Od. 2. 245 μαχήσασθαι περὶ δαιτί to fight about a feast.
 - 1. It is a question which meaning is to be given to περί in—

II. 5. 566 περί γὰρ δίε ποιμένι λαῶν (80 9. 433., 11. 555).
10. 240 ἔδεισεν δὲ περὶ ξανθῷ Μενελάῳ.
17. 242 ὅσσον ἐμῆ κεφαλῆ πέρι δείδια (οτ περιδείδια).

2. Much difficulty has been felt about the use of $\pi\epsilon\rho\dot{\iota}$ in a group of phrases of which the following are the chief instances:—

II. 4. 53 τὰς διαπέρσαι, ὅτ' ἄν τοι ἀπέχθωνται περὶ κῆρι (ep. 4. 46, &e).

Od. 6. 158 κείνος δ' αὖ περὶ κῆρι μακάρτατος ἔξοχον ἄλλων.

II. 21. 65 περί δ' ήθελε θυμ $\hat{\varphi}$ (so 24. 236).

22. 70 ἀλύσσοντες περί θυμῷ.

Od. 14. 146 περὶ γάρ μ' ἐφίλει καὶ κήδετο θυμῷ, 15-245

ΙΙ. 16. 157 τοισίν τε περί φρεσίν άσπετος άλκή.

Od. 14. 433 περί γάρ φρεσίν αίσιμα ήδη.

In all these places the Dative may be construed as a Locative (although κῆρι without περί is only found in Il. 9. 117): the only question is whether the Preposition is to be taken in the literal local sense round, all over, or in the derivative sense exceedingly. In favour of the latter it may be said that the same combinations of Preposition and Verb are found without a Dat. such as κῆρι or θυμῷ, where accordingly περί must mean exceedingly; compare—

Π. 13. 430 τὴν περὶ κῆρι φίλησε πατὴρ \
 Od. 8. 63 τὸν περὶ Μοῦσ' ἐφίλησε \
 Od. 14. 433 περὶ γὰρ φρεσὶν αἴσιμα ἥδη \
 2. 88 περὶ κέρδεα οἶδε \
 Π. 16. 157 τοῖσίν τε περὶ φρεσὶν ἄσπετος ἀλκή \
 Od. 12. 279 πέρι τοι μένος \
 Od. 5. 36 περὶ κῆρι θεὰν ὡς τιμήσουσι \
 Π. 8. 161 περὶ μέν σε τίον Δαναοί. \

Again, in II. 4. 46 τάων μοι περὶ κῆρι τιέσκετο the meaning beyond is required by the Gen. τάων; cp. 4. 257 περὶ μέν σε τίω Δαναῶν ταχυπώλων, 7. 289 περὶ δ΄ ἔγχει 'Αχαιῶν φέρτατός ἐσσι, :7. 22 περὶ σθένεϊ βλεμεαίνει. So with the Acc. in II. 13. 631 περὶ φρένας ἔμμεναι ἄλλων.

Other is using trans right. Then Al To His course in region, It ides with. Amore appeller some to the property and or pelled fort part of the Ace processes On the other side, the representation of a feeling as something surrounding or covering the heart, midriff, &c. is common in Homer. Thus we have—

II. 11. 89 σίτου τε γλυκεροῖο περὶ φρένας ἵμερος αἰρεῖ.Od. 9. 362 ἐπεὶ Κύκλωπα περὶ φρένας ἥλυθεν οἶνος.

So of a sound, Il. 10. 139 περὶ φρένας ἥλυθ' ἰωή (cp. Od. 17. 261). And more frequently with ἀμφί; cp. Od. 19. 516 πυκιναὶ δέ μοι ἀμφ' ἀδινὸν κῆρ ὀξεῖαι μελεδῶνες ὁδυρομένην ἐρέθουσι; and the other passages quoted at the end of § 181. Similarly περὶ κῆρι, περὶ φρεσί, may have been meant in the literal sense,—the feeling (fear, anger, &c.) being thought of as filling or covering the heart. On the whole, however, the evidence is against this view;—unless indeed we explain περὶ κῆρι as a traditional phrase, used without a distinct sense of its original meaning.

The occasional use of the Dat, with $\pi\epsilon\rho\ell$ in Attic is probably due to familiarity with Homer.

187.] The Accusative with περί is used (as with ἀμφί) when motion or extent in space is expressed: as II. 1. 448 ἐκατόμβην ἔστησαν περὶ βωμόν placed the hecatomb round the altar; 2. 750 περὶ Δωδώνην οἴκι ἔθεντο made their dwellings round Dodona. Generally speaking the Accusative implies surrounding in a less exact or complete way than the Dative. It makes us think of the space about an object rather than of its actual circumference. Occasionally, of course, the circumference is the space over which motion takes place, or extent is measured: as II. 12. 297 ῥάψε ῥάβδοισι διηνεκέσιν περὶ κύκλον round in a circle; II. 183274 ἐστάμεναι περὶ τοῖχον to stand along the wall all round it. η

188.] The Genitive with περί is used in three distinct ways:—

- I. With περί meaning beyond (in the figurative sense, = excelling) it expresses the object of comparison: II. I. 287 περὶ πάντων ἔμμεναι to surpass all, Od. I. 235 ἄιστον ἐποίησαν περὶ πάντων have made him unseen more than all men, 4. 23 Ι ἐπιστάμενος περὶ πάντων. This use is distinctively Homeric. The Gen. is ablatival, as with Adjectives of comparison (§ 152).
- 2. With $\pi\epsilon\rho i = round$, over (in the local sense) the Gen. is very rare; the instances are—
 - Od. 5. 68 ήδ' αὐτοῦ τετάνυστο περὶ σπείους γλαφυροῖο ήμερὶς ήβώωσα.

130 τὸν μὲν ἐγὼν ἐσάωσα περὶ τρόπιος βεβαῶτα. The Gen. may be akin to the (partitive) Gen. of place (§ 149): the vine e.g. grew round in or over (but not covering) the cave.

3. With $\pi \epsilon \rho i = over$ (the object of a contest), as Il. 16. 1 ώs οἱ μὲν $\pi \epsilon \rho i$ νηὸς ἐϋσσέλμοιο μάχοντο, 12. 142 ἀμύνεσθαι $\pi \epsilon \rho i$ νηῶν to defend the ships; sometimes also in the figurative sense, about, Il. 11. 700 $\pi \epsilon \rho i$ τρίποδος γὰρ ἔμελλον θεύσεσθαι, Od. 9. 423 ώς τε

περὶ ψυχῆς as when life is at stake; and of doubt, Il. 20. 17 ἢ τι περὶ Τρώων καὶ 'Αχαιῶν μερμηρίζεις. The use with Verbs of anger and fear is closely akin; Il. 9. 449 παλλακίδος πέρι χώσατο; 17. 240 νέκνος πέρι δείδια (unless we read περιχώσατο, περιδείδια).

The weapons of the contest are said to be fought over in Od. 8. 225 $\epsilon \rho i (\xi \epsilon \sigma \kappa o \nu \pi \epsilon \rho) \tau i \xi \omega \nu$; so Il. 15. 284 $\delta \pi \pi i \epsilon \kappa o \nu \rho o \iota \epsilon \rho i \sigma \sigma \epsilon \iota a \nu \pi \epsilon \rho i \mu i \theta \omega \nu$. And this is also applied to the quarrel itself, Il. 16.

476 συνίτην έριδος πέρι θυμοβόροιο (cp. 20. 253).

Under this head will come the Gen. in II. 23. 485 τρίποδος περιδώμεθον let us wager a tripod, Od. 23. 78 ἐμέθεν περιδώσομαι αὐτῆς I will stake myself. Whatever may be the original meaning of περιδόσθαι, it is construed as if = to join issue, contend (Lat. pignore certare): cp. the Attic use περιδίδομαί τινι περί (Gen. of

the thing staked).

By a not unnatural extension, περί with the Gen. follows Verbs meaning to speak, know, &c., but only in the Odyssey; viz. 1. 135 (= 3.77) ἵνα μιν περὶ πατρὸς ἀποιχομένοιο ἔροιτο; 15. 347 εἴπ' ἄγε μοι περὶ μητρὸς κτλ.; 17. 563 οἶδα γὰρ εὖ περὶ κείνου; also 1. 405., 7. 191., 16. 234., 17. 371., 19. 270. Note that the corresponding use of ἀμφί with the Dat. is similarly peculiar to the Odyssey (§ 182).

παρά.

- 189.] The Preposition παρά (παραί, by Apocope πάρ) means alongside. It is common in the adverbial use (see § 177), and also in Tmesis and Composition. Note the derivative meanings—
 - (1) at hand, hence at command; as II. 9. 43 πάρ τοι δδός the way is open to you; Od. 9. 125 οὐ γὰρ Κυκλώπεσσι νέες πάρα.
 - (2) aside; as Il. 11. 233 παραὶ δέ οἱ ἐτράπετ' ἔγχος the spear was turned to his side (instead of striking him).
 - (3) hence figuratively, παρά μ' ἤπαφε cozened me 'aside,' away from my aim: and so παρπεπιθών changing the mind by persuasion, παρειπών talking over, &c.; also, with a different metaphor, wrongly.
 - (4) past, with Verbs of motion, as ἔρχομαι, ἐλαύνω, &c.
- 190.] With the Dative παρά means beside, in the company of, near. It is applied in Homer to both persons and things (whereas in later Greek the Dat. with παρά is almost wholly

confined to persons); thus we have παρὰ νητ, παρὰ νηυσί (very frequently), παρ' ἄρμασι, παρὰ βωμῷ, πὰρ ποσί, παρὰ σταθμῷ, &c.

This Dat, is either locatival or instrumental: see § 144. It may be used after a Verb of motion (e.g. Il. 13. 617), see § 145, 4.

191.] The Accusative with παρά is commonly used—

when motion ends beside or near a person or thing: as II.
 4c6 ησο παρ' αὐτὸν ἰοῦσα go and sit by him; II. 7. 190 τὸν

μεν πάρ πόδ' έδν χαμάδις βάλε.

Hence the use of the Acc. often implies motion: as II. 11. 314 $\pi a \rho$ $\tilde{\epsilon} \mu$ $\tilde{\epsilon} \mu$ $\tilde{\epsilon} \tau a \sigma \sigma$ place yourself beside me; Od. 1. 333 $\sigma \tau \tilde{\eta}$ $\tilde{\rho} a$ $\pi a \rho \tilde{\alpha}$ $\sigma \tau a \theta \mu \dot{\sigma} v$ came and stood beside the pillar; II. 6. 433 $\tilde{\lambda} a \tilde{\sigma} v$ $\tilde{\delta} \tilde{\epsilon} \sigma \tau \tilde{\eta} \sigma \sigma v$ $\pi a \rho$ $\tilde{\epsilon} \rho \iota v \tilde{\epsilon} \dot{\sigma} v$. Similarly of the place near which a weapon has struck, as II. 5. 146 $\tilde{\kappa} \lambda \tilde{\eta} \tilde{\iota} \tilde{\delta} a$ $\pi a \rho$ $\tilde{\omega} \mu \sigma v$ $\tilde{\kappa} \lambda \tilde{\eta} \tilde{\epsilon} \tilde{\epsilon}$ struck the collar-bone by the shoulder.

- (2) of motion or extent alongside of a thing (esp. a coast, a river, a wall, &c.); Il. 1. 34 βη δ' ἀκέων παρὰ θινα went along the shore; Od. 9. 46 πολλὰ δὲ μῆλα ἔσφαζον παρὰ θινα sacrificed many sheep along the shore; Il. 2. 522 πὰρ ποταμὸν ἔναιον dwelt by the side of the river; Il. 3. 272 πὰρ ξίφεος κουλεὸν ἄωρτο hung beside the sword-scabbard.
- (3) of motion past a place; as II. 11. 166, 167 οἱ δὲ παρ' Ἰλου σῆμα.. παρ' ἐρινεὸν ἐσσεύοντο they sped past the tomb of Ilus, past the fig-tree; II. 6. 42 παρὰ τρόχον ἐξεκυλίσθη rolled out past the wheel; II. 16. 312 οὖτα Θόαντα στέρνον γυμνωθέντα παρ' ἀσπίδα passing the shield (implied motion, οὖτα=thrust at and struck). The derivative meaning beyond (=in excess of) is only found in Homer in the phrases πὰρ δύναμιν (II. 13. 787) and παρὰ μοῦραν (Od. 14. 509): but èp. the Adj. παραίσιος against fate.
- 192.] With a Genitive παρά properly means sideways from, aside from. As with the Dative, it is used of things as well as persons (whereas in later Greek it is practically restricted to persons). On the other hand it is confined in Homer to the local sense; thus it is found with Verbs meaning to go, bring, take, &c. not (as afterwards) with ἀκούω, μανθάνω, οἶδα, or the like. An apparent exception is—

Il. 11. 794 εὶ δέ τινα φρεσὶν ἦσι θεοπροπίην ἀλεείνει, καί τινά οἱ πὰρ Ζηνὸς ἐπέφραδε πότνια μήτηρ,

where however the notion of bringing a message is sufficiently prominent to explain the use. So Il. 11. 603 $\phi\theta\epsilon\gamma\xi\dot{a}\mu\epsilon\nu$ 05 π apà ryós sending his voice from the ship; and Hes. Op. 769 alde $\gamma\dot{a}$ p $\dot{\mu}\mu\dot{e}\rho$ ai $\epsilon\dot{l}$ oì Δ iòs $\pi\dot{a}\rho$ a, i. e. coming from Zeus. The later use is to

be seen in Emped. 144 θεοῦ πάρα μῦθον ἀκούσας, Xenophanes 3. I

άβροσύνας δὲ μαθόντες ἀνωφελέας παρὰ Λυδών.

The original meaning sideways or at the side from is visible in some of the uses with a Gen. denoting a thing: as II. 4. 468 $\pi a \rho'$ à $\sigma \pi i \delta os$ è $\xi \epsilon \phi a \acute{\alpha} v \theta \eta$ appeared beyond (outside the shelter of) the shield: so probably II. 4. 500 viòv Πριάμοιο νόθον βάλε. $\pi a \rho'$ $i \pi \pi \omega v$ $i \kappa \epsilon i d \omega v$ struck him (aiming) past the chariot. So too a sword is drawn $\pi a \rho a \mu \eta \rho o v$ sideways from the thigh. The same meaning lies at the root of the frequent use of $\pi a \rho a$ in reference to the act of passing from one person to another (as in $\pi a \rho a \delta i \delta \omega \mu u$ and $\pi a \rho a \delta \epsilon \chi o \mu a u$), hence of gifts, messages, &c.

It is usual to regard $\pi a \rho \acute{a}$ with the Gen. as meaning from the side of, from beside, de chez. But this is contrary to the nature of a prepositional phrase. The Case-ending and the Stem must form a single notion, which the Preposition then modifies; hence (e. g.) $\pi a \rho \grave{a}$ $\mu \eta \rho o \hat{v}$ means beside from-the-thigh, not from beside-the-thigh. This is especially clear where the Preposition is joined to a Verb; Od. 19. 187 $\pi a \rho a \pi \lambda \acute{a} \gamma f a \sigma a$ Maleiûv driving-aside from-Maleae: and in—

II. 4. 97 $\tau o \hat{v}$ $\kappa \epsilon \nu \delta \hat{\eta}$ $\pi \dot{a}\mu \pi \rho \omega \tau a$ $\pi a \rho^{\prime}$ $\dot{a}\gamma \lambda a \dot{a}$ $\delta \hat{\omega} \rho a$ $\phi \dot{\epsilon} \rho o i o$ the rhythm connects $\pi a \rho \dot{a}$ with $\phi \dot{\epsilon} \rho o i o$ rather than with $\tau o \hat{v}$ —thou will bringaside (= trans-fer) from-him. So with other Prepositions: $\dot{a}\pi \dot{\sigma}$ Troúns off from-Troy, not from off-Troy: $\kappa a \tau^{\prime}$ o $\dot{\nu} \rho a \nu o \hat{v}$ down from-heaven, not from under-heaven. As to $\dot{v}\pi \dot{\sigma}$ with the Gen.=from under, see § 204.

μετά.

193.] The Proposition μετά in the adverbial use means midway, in the middle; e.g. with a Verb understood, Il. 2. 446 μετὰ δὲ κτλ. and among them &c. Hence alternately, as Od. 15. 460 χρύσεον ὅρμον ἔχων, μετὰ δ᾽ ἢλέκτροισιν ἔερτο strung with electrum between (the gold); so in succession, afterwards, as Od. 21. 231 πρῶτος ἐγώ, μετὰ δ᾽ ὕμμες I first and you in turn; Od. 15. 400 μετὰ γάρ τε καὶ ἄλγεσι τέρπεται ἀνήρ = a man has his turn of being pleased even in the course of his sufferings.

The notion of alternation appears in Compounds with μετά, as μεταβάλλω, μεταστρέφω: in Tmesis, Od. 12. 312 μετὰ δ' ἄστρα βέβηκε the stars have changed their place. So μεταπαυόμενοι (Il.

17. 373) means with turns or intervals of rest.

194.] With the Dative μετά means between or (less exactly) among. The meaning between is found in phrases such as μετὰ χερσί, μετὰ ποσσί, μετὰ φρεσί (on the double character of the

φρένες cp. § 181); also, of two parties, μετ' ἀμφοτέροισι.

The use in reference to several objects (among) is mostly restricted to persons, since it conveys the idea of association of units forming a group, &c. (whereas $\hat{\epsilon}\nu$ is more local). Hence $\mu\epsilon\tau$ à $\sigma\tau\rho$ d $\sigma\iota$ (Il. 22. 28, 317) is said of a star among other stars (with a touch of personification): and in Il. 21. 122 $\kappa\epsilon\hat{\iota}\sigma$ 0 $\mu\epsilon\tau$

iχθύσι there is a sarcastic force—lie there with the fish for company. Cp. also the phrase Od. 5. 224 μετὰ καὶ τόδε τοῦσι γενέσθω let this be as one among them. The expression in Il. 15. 118 μεθ' αἴματι καὶ κονίησι is equivalent to a Collective Noun,=' the crowd of wounded and fallen.' So Il. 21. 503 μετὰ στροφάλιγγι κονίης, a somewhat bolder phrase of the same kind,

The Dat. with μετά is locatival (whereas with σύν and ἄμα it is comitative). This appears in the restriction to Plurals or Collectives, also in the use with Verbs of motion, as Il. 4. 16 φιλότητα

μετ' αμφοτέροισι βάλωμεν (§ 145, 6).

The construction of μετά with the Dative is in the main Homeric. It is occasionally imitated in later poetry.

195.] With the Accusative μετά has the two meanings among and after.

The meaning among is found after Verbs of motion with Plurals, and also with Collective Nouns, as $\mu\epsilon\theta$ ὁμήγυριν, $\mu\epsilon\theta$ ὅμιλον; so $\mu\epsilon\tau$ ὰ δεῖπνον to (join the company at) a feast, $\mu\epsilon\tau$ ά τ ἤθεα καὶ νομὸν ἵππων = to the pasture ground where other horses are.

It occurs without a Verb of motion in Il. 2. 143 πᾶσι μετὰ πληθύν to all among the multitude; Il. 9. 54 μετὰ πάντας ὁμήλικας ἔπλευ ἄριστος (so Od. 16. 419). And with a Singular in Il. 18. 552 δράγματα μετ' ὄγμον πίπτον the handfuls of corn fell in the middle of the furrow (between the ridges).

Of the other meaning we may distinguish the varieties—

after, following; Il. 13. 513 ἐπαΐξαι μεθ' ἐὸν βέλος following his weapon, Od. 2. 406 μετ' ἴχνια βαῖνε θεοῖο.

(2) after, in order to find (with a Verb of motion), as μετ' ἔμ' ἤλυθες has come in search of me, Od. 1. 184 ἐς Τεμέσην μετὰ χαλκόν.

(3) in succession to, next to; τὸν δὲ μετὰ κτλ. and after him &c.; II. 8. 289 πρώτφ τοι μετ' ἐμὲ πρεσβήϊον ἐν χερὶ θήσω to thee after myself; of rank, II. 7. 228 οἶοι . . μετέασι καὶ μετ' 'Αχιλλῆα even (in the second rank) after Achilles.

196.] With the Genitive μετά occurs in five places (with a Plural Noun), in the meaning among or with—

13. 700 μετὰ Βοιωτῶν ἐμάχοντο.
 21. 458 οὐδὲ μεθ' ἡμέων πειρᾶ κτλ.

24. 400 τῶν μέτα παλλόμενος κλήρφ λάχον.

Od. 10. 320 μετ' άλλων λέξο έταίρων.

16. 140 μετὰ δμώων τ' ἐνὶ οἴκῳ πῖνε κτλ.

Of these instances the first is in a passage probably inserted afterwards to glorify the Athenians; the second is in the θεῶν μάχη, and therefore doubtful; in the third we should perhaps

a (der is yngs

write μεταπαλλόμενος and construe of them casting lots in turn I was od the Pooling chosen. But the last two indicate that the use had crept into mestado the colloquial language as early as the Odyssey, taking the place of work and place of the place

ἐπί.

197.] The Proposition ἐπί means over, upon; sometimes after (as we speak of following upon); with, at (i.e. close upon); in addition, besides, esp. of an addition made to correspond with or complete something else; also, attached to, as an inseparable incident or condition of a person or thing; and conversely, on the condition, in the circumstances, &c.

Examples of these meanings in the adverbial use are—

II. 1. 462 $\epsilon \pi \lambda$ δ' αἴθοπα οἶνον λεῖβε poured wine over (the meat). 13. 799 πρὸ μέν τ' ἄλλ', αὐτὰρ $\epsilon \pi$ ' ἄλλα in front—behind.

Od. 1. 273 θεοὶ δ' ἐπὶ μάρτυροι ἔστων the gods be witnesses thereto.
 5. 443 ἐπὶ σκέπας ἦν ἀνέμοιο there was thereto (the place

was furnished with) a shelter from the wind.

 18. 529 κτεῖνον δ' ἐπὶ μηλοβοτῆρας killed the shepherds with the sheep.

1. 233 ἐπὶ μέγαν ὅρκον ὀμοῦμαι I will swear in confirmation. With a Verb understood, ἔπι=is present, is in the case, as Od. 2. 58 οὐ γὰρ ἔπ' ἀνήρ there is no man (for the purpose); Il. 1. 515 οὕ τοι ἔπι δέος there is no fear with or for you (as part of your circumstances); Il. 21. 110 ἔπι τοι καὶ ἐμοὶ θάνατος death is my lot too

(cp. 6. 357 οίσιν ἐπὶ Ζεὺς θῆκε κακὸν μόρον).

It is very much used in Composition. Note the meaning over in $\xi \pi \iota - \pi \lambda \epsilon \omega$ to sail over, also $\xi \pi - o \iota \chi o \mu a \iota$ to go over, review, $\xi \pi \iota - \pi \omega \lambda \epsilon o \mu a \iota$ (II. 17. 650 $\mu \dot{\alpha} \chi \eta$ δ' $\xi \pi \iota$ $\pi \dot{\alpha} \sigma a \phi \alpha \dot{\alpha} v \theta \eta$ the fight was lighted up all over); besides, in $\xi \pi \iota - \delta \iota \delta \omega \mu \iota$, &c.; to (of bringing aid, joining, &c.) in $\xi \pi \iota - \alpha \rho \dot{\eta} \gamma \omega$, $\xi \pi \iota - \alpha \lambda \dot{\epsilon} \xi \omega$, $\xi \pi \iota - \alpha \rho \alpha \rho \iota \dot{\epsilon} \omega$, $\xi \pi \iota - \alpha \rho \dot{\epsilon} \dot{\epsilon} \omega$, $\xi \pi \iota - \alpha \rho \dot{\epsilon} \dot{\epsilon} \omega$, $\xi \pi \iota - \alpha \rho \dot{\epsilon} \dot{\epsilon} \omega$, $\xi \pi \iota - \alpha \rho \dot{\epsilon} \dot{\epsilon} \omega$, $\xi \pi \iota - \alpha \rho \dot{\epsilon} \dot{\epsilon} \omega$ (with a general affirmative meaning, on as opposed to off, for as opposed to against).

198.] With the Dative ἐπί has the same group of meanings;

note especially-

ἐπὶ νηυσί by the ships, ἐπ' ὄεσσι with the sheep (of a shepherd), ἐπὶ κτεάτεσσι with (in charge of) the possessions; II. 4.
 235 ἐπὶ ψεύδεσσιν ἔσσετ' ἀρωγός will be a helper with (on the side of) falsehood (or false men, reading ψευδέσσι).

(2) Il. 4. 258 ἀλλοίφ ἐπὶ ἔργφ in (engaged upon) other work, so ἀτελευτήτφ ἐπὶ ἔργφ with a work unfinished: so Il. 4. 178

ἐπὶ πᾶσι in all cases dealt with.

- (3) Od. 17. 454 οὐκ ἄρα σοί γ' ἐπὶ εἴδεϊ καὶ φρένες ἦσαν with form thou hast not understanding too; Il. 13. 485 τῷδ' ἐπὶ θυμῷ with this spirit (too); Hes. Theog. 153 ἰσχὺς . . μεγάλῳ ἐπὶ εἴδει.
- (4) Od. 11. 548 τοιῷδ' ἐπ' ἀέθλφ with such a prize (when such a thing is prize); μισθῷ ἔπι ῥητῷ for fixed hire (given the hire, hence in view of it).
- (5) ἐπ' ἤματι for the day, i. e. as the day's work, in a single day. (5) ρ28 Ν Note also that ἐπί meaning upon very often takes the Dat. (8) After Verbs of motion, as κατέχευεν ἐπ' οὔδει poured on to the ground: hence with the meaning against, as ἐπ' ἀλλήλοισιν ἰόντες, μάρνασθαι ἐπ' ἀνδράσι, &c. (1) Δ1/2 [1]
- 199.] With the Accusative ἐπί implies (1) motion directed to a place, seldom (2) to a person; or (3) motion or (4) diffusion, extent, &c. over a space or (5) time.
- 1. After Verbs of motion the Acc. does not (like the Dat.) distinctly express that the motion terminates on the place: e.g. $\epsilon \pi i \chi \theta \delta v a$ is merely to or towards the ground, but $\epsilon \pi i \chi \theta o v \ell$ implies alighting on it. Cp. II. 18. 565 à $\tau a \rho \pi i \tau \delta s \hat{\eta} \epsilon v \hat{\epsilon} \tau \hat{\tau}$ autifu there was a path leading to it; II. 2. 218 $\epsilon \pi i \sigma \tau \hat{\eta} \theta o s \sigma v v o \chi \omega \kappa \delta \tau \epsilon$ bent in over the chest.

Hence the phrases expressing attitude, as $\epsilon \pi l$ στόμα, $\epsilon \pi l$ γοῦνα, &c. Two forms, $\epsilon \pi l$ δεξιά and $\epsilon \pi'$ ἀριστερά, are used even when motion is not expressed; as Il. 5. 355 εὖρεν ἔπειτα μάχης ἐπ' ἀριστερὰ θοῦρον ᾿Αρηα ἥμενον. Note however that ἐπ' ἀριστεροῖς and ἐπ' ἀριστερῶν are metrically impossible.

- 2. The use with persons in the meaning towards, in quest of, is rare, and almost confined to the Iliad: as 2. 18 $\beta \hat{\eta}$ δ' $\delta \rho'$ $\delta \rho'$
- 3. The meaning over, with Verbs of motion, is very common; επὶ πόντον (lών, πλέων, φεύγων, &c.), ἐπὶ γαῖαν, ἐπὶ χθόνα, ἐπὶ κύματα, &c. Also with Verbs of looking, as II. I. 350 ὁρόων ἐπ' ἀπείρονα πόντον.

Hence such phrases as ἐπὶ στίχας, of troops &c. moving in ranks, i.e. over or along certain lines: as II. 3. 113 ἕππους ἔρυξαν ἐπὶ στίχας: and so Od. 5. 245 ἐπὶ στάθμην ἴθυνε straightened along

(hence by) the rule.

So with Plural Nouns, Il. 14. 381 οἰχόμενοι ἐπὶ πάντας going over them all, Od. 15. 492 πολλὰ βροτῶν ἐπὶ ἄστε ἀλώμενος; and of a distribution, Od. 16. 385 δασσάμενοι κατὰ μοῖραν ἐφ' ἡμέας i.e. equally, so as to go round.

4. The instances in which extent (without motion) is implied are chiefly found in the Odyssey (2. 370, &c.). Examples from the Iliad are: 9. 506 φθάνει δέ τε πᾶσαν ἐπ' αἶαν she is beforehand all the world over (so 23. 742): 10. 213 κλέος εἴη πάντας ἐπ' ἀνθρώπους, 24. 202, 535. It will be seen that they are from books 9, 10, 23, 24.

181

Notice also the use with Neuters expressing quantity; as II. 5. 772 τόσσον ἔπι θρώσκουσι to such a distance they bound; also ἐπὶ πολλόν a long way, ἐπὶ τοα to an equal extent; and esp. the com-

mon phrase $\delta \sigma o \nu \tau' \epsilon \pi l$, see Il. 2. 616, &c.

5. Of time: Il. 2. 299 μείνατ' ἐπὶ χρόνον wait for (lit. over) a time; Od. 7. 288 εὐδον παννύχιοι καὶ ἐπ' ἠῶ καὶ μέσον ἦμαρ slept all night and on through morning and midday.

200.] The Genitive with ἐπί is used in nearly the same sense as the Dative, but usually with less definitely local force; in

particular—

- (1) with words expressing the great divisions of space, esp. when a contrast is involved (land and sea, &c.); as ἐπὶ χέρσου, ἐπ' ἠπείρου, ἐπ' ἀγροῦ; Od. 12. 27 ἢ ἁλὸς ἢ ἐπὶ γῆς ἀλγήσετε (cp. Il. 13. 565). This is evidently a Gen. of place, § 149. For the difference of Gen. and Dat. cp. Il. 1. 485 ἐπ' ἠπείροιο ἔρυσσαν ὑψοῦ ἐπὶ ψαμάθοις.
- (2) where the local relation is a familiar one; as ἐπὶ νηός, ἐπὶ ἀπήνης, ἐφὶ ἵππων, ἐπὶ θρόνου, ἐπὶ οὐδοῦ, ἐπὶ πύργου, ἐπὶ ἀγκῶνος, ἐπὶ μελίης (ἐρεισθείς). Thus ἐπὶ νηυσί means on or beside ships, ἐπὶ νηῶν on board ships.
- (3) with Verbs of motion, upon (of the terminus ad quem), as II. 3. 293 κατέθηκεν ἐπὶ χθονός; so bearing down on, as II. 3. 6 πέτονται ἐπὶ ἀΩκεανοῖο ῥοάων: II. 5. 700 προτρέποντο με-ρεωίτων λαινάων ἐπὶ νηῶν: Od. 3. 171 νεοίμεθα νήσου ἔπι Ψυρίης taking the course by the island Psyria. So perhaps II. 7. 195 (εὕχεσθε) σιγῆ ἐφὶ ὑμείων (keeping the words) to yourselves.

(4) of time; ἐπ' εἰρήνης (Il. 2. 797, &c.); ἐπὶ προτέρων ἀνθρώ-πων (Il. 5. 637, &c.).
 Cp. the Gen. of Time, § 150.

In later prose the Gen. is very common, and the uses become indistinguishable from those of the Dat.

ύπό.

201.] The Preposition ὁπό (also ὁπαί) usually means beneath, as in Il. 2. 95 ὑπὸ δὲ στεναχίζετο γαῖα the earth grouned beneath (their tread). The original sense, however, seems to have been upwards, as in the Superlative ὅπ-ατος uppermost (cp. τψι aloft, ὅπ-τιος facing upwards). On this view we can understand why

ύπό is not applied (like κατά) to express downward motion. Hence, too, it is especially used of supporting a thing, as II. I. 486 ὑπὸ δ' ἔρματα μακρὰ τάννσσαν: and on the same principle it expresses resistance to a motion (whereas κατά implies yielding, going with the stream &c.); as II. 5. 505 ὑπὸ δ' ἔστρεφον ἡνιοχῆες the drivers wheeled them up, i.e. to face (the Trojans): and so ὑπ-αντιάσαs meeting face to face, ὑπο-μένω to stand against (as we say, up to); and with the derived notion of answering, ὑπ-αείδω I sing in correspondence, ὑπο-κρίνομαι (= Att. ἀποκρίνομαι), ὑπο-βάλλω I take up (a speaker), ὑπ-ακούω I hear in reply, i.e. show that I hear (by answering or obeying).

So too the Compounds ὑφ-ορῶ, ὑπ-όψιος, ὑπό-δρα, &c. do not express looking down, but looking upwards from under; even in Il. 3. 217 στάσκεν ὑπαὶ δὲ ἴδεσκε κατὰ χθονὸς ὅμματα πήξας it is

the face that is bent downwards: cp. Il. 19. 17.

From the notion of being immediately under is derived that of being moved by, i. e. of agency or cause. The transition may be seen in $\dot{v}\pi o - \epsilon i \kappa \omega$ I give way (before), $\dot{v}\pi o - \tau \rho \epsilon \omega$ &c.; so II. 16. 333 $\dot{v}\pi \epsilon \theta \epsilon \rho \mu \dot{a} v \theta \eta$ was warmed by (the blood).

202.] With the Dative ὑπό is very common in the simple local meaning, under. It is sometimes found with Verbs of motion, as Od. 4. 297 δέμνι ὑπ αἰθούση θέμεναι; and even when motion from is intended, in Il. 18. 244 ἔλυσαν ὑφ ἄρμασιν ὠκέας ἵππους. In this case however we have to consider that ἄρμάτων is metri-

cally impossible.

The derived sense under the charge or power is found in such uses as II. 5. 231 $\dot{\nu}\dot{\phi}$ $\dot{\eta}\nu\iota\dot{\rho}\chi\dot{\phi}$ (of horses), 6. 139 Zeùs γάρ οἱ $\dot{\nu}\pi\dot{\rho}$ σκήπτρ $\dot{\phi}$ ἐδάμασσε, 6. 171 θεῶν $\dot{\nu}\pi$ ἀμύμονι πομπ $\hat{\eta}$: also, with the notion of an effect produced (where the Gen. would therefore be rather more natural), $\dot{\nu}\pi\dot{\rho}$ χερσί (δαμ $\hat{\eta}\nu$ αι, θανέειν, &c.), $\dot{\nu}\pi\dot{\rho}$ δουρί (τυπείς, &c.); II. 13. 667 νούσ $\dot{\phi}$ $\ddot{\nu}\pi$ ἀργαλέ $\dot{\eta}$ φθίσθαι, Od. 4. 295 $\ddot{\nu}\pi\nu\dot{\phi}$ $\ddot{\nu}\pi\dot{\rho}$ γλνκερ $\dot{\phi}$ ταρπώμεθα: and often of persons, as II. 5. 93 $\dot{\nu}\pi\dot{\rho}$ Τυδείδ $\dot{\eta}$ πυκιναὶ κλονέοντο $\dot{\phi}$ άλαγγες, $\dot{\phi}$ $\dot{\phi}$ $\dot{\phi}$

203.] The Accusative is used with ὑπό (1) of motion to a point under, as—

Il. 2. 216 ὑπὸ Ἰλιον ἢλθε came under (the walls of) Troy.
17. 309 τὸν βάλ ὑπὸ κληῗδα μέσην (so often with Verbs of

striking, &c.).

Also (2) of motion passing under, and hence of extent under: Od. 15. 349 ϵ i που έτι ζώουσιν ὑπ' αὐγὰς ἡ ϵ λίοιο i. e. anywhere that the sun shines (cp. ὑπ' ἡ $\hat{\omega}$ τ' ἡ $\hat{\epsilon}$ λιόν τ ϵ —an equivalent phrase).

Il. 2. 603 οἱ δ' ἔχον 'Αρκαδίην ὑπὸ Κυλλήνης ὅρος.

3. 37 Ι ἄγχε δέ μιν πολύκεστος ἱμὰς ἁπαλὴν ὑπὸ δειρήν (i.e. passing under the throat).

In one or two places it is applied to time: II. 16. 202 $\pi \acute{a}\nu \theta'$ $\mathring{v}\pi \eth$ $\mu \eta \nu \iota \theta \mu \acute{o}\nu$ all the time that my anger lasted; so perhaps II. 22. 102 $\nu \acute{v}\chi \theta'$ $\mathring{v}\pi \omicron$ $\tau \acute{\eta}\nu \eth$ $\mathring{o}\lambda \omicron \acute{\eta}\nu$ (but night is often regarded as a space of darkness).

183

- 204.] The Genitive with ὑπό is found in two or three distinct uses:—
 - (1) with the force of separation from : as II. 17. 235 νεκρον ὑπ' Αἴαντος ἐρύειν from under Δjax; Od. 9. 463 ὑπ' ἀρνειοῦ λυόμην : so II. 19. 17 ὄσσε δεινὸν ὑπὸ βλεφάρων ὡς εἰ σέλας ἐξεφάανθεν.

In this use the Gen. is ablatival, cp. § 152. Originally ὁπό with an Abl. probably meant upwards from: see § 192.

(2) of place under, with contact (especially of a surface); as—
II. 8. 14 ὑπὸ χθονός ἐστι βέρεθρον, ολ. 11-52

Od. 5. 346 τόδε κρήδεμνον ύπο στέρνοιο τανύσσαι.

Il. 1. 501 δεξιτερή δ' ἄρ' ὁπ' ἀνθερεωνος ελούσα taking hold of him under the chin.

4. 106 ύπο στέρνοιο τυχήσας.

16. 375 ὕψι δ' ἄελλα σκίδυαθ' ὑπὸ νεφέων, i.e. seeming to reach the clouds (cp. 15. 625., 23. 874).

As with the Dative, the notion under passes into-

(3) the metaphorical (or half metaphorical) meaning under the influence of, by the power of; as II. 3. 61 ős τ' εἶσιν διὰ δουρὸς ὑπ' ἀνέρος under the man's hand; Od. 19. 114 ἀρετῶσι δὲ λαοὶ ὑπ' αὐτοῦ under his rule; and many similar uses.

Cases may be noted in which the agency intended is indirect (where later writers would rather use διά with an Acc.):—

II. 16. 590 ην ρά τ' ἀνηρ ἀφέη πειρώμενος η ἐν ἀέθλω και ἐν πολέμω δηΐων ὕπο θυμοραϊστέων,

= under the stress of an enemy (so 18. 220);

Il. 23. 86 εὖτέ με . . ἤγαγεν ὑμέτερονδ' ἀνδροκτασίης ὑπὸ λυγρῆς by reason of a homicide (committed by me).

προτί,

205.] The Preposition προτί (πρός, ποτί) expresses attitude or direction towards an object. It is found in the adverbial use; Od. 5. 255 πρὸς δ' ἄρα πηδάλιον ποιήσατο he made a rudder to be put to (the raft); hence commonly in addition, besides—a use which remained in later Greek.

It is a question whether $\pi \rho \sigma \tau'$ and $\pi \sigma \tau'$ are originally the same word. The present text of Homer does not indicate any difference of usage.

206.] With the Dative προτί means resting on, against, beside a thing: as II. 4. 112 ποτὶ γαίη ἀγκλίνας resting (the bow) against the ground: Od. 5. 329 πρὸς ἀλλήλησιν ἔχονται hold on to one another. With Verbs of motion it implies that the motion ends on or beside the object; Od. 9. 459 θεινομένου πρὸς οὕδεϊ.

The later meaning besides, in addition, is only found in Od. 10.

68 ἄασάν μ' ἔταροί τε κακοὶ πρὸς τοῖσί τε ὕπνος.

207.] With the Accusative προτί is very common, meaning towards: as πρὸς πόλιν towards the city (not necessarily reaching it), Il. 8. 364 κλαίεσκε πρὸς οὐρανόν cried out to heaven; hence to, on to (mostly with Verbs of motion), as Od. 4. 42 ἔκλιναν πρὸς ἐνώπια leaned against the walls: against (persons), as πρὸς δαίμονα φωτὶ μάχεσθαι to fight with a man in opposition to a god; also addressing (persons), with Verbs of speaking, &c.; in one place of time, Od. 17. 191 ποτὶ ἔσπερα towards evening.

Note that the literal local sense appears in all the Homeric uses of mport with the Acc.: the metaphorical uses, viz. in respect of, for the purpose of, in proportion to, according to, &c., are later.

208.] With the Genitive προτί expresses direction without the idea of motion towards or rest on the object: as Od. 13. 110 at μèν πρὸς βορέαο.. at δ' αὖ πρὸς νότον i.e. not at or facing the north and south, but more generally, in the direction fixed by north and south; Il. 10. 428-430 πρὸς μèν άλὸς.. πρὸς Θύμβρης: Il. 22. 198 ποτὶ πτόλιος in the direction of Troy; Od. 8. 29 ἢὲ πρὸς ἢοίων ἢ ἐσπερίων ἀνθρώπων (=from east or west).

Among derived senses we may distinguish-

- (1) at the hand of, from (persons), as Il. 1. 160 τιμην ἀρνύμενοι πρὸς Τρώων, 11. 831 τά σε προτί φασιν 'Αχιλλη̂ος δεδιδάχθαι.
- (2) on the part of, by the will of, as II. 1. 239 οι τε θέμιστας πρὸς Διὸς εἰρύαται who uphold judgments on behalf of Zeus; II. 6. 456 πρὸς ἄλλης ἱστὸν ὑφαίνοις at another's bidding: and, perhaps in a metaphorical sense, Od. 6. 207 πρὸς γὰρ Διός εἰσιν ἄπαντες ξεῖνοί τε πτωχοί τε.

(3) before, by (in oaths and entreaties); as II. 13. 324 πρὸς πατρὸς γουνάζομαι I entreat in the name of thy father. The Preposition here implies that the god or person sworn by is made a party to the act; ep. Od. 11. 66 νῦν δέ σε τῶν ὅπιθεν γουνάζομαι οὖ παρεόντων, πρός τ' ἀλόχου καὶ πατρός κτλ. on the part of the absent ones I entreat &c.

It will be seen that προτί with a Gen. is seldom used in the strictly local sense except when there is a contrast between two directions. Hence the use approaches closely to that of the Gen. of Place given in § 149 (2); compare (e.g.) πρὸς βορέαο—πρὸς νότον with Od. I. 24 οἱ μὲν δυσομένον Ὑπερίονος οἱ δ' ἀνιόντος. The Case is accordingly 'quasi-partitive' (i.e. true) Genitive, and has no ablatival character.

avá.

209.] The Preposition ἀνά (ἄν) means up, upwards, up through. It is rarely used as a pure Adverb (the form ἄνω being preferred) except in the elliptical ἄνα up! But it has a derivative adverbial sense in Il. 18. 562 μέλανες δ' ἀνὰ βότρνες ἦσαν there were dark της grupes throughout. Thesis may be seen in Il. 2. 278 ἀνὰ δ' ὁ πτολίπορθος 'Οδυσσεὺς ἔστη, and in ἀνὰ δ' ἔσχετο (ἀνέσχετο), &c. In Thesis and Composition it sometimes expresses reverse action, as ἀνα-λύω. So ἀνα-βάλλω to put off.

ἀνά is seldom used with the Dative; the meaning is up on (a height of some kind), as Il. 1. 15 χρυσέφ ἀνὰ σκήπτρφ raised on a golden staff; 15. 152 ἀνὰ Γαργάρφ; so 8. 441., 14. 352., 18. 177., Od. 11. 128; 23. 275., 24. 8. This use is occasionally found in Pindar (Ol. 8. 67, Pyth. 1. 10), and lyric parts of tragedy, but is not Attic.

With the Genitive &vá is only used in three places in the Odyssey (2. 416., 9. 177., 15. 284), and only of going on board a ship $(\hat{a}\nu\hat{a}\ \nu\eta\hat{o}s\ \beta\hat{a}(\nu\omega))$. The meaning up from is only found in Composition: $\hat{a}\nu\hat{\epsilon}\delta\nu$ $\pi o\lambda \iota\hat{\eta}s$ $\hat{a}\lambda \acute{o}s$, &c.

210.] With the Accusative ἀνά means up along, up through, of motion or extent: ἀνὰ ἄστν, ἀμ πεδίον, ἀνὰ δώματα, ἀν᾽ δδόν, ἀν᾽ Ἑλλάδα, &c.; Il. 5. 74 ἀν᾽ όδοντας ὑπὸ γλῶσσαν τάμε χαλκός the spear cut its way up through the teeth and under the tongue; so ἀνὰ στόμα, used literally (Il. 16. 349., 22. 452, &c.), and also of words uttered, Il. 2. 250 βασιλῆας ἀνὰ στόμ᾽ ἔχων having the kings passing through your mouth (i. e. talking freely of them); similarly ἀνὰ θυμόν of thoughts rising in the mind. Note also the application to mixing, as Od. 4. 41 πὰρ δ᾽ ἔβαλον ζειάς, ἀνὰ δὲ κρῖ λευκὸν ἔμιξαν; cp. Od. 9. 209 (with the note in Merry and Riddell's edition). The Accusative is evidently one of Space (§ 138).

The use with collective Nouns, as ἀν' ὅμιλον through the press, μάχην ἀνά, ἃμ φόνον ἃν νέκυας, &c. seems to be peculiar to the Iliad.

The use in Il. 14. 80 ἀνὰ νύκτα may be explained either of

time or of space: cp. ὑπὸ νύκτα (§ 203), διὰ νύκτα (§ 215).

The meaning up on, up to (of motion) may be traced in Il. 10. 466 θηκεν ἀνὰ μυρίκην: Od. 22. 176 κίον' ἀν' ὑψηλὴν ἐρύσαι draw (the cord) up to a high pillar; perhaps in the phrase ἀνά θ' ἄρματα ποικίλ' ἔβαινον (Od. 3. 492, &c.).

ката.

211.] The Preposition κατά (by Apocope κάδ, &c.) means down, and is parallel in most uses to ἀνά. It is never purely adverbial (κάτω being used instead, cp. ἄνω), but is common in Tmesis, as II. 1. 436 κατὰ δὲ πρυμνήσι' ἔδησαν, 19. 334 κατὰ πάμπαν τεθνάμεν, &c., and in Composition. Besides the primary sense (seen in κατ-άγω I bring down, κατα-νεύω I nod downwards, i. e. in assent, &c.) it often has the meaning all over, as κατα-εινύω I clothe, καταχέω I pour over; hence completely, as κατὰ πάντα φαγεῖν to eat all up, κατα-κτείνω I kill outright: also in the place, as before, as καταλείπω I leave where it was, &c.

κατά is not used with the **Dative**. If such a use ever existed it was superseded by ὑπό (just as ἀνά with the Dat. gave way to ἐπί). The possibility of the combination may be seen from the

phrases κατ' αὐτόθι, κατ' αὖθι.

212.] With the Accusative κατά means down along, down through, as κατὰ ρόον down stream; cp. II. 16. 349 ἀνὰ στόμα καὶ κατὰ ρ̂ινας (of blood). But it is very often used (like ἀνά) of motion that is not upward or downward, except from some arbitrary point of view; as καθ' ὁδόν along the way, κατὰ πτόλιν through the city, &c.: again, κατὰ φρένα καὶ κατὰ θυμόν in mind and spirit.

Other varieties of use are:

- (1) with collective Nouns (chiefly in the Iliad), as κατὰ στρατόν through the camp, πόλεμον κάτα, κατὰ κλόνον, &c.
- (2) with Plurals (less common), as κατ' αὐτούς going among them, κατ' ἀνθρώπους ἀλάλησθαι.
- (3) of the character or general description of an action, as κατὰ πρῆξιν (ἀλάλησθε) on a piece of business, ῆλθον κατὰ χρέος, πλαζόμενοι κατὰ ληΐδα (all in the Odyssey).
- (4) to express place; esp. of wounds, e.g. κατ' ὧμον about (somewhere on) the shoulder. Cp. II. 1. 484 ἵκοντο κατὰ στρατόν arrived opposite (within the space adjoining) the camp; Od. 5. 441 ποταμοῖο κατὰ στόμα ἑξε νέων.

- (5) to express agreement (from the notion of falling in with), in the phrases κατὰ θυμόν, κατὰ κόσμον, κατὰ μοῖραν, κατ' αἶσαν.
- (6) distributively: as Il. 2. 99 ἐρήτυθεν δὲ καθ' ἔδρας in their several seats; and so in 2. 362 κριν' ἄνδρας κατὰ φύλα κατὰ φρήτρας.
- (7) κατὰ σφέας (μάχεσθαι) by themselves (to the extent constituted by themselves): so II. 1. 271 κατ' ἔμ' αὐτόν.

These uses may generally be identified in principle with some of the Accusatives mentioned in §§ 136-138. Thus the Acc. in $\tilde{\eta}\lambda\theta$ ov κατὰ χρέσε is like ἀγγελίην ἐλθεῖν: in κατὰ κόσμον it is like the adverbial δέμας, ἄκην, &c.: κρῖνε κατὰ φῦλα=μοίρας δάσασθαι; and κατ' ἄμον like the Acc. of the 'part affected.'

213.] With the Genitive κατά has two chief meanings:-

- down from; as κατ' οὐρανοῦ down from heaven, καθ' ἵππων ἄλτο leaped from the chariot. This Genitive is clearly ablatival in origin.
- (2) down on (in, over, &c.): as II. 3. 217 κατὰ χθονὸς ὅμματα πήξας fixing his eyes on the ground; κατὰ δ' ὀφθαλμῶν κέχντ' ἀχλύς a mist was shed over his eyes; κατὰ γαίης down in the earth. Odd?

Comparing the similar uses of ἐπί (§ 200), ὑπό (§ 204, 2), and προτί (§ 208), we can hardly doubt that the Gen. in this latter group is originally akin to the Genitives of Place (§ 149).

Siá.

214.] The Preposition διά seems to mean properly apart, in twain. It is not used freely as an Adverb; but the original sense appears in the combinations διαπρό, διαμπερές, and in Tmesis and Composition, as δια-στῆναι to stand apart; δια-τάμνω I cut asunder; διὰ κτῆσιν δατέοντο divided the possession. From the notion of going through it means thoroughly, as in δια-πέρθω I sack utterly.

In several Compounds, as δια-τάμνω, δι-αιρέω, δια-δάπτω, the notion of division is given by the Preposition to the Verb; e.g.

δια-τάμνω I separate by cutting, &c.

215.] The Accusative with &id is often used to denote the space through which motion takes place: as—

II. 1. 600 διὰ δώματα ποιπνύοντα bustling through the palace (so

διὰ σπέος, διὰ βήσσας, διὰ ρωπήϊα, &c.).

14. 91 μῦθον δν οὖ κεν ἀνήρ γε διὰ στόμα πάμπαν ἄγοιτο (= with which a man would not sully his mouth: cp. ἀνὰ στόμα, § 210).

Od. 9. 400 Φκεον εν σπήεσσι δι άκριας dwelt in caves about 08.10 150,5 (scattered through) the headlands. 23 1 4 758 2.1.4.276

So Il. 2. 40 διὰ κρατερὰς ὑσμίνας lasting through hard fights: and διὰ νύκτα (chiefly in the Odyssey, and books 10 and 24 of the

Iliad).

This use is distinctively Homeric. Sometimes also διά with the Acc. is used in Homer to express cause or agency; as II. 1. 73 ην διὰ μαντοσύνην (Calchas led the army) by virtue of his soothsaying; Od. 8. 520 διὰ μεγάθνμον 'Αθήνην (to conquer) by the help of Athene; so II. 10. 497., 15. 41, 71, Od. 8. 82., 11. 276, 282, 437., 13. 121., 19. 154, 523. These places do not show the later distinction between by means of and by reason of.

216.] The Genitive with &id implies passing through something in order to get beyond it; esp. getting through some obstacle: as—

ΙΙ. 4. 135 διὰ μὲν ἃρ ζωστῆρος ἐλήλατο.

So of a gate, II. 3. 263 διὰ Σκαιῶν ἔχον ἵππους: and of lower and upper air, &c. δι' ἠέρος αlθέρ' ἵκανεν, δι' αlθέρος οὐρανὸν ἵκε, πεδίονδε διὰ νεφέων. So again διὰ προμάχων, δι' ὁμίλου &c. of

making way through the press.

The Acc. is used where we expect this Gen. in Il. 7. 247 & $\delta \epsilon$ $\delta \epsilon$ $\delta \iota \hat{\alpha} \pi \tau \acute{\nu} \chi \alpha s \mathring{\eta} \lambda \theta \epsilon$ went through six folds: but this may be partly due to the metrical impossibility of $\pi \tau \iota \chi \hat{\omega} \nu$. Conversely, in Il. 10. 185 ős $\tau \epsilon \kappa \alpha \theta$ $\mathring{\nu} \lambda \eta \nu \ \tilde{\epsilon} \rho \chi \eta \tau \alpha \iota \ \delta \iota$ $\mathring{\sigma} \rho \epsilon \sigma \phi \iota$ the Acc. would be right, and $\mathring{\sigma} \rho \epsilon \sigma \phi \iota$ is perhaps a false archaism: but cp. § 158.

ὑπέρ.

217.] The Preposition ὑπέρ (or ὑπείρ) means higher, hence over, beyond. It is not found in the adverbial use, or in Tmesis, or with a Dative.

In Composition ὑπέρ expresses going across or beyond, hence excess, violation of limits, &c.

218.] With the Accusative ὑπέρ is used-

- (1) of motion or extent over a space, as Il. 23. 227 ὑπεὶρ ἄλα κίδυαται ἢώς. This use is not common; Il. 12. 289., 24. 13, Od. 3. 681 4. 172., 9. 254, 260.
- (2) of motion passing over an object: as Il. 5. 16 ὑπὲρ ὧμον, ἀριστερον ἤλυθ' ἀκωκή; Od. 7. 135 ὑπὲρ οὐδον ἐβήσετο.
- (3) metaphorically, in excess of, in violation of: ὑπὲρ αἶσαν, ὑπὲρ μοῦραν, ὑπὲρ ὅρκια: also, somewhat differently, Il. 17. 327 ὑπὲρ θεόν in spite of God.
- 219.] With the Genitive ὑπέρ is used both of position and of motion over an object, esp. at some distance from it; as $\sigma \tau \hat{\eta}$ δ' ἄρ' ὑπὲρ κεφαλ $\hat{\eta}$ s; Il. 15. 382 νηὸς ὑπὲρ τοίχων (of a wave com-

ing) over the sides of a ship: Il. 23. 327 όσον τ' όργυι' ὑπερ αίης α

fathom's length above ground.

Metaphorically it means over so as to protect, hence in defence of, on behalf of; as II. 7. 449 τείχος ετειχίσσαντο νεων υπερ; Il. 1. 444 έκατόμβην ρέξαι ύπερ Δαναῶν. So Il. 6. 524 δθ' ύπερ σέθεν αἴσχε' ἀκούω when I listen to reproaches on your account (of which I bear the brunt). But Hes. Op. 217 δίκη δ' ὑπὲρ ὕβριος ίσχει justice rises (prevails) over insolence.

În respect of form ὑπέρ (for ὑπέρι, Sanscr. upári) is a Comparative of ὑπό; cp. the Superlative ὅπατος, and the Lat. superus, summus. Hence the Gen. is ablatival, like the Gen. with words

of comparison; see § 152.

€ví.

220. The Proposition evi (also eivi, eiv, ev) means within, in; it is used adverbially (as Il. 5. 740 ἐν δ' ἔρις, ἐν δ' ἀλκή &c.), in Tresis (as ἔν τ' ἄρα οἱ φῦ χειρί), and with a (locatival) Dative.

Notice, as departures from the strict local sense, the uses-

(1) with Plurals denoting persons (= μετά among), as ἐν ὑμῖν (Il. 9. 121, 528., 10. 445), ἐν πᾶσι (Od. 2. 194., 16. 378), ἐνὶ σφίσι (Π. 23. 703). Κ 127.180, 207, 314(= Ε1)

(2) with abstract words (rare in the Iliad); ἐν πάντεσσι πόνοισι (II. 10. 245, 279), ἐν πάντεσσ' ἔργοισι (II. 23. 671), ἐν ἄλγεσι (II. 24. 568); θαλίη ένι (II. 9. 143, 285), έν νηπιέη (II. 9. 491); ἐν φιλότητι; ἐν μοίρη aright (Il. 19. 186), αἴση ἐν ἀργαλέη (Π. 22. 61), ἐν Καρὸς αἴση (Π. 9. 378); ἐν δὲ ἰῆ τιμῆ (II. 9. 319).

These two uses are nearly confined in the Iliad to books 9, 10, 23, 24. Efter bevægelsesverber H. 404 cf. Kr. 68-12.

σύν.

221.] The Preposition σύν (or ξύν) means in company with. It is not used as a pure Adverb, but is found in Tmesis, as Il. 1. 579 σὺν δ' ἡμῖν δαῖτα ταράξη and disturb (συνταράσσω) our feast. It is used with an Instrumental Dative (§ 144).

To express equally with, or at the same time as, Homer uses αμα with a Dat.; while our commonly means attended by, with the help of, &c. Hence σὺν ἔντεσι with armour on, σὺν νηυσί in ships, σὺν ὅρκω on oath, σὺν ᾿Αθήνη aided by Athene: so Il. 4, 161 σύν τε μεγάλφ ἀπέτισαν they pay with a great price.

The use of σύν with the Dative has been recently shown by Tycho Mommsen to be confined, generally speaking, to poetry. The Attic prose writers (with the singular exception of Xenophon) use μετά with the Gen.; the practice of the poets varies, from Homer, who hardly ever uses μετά with the Gen., down to Euripides, who uses it about half as often as σύν. It is evident that in

post-Homeric times $\mu\epsilon\tau\dot{a}$ with the Gen. became established in the ordinary colloquial language, while $\sigma\dot{v}$ with the dat, was retained as a piece of poetical style, but gradually gave way to living usage. See Tycho Mommsen's dissertation $M\epsilon\tau\dot{a}$, $\sigma\dot{v}v$ und $\tilde{a}\mu a$ bei den Epikern (Frankfurt am Main, 1874'.

εiς.

222.] The Preposition εἰς (or ἐς) expresses motion to or into. It is not used adverbially (the Adverb being εἴσω), and seldom in Tmesis: Il. 8. 115 τὼ δ' εἰς ἀμφοτέρω Διομήδεος ἄρματα βήτην.

The motion is sometimes implied: as II. 15. 275 equiv $\hat{\lambda}$ is $\hat{\eta}$ in $\hat{\nu}$ is $\hat{\nu}$ is

Of time; ès ἢέλιον καταδύντα to sun-set; so ès τί how long? els $\ddot{\mathbf{o}}$ until: Od. 14. 384 ès θέρος $\ddot{\eta}$ ès οπώρην as late as summer or autumn.

Metaphorical uses: Il. 2. 379 ϵ l dé π 07' és $\gamma \epsilon$ μ íav β 0v λ 6 ν 00 ν 6 ν 0 if we take counsel to one purpose; Il. 9. 102 ϵ 1 π 6 ν 6 ν 6 à γ 4 ν 60 speak to good effect (so 11. 789., 23. 305).

èξ.

223.] The Preposition ἐξ (or ἐκ) usually expresses motion out from an object. It is not used purely adverbially, but there are many examples of Tmesis: as ἐξ ἔρον ἔντο, ἐκ δέ οἱ ἡνίοχος πλήγη φρένας his charioteer lost (lit. was struck out of) his wits, ἔκ τε καὶ ὀψὲ τελεῖ (Il. 4. 161) he brings it to pass (ἐκτελεῖ) late.

With a Gen. (ablatival) $\xi \xi$ is used of motion from or out of.

Sometimes the idea of motion is implied:

Il. 13. 301 ἐκ Θρήκης Ἐφύρους μέτα θωρήσσεσθον armed themselves to come from Thrace after the Ephyri.

14. 129 ἔνθα δ' ἔπειτ' αὐτοὶ μὲν ἐχώμεθα δηϊοτῆτος ἐκ βελέων hold back from fighting (going) out of range: cp. 16. 122, 678., 18. 152.

So of direction: II. 14. 153 "Ηρη δ' εἰσείδε... στᾶσ' ἐξ Οὐλύμποιο stood and looked from Olympus; Od. 21. 420 (drew the bow) αὐτόθεν ἐκ δίφροιο καθήμενος from the chair as he sat; II. 19. 375 ὅτ' αν ἐκ πόντοιο σέλας ναύτησι φανήη when a meteor appears to sailors at sea (seeing it from the sea): of choosing out of, II. 15. 680 ἐκ πολέων πίσυρας συναείρεται ἵππους, and similarly, II. 18. 431 ὅσσ' ἐμοὶ ἐκ πασέων Κρονίδης Ζεὺς ἄλγε' ἔδωκε to me (taken from, hence) more than all.

 consequence of (a thing) occurs in Il. 9. 566 έξ ἀρέων μητρὸς κεχολωμένος, and in the Odyssey (3. 135., 5. 468, &c.).

Of time: ἐκ τοῖο from that time, ἐξ ἀρχῆς from the first (Od. 1.

188, &c.), ἐκ νεότητος (Il. 14. 86).

With an abstract word, Il. 10. 107 ἐκ χόλου ἀργαλέοιο μεταστρέψη φίλον ήτορ. Note also: Il. 10. 68 πατρόθεν εκ γενεής ονομάζων calling them by the father's name according to family; Il. 9. 343 (486) ἐκ θυμοῦ from the heart, heartily (but Il. 23. 595 ἐκ θυμοῦ πεσέειν to fall away from a person's favour).

ànó.

224. The Preposition ἀπό means off, away, at a distance from. It is not used adverbially, but is common in Tmesis; as Il. 8. 108 ούς ποτ' ἀπ' Αἰνείαν ελόμην which I took from Aeneas. Composition it generally gives the Verb the notion of separating; e.g. ἀπο-κόπτω is not I hew at a distance, but I separate by hewing: so ἀπεκόσμεον cleared away (Od. 7. 232), and similarly ἀποδύω, ἀποβάλλω, ἀπολούω, ἀπορρήγνυμι, ἀποκαπύω (all used in Tmesis). Hence we must explain Il. 19. 254 ἀπὸ τρίχας ἀρξάμενος cutting hair as an ἀπαρχή, or first offering; cp. Od. 3. 446., 14. 422.

Sometimes ἀπό has the force of restoration or return, as in ἀποδίδωμι, ἀπο-νοστέω (cp. ἄψ backwards). So ἀπο-ειπείν means either to speak out or to forbid, refuse. In a few cases it has an in-

tensive force, as in ἀπομηνίω, ἀπήχθετο, ἀποθανμάζω.

With the Genitive ἀπό generally expresses motion away from, not implying previous place within the object (whereas ¿ means proceeding from). It is also used of position, as Il. 8. 16 σσον ουρανός έστ' ἀπὸ γαίης as far as heaven is from earth; Od. I. 49 φίλων ἄπο πήματα πάσχει suffers woes far from his friends; metaphorically, Il. 1. 562 ἀπὸ θυμοῦ μᾶλλον ἐμοὶ ἔσεαι you will be the more out of favour with me; ἀπὸ δόξης away from expectation. This Gen. is clearly ablatival.

225.] The Preposition πρό means forward, in front. It is seldom used as an Adverb; Il. 13. 799 πρὸ μέν τ' ἄλλ', κτλ.; Il. 16. 188 εξάγαγε προ φόωσδε brought forth to the light: and of time, Il. 1. 70 πρό τ' ἐόντα the past. In one or two other instances we may recognise either the free adverbial use or Tmesis: Il. 1. 195 πρό γάρ ήκε, 1. 442 πρό μ' έπεμψε, Od. 1. 37 πρό οἱ εἴπομεν.

Traces of a use of πρό with the Locative may be seen in the phrases οὐρανόθι πρό in the face of heaven, Ἰλιόθι πρό in front of 938/N3 Troy, and (perhaps in the temporal sense) ηωθι πρό before dawn. 150 ε469 In these cases the meaning is to the front in, hence immediately

before. ofhere . 1. 15. I 166: Tow. Christ prote 112.

With a Genitive, on the other hand, $\pi\rho\delta$ means in front with respect to, in advance of; hence, in a more or less metaphorical sense, in defence of, as Il. 8. 57 $\pi\rho\delta$ $\tau\epsilon$ $\pi\alpha\delta\delta\omega\nu$ $\kappa\alpha\delta$ $\pi\rho\delta$ $\gamma\nu\nu\alpha\iota\kappa\delta\nu$. The Case is here the ablatival Gen. (as with $\nu \pi\epsilon\rho$ and words of comparison).

But in Il. 4. 382 $\pi\rho\delta$ $\delta\delta\delta\circ\hat{v}$ $\epsilon\gamma\epsilon$ vov τ 0 the Gen. is partitive, got forward on the way; and so perhaps Il. 16. 667 $\pi\rho\delta$ $\phi\delta\beta$ 010 forward in the flight, i.e. having betaken themselves to flight (so

Düntzer a. l.).

The temporal sense is rare in Homer; Od. 15. 524., 17. 476 πρὸ γάμοιο before marriage; Il. 10. 224 καί τε πρὸ ὁ τοῦ ἐνόησε one thinks of a thing before another.

άντί.

226.] The only certain Compound with ἀντί in Homer appears to be ἀντι-φέρεσθαι to oppose (Il. 1. 589., 5. 701., 22. 482, Od. 16. 238): for the Verbs ἀντιβολέω meet and ἀντιτορέω pierce may be derived from the Nouns ἀντί-βολος, ἀντί-τορος: also in Il. 8. 163 we may read γυναικὸς ἄρ' ἀντὶ τέτυξο, not ἀντετέτυξο (cp. Od. 8. 546 ἀντὶ κασιγνήτου ξεῖνός θ' ἰκέτης τε τέτυκται), and in Od. 22. 74 for ἀντίσχεσθε (hold up against) ἄντ' ἴσχεσθε (i. e. ἄντα ἴσχεσθε, cp. Od. 1. 334 ἄντα παρειάων σχομένη λιπαρὰ κρήδεμνα).

ἀντί also resembles the Improper Prepositions (esp. the Adverbs ἀντα, ἀντίον, &c.) in being used with the Gen., but not with the Dat. or Acc. It means in place of, hence in the character of,

equivalent to: as Il. 21. 75 αντί τοί είμ' ικέταο.

Double Prepositions.

227.] It is characteristic of Homer to form a species of compound by combining two Prepositions. We have—

ἀμφὶ περί, like our round about: also περί τ' ἀμφί τε round and about: used adverbially, as II. 22. 10 ὅχθαι δ' ἀμφὶ περὶ μεγάλ' ἴαχον; in Composition, ἀμφιπεριστρώφα (II. 8. 348), &c.

παρέξ out besides, out along, out past: adverbial in Od. 14. 168 ἄλλα παρέξ μεμνώμεθα: with the Acc., παρὲξ ἄλα alongside the sea, παρὲξ τὴν νῆσον past the island; παρὲκ νόον beyond (=contrary to) reason: with the Gen., παρὲξ όδοῦ aside from the way.

ὑπέξ, with a Gen. away from under, as II. 13. 89 φεύξεσθαι ὑπὲκ κακοῦ.

διέξ, with a Gen. right through, as διὲκ προθύρου, διὲκ μεγάροιο. ἀποπρό quite away, used adverbially and with a Gen.

διαπρό right through, adverbially and with a Gen.

περιπρό round about; Il. 11. 180 περιπρό γὰρ ἔγχεϊ θθε.

In all these instances the meaning and construction are mainly determined by the first of the two Prepositions (so that e. g. παρέξ is used nearly as παρά, διέξ and διαπρό as διά, &c.). The second does little more than add some emphasis.

The treble Preposition ὑπεκπρό is found in Composition : ὑπεκπροθέω, ὑπεκπρορέω, &c. The sense is represented by dividing the words ὑπεκ-προθέω, &c.

A curious variety is found in the Compound προ-προκυλινδόμενος rolling forward before, where a second πρό is added to give emphasis to the first.

Improper Prepositions.

228.] The term 'Improper Preposition' may be applied to any Adverb used to govern a Case. The following are some of the most important words of the kind:—

Used with a Genitive: $\mathring{a}\gamma\chi\iota$ near, close to, $\mathring{\epsilon}\gamma\gamma\flat\theta\iota$, $\mathring{\epsilon}\gamma\gamma\flat\delta$ near, $\mathring{a}\nu\tau\alpha$, $\mathring{a}\nu\tau(\nu)$, &c. facing, $\pi\rho\delta\sigma\theta\epsilon(\nu)$ before, $\pi\acute{a}\rho\iota\partial\epsilon(\nu)$ in front of, $\mathring{\sigma}\pi\iota\sigma\theta\epsilon(\nu)$ behind, $\mu\epsilon\sigma\sigma\eta\gamma\flat\delta$ between, $\mathring{\epsilon}\nu\tau\delta$, $\mathring{\epsilon}\nu\tau\sigma\sigma\theta\epsilon$, $\mathring{\epsilon}\nu\delta\delta\theta\epsilon\nu$ within, $\mathring{\epsilon}\xi\omega$ out, $\mathring{\epsilon}\kappa\tau\delta$, $\mathring{\epsilon}\kappa\tau\sigma\theta\iota$, $\mathring{\epsilon}\kappa\tau\sigma\theta\epsilon(\nu)$ outside, $\mathring{\epsilon}\nu\epsilon\rho\theta\epsilon$ beneath, $\mathring{a}\nu\epsilon\nu$, $\mathring{a}\nu\epsilon\nu\theta\epsilon(\nu)$ apart from, without, $\mathring{a}\tau\epsilon\rho$ without, $\nu\delta\sigma\phi\iota$ away from, $\mathring{\epsilon}\kappa\acute{a}s$, $\mathring{\epsilon}\kappa\acute{a}\tau\epsilon\rho\theta\epsilon(\nu)$ apart from, $\mu\acute{\epsilon}\sigma\phi\alpha$ until, $\pi\acute{\epsilon}\rho\eta\nu$ beyond, $\pi\acute{a}\lambda\iota\nu$ back from, $\mathring{a}\nu\tau\iota\kappa\rho\dot{\nu}$ straight to, $\mathring{\iota}\theta\dot{\nu}s$ straight towards, $\mathring{\tau}\mathring{\eta}\lambda\epsilon$, $\mathring{\tau}\eta\lambda\acute{o}\theta\iota$ far off, $\mathring{\nu}\pi\iota\iota\theta\alpha$ under, $\mathring{\epsilon}\mathring{\nu}\nu\epsilon\kappa\alpha$ ($\mathring{\epsilon}\nu\epsilon\kappa\alpha$) on account of, $\mathring{\epsilon}\kappa\eta\tau\iota$ by the favour of. The Gen. with some of these words may be ablatival (§ 152). In general, however, it appears to be used with little or no reference to the meaning of the governing Adverb, and merely in order to connect the two words. Hence these constructions are best brought under the general rule that a Noun governs the Genitive (§ 147).

With a Dative: αμα together with, μίγδα in company with, όμως

in like manner.

ἀμφίς takes a Gen. in the meaning aside from (II. 8. 444., 23. 393, Od. 14. 352). It is also found with the Acc. in the same sense as ἀμφί, in the phrase θεοὶ Κρόνον ἀμφὶς ἐόντες, II. 14. 274., 15. 225 (see also II. 11. 634, 748, Od. 6. 266); and once with a Dat., viz. in II. 5. 723 σιδηρέφ ἄξονι ἀμφίς. Also as an Adv. = around in II. 9. 464., 24. 488.

εἴσω generally takes an Accusative, as Ἰλιον εἴσω to Ilium: but a Gen. in Od. 8. 290 ὁ δ' εἴσω δώματος ἤει went inside the house η

(not merely to the house).

The word ως was supposed to govern an Accusative in one place in Homer, viz. Od. 17. 218 ως αλελ τὸν ὁμοῖον ἄγει θεὸς ως τὸν ὁμοῖον. But the true construction is (as Mr. Ridgeway has pointed out) ως—ως as God brings like as he brings like, i. e. deals with a man as he dealt with his like (see Journal of Philology, vol. xvii. p. 113).

Note the frequency of Compounds formed by one of these words following a Preposition: έν-αντα, είσ-αντα, άν-αντα, κάτ-αντα, πάρ-αντα, έν-αντίον, κατ-εν-

αντίων: ἔμ-προσθεν, προ-πάροιθε, μετ-όπισθεν, ἀπ-άνευθεν, ἀπ-άτερθεν, ἀπό-νοσφι, ὑπ-ένερθε, κατ-αντικρύ. Cp. ἄν-διχα, δι-αμπέρες, κατ-αντύθι, &c. These are not true Compounds (σύνθετα), but are formed by παράθεσις, or mere juxtaposition: i.c. they do not consist of two members, of which the first is wholly employed in limiting or qualifying the second, but of two adverbial words qualifying the same Verb. Thus they are essentially akin to the combinations formed by a Preposition and its Case: see § 178.

Homeric and Attic uses of Prepositions.

- 229.] The development of the language between the Homeric and the Attic period is especially shown in the uses of Prepositions. It may be convenient here to bring together some of the chief points.
- 1. Most of the Prepositions,—but esp. ἀμφί, περί, παρά, ἐπί, ὑπό, προτί, ἐνί—are used in Homer adverbially, i. e. as distinct words Afterwards they become mere unaccented words or prefixes.
- 2. A variety of the same process shows itself in the disuse of Tmesis. Besides the Prepositions already mentioned, this applies to μετά, ἀνά, κατά, διά, ἐξ, ἀπό, εἰς.

In these processes of development we have seen that the loss of independent meaning is accompanied by a change (which is

in all probability simply a loss) of accent.

- 3. The construction with the Dative (which is mostly locatival) is the one in which the Preposition retains most nearly its own 'adverbial' meaning—so much so that it is often doubtful whether the Preposition can be said to 'govern' the Case at all. Accordingly we find that this construction is comparatively rare in Attic. It is virtually lost (except as a poetical survival) with ἀμφί, περί, μετά, ἀνά, and σύν.
- 4. On the other hand the Genitive is more frequent in Attic, and not confined (as it generally is in Homer) to uses in which it has either an ablatival or a quasi-partitive sense. Thus it is used with ἀμφί, περί, and μετά: also with διά of motion through. In such uses as these the Case ceases to have a distinct meaning: it merely serves (as with the Improper Prepositions) to show that the Noun is governed by the Preposition.
- 5. The development of meaning is chiefly seen in the extension from the literal sense of place to various derivative or metaphorical senses. Some of these senses are beginning to be used in the Homeric language: e.g. ἀμφί with the Dat. = about, concerning; περί with the Gen. (probably also the Dat.) in the same meaning; παρά with the Acc. = in excess of, in violation of; μετά with the Acc. = after; ἐπί with the Acc. = towards (a person): διά with the Acc. = owing to: ἐξ = in consequence of. Others may safely be counted as post-Homeric; note in particular—

περί with the Acc. = about, nearly (of time and number); also = concerning, in relation to:

παρά with the Dat. = in the opinion of; with the Acc. = during the continuance of; also compared with:

κατά with the Acc. = answering to; also during the time of: with the Gen. = about, against:

 $\epsilon \pi i$ with the Dat. = in the power of:

6. There are slight but perceptible differences between the usage of the Iliad and that of the Odyssey (§§ 182, 188, 196, 199, 215). Some uses, again, are peculiar to one or two books of the Iliad, esp. 9, 10, 23, 24: see §§ 199 (4), 220, 223 (fin.).

CHAPTER X.

THE VERBAL NOUNS.

Introductory.

230.] The preceding chapters deal with the Simple Sentence: that is to say, the Sentence which consists of a single Verb, and the subordinate or qualifying words (Case-forms, Adverbs, Prepositions) construed with it (§ 131). We have now to consider how this type is enlarged by means of the Verbal Nouns.

The Infinitive and Participle, as has been explained (§ 84), are in fact Nouns: the Infinitive is an abstract Noun denoting the action of the Verb, the Participle a concrete Noun expressing that action as an attribute. They are termed 'Verbal' because they suggest or imply a predication, such as a finite Verb expresses (e.g. ἔρχεται ἄγων αὐτούs implies the assertion ἄγει αὐτούs), and because the words which depend upon or qualify them are construed with them as with Verbs (ἄγων αὐτούs, not ἄγων αὐτῶν bringer of them). Thus they have the character of subordinate Verbs, 'governed' by the finite Verb of the sentence, and serving at the same time as centres of dependent Clauses.

The distinction between Infinitives and other abstract Substantives, and again between Participles and other primitive Adjectives, was probably not always so clearly drawn as it is in Greek. The Infinitives of the oldest Sanserit hardly form a distinct group of words; they are abstract Nouns of various formation, used in several different Cases, and would hardly have

been classed apart from other Case-forms if they had not been recognised as the precursors of the later more developed Infinitive. The Participles, too, are variously formed in Sanscrit, and moreover they are not the only Nouns with which the construction is 'adverbial' instead of being 'adnominal.'

The peculiarity of the Verbal Nouns in point of meaning may be said to consist in the temporary and accidental character of the actions or attributes which they express. Thus πράττεν and πράξαι suggest a particular doing, momentary or progressive, at or during a time fixed by the context; whereas $\pi\rho\hat{a}\xi$ means doing, irrespective of time; $\pi\rho\hat{a}\kappa\tau\omega\rho$ one who does, generally or permanently, a doer; and so in other cases. The distinction is especially important for Homer. In the later language there are uses of the Infinitive and Participle in which they lose the Verbal element, and have the character of ordinary Nouns; e. g. τ 0 $\pi\rho\hat{a}\tau\tau\epsilon\nu$ is nearly equivalent to $\pi\rho\hat{a}\xi$ 1s, of $\pi\rho\hat{a}\tau\tau\sigma\nu\tau\epsilon$ 5 to $\pi\rho\hat{a}\kappa\tau\sigma\rho\epsilon$ 5, &c.

The Infinitive.

231.] Form and original meaning. The Greek Infinitive is a Case-form—usually the Dative—of an abstract Verbal Noun (nomen actionis). As a Dative it expresses an action to which that of the governing Verb is directed, or for which it takes place,—viz. a purpose, effect, bearing, &c. of the main action. Thus δόμεν-αι to give, being the Dative of a Stem δο-μεν giving, means 'to or for giving,' hence in order to give, so as to give, &c. But owing to the loss of all other uses of the Dative in Greek (§ 143), and the consequent isolation of the Infinitive, its meaning has been somewhat extended. For the same reason the Infinitives derived from other Cases (§ 85) are no longer used with different meaning, but are retained merely as alternative forms.

The Dative meaning evidently accounts for the common constructions of the Infinitive with Verbs expressing wish, command, power, expectation, beginning, and the like: as $\epsilon\theta\epsilon\lambda\omega$ $\delta\phi\mu\epsilon\nu\alpha\iota$ lit. I am willing for giving, $\delta\psi\nu\alpha\mu\alpha\iota$ $\delta\delta\epsilon\iota\nu$ I have power for seeing, &c. In Homer it may be said to be the usual meaning of the Infinitive. It is found in a great many simple phrases, such as $\xi\nu\nu\epsilon\eta\kappa\epsilon$ $\mu\dot{\alpha}\chi\epsilon\sigma\theta\alpha\iota$ urged together to fight (so that they fought), $\delta\delta$ s $\dot{\alpha}\gamma\epsilon\iota\nu$ give for leading away (to be led away), $\delta\delta\epsilon$ $\nu\delta\eta\sigma\alpha\iota$ knows (has sense) to perceive, $\beta\eta$ δ $\dot{\epsilon}$ $\dot{\epsilon}$

- II. 1. 22 ἐπευφήμησαν 'Αχαιοί, αίδεῖσθαι κτλ. the Greeks uttered approving cries for (to the effect of) respecting, &c.; so 2. 290 δδύρονται οἶκόνδε νέεσθαι.
- 107 'Αγαμέμνονι λείπε φορῆναι, πολλῆσιν νήσοισι καὶ "Αργεϊ παντὶ ἀνάσσειν left (the sceptre) to Agamemnon to bear, therewith to rule over many islands and Argos.

Od. 4. 634 ἐμὲ δὲ χρεω γίγνεται αὐτῆς "Ηλιδ' ἐς εὐρύχορον διαβήμεναι I have need of it for crossing over to Elis.

The notion of purpose often passes into that of adaptation, possibility, necessity, &c.; e.g.—

- II. 6. 227 πολλοὶ μὲν γὰρ ἐμοὶ Τρῶες . . κτείνειν there are many Trojans for me to kill (whom I may kill); cp. 9. 688 εἰσὶ καὶ οἴδε τάδ' εἰπέμεν these too are here to tell this, 11. 342 ἐγγὺς ἔσαν προφυγεῖν were near for escaping, to escape with.
- 13. 98 εἴδεται ἡμαρ ὑπὸ Τρώεσσι δαμῆναι the day is come for being subdued (when we must be subdued) by the Trojans; cp. Od. 2. 284.

Again, from the notion of direction or effect the Infinitive shades off into that of reference, sphere of action, &c.; as II. 5. 601 οἶον δὴ θαυμάζομεν Εκτορα δῖον αἰχμητήν τ' ἔμεναι κτλ. for being a warrior; Od. 7. 148 θεοὶ ὅλβια δοῖεν ζωέμεναι may the gods grant blessings for living, i.e. in life; ἀριστεύεσκε μάχεσθαι was best for (and so in) fighting, εὕχεται εἶναι boasts for (of) being.

In the passages quoted the Infinitive is so far an abstract Noun that the action which it denotes is not predicated of an agent. The agent, if there is one in the speaker's mind, is not given by the form of the sentence; e.g. ἐγγὺς ἔσαν προφυγεῖν (were near for escaping) might mean were near so as to escape or (as the context of Il. 11. 342 requires) were near so that he could escape; δῦναι ἐπειγόμενος would usually mean eager to set, but in Od. 13. 30 it means eager for (the sun's) setting. Hence the apparently harsh change of subject in such a case as—

to the intent that it should obey the old man and he should guard all surely (lit. for obeying—for guarding). And so in II. 9. 230 ϵv dough de sawoémen η described where v as is first Object, then Subject. The harshness disappears when we understand that the abstract use is the prevailing one in Homer.

It may also be noticed here that-

- (1) With Verbs of privative meaning, the Infinitive may be used as with the corresponding affirmative words: as έρριγ' ἀντι-βολῆσαι shudders as to (from) meeting; Od. 9. 468 ἀνὰ δ' ὀφρύσι νεῦον ἐκάστφ κλαίειν I nodded backwards to each for weeping (=forbidding him to weep), Il. 22. 474 εἶχον ἀπολέσθαι. But the proper use also appears, as in Il. 22. 5 αὐτοῦ μεῖναι ἐπέδησε fettered so that he remained. Here the context must determine the meaning.
- (2) With φρονέω, δίω, &c. the Infinitive may express the effect or conclusion: I think to the effect—, hence I think fit; as II. 13. 263 οὐ γὰρ δίω . . πολεμίζειν I have no mind to &c. So

εἰπεῖν to speak to the intent that, to bid, as Od. 3. 427 εἴπατε δ' εἴσω δμωῆσιν . . πένεσθαι. Other examples are given in § 238.

In this use, as was observed by Mr. Riddell (Dig. § 83), the 'dictative force'—the notion of thinking right, advising, &c.—comes through the Infinitive to the governing Verb, not vice versa. The same remark holds of the use with fort it is possible, lit it is (a case for (something to happen).

- 232.] Infinitive with Nouns, &c. It will be useful to bring together instances in which the Infinitive depends upon some qualifying word—Preposition, Adverb, Adjective, &c.—construed with the Verb:—
 - Il. 1. 258 οἱ περὶ μὲν βουλὴν Δαναῶν περὶ δ' ἐστὲ μάχεσθαι excel them in fighting.

1. 589 ἀργαλέος γὰρ 'Ολύμπιος ἀντιφέρεσθαι the Olympian is hard

to set oneself against; cp. 20. 131.

- 4. 510 ἐπεὶ οὖ σφι λίθος χρως οὐδὲ σίδηρος χαλκὸν ἀνασχέσθαι since their flesh is not stone or iron for withstanding (so as to be able to withstand) bronze.
- 8. 223 η ρ' εν μεσσάτω έσκε γεγωνέμεν αμφοτέρωσε for shouting (= so that one could shout) both ways.
- 13. 775 ἐπεί τοι θυμὸς ἀναίτιον αἰτιάασθαι since your mind is for blaming (is such that you must blame) the innocent.
- Od. 17. 20 οὐ γὰρ ἐπὶ σταθμοῖσι μένειν ἔτι τηλίκος εἰμί I am not yet of the age to remain.
- 17. 347 αίδως δ' οὐκ ἀγαθὴ κεχρημένω ἀνδρὶ παρείναι shame is not good to be beside a needy man (is not a good 'backer' for).
- 21. 195 ποιοί κ' είτ' 'Οδυσηι ἀμυνέμεν εί ποθεν έλθοι; = how would you behave in regard to fighting for Ulysses?

Od. 2. 60 ήμεις δ' οὕ νύ τι τοῖοι ἀμυνέμεν may be either we are not like him, so as to defend, or simply we are not fit to defend. The construction of the Inf. is the same in either case: the difference is whether τοῖοι means 'of the kind' with reference to οἶος 'Οδυσσεὺς ἔσκε or to the Inf. ἀμυνέμεν. The latter may be defended by Od. 17. 20 (quoted above).

This construction is extended to some Nouns even when they are not used as predicates; as $\theta \epsilon i \epsilon \iota \nu \tau a \chi \dot{\nu} s$ swift to run, $\theta a \hat{\nu} \mu a$ $i \delta \dot{\epsilon} \sigma \theta a \iota a$ wonder to behold (cp. the use of the Accusative with Adjectives, § 131 fin.).

- 233.] Impersonal Verbs. The Infinitive is used with εστι there is (means, room, occasion, &c.), εοικε it is fit, πέπρωται it is determined, είμαρτο it was fated. For έστι cp.—
 - ΙΙ. 14. 313 κείσε μεν έστι καὶ ὕστερον όρμηθηναι.
 - Od. 15. 392 αίδε δε νύκτες αθέσφατοι· εστι μεν ευδειν, εστι δε τερπομένοισιν ακούειν there is (enough) for sleeping and for listening.

It is very common with a negative: οὐκ ἔστι, οὕ πως ἔστι, &c. meaning there is no way, it may not be that, &c.

The Impersonal use is also found in phrases of the two kinds

noticed in § 162, 4; viz.—

- (a) With a Neuter Adjective; as ἀργαλέον δέ μοί ἐστι θέσθαι κτλ. it is difficult for me to make &c.; μόριμον δέ οι ἐστ' ἀλέασθαι it is fated for him to escape; so with αλσχρόν, νεμεσσητόν, αἴσιμον, ἄρκιον, βέλτερον, and the like.
 - (b) With an abstract Noun: as-

Il. 14. 80 οὐ γάρ τις νέμεσις φυγέειν κακόν there is no wrong in escaping ill.

Od. 5. 345 ὅθι τοι μοιρ' ἐστὶν ἀλύξαι where it is thy fate to &c.

11. 330 ἀλλὰ καὶ ὥρη εὕδειν there is a time for &c.

So with alσa, μόρος, θέμις, χρεώ, ἀνάγκη, alδώς, δέος, ἐλπωρή, &c. followed by an Infinitive to express what the fate, need, shame, &c. brings about, or in what it consists.

These examples throw light on two much-debated passages:

ΙΙ. 2. 291 ή μην καὶ πόνος ἐστὶν ἀνιηθέντα νέεσθαι

verily there is toil for a man to return in vexation, i. e. 'I admit that the toil is enough to provoke any one to return.' Thus understood, the expression is a slightly bold use of the form of sentence that we have in ωρη ἐστὶν είδειν, μοῖρα ἐστὶν ἀλύξαι, θυμός ἐστιν ἀναίτιον αἰτιάασθαι, &c. The other interpretation, 'it is toil to return vexed,' though apparently easier, is not really more Homeric; and it certainly does not fit the context so well.

Π. 7. 238 οἶδ' ἐπὶ δεξιά, οἶδ' ἐπ' ἀριστερὰ νωμῆσαι βῶν ἀζαλέην, τό μοι ἔστι ταλαύρινον πολεμίζειν

I know how to turn my shield of seasoned ox-hide to the right and to the left, wherefore I have that wherewith to war in stout-shielded fashion (=I have a good claim to the title of $\tau a \lambda a \acute{\nu} \rho \nu \sigma \gamma \delta \gamma$, elsewhere an epithet of Ares). Here $\acute{\epsilon} \sigma \tau i$ is used as in $\acute{\epsilon} \sigma \iota \nu \epsilon \acute{\nu} \delta \epsilon \nu \gamma$, &c.

In Il. 13. 99-101 $\hat{\eta}$ μέγα θαθμα τόδ' δφθαλμοῖσιν δρῶμαι, Τρῶας ἐφ' $\hat{\eta}$ μετέρας ἰέναι νέας the Inf. follows θαθμα, or rather the whole phrase θαθμα τόδε δρῶμαι (=θαθμά ἐστι): δράω does not take an Inf. (§ 245).

234.] Infinitive as apparent Subject, &c. In the Impersonal uses the Infinitive appears to stand as Subject to the Verb; ἀργαλέον ἐστὶ θέσθαι = making is hard; οὐ μὲν γάρ τι κακὸν βασιλευέμεν to be a king is not a bad thing. This construction however is not consistent with the original character of the Infinitive. It is plain that ἔστιν εὕδειν can never have meant 'sleeping is,' but 'there is (room &c.) for sleeping': and so ἀργαλέον ἐστὶ θέσθαι is originally, and in Homer, it (the case, state of things, &c.) is hard in view of making. It is only in later Greek that we have the form ἀργαλέον ἐστὶ τὸ θέσθαι, in which θέσθαι is an indeclinable Neuter Noun.

The process by which the Infinitive, from being a mere word

of limitation, comes to be in sense the Subject or Object of the principal Clause, can be traced in sentences of various forms:—

(1) With a personal Subject; e.g. in—

II. 5. 750 τῆς ἐπιτέτραπται μέγας οὐρανὸς Οὕλυμπός τε ἡμὲν ἀνακλῦναι πυκινὸν νέφος ἠδ' ἐπιθεῖναι

the meaning 'to them is entrusted the opening and shutting of the thick cloud of heaven,' is expressed by saying 'to them heaven is entrusted for opening and shutting the cloud.' So—

ΙΙ. Ι. 107 αλεί τοι τὰ κάκ' ἐστὶ φίλα φρεσὶ μαντεύεσθαι.

4. 345 ἔνθα φίλ' ὀπταλέα κρέα ἔδμεναι.

Meaning you love to prophesy wils (to eat roast flesh, &c.).

(2) The Impersonal form $(\partial \rho \gamma a \lambda \acute{e}o \nu \acute{e}o \tau \acute{\iota})$ only differs from the other in the vagueness of the Subject, which makes it easier for the Infinitive to become the Subject in sense, while it is still grammatically a word limiting the vague unexpressed Subject.

The use of a Neuter Pronoun as Subject (e.g. τό γε καλὸν ἀκουέμεν the thing is good, to listen) may be regarded as a link between the personal and impersonal forms of expression: cp. §

161 (note), also § 258.

(3) Similarly an Infinitive following the Object of a Verb may

become the logical Object; as-

- II. 4. 247 η μένετε Τρωας σχεδὸν ἐλθέμεν; do ye wait for the Trojans for their coming on? i.e. for the coming on of the Trojans.
 - 14. 342 " $H\rho\eta$, $\mu\dot{\eta}\tau\epsilon$ $\theta\epsilon\hat{\omega}\nu$ $\tau\dot{o}$ $\gamma\epsilon$ $\delta\epsilon\dot{\delta}\deltai\theta\iota$ $\mu\dot{\eta}\tau\epsilon$ $\tau\iota\nu$ " $\dot{a}\nu\dot{\delta}\rho\hat{\omega}\nu$ $\dot{o}\psi\epsilon\sigma\theta a\iota$ do not fear any one of gods or of men for their being about to see, i. e. that any one will see: cp. Od. 22. 39, 40.

A further development of this use leads, as we shall see, to the

'Accusative with the Infinitive.'

(4) Again, the Infinitive sometimes takes the place of a vague unexpressed Object. Thus οἶδε νοῆσαι means knows (enough) to perceive: the full construction being such as we have in Il. 2. 213 ὅς ρ΄ ἔπεα φρεσὶν ἦσιν ἄκοσμά τε πολλά τε ἤδει . . ἐριζέμεναι who knew (had a store of) words wherewith to wrangle. So too δίδωμι with an Infinitive is originally construed as Od. 8. 44 τῷ γάρ ῥα θεὸς πέρι δῶκεν ἀοιδὴν τέρπειν: Il. 11. 20 τόν ποτέ οἱ Κινύρης δῶκε ξεινήϊον εἶναι; thence it comes to mean 'to give (such a state of things) that some event shall happen,' i.e. to grant the happening; as δὸς τίσασθαι grant that I may punish. In such a passage as Il. 3. 322 τὸν δὸς ἀποφθίμενον δῦναι κτλ. we may take τόν with δός or as an Acc. with the Inf. δῦναι.

A Neuter Pronoun, too, may serve as a vague Object, explained by an Infinitive; e.g. Il. 5. 665–6 τὸ μὲν οὖ τις ἐπεφράσατ'.. ἐξερύσαι: cp. Od. 21. 278 καὶ τοῦτο ἔπος κατὰ μοῦραν ἔειπε, νῦν μὲν παῦσαι τόξον κτλ.

(5) The Infinitive may also be equivalent in sense to the Genitive depending on a Noun; as—

11. 7. 409 οὐ γάρ τις φειδὼ νεκύων κατατεθνηώτων γίγνετ' ἐπεί κε θάνωσι πυρὸς μειλισσέμεν ὧκα i.e. there is no grudging about the appeasing of the dead. Hence is developed an idiomatic use of the Genitive parallel to that of the Accusativus de quo: see Shilleto on Thuc. 1. 61, 1.

235.] With Relatives. It is remarkable that the use of the Infinitive with $ω_5$, $ω_5 τε$, οίος, δσος, &c. is rare in Homer. The familiar construction of $ω_5 τε$ only occurs twice: II. 9. 42 επεσσυται $ω_5 τε$ νεεσθαι is eager to return, and Od. 17. 20 οὐ γὰρ επι σταθμοῖσι μενειν έτι τηλίκος ειμί, $ω_5 τ' επιτειλαμένω ... πιθέσθαι. The other instances are: Od. 21. 173 τοῖον—οἴον τε εμεναι such a one as to be; Od. 5. 484 ὅσσον τε .. ἔρνσθαι so far as to shelter; Od. 19. 160 ἀνὴρ οἴος τε μάλιστα οἴκον κήδεσθαι, 21. I17 οἴος τ' .. ἀνελέσθαι.$

236.] With πρίν and πάρος. This use is common in Homer: as II. 1. 98 πρίν γ' ἀπὸ πατρὶ φίλφ δόμεναι before they give back to her father; 11. 573 πάρος χρόα λευκὸν ἐπαυρεῖν before touching the white flesh.

The tense is nearly always the Aorist: the exceptions are, Od. 19. 475 πρὶν ἀμφαφάασθαι (a verb which has no Aorist), and Il. 18. 245 πάρος δόρποιο μέδεσθαι. Perhaps however μέδεσθαι is an Aorist: see § 31, 2.

πρίν with the Indicative first appears in H. Apoll. 357 πρίν γέ οἱ ἰὸν ἐφῆκεν. For the use with the Subj. see § 297.

The origin of this singularly isolated construction must evidently be sought in the period when the Infinitive was an abstract Noun; so that (e.g.) πρὶν δόμεναι meant before the giving. The difficulty is that a word like πρίν would be construed with the Ablative, not the Dative: as in fact we find Ablatives used as Infinitives in Sanscrit with purâ 'before' (Whitney, § 983). It may be conjectured that the Dative Infinitive in Greek was substituted in this construction for an Ablative. Such a substitution might take place when the character of the Infinitive as a Case-form had become obscured.

It is held by Sturm (Geschichtliche Entwickelung der Constructionen mit $\pi\rhoi\nu$, p. 15) that the Inf. has the force of limitation: e.g. $\pi\rhoi\nu$ où $\tau\acute{a}\sigma a\iota$ before in respect to wounding, before the time of wounding. But on this view the sense would rather be 'too soon to wound.' It is better to say, with Mr. Goodwin (§ 623), that $\pi\rho\acute{i}\nu$ is 'quasi-prepositional': and if so the Infinitive had ceased to be felt as a Dative when the use arose.

The restriction to the Aor. Inf. may date from the time when Infinitives—or Case-forms on the way to become Infinitives (§ 242)—were chiefly formed from the same Stem as the Aorist. Cp. the Aor. Participles which are without Tense-meaning (§ 243, 1).

237.] Accusative with the Infinitive. Along with the use of the Infinitive as an abstract Noun, we find in Homer the

later use by which it is in sense the Verb of a dependent Clause, the Subject of the Clause being in the Accusative.

In the examples of the Acc. with the Infinitive we may dis-

tinguish the following varieties or stages of the idiom:-

1. The Acc. has a grammatical construction with the governing Verb: e.g.—

ΙΙ. 1. 313 λαούς δ' 'Ατρείδης ἀπολυμαίνεσθαι ἄνωγε Αдатенноп ordered the people to purify themselves (= that they should purify).

5. 601 οξον δή θαυμάζομεν "Εκτορα δίον αίχμητήν τ' έμεναι κτλ. (for being a warrior, how he was a warrior).

This might be called the *natural* Acc. with the Infinitive.

2. The Acc. has not a sufficient construction with the Verb

alone, but may be used if it is accompanied by an Infinitive of the thing or fact: e.g. βούλομ' έγω λαον σων έμμεναι I wish the people to be safe (the

safety of the people).

ούνεκ' ἄκουσε τείρεσθαι Τρώας because he heard of the Trojans being hard pressed.

τῷ οὐ νεμεσίζομ' 'Αχαιους ἀσχαλάαν wherefore I do not think it a shame in the Greeks to chafe.

In this construction the logical Object is the fact or action given by the Infinitive, to which the Acc. furnishes a Subject or agent, and thus turns it from an abstract Noun to a predication (so that e.g. $\tau \epsilon i \rho \epsilon \sigma \theta a \iota T \rho \hat{\omega} a s$ is virtually = $\tilde{\sigma} \tau \iota \epsilon \tau \epsilon i \rho \rho \sigma \tau \sigma T \rho \hat{\omega} \epsilon s$). It is found with Verbs that usually take only a 'Cognate Acc.' (Neuter Pronoun, &c.), as φημί, εἶπον, ἀκούω, πυνθάνομαι. οἶδα, ὀΐω, φρονέω, εθέλω, βούλομαι, ελπομαι, νεμεσίζομαι, φθονέω, &c. Thus it is in principle a particular form of the Accusativus de quo (see § 140, 3, 6, also § 234, 3).

- 3. The Acc. has no construction except as the Subject of the Infinitive. This Acc. is chiefly found in Homer—
 - (a) after Impersonal Verbs (§ 162, 4): as—

ΙΙ. 18. 329 ἄμφω γὰρ πέπρωται δμοίην γαΐαν ἐρεῦσαι it is fated for both to &c.

- 19. 182 οὐ μὲν γάρ τι νεμεσσητὸν βασιλῆα ἄνδρ' ἀπαρέσσασθαι it is no shame that a king should &c.
- (b) after πρίν and πάρος; as πρίν ἐλθεῖν νίας 'Αχαιῶν before the Greeks came, πάρος τάδε έργα γενέσθαι before these things came to pass.

The other examples are from the Odyssey, viz.—

Od. 4. 210 ώς νθν Νέστορι δώκε διαμπερές ήματα πάντα αὐτὸν μὲν λιπαρῶς γηρασκέμεν (10. 533., 14. 193).

This may be called the purely idiomatic Acc. with the Infinitive. It has evidently been formed on the analogy of the older varieties.

238. Tenses of the Infinitive. So long as the Infinitive is merely a Verbal Noun, it does not express anything about the time of the action as past, present, or future. But when it is virtually a predication, the idea of time comes in; e.g.—

ΙΙ. 5. 659 ἀλλ' οδόν τινά φασι βίην Ἡρακληείην ξμμεναι (' what they say he was'): cp. Od. 8. 181. 14. 454 οὐ μὰν αὖτ' ὀΐω . . άλιον πηδησαι ἄκοντα, άλλά τις 'Αργείων κόμισε χροί.

The Future Infinitive is used with φημί, δίω, ἔλπομαι, ὑπισχνέομαι, ὅμνυμι and other Verbs implying expectation or promise; also

with μέλλω when it means to be about to.

When the Inf. expresses, not simple expectation as to the future, but fitness, obligation, necessity, or the like (§ 231, 2), the Aorist or Present is used. Thus II. 13. 262 οὐ γὰρ δίω πολεμίζειν means, not 'I do not think I shall fight,' but I do not think fit, I have no mind, to fight; so Il. 3. 98 φρονέω διακρινθήμεναι my mind is (=δοκεί μοι) that they should be parted: 9. 608 φρονέω τετιμήσθαι I claim to be honoured: 22. 235 νοέω φρεσί τιμήσασθαι I see (understand) that I should honour thee (=I purpose to honour thee): 24. 560 νοέω δὲ καὶ αὐτὸς Εκτορά τοι λῦσαι: and so in a prophecy, Od. 2. 171 φημὶ τελευτηθήναι απαντα I say that all must that all is be accomplished: and—

ΙΙ. 13. 665 ος ρ' εν είδως κηρ' όλοην επί νηδς έβαινε, πολλάκι γάρ οἱ ἔειπε γέρων ἀγαθὸς Πολύϊδος νούσω ύπ' άργαλέη φθίσθαι οίς έν μεγάροισιν that he must perish (according to his fate).

So with μοίρα and θέσφατόν ἐστι: also with μέλλω when it means to be likely: II. 11. 364 & μέλλεις εύχεσθαι to whom it is like that you pray; Od. 9. 475 οὐκ ἄρ' ἔμελλες ἀνάλκιδος ἀνδρὸς ἐταίρους έδμεναι he proves to be no helpless man whose comrades you ate; II. 21. 83 μέλλω που ἀπέχθεσθαι it must be that I am become hateful; Il. 18. 362 μέλλει βροτός τελέσσαι a man is likely to accomplish

(i.e. it may be expected of him). 1946

The instances in which a Pres. or Aor. Inf. appears to be used E211 of future time may be variously accounted for. The Inf. iévai has a future sense in Il. 17. 709 οὐδέ μιν οἴω νῦν ἰέναι κτλ.; so Il. 20. 365., Od. 15. 214. Again in Od. 9. 496 καὶ δὴ φάμεν αὐτόθ' ὀλέσθαι the Aor. is used for the sake of vividness—we thought 'we are lost': ep. Il. 9. 413 ώλετο μέν μοι νόστος (§ 78). Similarly Il. 3. 112 ἐλπόμενοι παύσασθαι may be hoping that they had ceased (by the fact of the proposed duel); cp. Il. 7. 199., 16.

J. Wil. h. U

281. So Od. 13. 173 ος έφασκε Ποσειδάων' ἀγάσασθαι who said that Poseidon was moved to indignation (= ὅτι ἢγάσσατο).

In several places the reading is uncertain, the Fut. being of the same metrical value as the Aor. or the Pres. (- $\epsilon\sigma\theta$ a and - $\alpha\sigma\theta$ a, - $\iota\xi\epsilon\nu$ and - $\iota\xi\epsilon\nu$, &c.). In such cases the evidence of the ancient grammarians and the MSS, is usually indecisive, and we are justified in writing the Fut. throughout, according to the general rule. Thus—

- II. 3. 28 φάτο γὰρ τίσεσθαι (so Ven. A.: most MSS. τίσασθαι). Hence we may read φάτο γὰρ τίσεσθαι in Od. 20, 121.
 - 22. 118 (ἄλλ' ἀποδάσσεσθαι (so Aristarchus: most MSS. -ασθαι).
 - 22. Ι 20 μή τι κατακρύψειν, άλλ' ἄνδιχα πάντα δάσεσθαι (MSS. -ασθαι).
 - 23. 773 ξμελλον ἐπαίξεσθαι (the best MSS. have -ασθαι).
 - 20. 85 (ὑπίσχεο) ἐναντίβιον πτολεμίξειν (so A. D. : other MSS. πολεμίζειν).
 - 16. 830 ή που έφησθα πόλιν κεραϊξέμεν (MSS. -ιζέμεν).
- Od. 2. 373 όμοσον μή . . τάδε μυθήσεσθαι (so Ar.: MSS. -ασθαι).

Two exceptions remain: Od. 2. 280 ἐλπωρή τοι ἔπειτα τελευτήσαι τάδε ἔργα (τελευτήσειν in one of Ludwich's MSS.): Il, 12. 407 ἐπεί οἱ θυμὸς ἐέλπετο κῦδος ἀρέσθαι (some good authorities give ἐέλδετο).*

The only example of an Inf. representing an Optative is—

Il. 9. 684 καὶ δ' αν τοῖς ἄλλοισιν ἔφη παραμυθήσασθαι which is the report of the speech (v. 417) καὶ δ' αν . . παραμυθησαίμην. But cp. Od. 3. 125 οὐδέ κε φαίης . . μυθήσασθαι you would not think that . . would speak.

239.] Dative with the Infinitive. An idiomatic use of the Dative arises when the Noun which stands as logical subject to an Inf. of *purpose* is put in the same Case with it, *i. e.* in the Dative. Thus the construction in—

αλσχρὸν γὰρ τόδε γ' ἐστὶ καὶ ἐσσομένοισι πυθέσθαι idiomatic (as compared with σφῶϊν δὸς ἄγειν, &c.), beca

is idiomatic (as compared with $\sigma\phi\tilde{\omega}i\nu$ δὸς ἄγειν, &c.), because the meaning is, not 'is shameful for future men,' but 'is shameful for (with a view to) the hearing of future men.' The principle is evidently the same as has been pointed out in the case of the Nominative and the Accusative (§ 234). Because the action of the Infinitive stands in a Dative relation to the governing Verb, the agent or Subject of the action is put in the Dative.

This construction is found in the 'double Dative' of Latin (e. g. ἐσσομένοισι πυθέσθαι would be in Latin posteris auditui), and of Sanscrit (Delbrück, A. S. p. 149). It is usually classified as 'Attraction'—the Dat. of the person being regarded as following the Dat. of the thing or action. In Greek it evidently goes back to the time when the Inf. was still felt as a Dative.

240.] Predicative Nouns—'Attraction.' Corresponding to the Nominative in the Predicate (§ 162), an Infinitival Clause

^{*} See Madvig, Bemerkungen über einige Punkte der griech. Wortfügungslehre, p. 34: Cobet, Misc. Crit. p. 328.

may have a Predicative Accusative, in agreement with its (expressed or understood) Subject: as Il. 4. 341 σφωϊν μέν τ' ἐπέοικε μετά πρώτοισιν εόντας εστάμεν it becomes you that you should stand among the foremost; Il. 8. 192 της νυν κλέος ουρανον ίκει πάσαν χρυσείην έμεναι whose fame reaches heaven that it is all gold.

Or the words which enter in this way into an Infinitival Clause may follow the construction of the principal Clause, and thus be

put in the Nom. or Dat.; as-

ΙΙ. 1. 76 καί μοι ὅμοσσον, ἢ μέν μοι πρόφρων . . ἀρήξειν

12. 337 οὖ πώς οἱ ἔην βώσαντι γεγωνείν.

Here πρόφρων is said to be 'attracted' into the Nom. (agreeing with the subject of ὄμοσσον), and βώσαντι into the Dat. (agreeing

with oi).

The difference of meaning given by the two constructions is generally to be observed in Homer, at least in the case of the Dative. A Noun or Participle is put in the Acc. if it is closely connected with the Inf., so as to become an essential part of the predication: whereas a Dat. construed with the principal Clause expresses something prior to the Inf. (either a condition or a reason). Thus-

ΙΙ. Ι. 541 αλεί τοι φίλον έστλυ έμεθ άπο νόσφιν έόντα κρυπτάδια φρονέοντα δικαζέμεν,

means 'you like to decide apart from me,' i.e. 'you like, when you decide, to be apart from me': whereas with ξόντι the sense would be 'when you are apart from me you like to decide.' So Il. 15. 57 είπησι Ποσειδάωνι ἄνακτι παυσάμενον πολέμοιο ίκέσθαι 'shall bid Poseidon to cease from war and come'-not 'when he has ceased, to come,'

But with a Dat.—

ΙΙ. 6. 410 έμοι δέ κε κέρδιον είη σεῦ ἀφαμαρτούση χθόνα δύμεται it were better for me, if (or when) I lose thee, to &c.

ΙΙ. 8. 218 εἰ μὴ ἐπὶ φρεσὶ θῆκ' 'Αγαμέμνονι πότνια "Ηρη αὐτῷ ποιπνύσαντι θοῶς ὀτρῦναι 'Αγαιούς

'who had of himself made hot haste,' αὐτῷ as in the phrase μεμαῶτε καὶ αὐτώ (13. 46., 15. 604).*

ΙΙ. 15. 496 οὖ οἱ ἀεικὲς ἀμυνομένω περὶ πάτρης τεθνάμεν to die when fighting for his country.

So Il. 5. 253., 13. 96., 20. 356., 21. 185., 22. 72.

There are some exceptions, however, if our texts are to be trusted; i.e. there are places where a word which belongs to the predication is put in the Dat. owing to a preceding Dat.: e.g.—

ΙΙ. 15. 117 εἴ πέρ μοι καὶ μοίρα Διὸς πληγέντι κεραυνώ κεισθαι όμοῦ νεκύεσσι (cp. Od. 19. 139, 284).

^{*} This is pointed out by Dingeldein, De participio Homerico, p. 8.

This seems to be always the case when there are two successive Participles, the first of which is properly in the Dat.: as—

Il. 12. 410 ἀργαλέον δέ μοί ἐστι καὶ ἰφθίμφ περ ἐόντι μούνφ ῥηξαμένφ θέσθαι παρὰ νηυσὶ κέλευθον.

Here the meaning is, 'to break through and make' &c.,—and therefore ρηξάμετον would be correct; but after ἐόντι the change from the Dat. to the Acc. would be very harsh. So II. 13. 317–319, Od. 10. 494–5. In other places the text may be at fault. As attraction became the rule in later Greek, and the two Case-forms are generally of the same metrical form, it would be easy for a Dat. to take the place of an Acc.: e.g. in II. 9. 398–400 ἔνθα δέ μοι .. ἐπέσσντο θυμὸς ἀγήνωρ γήμαντι .. κτήμασι τέρπεσθαι, where for γήμαντι, the reading of Aristarchus, others gave γήμαντα, which conforms to the principle laid down.

When the Subject of the Infinitive is also Subject of the governing Verb the Nominative is generally used: as II. 1. 76 (quoted above), 1. 415., 4. 101-3., 8. 498, &c. An exception is—

Od. 9. 224 ἔνθ' ἐμὲ μὲν πρώτισθ' ἔταροι λίσσοντ' ἐπέεσσι, τυρῶν αἰνυμένους ἰέναι πάλιν

that they might take of the cheeses and so go back.

241.] Infinitive as an Imperative. This use is often found in Homer, but chiefly after an Imperative, so that the Infinitive serves to carry on the command already given:—

Il. 1. 322 ἔρχεσθον κλισίην 'Αγαμέμνονος 'Ατρείδαο, χειρὸς ἐλόντ' ἀγέμεν Βρισηΐδα.

2. 8-10 βάσκ' ἴθι . . ἀγορευέμεν ὡς ἐπιτέλλω.

3. 459 ἔκδοτε, καὶ τιμὴν ἀποτινέμεν.

Od. 4. 415 καὶ τότ' ἔπειθ' ὑμῖν μελέτω κάρτος τε βίη τε, ανθι δ' ἔχειν κτλ. (cp. v. 419, 422 ff.).

Or after a Future, to express what the person addressed is to do as his part in a set of acts:—

11. 22. 259 νεκρὸν 'Αχαιοῖσιν δώσω πάλιν, ὡς δὲ σὰ ῥέζειν.
 Od. 4. 408 εὐνάσω ἐξείης· σὰ δ' ἐὰ κρίνασθαι ἐταίρους.

So after a clause which leads up to a command; II. 11. 788 ἀλλ' εν οι φάσθαι (Achilles is the mightier) but do you advise him well: 17. 691., 20. 335. Cp. also, II. 10. 65 ανθι μένειν (answer to the question am I to remain here?): 5. 124 θαρσέων νθν . . μάχεσθαι (in answer to a prayer) without fear now you may fight.

The use for the Third Person is rare: in a command, II. 6. 86-92 $\epsilon l\pi \hat{\epsilon}$ δ' $\epsilon \pi \epsilon \iota \tau a$ $\mu \eta \tau \epsilon \rho \iota$ $\sigma \hat{\eta}$ $\kappa a l$ $\epsilon \mu \hat{\eta}'$ $\dot{\eta}$ $\delta \hat{\epsilon}$. $\theta \epsilon \hat{\iota} v a \iota$ $\kappa \tau \lambda$.; 7. 79 $\epsilon \hat{\omega} \mu a$ $\delta \hat{\epsilon}$ $\delta \hat{\iota} \kappa a \delta'$ $\epsilon \hat{\mu} \partial v$ $\delta \hat{\iota} \mu \epsilon v a \iota$ $\pi \dot{a} \lambda \iota v$ (let him take my arms) but give back my body; so 17. 155., 23. 247, Od. 11. 443: in a prayer, with a Subject in the Accusative,—

II. 2. 412 Ζεῦ κύδιστε, μέγιστε, κελαινεφές, αἰθέρι ναίων, μὴ πρὶν ἐπ' ἠέλιον δῦναι κτλ. (cp. 3. 285., 7. 179).

Od. 17. 354 Ζεῦ ἄνα, Τηλέμαχόν μοι ἐν ἀνδράσιν ὅλβιον εἶναι.

An Infinitive of wish is used with the Subject in the Nom., once of the Second Person, and once of the First Person:—

Od. 7. 311 αὶ γὰρ Ζεῦ τε πάτερ καὶ ᾿Αθηναίη καὶ Ἦπολλον τοῦος ἐὼν οἶός ἐσσι, τά τε φρονέων ἃ τ᾽ ἐγώ περ, παῖδά τ᾽ ἐμὴν ἐχέμεν καὶ ἐμὸς γαμβρὸς καλέεσθαι.

24. 376 αΐ γὰρ . . οἶος Νήρικον εἶλον . . τοῖος ἐὼν . . ἐφεστάμεναι καὶ ἀμύνειν.

The force of the Infinitive in all these uses seems to be that of an indirect Imperative. The command is given as something following on an expressed or implied state of things. Thus we may connect the idiom with the use of the Infinitive to imply fitness, obligation, &c. (§ 231); compare $\epsilon l \sigma l$ $\kappa \alpha l$ $\delta l \delta \epsilon \tau \dot{\alpha} \dot{\delta}$ $\epsilon l \pi \dot{\epsilon} \mu \epsilon \nu \nu$ these are here to say this with $\kappa \alpha l$ $\delta \dot{\epsilon} \sigma \dot{\nu}$ $\epsilon l \pi \dot{\epsilon} \mu \epsilon \nu \alpha u$ it is your part to say. There is a similar use of the Infinitive in Sanscrit, with ellipse of the verb to be (Delbrück, A. S. p. 15: Whitney, § 982, c, d).

It should be noticed, however, that other languages have developed a use of the Infinitive in commands, to which this explanation does not apply: as Germ. schritt fahren! In these cases we may recognise a general tendency towards the impersonal form. It is very probable that the ordinary 2 Sing. Imper. $\lambda \acute{\epsilon} \gamma \epsilon$ represents an original use of the Tense-stem without any Personending (Paul, Principien, p. 108).

242. Origin and history of the Infinitive. That the Greek Infinitive was originally the Dative of an abstract Noun is proved by comparison with Sanscrit. 'In the Veda and Brāhmana a number of verbal nouns, nomina actionis, in various of their cases, are used in constructions which assimilate them to the infinitive of other languages—although, were it not for these other later and more developed and pronounced infinitives, the constructions in question might pass as ordinary case-constructions of a somewhat peculiar kind' (Whitney, § 969). In the Veda these Infinitives, or Case-forms on the way to become Infinitives (werdende Infinitive, Delbr.), are mostly Datives, expressing end or purpose, and several of them are identical in formation with Greek Infinitives; as davane δοῦναι (δοΓεναι), vidmane Fίδμεναι, -dhyai -σθαι,* -ase -σαι. In Greek, however, the Dative Ending -at is not otherwise preserved, and the 'true Dative' construction is not applied to things (§ 143): conse-

^{*} So Delbrück and others; but see Max Müller's Chips, Vol. IV. p. 58.

quently these forms stand quite apart from the Case-system, and have ceased to be felt as real Case-forms. Thus the Greek Infinitive is a survival, both in form and in construction, from a period when the Dative of purpose or consequence was one of the ordinary idioms of the language. In Latin, again, this Dative is common enough, and often answers in meaning to the Greek Infinitive; compare (e.g.) ωρη ἐστὶν εῦδειν with munitioni tempus relinguere (Roby, § 1156), αμύνειν είσι και άλλοι with auxilio esse. &c. The retention of the construction in Latin is connected, on the one hand with the fact that the Latin Dative is a 'true Dative,' on the other hand with the comparatively small use that is made in Latin of the Infinitive of purpose. Similarly in classical Sanscrit the Dative of purpose &c. is extremely common, but the Dative Infinitives have gone entirely out of use (Whitney, § 287 and § 986) - a result of the 'struggle for existence' which precisely reverses the state of things in Greek.

The growth of the Dative of purpose into a distinct subordinate Clause was favoured by the habit of placing it at the end of the sentence, after the Verb, so that it had the appearance of an addition or afterthought. This was the rule in Vedic Sanscrit (see Delbrück, A. S. p. 25). It may be traced in Greek, not merely in collocations like ἐριδι ξυνέηκε μάχεσθαι, &c., but eyen in such forms as—

 5. 639 ἀλλ' οἰόν τινά φασι βίην Ἡρακληείην ἔμμεναι (what they call him as to being),

where the Inf. appears to be added epexegetically after a slight pause: cp. Il. 2. 249., 17. 27., 21. 463, 570, Od. 1. 233, 377.,

6. 43., 17. 416.

The development of the Infinitival Clause which we find in Greek and Latin may be traced chiefly under two heads; (1) the construction of the 'Accusative with the Infinitive,' by which the predication of the Infinitive was provided with an expressed Subject (§ 237): and (2) the system of Tenses of the Infinitive, which was gradually completed by the creation of new forms,—esp. the Future Infinitive, peculiar to Greek,—and by the use of the Present Infinitive as equivalent in meaning to the Present and Imperfect Indicative. In the post-Homeric language the Infinitive came to be used as an equivalent, not only for the Indicative, but also for other Moods.

The use of the Infinitive as an indeclinable Noun is subsequent to Homer; it became possible with the later use of the Article. Some of the conditions, however, out of which it grew may be traced in Homeric language. The first of these was the complete separation of the Infinitive from the Case-system; so that it ceased to be felt as a Case-form, and could be used in parallel construction to the Nom. or Acc.: as-

ΙΙ. 2. 453 τοίσι δ' ἄφαρ πόλεμος γλυκίων γένετ' ή ενέεσθαι.

7. 203 δὸς νίκην Αἴαντι καὶ ἀγλαὸν εὖχος ἀρέσθαι.

Again, an Infinitive following a Neuter Pronoun, and expressing the logical Subject or Object, easily came to be regarded as in 'Apposition' to the Pronoun: as-

Od. 1. 370 έπεὶ τό γε καλὸν ἀκουέμεν ἐστὶν ἀοιδοῦ.

ΙΙ. 358 καί κε τὸ βουλοίμην, καί κεν πολύ κέρδιον είη, πλειοτέρη σὺν χειρὶ φίλην ἐς πατρίδ' ἰκέσθαι.

The only instance which really comes near the later 'Articular Infinitive' is Od. 20. 52 ἀνίη καὶ τὸ φυλάσσειν (§ 259). The use of the Infinitive with an Article in the Gen. or Dat. is wholly post-Homeric.

The Participle.

243. Uses of the Participle. Following out the view of the Participle as a Verbal Adjective, we may distinguish the following uses :-

1. The Participle is often used as an ordinary Adjective qualifying a Noun; as θεοί αίεν εόντες, βροτοί σίτον εδοντες, πίθοι ποτί τοίχου άρηρότες, σάκος τετυγμένου, and the like. In one or two cases it is Substantival: as τὸ γὰρ γέρας ἐστὶ θανόντων, ψυχαὶ εἴδωλα καμόντων, Ὁλύμπια δώματ' ἔχοντες.

A few Participles have lost their Verbal character altogether: esp. οὐλόμενος miserable, ὀνήμενος happy, ἴκμενος secundus, ἄσμενος glad, ξκών willing, ξθων (better ξθών, since it is an Aor. in form, § 31, 1) according to wont, περιπλόμενος (in the phrase περιπλομένων ἐγιαυτῶν the revolving years); also the Substantival μέδοντες rulers, τένοντες muscles, αμείβοντες rafters, αίθουσα a portico, δράκων a serpent, γέρων, μοῦσα. The word κρείων ruler retains a trace of the Verb in εὐρὺ κρείων widely ruling. Cp. also the compounds πολύ-τλας, ά-κάμας, ά-δάμας, λυκά-βας.

2. Much more frequently, the Participle qualifies or forms part of the predication (§ 162): e.g. in such combinations as—

> διαστήτην ερίσαντε parted having quarrelled ἐυφρονέων ἀγορήσατο spoke with good thought

the Participle has the same construction as the Adjective in παλίνορσος ἀπέστη, or πρόφρων τέτληκας (§ 162, 2). Thus it serves to express a predication which the speaker wishes to subordinate in some way to that of the governing Verb.

The Participle may express different relations: attendant cir-

- cumstance or manner (as in the examples quoted); cause, as II. 11. 313 τi $\pi a\theta \acute{o}v\tau \epsilon \lambda \epsilon \lambda \acute{a}\sigma \mu \epsilon \theta a \theta \acute{o}\nu \rho \iota \grave{o}os \mathring{a}\lambda \kappa \mathring{\eta}s$; opposition, as often with kai and $\pi \epsilon \rho$, &c. (Goodwin, §§ 832-846).
- 3. Finally, a Participle construed in 'Apposition' to a Noun in an oblique Case may imply a predication (§ 168); as καπνὸν ἀποθρώσκοντα νοῆσαι to descry the smoke rising (i. e. when it rises, or that it rises, &c.). Note that—
- (a) A Participle of this kind often has the character of a distinct Clause, coming at the end of a sentence, and after a metrical pause: as—
 - Il. 4. 420 δεινὸν δ' ἔβραχε χαλκὸς ἐπὶ στήθεσσιν ἄνακτος δρυυμένου (as he roused himself).
 - Od. 23. 205 ως φάτο, της δ' αὐτοῦ λύτο γούνατα καὶ φίλον ήτορ σήματ' ἀναγνούσης (when she recognised the token).
- (b) Not unfrequently the word with which the Participle should be construed is understood: especially when it is a Partitive or quasi-Partitive Gen. (§§ 147, 151):—
 - II. 2. 153 ἀὐτὴ δ' οὐρανὸν ἴκεν οἴκαδε ἱεμένων a cry rose to heaven (of men) eager to return home: so II. 12. 339., 13. 291, 498., 15. 689.
 - 5. 162 πόρτιος ἢὲ βοὸς ξύλοχον κάτα βοσκομενάων a heifer or cow (of those) that are feeding in a thicket.
 - 5. 665 τὸ μὲν οὕ τις ἐπεφράσατ' οὐδ' ἐνόησε μηροῦ ἐξερύσαι δόρυ μείλινον, ὄφρ' ἐπιβαίη, σπευδόντων no one ... (of them) in their haste: cp. 15. 450 τό οἱ οὕ τις ἐρύκακεν ἱεμένων περ.
 - 18. 246 δρθων δ' έσταότων ἀγορη γένετ' an assembly was held upstanding (of them standing up).
- Od. 17. 489 Τηλέμαχος δ' εν μεν κραδίη μέγα πένθος ἄεξε βλημένου (for his having been wounded).

So with the Dative; Il. 12. 374 ἐπειγομένοισι δ' ἴκοντο came as a relief (to them) when they were hard pressed; Od. 5. 152 κατείβετο δὲ γλυκὺς αἰὼν νόστον δδυρομένω.

- (c) The Subject thus understood may be indefinite:—
- Il. 2. 291 πόνος ἐστὶν ἀνιηθέντα νέεσθαι (see § 233).
 - 267 οὐδέ πη ἔστι κελαινεφέϊ Κρονίωνι αἵματι καὶ λύθρω πεπαλαγμένον εὐχετάασθαι for one who is bespattered . . to pray.
 - 13. 787 πὰρ δύναμιν δ' οὐκ ἔστι καὶ ἐσσύμενον πολεμίζειν.
- So Il. 2. 234., 14. 63, Od. 2. 311: cp. the phrase ὅσον τε γέγωνε βοήσας as fur as a man makes himself heard by shouting.
 - (d) The Participle is sometimes found in a different Case from

a preceding Pronoun with which it might have been construed. Thus we have—

Il. 14. 25 λάκε δέ σφι περὶ χροὶ χαλκὸς ἀτείρης νυσσομένων (construed with χροὶ instead of σφι).

16. 531 ὅττι οἱ ὧκ' ἤκουσε μέγας θεὸς εὐξαμένοιο (with ἤκουσε instead of οἱ).

Od. 9. 256 ως ἔφαθ', ἡμῖν δ' αὖτε κατεκλάσθη φίλον ἦτορ δεισάντων (so Il. 3. 301, Od. 6. 157., 9. 458).

Il. 20. 413 τὸν βάλε... νῶτα παραίσσοντος wounded him... in the back as he darted past.

Od. 4. 646 ή σε βίη ἀέκοντος ἀπηύρα.

II. 10. 187 ως των νήδυμος υπνος ἀπὸ βλεφάροιϊν ὀλώλει νύκτα φυλασσομένοισι κακήν: so II. 14. 141-3.

Od. 17. \$55 μεταλλησαί τί ε θυμός αμφὶ πόσει κέλεται καὶ κήδεά περ πεπαθυίη.

We need not consider these as instances of 'Anacoluthon' or change of the construction. The Participle, as we saw, does not need a preceding Pronoun: it may therefore have a construction independent of such a Pronoun. And it is characteristic of Homer not to employ concord as a means of connecting distant words when other constructions are admissible.

244.] Tenses of the Participle. The distinction between the Present and Aorist Participle has already been touched upon in §§ 76-77, and the meaning of the Perfect Participle in § 28.

It may be remarked here, as a point of difference between the two kinds of Verbal Noun, that the Aorist Participle almost always represents an action as past at the time given by the Verb $(e.g.\ \hat{\omega}s\ \epsilon ln\hat{\omega}v\ \kappa ar'\ \tilde{a}\rho'\ \tilde{\epsilon}\zeta\epsilon ro\ having\ thus$ spoken he sat down), whereas the Aor. Inf. generally conveys no notion of time. This however is not from the Participle itself conveying any notion of past time. Indeed it is worth notice that the Participles which are without Tense-meaning are chiefly Aorists in form (§ 243, 1).

The Future Participle is used predicatively with Verbs of motion: $\mathring{\eta}\lambda\theta\epsilon$ $\lambda\nu\sigma\acute{o}\mu\epsilon\nuos$ came to ransom, καλέουσ' τε went to call, $\mathring{\eta}\gamma'$ $\mathring{\epsilon}\pi\iotaκουρ\acute{\eta}\sigmaοντα$, $\mathring{\epsilon}\pi\acute{\epsilon}\delta\rho\alpha\mu\epsilon$ $\tau\epsilon\acute{\nu}\chi\epsilon\alpha$ συλ $\mathring{\eta}\sigma\omega\nu$, &c. The exceptions to this rule are—

- (1) ἐσσόμενος future, in Il. 1. 70 τά τ' ἐσσόμενα πρό τ' ἐόντα things future and past; 2. 119 καὶ ἐσσομένοισι πυθέσθαι.
- (2) ἐπιβησόμενος, in Il. 5. 46 (16. 343) νύξ' ἵππων ἐπιβησόμενον, 23. 379 αἰεὶ γὰρ δίφρου ἐπιβησομένοισιν ἐΐκτην. But see § 41.
- (3) Il. 18. 309 καί τε κτανέοντα κατέκτα, see § 63.
- (4) Od. 11. 608 alel βαλέοντι ἐοικώς like one about to cast.

245.] Implied Predication. Where the Participle is predicative, we often find the Noun or Pronoun taking the place in the construction of the whole Participial Clause: as II. 17. 1 οὐδ' ἐλαθ' ᾿Ατρέος νἱὸν Πάτροκλος Τρώεσσι δαμείς that Patroclus had fallen: Od. 5. 6 μέλε γάρ οἱ ἐὼν ἐν δώμασι νύμφης it troubled her that he was δρε.: II. 6. 191 γίγνωσκε θεοῦ γόνον ἡὺν ἐόντα knew him for the offspring of a god: Od. 10. 419 σοὶ μὲν νοστήσαντι ἐχάρημεν we were gladdened by thy return: II. 13. 417 ἄχος γένετ' εὐξαμένοιο there was vexation at his boasting: II. 5. 682., 14. 504., 17. 538, 564., 18. 337, &c.

We have here the idiom already observed in the use of the Infinitive (§ 237) by which the weight of the meaning is shifted from the grammatical Subject, Object, &c. to a limiting or

qualifying word. Note especially that-

- 1. The Aor. Participle may be used in this way to express a fact which coincides in time with the Verb of the sentence: as II. 6. 284 εἰ κεῖνόν γε ἴδοιμι κατελθόντ' Ἄιδος εἴσω. So especially when the time of the fact is the important point, as ἐς ἠέλιον καταδύντα till sun-set: II. 13. 38 μένοιεν νοστήσαντα ἄνακτα should await the master's return: 13. 545 Θόωνα μεταστρεφθέντα δοκεύσας.
- 2. With Verbs of saying, hearing, knowing, &c., also of rejoicing and grieving, the Acc. with a Participle is used like the Acc. with the Inf. (both being evidently applications of the Accusativus de quo, § 140, 3, b): e.g.—
 - Il. 7. 129 τοὺς νῦν εἰ πτώσσοντας ὑφ' Ἐκτορι πάντας ἀκούσαι if he were to hear of their shrinking.
 - Od. 4. 732 εἰ γὰρ ἐγὰ πυθόμην ταύτην δδὰν δρμαίνοντα.
 23. 2 δεσποίνη ἐρέουσα φίλον πόσιν ἐνδὰν ἐόντα,
 - ΙΙ. Ι. 124 οὐδέ τί που ἴδμεν ξυνήϊα κείμενα πολλά.
 - Od. 7. 211 οὖς τινας ὑμεῖς ἴστε μάλιστ' ὀχέοντας ὀϊζύν.
 - Il. 8. 378 η νωϊ . . γηθήσει προφανείσα will rejoice at our appearing.
 - 13. 353 ἤχθετο γάρ ρ̄α Τρωσὶν δαμναμένους he was vexed at their being subdued by the Trojans.

A further extension, analogous to the Acc. with the Inf. after Impersonal Verbs, may perhaps be seen in Od. 6. 193 ων ἐπέουχ ἰκέτην ταλαπείριον ἀντιάσαντα which it is fit that a suppliant should meet with.

246.] Genitive Absolute. This is a form of implied predication, in which the Noun or Pronoun has no regular construction with the governing Verb. The Participial Clause expresses

the time or circumstances in which the action of the Verb takes place:—

Il. 1. 88 οὖ τις ἐμεῦ ζῶντος κτλ. no one, while I am living shall &c.

2. 551 περιτελλομένων ενιαυτών as years go round.

 203 ἀνδρῶν εἰλομένων where men are crowded; so ἀνδρῶν λικμώντων, ἀνδρῶν τρεσσάντων, πολλῶν ἐλκόντων, &c.

Od. 1. 390 καί κεν τοῦτ' ἐθέλοιμι Διός γε διδόντος ἀρέσθαι that too I would be willing to obtain if Zeus gave it.

The Subject is understood in Od. 4. 19 μολπης εξάρχουτος when

the singer began the music.

The Aorist Participle is less common in Homer than the Present, especially in the Odyssey: the instances are, Il. 8. 164, 468., 9. 426., 10. 246, 356., 11. 509., 13. 409., 14. 522., 16. 306., 19. 62, 75., 21. 290, 437., 22. 47, 288, 383, Od. 14. 475., 24. 88, 535 (Classen, *Beob.* p. 180 ff.).

The 'Genitive Absolute' must have begun as an extension of one of the ordinary uses of the Gen.; most probably of the Gen. of Time (§ 150). For, ἡελίον ἀνιόντος within the time of the sun's rising is a Gen. like ἠοῦς in the morning, νυκτός by night, &c., and answers, as a phrase denoting time, to ἄμ' ἢελίφ καταδύντι at sunset, ἐς ἡέλιον καταδύντα up to sun-set, &c. So we may compare τοῦδ' αὐτοῦ λυκάβαντος ἐλεύσεται he will come within this year with ἡ σέθεν ἐνθάδ' ἐόντος ἐλεύσεται he will come within your being here; and again περιτελλομένων ἐνιαντῶν in the years as they go round, with τῶν προτέρων ἐτέων in the former years. The transition may be seen in ἔαρος νέον ἱσταμένοιο in the spring when it is beginning. Compare also the phrases ἐπειγομένων ἀνέμων, Βορέαο πεσόντος, &c. with νηνεμίης in calm weather, &c.

The circumstance that the Ablative is the 'Absolute' Case in Latin is far from proving that the Greek Gen. in this use is Ablatival. In Sanscrit the Case used in this way is the Locative, occasionally the Genitive: and the Latin Abl. Absolute may represent a Locative of time at which, or an Instrumental of circumstance (§ 144). The hypothesis that such Participial Clauses in Greek expressed space of time within which (rather than point of time, or circumstance) is borne out by the interesting fact, noticed above, that in Homer this construction is chiefly found with the Participle which implies continuance, viz. the Present: whereas in Latin the Abl. Abs. is commonest with the Perfect Participle.

An approach to a 'Dative Absolute' may be seen in such uses as-

II. 8. 487 Τρωσίν μέν δ' ἀέκουσιν έδυ φάος.

12. 374 ἐπειγομένοισι δ' ἵκοντο.

Od. 21. 115 οὕ κέ μοι ἀχνυμένφ τάδε δώματα πότνια μήτηρ λείποι (=it would be no distress to me if &c.)

which are extensions or free applications, by the help of the Participle, of the true Dat. (Dativus ethicus).

246.*] The Verbal Adjectives. The formations to which this term is applied resemble the Participles in some of their characteristics.

Several groups of Nouns are used as Participles or 'Gerundives' in the cognate languages, such as the Latin forms in -tu-s, the Sanser. in -ta-s, -na-s, -ya-s, -tavya-s, &c. Of the corresponding Greek forms the Verbal in -τo-s is the most important, and approaches most nearly to the character of a Participle.* It is used mainly in two senses:—

- (1) To express the state corresponding to or brought about by the action of a Verb: τυκ-τός made, κρυπτός secret, κλυ-τός heard about, famed, στα-τός standing (in a stall), τλη-τός enduring (II. 24. 49), ἀγαπη-τός object of love, ἐρπε-τόν creeping thing, φυ-τόν growth, plant, πινυ-τός wise. So with ά- priv., ἄ-κλαυτος unweeping, ἄ-παστος fasting, ἄ-πυστος not having news, also of whom there is no news, ἄ-πιστος faithless, &c. The force of the Verb in these words is intransitive rather than passive, and they have no reference to time as past or present. Compare the Latin aptus, cautus, certus, catus, falsus, scītus, &c. We may note that there is a similar (but more complete) divergence of use between the Sanser. Participles in -na-s and the Greek Adjectives in -vo-s, as στυγ-νός.
- (2) To express possibility, as κτη-τός that can be acquired, ληϊστός that can be taken as plunder (II. 9. 406), ρηκτός vulnerable (II. 13. 323), ἀμ-βα-τός approachable. This meaning is chiefly found in Compounds with ἀ- priv.: as ἄ-λυ-τος that cannot be loosed, ἄρρηκτος, ἄ-φυκτος, ἄ-λαστος, ἀ-κίχητος, ἄ-σβεστος, ἄ-τλητος, ἄ-φθι-τος, &c.: and in other negative expressions, as οὐκ ὀυόμαστος, οὐκέτ ὀυοστά, οὐκέτ ἀνεκτῶς, οὕ τι νεμεσσητόν. Hence, αναίτη φυ as Brugmann observes, it is probable that this use of the Verbal in -τος began in the use with the negative.

It is evident that in respect of meaning the Verbals in $-\tau$ 0s are closely akin to the Perfect Participle. Compare $(e.\ g.)$ $\tau\nu\kappa\tau$ 0s and $\tau\epsilon\tau\nu\gamma\mu$ 6 $\epsilon\tau$ 0s, $\sigma\tau\sigma\tau$ 0s and $\epsilon\sigma\tau\eta$ 0s, $\pi\iota\nu\nu\tau$ 0s and $\pi\epsilon\pi\nu\nu\mu$ 6 $\epsilon\tau$ 0s. Hence the readiness with which in Latin they have taken the place of the Pf. Part. Passive. The extension by which they came to convey the notion of past time took place in the Perfect tense itself, in Latin and Sanscrit.

The Verbals in $-\tau\epsilon o$ -s (for $-\tau\epsilon F$ - ιo -s) are post-Homeric. The earliest instance seems to be ϕa - $\tau\epsilon \iota o$ -s, in Hesiod, Th. 310 $\delta\epsilon \nu \tau\epsilon \rho o \nu$ α $\nu \tau \iota \delta \tau \nu \tau \delta \nu$ κτλ.

^{*} See the fine observations of Brugmann, Grundr. ii. § 79, p. 207.

CHAPTER XI.

Uses of the Pronouns.

Introductory.

247.] The preceding chapter has dealt with the two grammatical forms under which a Noun, by acquiring a verbal or predicative character, is developed into a kind of subordinate Clause. We have now to consider the Subordinate Clause properly so called: that is to say, the Clause which contains a true (finite) Verb, but stands to another Clause in the relation of a dependent word. E.g. in the Sentence λεύσσετε γὰρ τό γε πάντες ὅ μοι γέρας ἔρχεται ἄλλη ye see that my prize goes elsewhere, the Clause ὅ μοι γέρας ἔρχεται ἄλλη stands in the relation of Object to the Verb of the principal Clause.

As the grammatical structure of Subordinate Clauses is shown in general by means of Pronouns, or Conjunctions formed from Pronominal Stems, it will be proper to begin with an account of the meaning and use of the different words of this class.

The Greek Grammarians divided the Pronouns (ἀντωνυμίαι) into δεικτικαί 'pointing,' and ἀναφορικαί 'referring' or 'repeating.' These words have given us, through the Roman grammarians, the modern terms Demonstrative and Relative; but the meaning, as often happens in such cases, has undergone a considerable change. A Deictic Pronoun—it will be convenient to adopt the Greek words—is one that marks an object by its position in respect to the speaker: I, thou, this (here), yonder, &c.; an Anaphoric Pronoun is one that denotes an object already mentioned or otherwise known,—the term thus including many 'Demonstratives' (that same man, the man, &c.), as well as the 'Relative.' In all, therefore, we may distinguish three kinds of Pronouns:—

- 1. DEICTIC, in the original sense.
- 2. Anaphoric, i. e. referring to a Noun, but Demonstrative (in the modern sense).
- 3. RELATIVE, in the modern sense.

This however, it should be observed, is a classification of the uses of Pronouns, not of the words or Stems themselves: for the same Pronoun may be Deictic or Anaphoric, Demonstrative or Relative, according to the context. It is probable, indeed, that all Pronouns are originally Deictic, and become Anaphoric in the course of usage.

248.] Interrogative Pronouns. The Interrogatives used in Homer are τίς (§ 108), πότερος, πόστος, ποΐος, πŷ, πῶς, ποῦ, πόθι,

 $\pi \delta \theta \epsilon \nu$, $\pi \delta \tau \epsilon$, $\pi \delta \sigma \epsilon$. The form $\pi \delta \sigma \sigma \sigma$ only occurs in the compound

ποσσημαρ (ΙΙ. 24. 657).

The Pronoun τ is is used both as a Substantive and as an Adjective. The adjectival use is chiefly found in the Odyssey (e.g. 1. 225 τ is δa is, τ is $\delta \epsilon \tilde{\delta} \mu \lambda \delta \tilde{\delta} \tilde{\delta} \tilde{\epsilon} \pi \lambda \epsilon \tau \sigma$; 13. 233 τ is $\gamma \tilde{\eta}$, τ is $\delta \tilde{\eta} \mu \sigma s$, τ ives $\delta v \epsilon \rho \epsilon s \epsilon \gamma \epsilon \gamma \epsilon \gamma \tilde{\alpha} \sigma \sigma i$;) and in the 24th book of the Iliad (ll. 367, 387). The only clear instance in the rest of the Iliad is 5. 633 τ is $\tau \sigma i \delta v \delta \gamma \kappa \eta$; for in Il. 1. 362., 18. 73, 80 τi is probably adverbial.

Notice also as peculiar to the Odyssey the combination of τίς with ὅδε, as Od. δ. 276 τίς δ' ὅδε Ναυσικάα ἔπεται; 20. 351 τί κακὸν τόδε πάσχετε; The corresponding use with οὖτος is only found in Il. 10. 82 τίς δ' οὖτος .. ἔρχεαι; cp. H. Merc. 261 τίνα

τοῦτον ἀπηνέα μῦθον ἔειπας;

The use of the Interrogative in Dependent Questions is rare:—

ΙΙ. 5. 85 Τυδείδην δ' οὐκ αν γνοίης ποτέροισι μετείη.

Od. 15. 423 εἰρώτα δὴ ἔπειτα τίς εἴη καὶ πόθεν ἔλθοι.

17. 368 ἀλλήλους τ' εἴροντο τίς εἴη καὶ πόθεν ἔλθοι.

17. 373 αὐτὸν δ' οὐ σάφα οΐδα πόθεν γένος εὕχεται εἶναι.

With these it is usual to reckon the anomalous—

ΙΙ. 18. 192 ἄλλου δ' οὖ τευ οἶδα τεῦ αν κλυτὰ τεύχεα δύω.

But in this case we have the further difficulty that the form of the Principal clause leads us to expect a Relative, not an Interrogative—the Indefinite ἄλλου τευ standing as Antecedent: cp. Od. 2. 42 (§ 282). Hence there is probably some corruption in the text.

The use of the Interrogative in a Dependent Question doubtless grew out of the habit of announcing that a question is going to be asked. A formula, such as $d\lambda\lambda$ ' $\check{\alpha}\gamma\epsilon$ μοι $\tau \acute{o}\delta\epsilon$ $\epsilon \acute{l}\pi^{\dot{\epsilon}}$ καὶ $\check{a}\tau\rho\epsilon$ -κέως κατάλεξον, or καί μοι τοῦτ' ἀγόρευσον ἐτήτυμον ὄφρ' ἐδ εἰδῶ, though grammatically a distinct sentence, may be regarded as on the way to become a governing clause. It is a step to this when there is no Pronoun as object—not 'tell me this,' but simply 'tell me': as Od. 4. 642 νημερτές μοι ἔνισπε, πότ' ἄχετο καὶ τίνες αὐτῷ κοῦροι ἔποντ' κτλ.; II. 144 εἰπέ, ἄναξ, πῶς κτλ.; 24. 474 εἰπέ μοι εἰρομένη, τί νύ τοι νόος ἔνδοθι κεύθει; It is to be observed that nearly all the passages of this kind are to be found in the Odyssey and in the 10th and 24th books of the Iliad. The only instance in the rest of the Iliad is 6. 377 εἴ δ' ἄγε μοι, δμφαί, νημερτέα μνθήσασθε΄ πῆ ἔβη κτλ.

όδε, κείνος, ούτος.

249.] The Pronoun öδε is almost purely Deictic. It marks an object as near the speaker,—this here, this on my side, &c.; as val μὰ τόδε σκῆπτρον by this sceptre (in my hand); Εκτορος ἥδε γυνή this

is the wife of Hector; Od. 1. 76 has solve teriopas whether let us here consider (§ 162, 2): 1. 226 our épavos tade γ èct what I see here is not a club-feast. It is especially applied to a person or thing to which the speaker turns for the first time, as—

Il. 3. 192 εἴπ' ἄγε μοι καὶ τόνδε, φίλον τέκος, ὅς τις ὅδ' ἐστί. Hence the use to denote what is about to be mentioned—the new as opposed to the known. This is an approach to an Anaphoric use, in so far as it expresses not local nearness, but the place of an object in the speaker's thought. So in—

Il. 7. 358 οἶσθα καὶ ἄλλον μῦθον ἀμείνονα τοῦδε νοῆσαι the speech is the *present* one, opposed to a better one which should have been made.

The derivatives τοσόσδε, τοιόσδε, ὧδε, ἐνθάδε, are similarly Deictic: as Il. 6. 463 χήτεϊ τοιοῦδ' ἀνδρός from want of a man such as I am now.

250.] The Pronoun κείνος is sometimes used in the Deictic sense, pointing to an object as distant:—

Il. 3. 391 κείνος ο γ' εν θαλάμω yonder he is in the chamber.

5. 604 καὶ νῦν οἱ πάρα κεῖνος 'Aρης there is Ares at his side. So of an absent object: as Od. 2. 351 κεῖνον οιομένη τὸν κάμμορον thinking of that (absent) one, the unhappy.

Hence in an Anaphoric use, KELPOS distinguishes what is past or

done with, in contrast to a new object or state of things:

Il. 2. 330 κείνος τως ἀγόρευε he (on that former occasion), &c.

 440 νθν μὲν γὰρ Μενέλαος ἐνίκησεν σὺν ᾿Αθήνη, κεῖνον δ᾽ αὖτις ἐγώ.

Od. 1. 46 καὶ λίην κεῖνός γε ἐοικότι κεῖται ὀλέθρῳ· ἀλλά μοι ἀμφ' 'Οδυσῆϊ κτλ.

Here Keîvos marks the contrast with which the speaker turns to a new case. The literal sense of local distance is transferred to remoteness in time, or in the order of thought.

- 251.] The Pronoun ours is not unfrequently Deictic in Homer, expressing an object that is present to the speaker, but not near him, or connected with him. Hence it is chiefly used (like iste in Latin) of what belongs to or concerns the person spoken to, or else in a hostile or contemptuous tone. Instances of the former use are:—
 - Il. 7. 110 ἀφραίνεις, Μενέλαε διοτρεφές, οὐδέ τί σε χρη ταύτης ἀφροσύνης.
 - 10. 82 τίς δ' οὖτος κατὰ νῆας ἀνὰ στρατὸν ἔρχεαι οἶος;
 - Od. 2. 40 οὐχ ἐκὰς οὖτος ἀνήρ the man you want is not far off.
 - 6. 218 στηθ' ούτω ἀποπρόθεν (as you are).

Again, ovros is regularly used of one of the enemy; as-

ΙΙ. 5. 257 τούτω δ' οὐ πάλιν αὖτις ἀποίσετον ὠκέες ἵπποι.

22. 38 μή μοι μίμνε, φίλον τέκος, ἀνέρα τοῦτον.

Similarly, with a tone of contempt,-

Il. 5. 761 ἄφρονα τοῦτον ἀνέντες (ep. 831, 879).

Od. 1. 159 τούτοισιν μεν ταῦτα μέλει (of the Suitors).

More commonly, however, οῦτος is Anaphoric, denoting an object already mentioned or known. In later Greek it is often employed where Homer (as we shall see) would use the Article.

αὐτός.

252.] The Pronoun adrós is purely Anaphoric: its proper use seems to be to emphasise an object as the one that has been mentioned or implied,—the very one, that and no other. It conveys no local sense, and is used of the speaker, or the person addressed, as well as of a third person. Specific uses are—

(1) To distinguish a person from his surroundings, adjuncts, company, &c.: as—

Il. 3. 195 τεύχεα μέν οἱ κεῖται ἐπὶ χθονὶ πουλυβοτείρῃ, αὐτὸς δὲ κτλ.

9. 301 aὐτὸς καὶ τοῦ δῶρα he and his gifts.

14. 47 πρίν πυρί νηας ένιπρησαι, κτείναι δε καί αὐτούς.

17. 152 ὅς τοι πόλλ' ὄφελος γένετο πτόλει τε καὶ αὐτῷ to thy city and thyself.

So of the body, as the actual person, in contradistinction to the soul or life $(\psi v \chi \dot{\eta})$, Il. 1. 4, Od. 11. 602, &c.

Hence, too, αὐτός = by himself (without the usual adjuncts):—

ΙΙ. 8. 99 Τυδείδης δ' αὐτός περ έων προμάχοισιν ἐμίχθη.

So Achilles in his complaint of Agamemnon, Il. 1. 356 ξλων γὰρ ξχει γέρας αὐτὸς ἀπούρας, i. e. at his own will, without the usual sanction: ep. 17. 254., 23. 591.

This meaning appears also in αὖτως = merely, as—

Od. 14. 151 αλλ' έγω οὐκ αὕτως μυθήσομαι αλλα σὺν ὅρκω.

Cp. Il. 1. 520 ή δὲ καὶ αὕτως . . νεικεῖ as it is (without such provocation) she reproaches me.

The Gen. $a \dot{\tau} \tau o \hat{v}$, &c. is used to strengthen the Possessives: as Od. 2. 45 $\dot{\epsilon} \mu \dot{\nu} \nu$ $a \dot{v} \tau o \hat{v}$ $\chi \rho \dot{\epsilon} \hat{v} o s$: II. 6. 490 $\tau \dot{a}$ σ' $a \dot{v} \tau \hat{\eta} s$ $\ddot{\epsilon} \rho \gamma a$: II. 10. 204 $\dot{\phi}$ $a \dot{v} \tau o \hat{v}$ $\theta \nu \mu \dot{\phi}$ (suo ipsius animo): Od. 16. 197 $\dot{\phi}$ $a \dot{v} \tau o \hat{v}$ $\gamma \epsilon \nu \phi \phi$.

Hence in Il. 9. 342 την αὐτοῦ φιλέει—where the use of the Art. is not Homeric—we should probably read ην αὐτοῦ.

(2) To express without change, the same as before:-

ΙΙ. 12. 225 οὐ κόσμφ παρὰ ναῦφιν ἐλευσόμεθ αὐτὰ κέλευθα.

Od. 8. 107 ἦρχε δὲ τῷ αὐτὴν όδὸν ἥν περ οἱ ἄλλοι κτλ.

Hence the use with a Dat., noticed in § 144; as Od. 8. 186 αὐτῷ φάρεϊ with his cloak as it was (without putting it off); and so αὐτόθι, αὐτοῦ in the place, without moving; and αὕτως without doing more, hence without effect, idly: as—

ΙΙ. 2. 342 αύτως γάρ ρ' ἐπέεσσ' ἐριδαίνομεν.

- (3) The unemphatic use, as it may be called, in which it is an ordinary Anaphoric Pronoun of the Third Person (Eng. he, she, it). In this use the Pronoun cannot stand at the beginning of a Clause (the emphatic position), or in the Nominative—an unemphasised Subject being sufficiently expressed by the Person-Ending of the Verb. The use is derived from that of the emphatic adrés in the same way that in old-fashioned English 'the same' often denotes merely the person or thing just mentioned: and as in German derselbe and der nämliche are used without any emphasis on the idea of sameness.
- (4) The Reflexive use of αὐτός is very rare: Od. 4. 247 ἄλλφ δ' ἀντοῦς αὐτὸν φωτὶ κατακρύπτων ἤϊσκε, and perhaps Il. 20. 55 ἐν δ' αὐτοῖς χάθωνος ἔριδα ῥήγνυντο βαρεῖαν (among them there, in heaven itself). On φ2^{γγ},χοηνος Il. 9. 342 τὴν αὐτοῦ φιλέει see above (1). In Il. 12. 204 κόψε γὰρ αὐτὸν ἔχοντα it is best to take αὐτόν in agreement with ἔχοντα (of the eagle). In Il. 19. 255 read αὐτόθι (§ 157).

The Reflexive Pronoun.

- 253.] The Pronoun ϵ_0 (i. e. the Personal Pronoun declined from the Stems ϵ_{ϵ} or ϵ and $\sigma\phi\epsilon$) is sometimes Reflexive (i. e. denotes the Subject of the Sentence or Clause), sometimes a simple Anaphoric Pronoun. In the latter use it is always unemphatic.
- (1) The Reflexive sense is chiefly found either (a) after a Preposition, as ἀμφὶ ε παπτήνας looking round him, and so ἀπὸ εο, ἐπὶ οἶ, προτὶ οῖ, μετὰ σφίσι, κατὰ σφέσς, &c.; or (b) when it is reinforced by αὐτός, as Il. 20. 171 εὲ δ' αὐτὸν ἐποτρύνει μαχέσασθαι stirs himself up to fight. Other examples are few in number:—

ΙΙ. 2. 239 δε καὶ νῦν 'Αχιλῆα, ἔο μέγ' ἀμείνονα φῶτα κτλ.

5. 800 η ολίγου οί παίδα ἐοικότα γείνατο Τυδεύς.

So Il. 4. 400., 5. 56., 24. 134, Od. 11. 433., 19. 446, 481. We should add however such Infinitival Clauses as—

Il. 9. 305 ἐπεὶ οὔ τινά φησιν ὁμοῖον οἶ ἔμεναι κτλ. where the reference is to the Subject of the governing Verb: so

Il. 17. 407, Od. 7. 217, &c. Compare also the similar use in Subordinate Clauses, as—

ΙΙ. 11. 439 γυῶ δ' 'Οδυσεὺς ος οι οῦ τι τέλος κατακαίριου ήλθευ.

The strictly Reflexive use is commoner in the Iliad than in the Odyssey. Excluding Infinitival and Subordinate Clauses, there are 43 examples in the Iliad, against 18 in the Odyssey. Note that the use is mainly preserved in fixed combinations (ἀπὸ ἔο, προτὶ οῖ, &c.).

(2) The Anaphoric (non-Reflexive) use is very much commoner. In this use—which is doubtless derived from the other by loss of the original emphasis—the Pronoun is enclitic: whereas in the Reflexive use it is orthotone.

Accentuation. According to the ancient grammarians this Pronoun is orthotone (1) when used in a reflexive sense, (2) when preceded by a Preposition, and (3) when followed by a Case-form of αὐτόs in agreement with it. The first and second rules, as we have seen, practically coincide: and the third is not borne out by the usage of Homer. In such places as Od. 2. 33 εἴθε οἱ αὐτῷ Ζεὐs ἀγαθὸν τελέσειε, Il. 6. 91 καί οἱ πολὺ φίλτατος αὐτῷ, Od. 8. 396 Εὐρύαλος δέ ἐ αὐτὸν ('Οδυσσέα) ἀρεσσάσθω,—add Il. 24. 292, Od. 4. 66, 667., 6. 277—the Pronoun is evidently unemphatic, and is accordingly allowed to be enclitic by good ancient authorities. This is amply confirmed by the instances of μιν αὐτόν (Il. 21. 245, 318, Od. 3. 19, 237, &c.), and the parallel use of αὐτός with the enclitic μοι, τοι, &c.

In one instance, viz.-

Od. 4. 244 αὐτόν μιν πληγῆσιν ἀεικελίησι δαμάσσας

it would seem that $\mu\nu$ has a reflexive sense. The reading, however, is not certain, some ancient authorities giving aὐτὸν μέν or αὐτὸν μέν.

- 254.] The Possessive &65, &5 is nearly always Reflexive. Occasionally it refers to a prominent word in the same Sentence which is not grammatically the Subject: as—
 - ΙΙ. 6. 500 αὶ μὲν ἔτι ζωὸν γόον Εκτορα ῷ ἐνὶ οἴκῳ.

Od. 9. 369 Οὖτιν ἐγὼ πύματον ἔδομαι μετὰ οἶς ετάροισι.

Cp. Il. 16. 800., 22. 404, Od. 4. 643., 11. 282., 23. 153. And it is occasionally used in a Subordinate Clause to refer to the Subject, or a prominent word, of the Principal Clause:—

Od. 4. 618 πόρεν δέ è Φαίδιμος ἥρως Σιδονίων βασιλεύς, ὅθ᾽ èòs δόμος ἀμφεκάλυψε κεῖσέ με νοστήσαντα (cp. 4. 741).

II. 10. 256 Τυδείδη μὲν δῶκε μενεπτόλεμος Θρασυμήδης φάσγανον ἄμφηκες, τὸ δ' ἐὸν παρὰ υπὰ λέλειπτο.

753 ἔβλητο πρὸς στῆθος, ἐή τέ μιν ὥλεσεν ἀλκή.

It will be seen that where $\dot{\epsilon}\dot{\epsilon}s$ does not refer to the grammatical Subject it is generally emphatic: e.g. in the line last quoted, $\dot{\epsilon}\dot{\eta}$ $\dot{a}\lambda\kappa\dot{\eta}$ his own provess, not that of an enemy. This indicates the

original force of the Pronoun, which was to confine the reference emphatically to a person or thing just mentioned.

- 255.] Use of έός, ös as a general Reflexive Pronoun. It has been a matter of dispute with Homeric scholars, both ancient and modern, whether έός (ös) was confined to the Third Person Singular (his own) or could be used as a Reflexive of any Number and Person (own in general—my own, thy own, their own, &c.).* The question is principally one of textual criticism, and depends in the last resort on the comparative weight to be assigned to the authority of the two great Alexandrian grammarians, Zenodotus and Aristarchus. It is connected with another question, of less importance for Homer, viz. whether the forms έο, οῖ, ἔ are confined to the Singular, and those beginning with σφ- to the Plural.
- (1) In regard to the latter of these questions there is no room for doubt. The only instance in dispute is Il. 2. 197, 198, where Zenodotus read—

θυμὸς δὲ μέγας ἐστὶ διοτρεφέων βασιλήων τιμὴ δ' ἐκ Διός ἐστι, φιλεῖ δέ ὲ μητίετα Ζεύς,

and so the first line is quoted by Aristotle (Rhet. 2. 2). Aristarchus read διοτρεφέος βασιλήος. However, admitting Zenodotus to be right, ε need not be a Plural. The change from Plural to Singular is not unusual in passages of a gnomic character, e.g.—

Od. 4. 691 η τ' έστι δίκη θείων βασιλήων ἄλλον κ' έχθαίρησι βροτών, ἄλλον κε φιλοίη.

(2) Again, the 'general' Reflexive use, if it exists in Homer, is confined to the Adjective &65, 55. The only contrary instance is Il. 10. 398 (Dolon tells Ulysses that he has been sent by Hector to find out)—

η φυλάσσονται νη ες θοαί ως το πάρος περ, η ήδη χείρεσσιν υφ' ημετέρησι δαμέντες φύξιν βουλεύοιτε μετα σφίσιν, οὐδ' εθέλοιτε κτλ.

So the MSS., but Ar. read $\beta ov\lambda \epsilon \acute{v}ov\sigma \iota$, $\dot{\epsilon}\theta \acute{\epsilon}\lambda ov\sigma \iota$, making Dolon repeat the exact words of Hector (ll. 309–311); and this reading, which gives $\sigma \phi \acute{\iota}\sigma \iota$ its usual sense, is clearly right. The Optative is not defensible (esp. after the Indic. $\phi v\lambda \acute{a}\sigma \sigma ov\tau a\iota$), and was probably introduced by some one who thought that Dolon, speaking of the Greeks to Ulysses, must use the Second Person Plural. But the Third Person is more correct; for Ulysses is not one of

^{*} The question was first scientifically discussed by Miklosich, in a paper read to the Vienna Academy (I, 1848, p. 119 ff.). He was followed on the same side by Brugmann (Ein Problem der homerischen Textkritik und der vergleichenden Sprachwissenschaft, Leipzig, 1876).

the Greeks who can be supposed to be 'consulting among themselves.'

The form \mathcal{E} is found as a Plural in Hom. II. Ven. 267. In later Epic poets the Substantival \mathcal{E} 10, &c. are used as Reflexives of any Person or Number: see Theoretics 27. 44, Apollonius Rhodius 1. 893., 2. 635, 1278., 3. 99 (Brugmann, *Probl.* p. 80). But the use is exclusively post-Homeric.

- (3) The case is different with the Adjective. We find forms of έός (ὄς) read by Zenodotus in a number of places in which our MSS, and editions—following the authority of Aristarchus—have substituted other words. Thus in—
- Il. 3. 244 ως φάτο, τοὺς δ' ἦδη κάτεχεν ψυσίζους αἶα, ἐν Λακεδαίμονι αὖθι, φίλη ἐν πατρίδι γαίη for φίλη Zenodotus read εῆ (their own). So, again, in—

Il. 1. 393 ἀλλὰ σύ, εἰ δύνασαί γε, περίσχεο παιδὸς έῆος, and in similar passages (Il. 15. 138., 19. 342., 24. 550), it is known from the Scholia that Aristarchus read έῆος, Zenodotus έοιο (=thine own). Again, in—

Il. 11. 142 νθν μέν δη τοθ πατρὸς ἀεικέα τίσετε λώβην Zenodotus read οδ πατρὸς (your own father). It is probable that he read οδ in the similar places Il. 19. 322, Od. 16. 149, &c. 4 [455]

Besides the instances of undoubtedly ancient difference of reading, there are several places where one or more MSS. offer forms of éós in place of éuós and σός. Thus—

II. 14. 221 ὅ τι φρεσὶ σῆσι μενοινῆς (ἦσι D).

19. 174 σὰ δὲ φρεσὶ σῆσιν ἰανθῆς (ἦσιν in several MSS.).
 Similar variations (with φρεσί) are found in Od. 5. 206., 6. 180.,
 13. 362., 15. 111., 24. 357. Again—

Od. 1. 402 δώμασι σοίσιν ἀνάσσοις (οἶσιν ten MSS.). Similarly in Od. 8. 242., 15. 89 (ξοίσι for ἐμοίσι): also—

Od. 7. 77 καὶ σὴν ἐς πατρίδα γαῖαν (ἡν ἐς in one MS.).

13. 61 σὺ δὲ τέρπεο τῷδ' ἐνὶ οἴκῳ (ῷ ἐνὶ one MS.).

Another instance of variation is detected by Brugmann in-

II. 9. 414 εὶ δέ κεν οἴκαδ' ἵκωμι φίλην ἐς πατρίδα γαῖαν, where the MSS. (except A) have ἵκωμαι, pointing to ἐὴν (my own).*

The existing text of the Odyssey contains three passages which Brugmann claims as instances of a general Reflexive sense, viz. Od. 4. 192 (as to which see Merry and Riddell's note),

^{*} Brugmann carries his theory into other passages where he supposes Aristarchus to have corrected the text in order to get rid of the use of ¿ós for the First or Second Person: but the examples quoted above will suffice to give an idea of the strength of his argument.

Od. 13. 320 (where there is some reason to suspect an interpolation), and—

Od. 9. 28 οὔ τοι ἐγώ γε ης γαίης δύναμαι γλυκερώτερον ἄλλο ἰδέσθαι.

But there is no reason to take $\hat{\eta}_s$ otherwise than in v. 34 &s o'dde $\gamma\lambda \acute{u}\kappa\iota ov\ \mathring{\eta}_s$ $\pi a\tau \rho (\delta os\ o'dde\ \tau o\kappa \acute{\eta}\omega v)(\gamma v\epsilon\tau a\iota\ nothing\ is\ sweeter\ than\ a$ man's own country, &c. The reference of the Pronoun is to a typical or imaginary person, as in Od. 1. 392 a $\mathring{u}\acute{u}\acute{u}\acute{u}$ $\tau \epsilon$ o'd $\mathring{u}\acute{u}\acute{u}$ $\mathring{u}\acute{u}\acute{u}$ $\mathring{u}\acute{u}$ $\mathring{u}\acute{u}$

We have seen that post-Homeric poets use the substantival 20, &c. in the sense in question. The corresponding use of the adjective \$\delta 65\$, \$\delta 5\$ is still more common, as Brugmann shows. It is found in Hesiod for the Third Person Plur. (Op. 58, Theog. 71), and in Callimachus, Apollonius Rhodius, and Quintus Smyrnaeus (*Probl.* pp. 28, 78-83).

(4) In attempting to arrive at a conclusion on this matter we must begin by understanding that the issue does not lie between supposing on the one hand that Aristarchus was entirely right, and on the other hand that he introduced a strange form like egos on his own authority, and merely to satisfy a theory. The latter is improbable, not only from the respect for manuscript authority which is expressly attributed to him, but also because the various readings are not all capable of being explained on this supposition. Thus, (1) the word enos is proved to exist by Od. 14. 505., 15. 450, and in the latter place ¿oîo, though excluded by the sense, is found as a variant. Also (2) épos is found for éoûo meaning his own in Il. 14. 9., 18. 71, 138. It cannot therefore be regarded as certain that egos was systematically introduced merely to get rid of ¿oîo = my own, thy own. Again, (3) the use of the Article in τοῦ πατρός, τῆς μητρός, τοῦ παιδός, is not clearly un-Homeric (see § 258). And if in Il. 11. 763 olos της ἀρετης απονήσεται Bentley was right in reading is (cp. 17. 25), it follows that the Article might creep in for ou, is, &c. apart from the intention of carrying out a grammatical theory.

On the other side it must be conceded that the generalised Reflexive use of ¿ós, ös,—if not of the substantival ¿o, &c.—is of high antiquity, so that sporadic instances of it may have occurred in the genuine text of Homer. If so, the error of Aristarchus

will consist in a somewhat undue purism.

Brugmann holds that the general Reflexive sense is the primary one, belonging to the Stem sva in the original Indo-European language, and surviving in the Homeric use of £65, 55. But even if the readings of Zenodotus which give this sense are right, it does not follow that they represent the oldest use of the Pronoun.

Brugmann has himself given excellent instances of the extension to the First and Second Person of a Reflexive Pronoun originally confined to the Third (*Probl.* pp. 119 ff.). In the present case it is significant that the generalised use of the substantival forms ξ_0 , &c. is clearly post-Homeric. If ξ_0 is sometimes used in Homer, as well as afterwards, of the First and Second Persons, it is natural to see in this the result of an extension of usage. The case is different with the use of the Stem sva for the Plural. That use, as we see from the Latin se and suus, was the original one. It is noteworthy that this undoubtedly primitive use is precisely the one of which there is least trace in Homer.

ὁ ἡ τό.

256.] The Article ὁ ἡ τό may be defined as a purely Anaphoric Pronoun, conveying some degree of emphasis. It differs from ὅδε οὖτος and ἐκεῖνος in the absence of Deictic meaning: for while it usually marks some contrast between objects, it does not distinguish them as near or far, present or absent, &c. On the other hand it is distinguished from the non-Reflexive use of αὐτός and ξο by greater emphasis.

Three chief uses of & \$\dagger\$ to may be distinguished:—

- The use as an independent Pronoun; δ ἡ τό=he she it.
 This may be called the Substantival use: it embraces the great majority of the instances in Homer.
- 2. The use as an 'Article' in the later sense of the term, i.e. with a Noun following. This may be called the Attri-
- 3. The use as a Relative.

257.] The Substantival Article. This use of the Article is very much the commonest in Homer, and it is also the use from

which the others may be easily derived.

The Substantival Article either (1) is simply 'resumptive,' recalling a person or thing already mentioned, as δ $\gamma \acute{a}\rho$ for he, $\tau \acute{o}\nu$ $\acute{\rho}a$ him I say, $a\mathring{v}\tau \acute{o}s$ kai $\tau o\~{o}v$ $\delta\~{a}\rho a$ the man and his gifts: or (2) marks a contrast, as δ $\delta\acute{e}$ but the other.

The following points of usage are to be noticed:-

I. The most frequent—we may almost say the regular—place of the Article is at the beginning of a Clause, followed by μέν, δέ, γάρ, ἄρα, or preceded by αὐτάρ, ἀλλά, ἢ τοι, or an equivalent Particle. Hence the familiar combinations ὁ μέν, ὁ δέ, ὁ γάρ, καὶ γὰρ ὁ, αὐτὰρ ὁ, ἢ τοι ὁ, τόν ῥα, ἀλλὰ τόν, &c. of which it is needless to give instances.

The later Substantival use with $\mu \dot{\epsilon} \nu$ and $\delta \dot{\epsilon}$ is a surviving frag-

ment of this group of uses. A few others are found in Attic poets, as δ γάρ (Aesch. Sept. 17, Soph. El. 45, O. T. 1082).

The use to contrast indefinite persons or things ($\delta \mu \hat{\epsilon} \nu - \delta \delta \hat{\epsilon} =$ one—another, of $\mu \hat{\epsilon} \nu - \delta \delta \hat{\epsilon} =$ some—others) is not very common in Homer.

The use of the Article with an adversative Particle ($\delta \epsilon$, $a \hat{v} \tau d \rho$, $a \lambda \lambda d$) generally marks a change of Subject: $\delta \delta \epsilon$ but the other, &c. But this is not always the case: e.g. II. 4. 491 $\tau o \hat{v}$ $\mu \epsilon v$ $a \mu a \rho \theta'$, $\delta \delta \epsilon \Lambda \epsilon \hat{v} \kappa o v \ldots \beta \epsilon \beta \lambda \hat{\eta} \kappa \epsilon \iota$ him he missed, but smote Leucus (so II. 8. 119, 126, 302., 11. 80, &c.); II. 1. 496 $\Theta \epsilon \tau \iota s$ δ' o $\delta \lambda \hat{\eta} \theta \epsilon \tau'$ $\delta \epsilon \epsilon \iota v \epsilon \iota v$ $\delta \iota v$ δ

This last use—in which the Article is pleonastic, according to Attic notions—occurs in Herodotus, as 5. 120 τὰ μὲν πρότερον οἱ Κᾶρες ἐβουλεύοντο μετῆκαν, οἱ δὲ αὖτις πολεμεῖν ἐξ ἀρχῆς ἀρτέοντο. We may compare it with the pleonastic use of the Pronoun in—

Il. 11. 131 ζώγρει 'Ατρέος υλέ, σὺ δ' ἄξια δέξαι ἄποινα, where the effect of inserting $\sigma \dot{\omega}$ is to oppose the two acts denoted by ζώγρει and δέξαι ἄποινα.

The Article is frequent in Disjunctive sentences:—
 Il. 12. 240 εἴ τ' ἐπὶ δεξί' ἴωσι πρὸς ἢῶ τ' ἢέλιόν τε, εἴ τ' ἐπ' ἀριστερὰ τοί γε κτλ. (or else to left).
 Od. 2. 132 ζώει ὅ γ' ἢ τέθνηκεν.

Here also it serves to contrast the alternative things said about the same Subject.

3. The principle of contrast often leads to the placing of two Articles together: Il. 21. 602 η̃ος δ τὸν πεδίοιο διώκετο, 10. 224 καί τε πρὸ ὁ τοῦ ἐνόησεν. So an Article and a Personal Pronoun, ἐν δὲ σὰ τοῖσι (Il. 13. 829, &c.); cp.— Il. 8. 532 εἴσομαι εἴ κέ μ' ὁ Τυδείδης κρατερὸς Διομήδης πὰρ νηῶν πρὸς τεῖχος ἀπώσεται, ἢ κεν ἐγὼ τόν.

Note that when the second of the two is in the Nom., it usually takes $\gamma \epsilon$: hence $\tau \circ \hat{v} \circ \gamma \epsilon$, $\tau \hat{\eta} \circ \hat{v} \circ \gamma \epsilon$, &c.

4. The Article often stands for the object to be defined by a following Relative Clause, e. q.—

ΙΙ. 9. 615 καλόν τοι σὺν ἐμοὶ τὸν κήδειν ὅς κ' ἐμὲ κήδη.

272 τῶν οἱ νῦν βροτοί εἰσι &c.

The use is to be classed as Anaphoric; the intention of saying something about the object is equivalent to a previous mention. So in Latin the Anaphoric is is used to introduce qui.

The Neuter Article is similarly used to introduce Clauses beginning with ὅτϵ, ὡs, and the like:—

ΙΙ. 15. 207 ἐσθλὸν καὶ τὸ τέτυκται ὅτ' ἄγγελος αἴσιμα εἰδῆ.

Od. 9. 442 τὸ δὲ νήπιος οὖκ ἐνόησεν ως οἱ κτλ.

ΙΙ. 3. 308 Ζεὺς μέν που τό γε οἶδε . . . ὁπποτέρω κτλ.

So Il. 14. 191., 20. 466., 23. 545. It may even introduce an independent sentence, as—

Od. 4. 655 ἀλλὰ τὸ θαυμάζω· ἴδον ἐνθάδε Μέντορα δίον.

- 5. The uses in which the Article is least emphatic (i.e. does not begin the Clause, or express a contrast) appear to be—
- (a) after Prepositions: esp. in the Dat. Plur. after $\mu\epsilon\tau\dot{\alpha}$, $\pi\alpha\rho\dot{\alpha}$, $\pi\rho\rho\tau\dot{\iota}$, $\sigma\dot{\nu}\nu$, $\dot{\epsilon}\nu$, $\ddot{\alpha}\mu\alpha$: as II. 1. 348 $\dot{\eta}$ δ' ἀέκουσ' $\ddot{\alpha}\mu\alpha$ τοΐσι γυνη κίευ. This is to be connected with the fact that the forms $\ddot{\epsilon}o$, $o\dot{\iota}$, $\sigma\dot{\phi}i\sigma\iota$, &c. are not used with Prepositions in the simple Anaphoric sense (§ 253), and thus the Art. is used instead of them.
- (b) when the Neuter Article is used for a fact or set of facts; as II. 4. 353 ὄψεαι ἢν ἐθέλησθα καὶ αἴ κέν τοι τὰ μεμήλη. Here again the want of a corresponding form of ἕο makes itself felt. This use is chiefly found in the Nom. and Acc.; but also in τοὕνεκα therefore, ἐκ τοῖο from that time, &c.
- 258.] The Attributive Article. The Attributive Article is found in Homer in a limited range of cases, and has evidently grown out of the use of the Substantival Article followed by a Noun in 'Apposition;' e.g. Il. 4. 20 &s έφαθ', αἱ δ' ἐπέμνξαν 'Αθηναίη τε καὶ "Ηρη thus he spoke, but they murmured, Athene and Here: Il. 1. 348 ἡ δ' ἀέκουσ' ἄμα τοῦσι γυνὴ κίεν. So with μιν, Il. ½1. 249 ἵνα μιν παύσειε πόνοιο | δῖον 'Αχιλλῆα, cp. Od. 11. 570. In such cases the Pronoun is still substantival, the Noun being added by way of afterthought.

It is a step towards an Attributive use when the Article needs

the addition of the Noun to explain it; e.g.—

II. 4. 501 τόν ρ' 'Οδυσεὺς ἐτάροιο χολωσάμενος βάλε δουρὶ κόρσην' ἡ δ' ἐτέροιο διὰ κροτάφοιο πέρησεν αἰχμὴ χαλκείη.

Here ή δέ would not be clear without αἰχμή. So in—

II. 1. 408 αἴ κέν πως ἐθέλησιν ἐπὶ Τρώεσσιν ἀρῆξαι, τοὺς δὲ κατὰ πρύμνας τε καὶ ἀμφ' ἄλα ἔλσαι 'Αχαιούς.

Od. 15. 54 τοῦ γάρ τε ξεῖνος μιμνήσκεται ήματα πάντα ἀνδρὸς ξεινοδόκου.

So too with Proper Names,—when a new person is about to be mentioned the Art. anticipates the Noun: e.g.—

ΙΙ. 2. 402 αὐτὰρ ὁ βοῦν ἱέρευσεν ἄναξ ἀνδρῶν ᾿Αγαμέμνων.

And where the Neut. 76 is followed by an epexegetic Infinitive:-

Od. 1. 370 έπεὶ τό γε καλὸν ἀκουέμεν ἐστὶν ἀοιδοῦ.

11. 17. 406 ἐπεὶ οὐδὲ τὸ ἔλπετο πάμπαν,
 ἐκπέρσειν πτολίεθρον ἄνευ ἔθεν.

In all these cases the combination of Article and Noun is not sufficiently close to constitute an Attributive use; but they serve to show how such a use is developed.

The Attributive uses in Homer may be classified as follows:—

- 1. Uses with *connecting Particles*, where some contrast is made in passing to the new sentence or clause.
- 2. Uses with certain Adjectives that imply contrast.
- 3. Uses to mark a person or thing as definite.
- 259.] Article of Contrast—with connecting Particles. The uses that fall under this head, though not very numerous, are characteristic of Homer. The following are the chief:—
- (a) The Article with an adversative $\delta \epsilon$, advap, &c. is not unfrequently used to bring out the contrast in which the Noun stands to something already mentioned: e. g.—
- II. 2. 217 φολκὸς ἔην, χωλὸς δ' ἔτερον πόδα, τὰ δέ οἱ ἄμω κτλ. but then his shoulders; so τὰ δέ οἱ ὄσσε (Π. 13. 616), &c.
- Il. 22. 405 $\dot{\omega}$ s τοῦ μὲν κεκόνιτο κάρη $\ddot{a}\pi a v$, $\dot{\eta}$ δέ νυ μήτηρ κτλ. but on the other hand his mother &c.
 - Il. 1. 382 ἦκε δ' ἐπ' ᾿Αργείοισι κακὸν βέλος, οἱ δέ νυ λαοὶ θνῆσκον ἐπασσύτεροι, τὰ δ' ἐπώχετο κῆλα θεοῖο.

4. 399 τοίος ἔην Τυδεὺς Αἰτώλιος ἀλλὰ τὸν νίὸν κτλ.

So we should explain the Article in II. 1. 20 παίδα δέ μοι λύσαιτε φίλην, τὰ δ' ἄποινα δέχεσθαι release my daughter, and on the other side accept ransom. The usage is common in the Iliad, but perceptibly rarer in the Odyssey.

- (b) The use of the Art. with μέν—in contrast with something that follows—is rare: II. 11. 267 αὐτὰρ ἐπεὶ τὸ μὲν ἔλκος ἐτέρσετο: cp. 8. 73., 9. 1., 13. 640., 19. 21., 20. 75, Od. 3. 270 (seemingly the only instance in the Odyssey). There is a similar use with the Art. following the Noun in Od. 1. 116 μνηστήρων τῶν μὲν σκέδασιν κατὰ δώματα θείη, κτλ.
- (c) The corresponding use with copulative and illative Particles, καί, τε, ἢδέ, καὶ γάρ, is much less common: cp.—
 - Il. 1. 339 πρός τε θεων μακάρων πρός τε θνητων ανθρώπων και πρός του βασιλήσς απηνέσς.
 - 36 ἴστω νῦν τόδε γαῖα καὶ οὐρανὸς εὐρὸς ὅπερθεν,
 καὶ τὸ κατειβόμενον Στυγὸς ὅδωρ (cp. 18. 486).

Od. 22. 103 δώσω δὲ συβώτη | καὶ τῷ βουκόλῳ ἄλλα.

ΙΙ. 14. 503 οὐδὲ γὰρ ἡ Προμάχοιο δάμαρ κτλ.

The Article singles out its Noun as the special object intended, or turns to it with fresh emphasis. So with an Infinitive, Od. 20. 52 ἀνίη καὶ τὸ φυλάσσειν, where we need not take τὸ φυλάσσειν closely together. So Hes. fr. 192 ἡδὺ δὲ καὶ τὸ πυθέσθαι κτλ. also Op. 314 τὸ ἐργάζεσθαι ἄμεινον.

260.

These uses should be carefully distinguished from the later Definite Article. For instance, in II. I. 20 τ d $\check{\alpha}\pi\sigma\nu\sigma$ does not mean this or the ransom, in contradistinction to other ransoms. It means the other, the ransom, in contrast to the person ransomed. Again, the 4th book of the Iliad begins of $\delta \epsilon$ $\theta \epsilon o i$, which we naturally take to mean simply but the gods. But, taking in the last line of the 3rd book, we have—

ως έφατ' 'Ατρείδης, επὶ δ' ήνεον ἄλλοι 'Αχαιοί' οἱ δὲ θεοὶ πὰρ Ζηνὶ καθήμενοι ήγορόωντο.

Clearly the Article marks the turning from the one scene to the other,—from the battlefield to Olympus. Thus the Attic of $\theta\epsilon\epsilon\delta$ distinguishes the gods from other beings: the Homeric of $(\delta \epsilon \ \theta\epsilon\epsilon\delta)$ marks, not this permanent distinction, but the contrast arising out of the particular context.

The difference appears also in the use with Proper Names. In Attic the Article shows that a particular known person is spoken of; in Homer it marks the turning of attention to a person—ushers in the name, as it were. In short, the Homeric Article contrasts, the Attic Article defines.

- 260.] With Adjectives. The Article is used before adjectival words that imply a contrast or distinction, especially between definite or well-known alternatives: in particular—
 - (a) ἄλλος and ἔτερος, passim: also αὐτός = same.
- (b) Comparatives and Superlatives; οἱ πλέονες, οἱ ἄριστοι, &c. So in the adverbial expressions τὸ πρίν, τὸ πάρος, τὰ πρῶτα, and the like, in which the Neut. Article is used adverbially (τὸ πάρος = then formerly). It is quite different when a Mase. or Fem. Article is used with an Adverb, as οἱ ἔνερθε θεοί (Il. 14. 274), ἀνδρῶν τῶν τότε (Il. 9. 559), τά τ' ἐνδόθι καὶ τὰ θύρηφιν (Od. 22. 220),—a use which is extremely rare in Homer.
- (c) Ordinal Numerals: as $\tau \hat{\eta}$ δεκάτη: so $\tau \delta$ ήμισυ. Also Cardinal Numerals, when a division is made; as II. 5. 271 τοὺς μὲν τέσσαρας αὐτὸς ἔχων ἀτίταλλ' ἐπὶ φάτνη, τὼ δὲ δύ' Alνεία δῶκεν four he kept, and the (other) two he gave to Aeneas: II. 11. 174 πάσας $\tau \hat{\eta}$ δέ τ ' l $\hat{\eta}$ κτλ. (the lion chases) all, but to one &c.
 - (d) Possessives; τὸν ἐμὸν χόλον, τὰ σὰ κῆλα, &c.
- (e) A few words expressing the standing contrasts of great and small, many and few, good and evil, &c., esp. when the contrast is brought out by the context:—
 - II. 1. 106 μάντι κακῶν, οὖ πώ ποτέ μοι τὸ κρήγυον εἶπας αἰεί τοι τὰ κάκ' ἐστὶ φίλα φρεσὶ μαντεύεσθαι.

3. 138 τῷ δέ κε νικήσαντι φίλη κεκλήση ἄκοιτις (the conqueror being one of two definite persons).

So $\dot{\eta}$ $\pi\lambda\eta\theta\dot{\nu}s$ (Il. 2. 278., 15. 305) the many (in contrast to a single man, or to the few): $\tau\dot{o}$ $\chi\theta\iota\zeta\dot{o}\nu$ (Il. 13. 745); $\tau\dot{o}\nu$ $\delta\epsilon\dot{\xi}\iota\dot{o}\nu$ $\iota\pi\sigma\nu$ (Il. 23. 336); Aias \dot{o} $\mu\dot{\epsilon}\gamma$ as the greater Ajax: $\theta\epsilon\dot{o}\nu\dot{s}$... $\tau\dot{o}\nu\dot{s}$ $\dot{\nu}$ $\dot{\tau}$ $\dot{\tau}$

Il. 1. 70 δς ήδη τά τ' εόντα τά τ' εσσόμενα πρό τ' εόντα.

The use to contrast indefinite individuals (one—another) is rare in Homer: Il. 23. 325 τὸν προύχοντα δοκεύει waits on the one in advance: Il. 16. 53 ὁππότε δὴ τὸν ὁμοῖον ἀνὴρ ἐθέλησιν ἀμέρσαι: Il. 9. 320 κάτθαν ὁμῶς ὅ τ' ἄεργος ἀνὴρ ὅ τε πολλὰ ἐοργώς: Od. 17. 218 ὡς ἀεὶ τὸν ὁμοῖον ἄγει θεὸς ὡς τὸν ὁμοῖον.

- (f) Patronymics and geographical epithets: e.g. II. 11. 613 Μαχάονι πάντα ἔοικε τῷ ᾿Ασκληπιάδη (ep. 13. 698., 14. 460., 23. 295, 303, 525): II. 2. 595 Θάμυριν τὸν Θρήϊκα: II. 6. 201 πεδίον τὸ ᾿Αλῆϊον, ep. 2. 681., 10. 11: and so perhaps II. 21. 252 αlετοῦ .. τοῦ θηρητῆρος an eagle, the hunting kind. This use is rare.
- (g) In a very few places, a Genitive: II. 20. 181 τιμῆς τῆς Πριάμου: Od. 24. 497 υἰεῖς οἱ Δολίοιο: II. 9. 342., 10. 408., 23. 348, 376, Od. 3. 145.
- 261.] The defining Article. The few and somewhat isolated uses which fall under this description may be grouped as follows:
- 1. The use before a Relative is combined with 'Apposition' to a preceding Noun: as—

ΙΙ. 5. 319 οὐδ' νίὸς Καπανῆος ἐλήθετο συνθεσιάων

τάων ἃς ἐπέτελλε κτλ. (cp. 5. 331 θεάων τάων αἷ—). This is the primitive order, the Article being 'resumptive'—the injunctions, those namely which, &c. So ηματι τῷ ὅτε—, and commonly in the Iliad. The later order—that in which the Noun follows the Article—appears in a few places of the Iliad:—

5. 265 της γάρ τοι γενεής ης Τρωί περ κτλ. (cp. v. 268), also 6. 292., 8. 186., 19. 105. It is commoner in the Odyssey.

2. Occasionally the Article conveys a hostile or contemptuous tone: Il. 2. 275 τον λωβητῆρα: 13. 53 ὁ λυσσώδης: 21. 421 ἡ κυνάμυια: 22. 59 τον δύστηνον: Od. 2. 351 τον κάμμορον: 12. 113 τὴν ὀλοήν: 14. 235 τήν γε στυγερὴν ὁδόν: 18. 26 ὁ μολοβρός: 18. 333 τον ἀλήτην: 19. 372 αἱ κύνες αἶδε. So in Il. 3. 55 ἥ τε κόμη τό τε εἶδος.

In Od. 18. 114 τοῦτον τὸν ἄναλτον does not mean (as it would in Attic) 'this ἄναλτος,' but 'this man—ἄναλτος that he is.' Cp.

- II. 13. 53 $\hat{\eta}$ $\hat{\rho}$ \hat{o} γ \hat{o} $\lambda \nu \sigma \sigma \omega \hat{o} \eta s$ $\kappa \tau \lambda$., where \hat{o} $\lambda \nu \sigma \sigma \omega \hat{o} \eta s$ —the madman—is used as a single term, in Apposition to \tilde{o} $\gamma \epsilon$. This use—which is characteristic of Homer—may be regarded as a relic of the Deictic force of \hat{o} $\hat{\eta}$ $\tau \hat{o}$. It answers to the later use of $\hat{o}\hat{v} \tau \hat{o}$, Latin iste.
- 3. The use of the Article to show that the Noun denotes a known person or thing—the defining Article of later Greek—is rare in Homer. It is found in the Iliad—
- (a) with γέρων, γεραιός, ἄναξ, ῆρως: where however the Pronoun is the important word, the Noun being subjoined as a kind of title: τοῦο ἄνακτος=' of his lordship' (cp. the German allerhöchst derselbe). Accordingly, when the name is added the Art. is generally not used; as γέρων $i\pi\pi\eta\lambda$ άτα $\Pi\eta\lambda$ εύς (not δ γέρων).
- (b) with έπος and μῦθος, in certain phrases, as ποῖον τὸν μῦθον ἔϵιπες; In these cases the Noun is of vague meaning, adding little to the Article: ep. ἐπεὶ τὸν μῦθον ἄκουσε with ἐπεὶ τό γ' ἄκουσε. So in the formula ὅμοσέν τε τελεύτησέν τε τὸν ὅρκον,

perhaps with a touch of ceremonial verbiage.

In the Odyssey it occurs with several other Nouns: $\delta \xi \hat{\epsilon} \hat{\epsilon} v o s (passim)$; $\hat{\eta} v \hat{\eta} \sigma o s Od. 5. 55., 9. 146., 12. 201, 276, 403, &c.; <math>\tau \hat{\alpha} \mu \hat{\eta} \lambda a Od. 9. 464., 11. 4, 20: \delta \mu \hat{\sigma} \chi \lambda o s Od. 9. 375, 378: <math>\tau \hat{\delta} \tau \hat{\delta} \xi o v Od.$ 21. 113, 305. The other examples in the Iliad are chiefly found in books x, xxiii, xxiv: see Il. 10. 97, 277, 321, 322, 330, 408, 497., 23. 75, 257, 465., 24. 388, 801, also 2. 80., 7. 412., 20. 147.

We may perhaps add a few uses with words of relationship:-

ΙΙ. 11. 142 νῦν μὲν δὴ τοῦ πατρὸς ἀεικέα τίσετε λώβην.

But here the Art. is resumptive with emphasis: (if ye are sons of Antimachus) ye shall now pay for his, your father's, outrage.

Il. 19. 322 οὐδ' εἴ κεν τοῦ πατρὸς ἀποφθιμένοιο πυθοίμην not even if I heard of such a one as my father being dead: Od.

134 ἐκ γὰρ τοῦ πατρὸς κακὰ πείσομαι for from my father (for one)
 I shall suffer (cp. Il. 15. 641 τοῦ γένετ' ἐκ πατρὸς κτλ.): Od. 16.

149, Il. 21. 412. See however § 255.

It has been a question whether the Article is ever equivalent to a Possessive Pronoun. If so it would be a kind of defining Article—defining a thing as belonging to a known person. In most of the instances, however, the reference to a person is given by a distinct Pronoun: Il. 19. 331 ω΄s ἄν μοι τὸν παΐδα κτλ.: Od. 11. 492 ἀλλ' ἄγε μοι τοῦ παιδὸς κτλ.: Od. 8. 195 καί κ' ἀλαός τοι .. τὸ σῆμα: Od. 18. 380 οὐδ' ἄν μοι τὴν γαστέρ' κτλ.: Od. 19. 535 ἀλλ' ἄγε μοι τὸν ὄνειρον κτλ.: Il. 1. 167 σοὶ τὸ γέρας πολὺ μεῖζον. Hence the Art. in these places has much the same

function as with a Possessive ($\mu o \iota \tau \partial \nu \pi a \iota \delta a = \tau \partial \nu \epsilon \mu \partial \nu \pi a \iota \delta a$); it reinforces the Pronoun which conveys the idea of possession.

This account does not apply to $\tau \hat{\eta} s$ $\epsilon \hat{v} v \hat{\eta} s$ (II. 9. 133, 275., 19. 176), and $\tau \hat{\eta} s$ $\hat{d} \rho \epsilon \tau \hat{\eta} s$ (Od. 2. 206). But here the Art. is probably substantival: $\tau \hat{\eta} s$ $\epsilon \hat{v} v \hat{\eta}$ her couch, $\tau \hat{\eta} s$ $\hat{d} \rho \epsilon \tau \hat{\eta}$ her perfection. In 23. 75 kal μ oi $\delta \hat{o} s$ $\tau \hat{\eta} v$ $\chi \epsilon \hat{i} \rho a$ the Art. is quite anomalous.

262.] The Article as a Relative. The Article at the beginning of a clause may often be translated either as a Demonstrative or as a Relative. It has the character of a Relative when the clause which it introduces is distinctly subordinate or parenthetical: as—

Il. 1. 36 'Απόλλωνι ἄνακτι, τὸν ἢΰκομος τέκε Λητώ Apollo—son of the fair-haired Leto.

The use of δ $\dot{\eta}$ $\tau\dot{\delta}$ as a Relative is less common in Homer than that of $\ddot{o}s$ $\ddot{\eta}$ \ddot{o} , and is restricted in general to clauses which refer to a definite antecedent. Thus in the line just quoted the clause $\dot{\tau}\dot{\delta}v$ $\dot{\eta}\dot{v}\kappa\rho\mu\sigma s$ $\tau\dot{\epsilon}\kappa\epsilon$ $\Lambda\eta\tau\dot{\omega}$ does not define Apollo, i.e. does not show who is meant by the name; it assumes that a definite person is meant, and adds something further about him.

From this principle it evidently follows that—

(1) The Art, when used as a Relative must follow the Noun or Pronoun to which it refers; whereas a Relative Clause often precedes. The only exceptions are—

ΙΙ. 1. 125 άλλὰ τὰ μὲν πολίων ἐξεπράθομεν, τὰ δέδασται.

Od. 4. 349 (= 17. 140) ἀλλὰ τὰ μέν μοι ἔειπε . . τῶν κτλ. We may perhaps read ἀλλά θ ' ἃ μὲν (§ 332).

(2) The Art. cannot stand as correlative to a Demonstrative (i.e. we must have τό—δ that which, not τό—τό). Hence in—

Il. 7. 452 τοῦ δ' ἐπιλήσονται, τὸ ἐγὰ καὶ Φοῦβος ᾿Απόλλων κτλ. τοῦ—τό are not meant as correlatives: the sense is and will forget the other—(a wall) which &c. But some MSS. have ὅ τ' ἐγά. So Od. 13. 263 (τῆς ληΐδος) τῆς εἴνεκ' ἐγὰ πάθον ἄλγεα θυμῷ my share of the spoil—(spoil) for which I had suffered &c. Exceptions are, Od. 14. 227 αὐτὰρ ἐμοὶ τὰ φίλ' ἔσκε τά που θεὸς ἐν φρεσὶ θῆκεν, thou described 19. 573 τοὺς πελέκεας τοὺς κτλ. (perhaps also Od. 9. 334).

(3) The Art. is not used in epexegetic clauses, as II. 2. 338 ενηπιάχοις, οἰς οὕ τι μέλει κτλ., II. 5. 63 ἀρχεκάκους, αὶ πᾶσι κακὸν

κτλ., Il. 15. 526 Λαμπετίδης, δυ Λάμπος εγείνατο.

Instances at variance with the general principle are to be found in Il. 5. 747 ἡρώων τοῖσίν τε κοτέσσεται (οἶσίν τε in some MSS.), Il. 9. 592 κήδε ὅσ᾽ ἀνθρώποισι πέλει τῶν ἄστυ ἀλώη, also Il. 17. 145., 18. 208, Od. 1. 17., 6. 153., 11. 545., 16. 257., 23.

3.55, &c. It is probable however that the text is sometimes at fault, the Art. having been substituted for 5s, especially in order to avoid hiatus: e.g.—

ΙΙ. 17. 145 οίος σὺν λαοίσι τοὶ Ἰλίφ (λαοίς οἱ Γιλίφ).

Od. 16. 263 εσθλώ τοι τούτω γ' επαμύντορε τους αγορεύεις,

where ous is not excluded by the hiatus, § 382).

As the Art. usually adds some new circumstance about a known antecedent, it sometimes has the effect of representing a fact as unexpected: as II. 1. 392 τήν μοι δόσαν νἷες 'Αχαιῶν (Briseis)—νhom the Greeks gave me (=although the Greeks had given her to me): Od. 16. 19 μοῦνον τηλύγετον, τῷ ἐπ' ἄλγεα πολλὰ μογήση his only son, after he has endured many sorrows about him (ep. 19. 266., 23. 6): II. 1. 160 πρὸς Τρώων, τῶν οὖ τι μετατρέπει the Trojans—νhile you pay no heed to them. So in—

Il. 1. 319 ληγ' ἔριδος την πρώτον ἐπηπείλησ' 'Αχιληϊ, the meaning is not the same quarrel which he had declared, but his quarrel—now that he had declared it. And so—

Od. 19. 393 οὐλήν, τήν ποτέ μιν σῦς ἤλασε a wound—one that once a boar gave him. Similarly τ $\hat{\eta} = at$ a place where (Il. 14. 404., 21. 554., 23. 775).

The Acc. Neut. 76 used adverbially means wherefore (§ 133),

as-

Il. 3. 176 ἀλλὰ τά γ' οὐκ ἐγένοντο' τὸ καὶ κλαίουσα τέτηκα. So Il. 7. 239., 12. 9., 17. 404., 19. 213., 23. 547. There is one instance in the Odyssey, in the song of Demodocus (8. 332).

The Relatival use does not extend to the Adverbs $\tau \omega s$, $\tau \delta \tau \epsilon$, $\tau \delta \omega s$ ($\tau \hat{\eta} \sigma s$), or to the derivative adjectives $\tau \sigma \hat{\iota} \sigma s$, &c.

- 263.] The Article with $\tau\epsilon$ serves as a Relative. In accordance with the use of $\tau\epsilon$ in Homer (§ 332) δ $\tau\epsilon$ expresses a constant or general characteristic, but only of a definite Antecedent: as—
 - ΙΙ. 6. 112 Έκτορι Πριαμίδη, τόν τε στυγέουσι καὶ άλλοι.
 - 15. 621 κύματά τε τροφόεντα, τά τε προσερεύγεται αὐτήν.
- Od. 18. 273 οὐλομένης ἐμέθεν, τῆς τε Ζεὺς ὅλβον ἀπηύρα. It is especially used in similes (where a typical case is described), as II. 13. 390 πίτυς βλωθρὴ τήν τ' οὔρεσι κτλ.: II. 5. 783., 11. 554., 12. 146., 13. 571., 15. 581., 23. 712, &c.
- 264.] Homeric and Attic Article. After the account given in the preceding §§ of the Homeric uses of the Article it is hardly necessary to show in detail where they differ from the corresponding uses in Attic Greek. What we have chiefly to observe is that the difference is often greater in reality than it appears to be at first sight. Familiar as we are with the de-

fining Article of modern languages, and of Attic Greek, we naturally import it into Homer whenever it is not made impossible by the context. But even when a Homeric use falls under the general head of the 'defining Article' (§ 261), the effect is perceptibly different from that of the 'Definite Article' properly so called. In Homer the Article indicates, not that a person or thing is a known or definite one, but that it is presented to us in an antithesis or contrast. Objects so contrasted are usually definite, in the sense that they are already known or suggested by the context; and hence the readiness with which the later defining sense can be applied to passages in Homer. Thus αὐτὰρ ο γ' ήρως can usually be translated but the hero (before mentioned), as though & distinguished him from other heroes. But when we find that autap & in Homer constantly means but he, or but the other, and that it may be followed by an epexegetic Noun (as αὐτὰρ ὁ βοῦν ἱέρευσεν ἄναξ ἀνδρῶν 'Αγαμέμνων), we see that ὁ is more important than a mere Article, is in fact a Substantival Pronoun, to which $\tilde{\eta}\rho\omega s$ is added as a kind of epithet—but he the hero.

This point has been explained in connexion with the use of the Attributive Article, § 259, a. It may be further illustrated from instances in which the Article marks contrast, but not definition, and consequently cannot be translated by the. Such are:—

Il. 15. 66 πολέας δλέσαντ' αίζηοὺς τοὺς ἄλλους, μετὰ δ' υἱὸν ἐμὸν Σαρπηδόνα δίον not the others, but others as well, certain others.

II. 5. 672 η προτέρω Διὸς υἱὸν ἐριγδούποιο διώκοι, η ὅ γε τῶν πλεόνων Λυκίων ἀπὸ θυμὸν ἔλοιτο

or should take the lives of more Lycians instead. Here of $\pi\lambda$ éoves does not mean 'the greater number,' but 'a greater number,' in contrast to the one person mentioned.

Il. 22. 162 ως δ' ὅτ' ἀεθλοφόροι περὶ τέρματα μώνυχες ἵπποι ρίμφα μάλα τρωχωσι' τὸ δὲ μέγα κεῖται ἄεθλου

and there a great prize lies ready. So Od. 20. 242 αὐτὰρ δ... ὅρνις but a bird. The same thing is shown by $\mu\nu\eta\sigma\tau\eta\rho\omega\nu$ τῶν μ èν κτλ. (§ 259, b). It is evident that τῶν is used, not because the suitors are definite persons, but because a contrast is made by μ έν.

The same remark applies to the use with Adjectives (§ 260), especially to the use by which they are turned into Substantives, as τὸ κρήγυου, τὰ κακά. In Homer τὰ κακά is said because in the particular context κακά evils are opposed to good. In Attic τὰ κακά or τὸ κακόυ implies that evils form a class of things, distinguished from all other things. This again is a difference,

which does not come out in translating Homer, and is therefore

apt to be overlooked.

The use with Cardinal Numerals (§ 260, c) is to be similarly explained. It is not peculiar to Homer, but is regular in Attic also, where it may be regarded as a survival of the Homeric use of the Article.

The use of the Art. in Hesiod shows some advance. Thus the use to form a class is no longer confined to the case of a particular contrast given in the context: Op. 280 $\tau \delta$ dikai' dyopediai, Op. 353 $\tau \delta \nu$ fildenta filter kal $\tau \hat{\rho}$ produnt $\pi \rho o \sigma \epsilon \hat{\nu} \alpha i$. The use with Adverbs is commoner, Op. 365 $\tau \delta$ dupphin, Op. 457 $\tau \hat{\omega} \nu$ product. The Prepositional phrase in Op. 364 $\tau \delta$ è v dika katakélhevov is quite post-Homeric. The same may be said of the 'articular' Inf. in Op. 314 $\tau \delta$ èrgáçebai ďheinov (§ 259, 3). It will be found that the Art. occurs nearly twice as often in Hesiod as in Homer.

It is a further question, and one that cannot be fully discussed here, whether any uses of the Article found in our text of the Iliad and Odyssey are post-Homeric, and evidence of a later origin of the books or passages where they occur. It will be seen that in the case of the uses which have been noticed as rare or exceptional most of the examples come from books ix, x, xxiii, and xxiv. See especially the uses treated of in § 260 f, g, and § 261, 3. Others again seem to belong to the Odyssey; see § 261, 3, and cp. § 259, a. The use of the Article in the 10th book of the Iliad seems clearly later than in any other part of Homer: e.g.—

II. 10. 97 δεῦρ' ἐς τοὺς φύλακας καταβήσμεν,
 277 χαῖρε δὲ τῷ ὅρνιθ' 'Οδυσεύς.
 322 ἢ μὲν τοὺς ἵππους τε καὶ ἄρματα κτλ, (so 330).
 408 πῶς δ' αἱ τῶν ἄλλων Τρώων φυλακαί κτλ.

Also πεδίον τὸ Τρωϊκόν (v. 11), ὁ τλήμων 'Οδυσεύς (v. 231, 498), τὴν νύκτα (v. 497). So in the Catalogue of the Ships we have Θάμυριν τὸν Θρήϊκα (II. 2. 595), and τὸ Πελασγικὸν Άργος (2. 681).

ős ŋ ő.

- 265.] The Pronoun os η o, and the Adverbs formed from the same Stem, esp. ω_s , $\tilde{\sigma}\tau\epsilon$, $\tilde{\epsilon}\omega_s$, are occasionally used in a Demonstrative or quasi-Demonstrative sense; viz.—
- (1) After καί, οὐδέ, μηδέ: as Il. 21. 198 ἀλλὰ καὶ δε δείδοικε even he fears: Il. 6. 59 μηδ' δε φύγοι may not even he escape: and often in the combinations καὶ $\tilde{\omega}$ s even so, οὐδ' $\tilde{\omega}$ s not even so. So οὐδ' ἔνθα not even there (Od. 1. 18).
- (2) With μέν and δέ, to express a contrast between indefinite objects: as—
 - Il. 11. 64 ως Έκτωρ ότε μέν τε μετὰ πρώτοισι φάνεσκεν, ἄλλοτε δ' εν πυμάτοισι κτλ. (so 18. 599., 20. 49).
 - 12. 141 of δ ' $\mathring{\eta}$ τοι $\mathring{\eta}$ os $\mu \grave{\epsilon} \nu$ κτλ. up to a certain time.
 - 17. 178 ότε δ' αὐτὸς ἐποτρύνει but sometimes &c.
 - (3) In the Adverb &s 80; especially as the second member of

the Correlation &s—&s as—so. A single &s is often used where it may be either a Relative or a Demonstrative, as in the formula &s φάτο, &s εἰπών, &c.: ep. the Latin quae quum dixisset, &c. The other instances in which we have to translate as a Demonstrative are rare: e.g. Il. 3. 339 ωs δ' αύτωs and in like manner.

Among Demonstrative uses of os it is usual to count the use with γάρ, as δε γάρ, ως γάρ, ΐνα γάρ. This however is an error, arising from the occasional use of $\gamma d\rho$ where it cannot be trans-

lated for: see § 348, 3.

Some commentators find a Demonstrative os in-

Od. 4. 388 τόν γ' εί πως σὺ δύναιο λοχησάμενος λελαβέσθαι, δς κέν τοι είπησιν όδόν κτλ.

Here however the clause σs κέν τοι κτλ. is not the Apodosis, but a Relative Clause expressing purpose. The peculiarity of the passage is merely that the Apodosis is left to be understood: if you can seize him, (do so), that he may tell you &c.: ep. Od. 5. 17., 10. 539.

These idioms are usually regarded as the remains of an earlier use of os in the simple Anaphoric sense. The growth of a Relative out of a Demonstrative has been already exemplified in the Article (§ 262). But the Relatival use of os is so ancient that any attempt to trace its growth from an earlier syntax must be of very uncertain value.

266.] ος τε, ος τις. The simple ος may be used in any kind of Relative Clause, although in certain cases (§ 262) the Article is preferred. Thus we have—

Il. 4. 196 ου τις διστεύσας έβαλεν (a particular fact).

1. 403 δυ Βριάρεων καλέουσι (a constant, characteristic fact). In these two places the Art. might be put in place of os: but not in-

Il. 2. 205 είς βασιλεύς, ὧ έδωκε (a characteristic fact, defining).

1. 218 ős κε θεοις ἐπιπείθηται (definition of a class).

So os is used to convey a reason (which implies a general cause or tendency): as Od. 1. 348 Ζεὺς αἴτιος ὅς τε δίδωσιν κτλ.; cp. Il. 2. 275., 5. 650., 8. 34.

If the Relative is meant to refer to an indefinite number of individuals falling under a common description, os res is gene-

rally used, = who being any one, whoever.

If, again, the Relative Clause generalises by making us think, not so much of all possible individuals in a class, as of different times and circumstances,—in other words, if it lays stress on the general and permanent element in facts—os te is used: e.g.—

Il. 1. 279 σκηπτούχος βασιλεύς, ή τε Ζεύς κύδος έδωκε to whom as king, to whom in every such case.

Il. 4. 361 τὰ γὰρ φρονέεις ἃ τ' ἐγώ περ (such things as &c.).

5. 545 'Αλφειοῦ őς τ' εὐρὺ ρέει (cp. 5. 876).

9. 117 ἀνὴρ ὅν τε Ζεὺς κῆρι φιλήση.

Od. 7. 74 οἶσίν τ' εὖ φρονέησι they to whom she is well inclined. Thus ὅς τε is constantly used in comparisons: as Il. 3. 61 (π έλεκυς) ὅς τ' εἶσιν διὰ δουρὸς ὑπ' ἀνέρος ὅς ῥά τε τέχνη νήϊον ἐκτάμνησι.

So ως τε, όθι τε, όθεν τε, ότε τε : ένθα τε, ίνα τε : όσος τε, οίός τε.

Od. 12. 22 δισθανέες, ὅτε τ' ἄλλοι ἄπαξ θνήσκουσ' ἄνθρωποι.

19. 179 Κυωσός, μεγάλη πόλις, ἔνθα τε Μίνως κτλ.

Thus Homer has five Relatives, viz. ös, ös τε, ös τις, ö, ö τε, each with a distinct use: Attic retains only ös and ös τις.*

267.] Correlative Clauses. 1. We have first to distinguish between the simple structure in which the Relative Clause only qualifies a Noun or Pronoun in the Principal Clause, as—

 $\tau \hat{\omega} v$ of $v \hat{v} v$ $\beta \rho \sigma \tau o i$ else of those who are now living. Ev $\pi \epsilon \delta i \omega$ $\delta \theta$, $\pi \epsilon \rho$ $\kappa \tau \lambda$, in the plain where &c.

and the parallel structure, in which the Relative is an Adverb of the same form as the Antecedent; as—

τως δέ σ' ἀπεχθήρω ως νῦν ἔκπαγλ' ἐφίλησα.
τόφρα δ' ἐπὶ Τρώεσσι τίθει κράτος, ὄφρ' ἃν 'Αχαιοί κτλ.
τῆ ἴμεν ἢ κεν δὴ σύ, κελαινεφές, ἡγεμονεύης.

Here the notion given by the adverbial ending—manner, time, way, &c.—is the point of comparison, and must be understood to

qualify both clauses.

In both these kinds of compound sentence the Demonstrative Antecedent may often be omitted, but this is especially the case with the second, in which a Relatival Adverb implies a corresponding Demonstrative. Thus ως ἐφίλησα implies τως—ως ἐφί-

λησα: ὄφρ' ἄν is equivalent to τόφρα—ὄφρ' ἄν, &c.

In this way, then, it came about that ωs (lit. in which manner) means in the manner in which: and so ὄφρα to the time up to which, ἡ by the way by which, ὅθι at the place where, ὅτε at the time when, and so on.† The whole Relative Clause in fact serves as an Adverb (of manner, time, way, &c. as the ending may determine), construed with the Verb of the Principal Clause. Such clauses accordingly are called adverbial: while clauses which merely qualify a Noun or Pronoun are adjectival.

* It is worth notice that os us in Attic has some of the uses of os uses of us

[†] In the corresponding sentences in English it is often the Relative that is wanting: thus $\tau \hat{\eta}$ $\tilde{\iota}$ $\mu \epsilon \nu$ $\tilde{\eta}$ $\tilde{\eta}$ $\kappa \epsilon \nu$ $\tilde{\eta}$ $\gamma \epsilon \mu \nu \nu \epsilon \dot{\nu} \gamma s$ to go by the way [by which] you lead. This forms a characteristic difference between Greek and English Syntax.

- 2. The omission of the antecedent from the governing clause leads to various idiomatic uses :—
- (a) The Relative Clause comes to be equivalent to a Noun or Pronoun in any Case which the governing clause may require: thus—
 - 5. 481 τά τ' ἐἐλδεται ὅς κ' ἐπιδευής which (he) desires who is in need.
 - 230 δῶρ' ἀποαιρεῖσθαι ὅς τις σέθεν ἀντίον εἴπη to take away gifts (from him, from any one) who &c.
 - 7. 401 γυωτον δε καί δε μάλα νήπιός εστιν.
 - Od. 15. 281 αὐτὰρ κεῖθι φιλήσεαι οἶά κ' ἔχωμεν you will be entertained (with such things) as we have.
 - II. 14. 81 βέλτερον δο φεύγων προφύγη κακόν it is better (for one) who by flying escapes evil, i.e. it is better when a man &c.: ep. Od. 15. 72, II. 3. 109.
- (b) The omission is especially characteristic of clauses with στε when (for τὸ—ὅτε the time when): II. 15. 18 ἢ οὐ μέμνη ὅτε do you not remember (the time) when: II. 8. 229 πἢ ἔβαν εὐχωλαί, ὅτε δὴ κτλ. where are gone the boastings (of the time) when ϛc.: II. 19. 337 λυγρὴν ἀγγελίην ὅτ' ἀποφθιμένοιο πύθηται: and with Numerals, II. 21. 80 ἢως δέ μοί ἐστιν ἥδε δυωδεκάτη ὅτε κτλ. this is the twelfth morn (from the time) when ϛc. So in II. 2. 303 χθιζά τε καὶ πρωτζ' ὅτε means a day or two (from the time) that. Hence too the forms εἰς ὅτε to the time that, πρίν γ' ὅτε before the time when.

Similarly with 50 where, as "kavov "ou they came (to the place) where.

(c) With a Verb of saying or knowing the Relative Clause has apparently the force of a dependent question:—

Il. 2. 365 γνώση ἔπειθ' ὅς θ' ἡγεμόνων κακός, ὅς τέ νυ λαῶν, ἠδ' ὅς κ' ἐσθλὸς ἔησι

you will recognise (γιγνώσκω, not oίδα) of the leaders him who is a weakling, and who of the people, and again him who shall be (found to be) brave.

So Il. 13. 278., 21. 609, Od. 3. 185., 17. 363: compare the form with the antecedent expressed—

II. 23. 498 τότε δὲ γνώσεσθε ἔκαστος ἔππους ᾿Αργείων, οἱ δεύτεροι οἱ τε πάροιθεν.

The construction is the same with a Verb which implies knowing, finding out, or the like: e.g.—

κλήρφ νῦν πεπάλασθε διαμπερες ὅς κε λάχησι cast lots (to find him) whose portion it shall be.

- 3. The suppressed antecedent, again, may have no clear or grammatical construction:—
- (a) This is especially found when the Relative Clause expresses a reason, as—
- Od. 4. 611 αΐματός εἰς ἀγαθοῖο, φίλον τέκος, οἶ' ἀγορεύεις lit. you are of good blood (seeing the things) such as you speak, i.e. as I see by the manner of things that you speak.
- Il. 14. 95 vûv δέ σευ ἀνοσάμην πάγχυ φρένας οἶον ἔειπες I blame your thought, because of the kind of thing you have said.
 - Od. 2. 239 νῦν δ' ἄλλφ δήμφ νεμεσίζομαι, οἶον ἄπαντες $\mathring{\eta} \sigma \theta$ ' ἄνεφ at the way that ye all sit silent.
 - Il. 17. 586 Έκτωρ, τίς κέ σ' ἔτ' ἄλλος ᾿Αχαιῶν ταρβήσειεν, οἶον δὴ Μενέλαον ὑπέτρεσας;

who would fear you any more, seeing the way you shrank before Menelaus?

Od. 15. 212 οίος ἐκείνου θυμὸς ὑπέρβιος, οὔ σε μεθήσει.

ΙΙ. 16. 17 ἢε σύ γ' ᾿Αργείων ὀλοφύρεαι ὡς ὀλέκονται.

Od. 10. 326 θαῦμά μ' ἔχει ὡς κτλ. I wonder at the way that &c.

This is the idiom generally described by saying that of is put for $\tilde{\sigma}\tau\iota$ $\tau\sigma\iota\sigma\tilde{\upsilon}\tau\sigma s$, as for $\tilde{\sigma}\tau\iota$ $\sigma\tilde{\upsilon}\tau\omega s$, and so on. So when is introduces a reason (§ 266) we might say that it is for $\tilde{\sigma}\tau\iota$ $\sigma\tilde{\upsilon}\tau\sigma s$ (e.g. $Z\epsilon\tilde{\upsilon}s$ $a\tilde{\iota}\tau\iota\sigma s$ is $\tau\epsilon$ $\delta l\delta\omega\sigma\iota=\tilde{\sigma}\tau\iota$ $\sigma\tilde{\upsilon}\tau\sigma s$ $\delta l\delta\omega\sigma\iota$). The peculiarity, however, of the clauses now in question is that the Relative can have no grammatical Antecedent, that is to say, that the Correlative which it implies as an Antecedent has no regular construction in the Principal Clause.

- (b) This is also found after Verbs of knowing, &c.—the Relative Clause expressing the Object or thing known: as—
 - Il. 2. 409 $\eta \delta \epsilon \epsilon \gamma \alpha \rho \kappa \alpha \tau \alpha \delta \theta \nu \mu \delta \nu \alpha \delta \epsilon \lambda \phi \epsilon \delta \nu \delta \epsilon \epsilon \tau \delta \nu \epsilon \delta \tau \delta he knew of his brother (as to the manner) in which he laboured.$

24. 419 θηοιό κεν . . οιον εερσήεις κείται.

Od. 7. 327 είδήσεις . . ὅσσον ἄρισται νῆες ἐμαί.

This is evidently an extension of the form $\gamma\nu\omega\sigma\eta$ ds kakds (supra, 2 c), with the difference that the suppressed Correlative in the Principal Clause is without a regular construction.

- (c) Sometimes the Relative Clause is used without any Principal Clause, as an exclamation: e.g.—
 - ΙΙ. 7. 455 & πόποι, Έννοσίγαι' εὐρυσθενές, οἶον ἔειπες.

Od. 1. 32 & πόποι, οίον δή νυ θεούς βροτοί αιτιόωνται.

ΙΙ. 5. 601 & φίλοι, οδον δη θαυμάζομεν Εκτορα.

The ellipse gives an expression of surprise: (to think) what a thing you have said! (to see) how men blame the gods! (to remember)

how we wondered at Hector! The want of a construction has much the same effect as with the exclamatory use of the Nominative (§ 163). Similarly—

Od. 4. 240 πάντα μεν οὐκ ἃν ἐγω μυθήσομαι οὐδ' ὀνομήνω, ὅσσοι 'Οδυσσῆος ταλασίφρονός εἰσιν ἄεθλοι' ἀλλ' οἷον τόδ' ἔρεξε κτλ.

I will not tell of all his feats: but (just to mention) what a feat this was that he did &c. So Od. 4. 260., 11. 517; ep. also Il. 5. 638 ἀλλ' οιόν τινά φασι κτλ. (just to instance) the kind of man that they tell &c.

If the explanation now given of these Relative Clauses is right, it is evidently incorrect to accent and punctuate as is done by editors (e.g.) in—

II. 6. 108 φὰν δέ τιν' ἀθανάτων ἐξ οὐρανοῦ ἀστερόεντος Τρωσὶν ἀλεξήσοντα κατελθέμεν' ὡς [or ὡς] ἐλέλιχθεν

taking it as an Independent Clause—'so they wheeled.' The same editors do not hesitate to write in Il. 16. 17 δλοφύρεαι, ώς δλέκονται, where the construction is precisely the same.

It is sometimes maintained that in all such cases we have a survival of the primitive 'parataxis'—that (e.g.) δλοφύρεαι ως δλέκονται was originally δλοφύρεαι, ως δλέκονται you lament, they so perish, hence you lament how they perish, or that they thus perish. On the same view the exclamatory ofor estres is not elliptical, but represents the original independent what a thing you have said! (See Mr. Leaf on Il. 2. 320 θαυμάζομεν οἶον ἐτύχθη). This hypothesis, however, is not borne out by the facts of language. In the first place, it is strange that the traces of parataxis should be found with the Relatives as, ofos, ocos, &c. rather than with the corresponding Demonstrative forms. Again, if the Relative retained an original Demonstrative use, we should expect to find this, like other survivals, in some isolated group of uses: whereas the clauses now in question are very various in character. Again, the passages which favour the notion of parataxis are indistinguishable in structure from others to which it cannot be applied, such as most of the examples given under 2. Yet we cannot separate τά τ' ἐέλδεται ὅς κ' ἐπιδενής from φιλήσεαι οδά κ' ἔχωμεν, or that again from ἀνοσάμην οἶον ἔειπες. In particular it will be found that the theory does not apply to clauses which are conditional so well as to those which give a reason. The exclamatory use—οἶον ἔϵιπϵs and the like—does not furnish a good argument, because the pronoun used in a simple exclamation would not be Demonstrative, but Interrogative (ποῖον ἔειπες, &c.). The most decisive consideration, however, is that the Relatival use of os and its derivatives is common to Greek and Sanscrit, and may be regarded therefore as Indo-European. Consequently there is a strong presumption against any hypothesis which explains the Homeric use of the Relative from a still earlier or pre-Indo-European stage of language.

4. Sometimes an Antecedent is not construed with the Governing Clause, but follows the Case of the Relative. This is allowed if the Antecedent is separated from its own clause, as—

Il. 14. 75 νηες ὅσαι πρῶται εἰρύαται ἄγχι θαλάσσης ελκωμεν (so Il. 6. 396., 10. 416., 14. 371).

This 'Inverse Attraction' may be placed with the forms in which the Antecedent is wanting, because it can only arise when the original construction of the Antecedent ($\tilde{\epsilon}\lambda\kappa\omega\mu\epsilon\nu$ $v\hat{\eta}as$ $\tilde{\delta}\sigma a\iota$) has been forgotten.

5. Again, the Correlative structure is liable to an extension, the characteristic of which is that the Relatival Adverb has no proper construction in its own clause.

This may be most clearly seen in the use of ouvera (i.e. ov

ένεκα) for which reason: e.g.—

 II. I. IIO ως δη τοῦδ' ἔνεκά σφιν ἐκηβόλος ἄλγεα τεύχει, οῦνεκ' ἐγω . . οὐκ ἔθελον κτλ.

Apollo causes sorrow for this reason, that I would not &c. Here we cannot translate οῦνεκα for which reason: the reason does not precede, but is given by the Relative Clause. That is, the first ε̃νεκα is rational; the second is logically unmeaning. Hence the οῦνεκα can only be due to the correlation: as it is usually expressed, οῦνεκα is altracted to the antecedent τοῦνεκα. Then—since οῦνεκα comes to imply a correlative τοῦνεκα—the antecedent τοῦνεκα is omitted, and the relatival οῦνεκα by itself comes to mean for the reason that, because.

The process may be traced more or less distinctly in all the Relatival Adverbs. Thus ω_s (in which manner) comes to mean in such manner that: and so $\delta \phi \rho \alpha$ for so long that, $i v \alpha$ (lit. where) to the end that. Also, as will be shown presently, δ , $\delta \tau_1$ and $\delta \tau \epsilon$ are Adverbial Accusatives, meaning literally in which respect, hence in respect that, because: ep. $\epsilon i \pi \epsilon \hat{\imath} v \hat{\imath} v \hat{\imath} \hat{\imath} v \hat{\imath} \omega \sigma \alpha \tau_0$ to say for what he was angered with $\chi \omega \sigma \alpha \tau_0$ or $i \cdot k v \omega \sigma \alpha \tau_0$ (the reason) that. The qualifying force of the Adverb is transferred from its own clause to the Verb of the Governing Clause.

On the same principle $\tilde{\epsilon}\kappa$ $\tau o \tilde{v}$ $\tilde{v} \epsilon$ from the time when becomes $\tilde{\epsilon} \xi$ $\tilde{o} \tilde{v}$ (for $\tilde{\epsilon}\kappa$ $\tau o \tilde{v}$ $\tilde{v} \tilde{v}$): and $\tilde{\epsilon} l s$ $\tau \tilde{v}$ $\tilde{v} \tilde{\tau} \epsilon$ becomes $\tilde{\epsilon} l s$ \tilde{v} to the time

that.

- 268.] οὔνεκα. This Conjunction (which may be treated as a single word) is used in two ways:—
 - (a) to assign a cause or reason:

(b) to connect the fact expressed in the Relative Clause with a Verb of saying, knowing, &c.

The second of these uses is evidently derived from the first by a kind of degeneration, or loss of meaning. The fact told or known is originally given as the ground of the saying or knowing. The transition may be seen in—

Od. 7. 299 ξειν', ἢ τοι μὲν τοῦτό γ' ἐναίσιμον οὐκ ἐνόησε παις ἐμή, οὕνεκά σ' οὕ τι μετ' ἀμφιπόλοισι γυναίξιν ἢγεν ἐς ἡμέτερον

my daughter did not judge aright in this, because she did not &c., more simply, in this, that she did not &c. Again—

Od. 5. 215 οἶδα καὶ αὐτὸς

πάντα μάλ', οὕνεκα σεῖο περίφρων Πηνελόπεια κτλ.

I know all, inasmuch as Penelope is &c.; i.e. I know that she is. This use is found with Verbs of saying in Od. 13. 309., 15. 42., 16. 330, 379. In the Iliad it occurs only once, viz. Il. 11. 21 πεύθετο.. μέγα κλέος, οὕνεκ' 'Αχαιοί κτλ.

Note that (except in Od. 13. 309., 16. 379) the Verb is followed by an Acc. of the thing; so that the Relative Clause does not directly take the place of the Object. Thus (e.g.) πεύθετο κλέος οὕνεκα is literally heard a rumour the ground of which was that &c.

A peculiar use to state a consequence which is made the ground of inference may be seen in Il. 9. 505 $\mathring{\eta}$ δ' Åτη σθεναρή τε καὶ ἀρτίπος, οὕνεκα πάσας πολλὸν ὑπεκπροθέει Ate is strong and sound of foot, (as we know) because she &c.

269.] δ, δτι, δ τε. The Acc. Neut. of the Relative, when used adverbially (§ 133), yields the three 'Conjunctions' δ, δτι, δ τε, which mean properly in respect that, hence usually (a) because, or (b) that (after a Verb of saying, knowing, &c.). The antecedent 76 is generally wanting, but is found in a few instances: as II. 19. 421 τὸ οἶδα καὶ αὐτός, ὅ τοι κτλ.: Il. 5. 406 οὐδὲ τὸ οἶδε... όττι μάλ' οὐ δηναιός κτλ.: ΙΙ. Ι. 120 λεύσσετε τό γε πάντες, ο μοι кта.; also Il. 15. 217., 19. 57., 20. 466, and Od. 13. 314 (seemingly the only instance in the Odyssey). These places, however, serve to show the origin of the idiom. We have here the phenomenon already noticed in § 267, 5, viz. the Relative has no construction in its own Clause, but reflects the construction of the Demonstrative in the principal Clause. E.g. II. 20. 283 ταρβήσας δ οι άγχι πάγη βέλος dreading because the dart stuck near him represents an older $\tau \alpha \rho \beta \dot{\eta} \sigma \alpha s$ ($\tau \dot{\delta}$) $\delta \pi \dot{\alpha} \gamma \eta \beta \dot{\epsilon} \lambda \sigma s$. The adverbial Accusative with ταρβήσας would express the nature or ground of dread (as in τό γε δείδιθι, τόδε χώεο, &c.); hence the meaning dreading in respect of (or because of) this, that the dart stuck. Accordingly we find 3=because chiefly with Verbs of feeling, which regularly take a Neuter Pronoun of the ground of feeling.*

^{*} The Clauses of this type are the subject of Dr. Peter Schmitt's monograph, Ueber den Ursprung des Substantivsatzes mit Relativpartikeln im Griechischen (Würzburg, 1889). He rightly takes ὅ (ὅτι, ὁκ.) to be an Acc, of the 'inner object '(§ 133), but he seems to have overlooked the real difficulty; which is that ὅ supplies an object to the Verb of the principal Clause, not to the Verb of its own Clause. Thus he says 'ὁρῶ ὁ νοτεῖς war ursprünglich: ich weiss, was du krankst; οἶδ' ὅ σε ἐπήνεσε ich weiss, was er dich gelobt hat '(p. 21). But the

(1) 8 in respect that, because may be exemplified by-

II. 16. 835 Τρωσὶ φιλοπτολέμοισι μεταπρέπω, \tilde{o} σφιν ἀμύνω $\tilde{\eta}$ μαρ ἀναγκαῖον (for that I keep off).

Od. 1. 382 Τηλέμαχον θαύμαζον δ θαρσαλέως ἀγόρευε.

So II. 9. 534 (χωσαμένη), Od. 19. 543., 21. 289 (οὐκ ἀγαπậs ὅ).

The use to state a consequence as a ground of inference (like that of οῦνεκα in II. 9. 505, § 268) occurs in—

Od. 4. 206 τοίου γὰρ καὶ πατρός, ὁ καὶ πεπνυμένα βάζεις for you are of a wise father, (as I know) because you speak wisely: so Od. 18. 392, and probably also—

Il. 21. 150 τίς πόθεν εἰς ἀνδρῶν, ὅ μεν ἔτλης ἀντίος ἐλθεῖν; who are you that you dare &c.

The transition to the use of $\delta = that$ may be seen in—

Od. 2. 44 οὔτε τι δήμιον ἄλλο πιφαύσκομαι οὐδ' ἀγορεύω ἀλλ' ἐμὸν αὐτοῦ χρεῖος, ὅ μοι κακὸν ἔμπεσεν οἴκφ

what I tell is my own case (which consists in the fact) that evil has fallen on my house. It is common with olda, $\gamma_i \gamma_i \nu \omega \sigma \kappa \omega$ (II. 5. 433, &c.), at ω (II. 15. 248): and is found with Verbs of seeing, as II. 1. 120 leússet $\gamma \alpha \rho$ to $\gamma \epsilon$ mántes δ moi $\gamma \epsilon \rho \alpha s$ excetai all γs see this, that my prize goes elsewhere (II. 19. 144., 22. 445, Od. 17. 545).

- (2) öt because is common after the Verbs of feeling. We need only stop to notice some instances (parallel to those of 5 just quoted) in which öt is = as I know because:—
 - II. 16. 33 νηλεές, οὐκ ἄρα σοί γε πατὴρ ἦν ἱππότα Πηλεύς, οὐδὲ Θέτις μήτηρ, γλαυκὴ δέ σε τίκτε θάλασσα, πέτραι τ' ἢλίβατοι, ὅτι τοι νόος ἐστὶν ἀπηνής

meaning now I know that you are no child of Peleus &c., because your mind is relentless. So—

Il. 21. 410 νηπύτι', οὐδέ νύ πώ περ ἐπεφράσω ὅσσον ἀρείων εὕχομ' ἐγὼν ἔμεναι, ὅτι μοι μένος ἀντιφερίζεις.

Od. 5. 339 κάμμορε, τίπτε τοι δδε Ποσειδάων ἐνοσίχθων δούσατ' ἐκπάγλως, ὅτι τοι κακὰ πολλὰ φυτεύει

why is Poseidon so enraged against you (as he seems to be) since he

two meanings, I know in what respect you are sick and I know that you are sick are quite distinct, and are given by essentially different constructions of the Relative. Let us take as example a Clause which follows a Verb of feeling: $\dot{\epsilon}\chi\dot{\omega}\sigma\alpha\tauo$ őτι οἱ βέλος ἔκφυγε χειρός. The construction with ἐχώσατο is the Acc. of the 'inner object' (as τόδε χώεο, τό γε δείδιθι, &c.). But ὅτι is in a different Clause from ἐχώσατο: the full construction would be ἐχώσατο (τὸ) ὅτι. Schmitt would say that ὅτι ἔκφυγε also is an Acc. of the 'inner object,'—that the sentence meant originally was angered in respect of this in respect of which it flew out. It is surely more probable that ἐχώσατο ὅτι was like ἐξ οῦ from the time that, εἰς ὅ to the time that, οῦνεκα for the reason that, &c. (§ 267, 5), so that ὅτι was an Acc. by Attraction, and had no real construction with its own Verb.

causes you many evils? So II. 10. 142., 21. 488., 24. 240, Od. 14. 367., 22. 36.

The transition to the meaning that may be seen in—

II. 2. 255 ήσαι ὀνειδίζων ὅτι οἱ μάλα πολλὰ διδοῦσι reproaching him in respect that, with the fact that, &c. 24. 538. It is the regular meaning with Verbs of knowing: II. 8. 175 γιγνώσκω δ' ὅτι μοι πρόφρων κατένευσε Κρονίων I know that &c. Cp. II. 1. 536 οὐδέ μιν "Ηρη ἠγνοίησεν ἰδοῦσ' ὅτι οἱ κτλ.: 24. 563 καὶ δέ σε γιγνώσκω . . ὅττι θεῶν τίς σ' ἦγε.

The use of ὅτι=that is commoner in the Iliad than in the Odyssey (where ως and οὖνεκα partly supply the place, see § 268).

(3) The form $\delta \tau \epsilon$ (so written by Bekker to distinguish it from $\delta \tau \epsilon$ when) is found in Homer with the same varieties of meaning as δ and $\delta \tau \iota$. Thus we have $\delta \tau \epsilon = because$ in—

Π. 1. 244 χωόμενος ὅ τ' ἄριστον 'Αχαιῶν οὐδὲν ἔτισας angry because &c.; Π. 6. 126., 16. 509, Od. 8. 78. So—

i.e. there is a snare in this bidding me to get off the raft. So probably II. 1. 518 $\mathring{\eta}$ δ $\mathring{\eta}$ λοίγια $\mathring{\epsilon}$ ργ' $\mathring{\delta}$ τ $\acute{\epsilon}$ μ' κτλ. it is a pestilent thing that you &c.; II. 19. 57 $\mathring{\eta}$ αρ τι τόδ' ἀμφοτέροισιν αρειον $\mathring{\epsilon}$ πλετο $\mathring{\delta}$ τε κτλ.: and the exclamatory use (\S 267, 3, c) in II. 16. 433 $\mathring{\delta}$ μοι $\mathring{\epsilon}$ γών, $\mathring{\delta}$ τε κτλ. alas for me that &c.

Again, & TE is = as I know because, in - Denne brug nei hold higi dayly tale

II. 4. 31 δαιμονίη, τί νύ σε Πρίαμος Πριάμοιό τε παίδες τόσσα κακὰ ρέζουσιν, ὅ τ' ἀσπερχὲς μενεαίνεις

how do Priam and his sons do you such evil, (as they must do) since you are furiously enraged?

II. 15. 467 ἃ πόποι, ἢ δὴ πάγχυ μάχης ἐπὶ μήδεα κείρει δαίμων ἡμετέρης, ὅ τέ μοι βιὸν ἔκβαλε χειρός

(as I judge from this) that he has thrown the bow from my hands. So Od. 13. 129 δ té $\mu\epsilon$ $\beta\rho\sigma\tau$ 0 oð ti tíougi for that mortals honour me not: Od. 14. 89 o δ 0 δ 6 δ 6 τ 0 i igagi. . δ 7 où è θ 6 δ 0 out they know something (as is plain) because they are not willing: Od. 21. 254 τ 0 o σ 0 o δ 0 δ 6 δ 6 igs δ 7 o δ 8 o δ 9 o δ 9

With Verbs of knowing, again, δ τε has the meaning that—

Π. 1. 411 γυῷ δὲ καὶ 'Ατρεΐδης εὐρυκρείων 'Αγαμέμνων ην ἄτην, ὅ τ' ἄριστον 'Αχαιῶν οὐδὲν ἔτισεν

may know his folly, in that he failed to honour &c.

Od. 14. 365 ἐγὼ δ' εν οίδα καὶ αὐτὸς

νόστον εμείο ἄνακτος, ὅ τ' ἤχθετο πᾶσι θεοίσι

I know of the return of my lord, that (as it showed) he was hated

by all the gods. So II. 8. 251 ϵ ĭôov θ ' ő τ ' ắ ρ ' κτλ. saw that &c.;

and with γιγνώσκω, Il. 5. 231, &c.

The existence of a distinct of the with the meaning because or that depends upon its being shown that in places such as those now quoted the word cannot be either on that or ore when. latter explanation of the reading $\delta \tau \epsilon$ (or $\delta \tau$) is often admissible, r.g. in Il. 14. 71 ήδεα μεν γάρ ὅτε—, οἶδα δὲ νῦν ὅτε—; cp. Il. 15. 207 ἐσθλὸν καὶ τὸ τέτυκται ὅτ' . . εἰδῆ, and instances in Attic, as Soph. O. T. 1133 κάτοιδεν ήμος κτλ. he knows well of the time when &c., Eur. Troad. 70 οἶδ' ἡνίκ' Aἴas εἶλκε. But the supposition of a distinct of the is supported by a sufficient number of examples in Homer,—e.g. Il. 5. 331 $\gamma_i \gamma_\nu \omega \sigma \kappa \omega \nu \delta \tau' \delta \nu \alpha \lambda \kappa \iota s \delta \eta \nu \theta \epsilon \delta s$, —and generally by the complete correspondence of meaning thus obtained between δ, ὅτι, and ὅ τε. On the other hand it is extremely improbable that the i of on was ever capable of elision. In this respect on that stands on the same footing as Ti and on. Moreover, the adverbial use of these words, which gives them the character of Conjunctions, is only a slight extension of the ordinary Acc. of the Internal Object (§ 133). Hence if the Neut. of os and os Tis is used in this way, it is difficult to see any reason why the Neut. of the equally familiar os TE should be excluded. ancient authorities and the MSS. vary in some places between оте and от (as in Il. 14. 71, 72., 16. 35, Od. 13. 129), and on such a point we have no good external authority.

270.] ο, ότι, ότε as Conjunctions. In a few instances it is impossible to explain these Relatives by supplying an Accusative τό in the principal Clause. Thus in—

Od. 20. 333 νῦν δ' ἤδη τόδε δῆλον, ὅ τ' οὐκέτι νόστιμός ἐστι the Antecedent is a Pronoun in the Nom. Similarly in—

Il. 5. 349 ἢ οὐχ ἄλις ὅττι γυναῖκας ἀνάλκιδας ἢπεροπεύεις; the principal Clause is Impersonal, and the Antecedent might be a Nom. (is it not enough) or Gen. (is there not enough in this), but hardly an Accusative. Again in—

ΙΙ. 8. 362 οὐδέ τι τῶν μέμνηται, ὅ οἱ μάλα πολλάκις κτλ.

17. 207 τῶν ποινήν, ὅ τοι κτλ. (as amends for the fact that) the Relative Clause serves as a Genitive: cp. Od. 11. 540 γηθοσύνη ὅ οἱ κτλ., 12. 374 ἄγγελος ἡλθεν . . ὅ οἱ κτλ.

Add II. 9. 493 τὰ φρονέων ὅ μοι κτλ., 23. 545 τὰ φρονέων ὅτι οἰ κτλ.: and also Od. 2. 116 τὰ φρονέουσ' ἀνὰ θυμὸν ἄ οἱ κτλ., where

the v. l. of for a has good MS. authority.

In these instances, then, the forms \ddot{o} , &c. have ceased to be felt as Case-forms, and may properly be termed Conjunctions.

The Mood in all Clauses of this kind is the Indic.—not the Opt., as in some Attic uses (Goodwin, § 714).

It may be worth while pointing out the parallel between this extension of the Relative Clause and the development which has been observed in the use of the Infinitive (§ 234). In the first instance the Clause serves as epexegesis of an Acc. with a Verb of saying, knowing, feeling, &c. (§ 237, 2): μη δείδιθί τινα δίμεσθαι fear not any one, for being likely to see; ταρβήσας (τδ) δ άγχι πάγη βέλος fearing (this), that the spear stuck near him. Then the Acc. is used without reference to the construction of the principal Verb and consequently the dependent Clause may stand to it as logical Subject: οὕ τι νεμεσσητόν βασιλῆα ἀπαρέσσασθαι for a king to make his peace is no shame; οὐχ ἄλις ὅτι ἡπεροπενίεις is (the fact) that you deceive not enough;—where the Clause in both cases serves as a Nom. Finally the Clause is used as an indeclinable Noun of any Case: τῶν μέμνηται δ κτλ. remembers this, that &c.; to which corresponds the so-called 'articular Infinitive,' or Inf. with the Article as a Substantive.

The three forms $\delta,\,\delta$ $\tau\varepsilon,\,\delta\tau\iota$ do not differ perceptibly in meaning. Hence

the reduction in Attic to the single on is no real loss.

270*.] Indirect Discourse. Clauses introduced by δ (δ τε, δτι), ως, οῦνεκα after Verbs of saying and knowing are evidently of the nature of oratio obliqua, or indirect quotation of the words of

another person.

The Homeric language has no forms of Syntax peculiar to Indirect Discourse (such as the use of the Opt. or Pres. Indic. after a Secondary Tense). Every assertion is made from the speaker's own point of view: consequently what was present to the person quoted must be treated as now past. Accordingly the Present Tense of the oratio directa becomes the Impf., the Pf. becomes the Plpf. The Future is thrown into past time by the help of μέλλω, as in οὐδὲ τὸ ἤδη δ οὐ πείσεσθαι ἔμελλεν he knew not that he would not be persuaded. The only exception to this is Od. 13. 340 ἤδε δ νοστήσεις I knew that you will (i. e. would) return. For an instance of the Opt. with ως after a Verb of saying see § 306, 2: and cp. the Dependent Question, § 248.

The Clauses now in question are commoner after Verbs of knowing, hearing, remembering, &c. than after Verbs of saying. Of the former kind there are about 70 in Homer; of the latter, which may be counted as examples of true Indirect Discourse, there are 16. Of these, again, only three are in the Iliad (16. 131., 17. 654., 22. 439). This confirms the view that these Clauses are originally causal, the meaning that being derived from the meaning because (\S 268). If we confine ourselves to δ (δ $\tau\epsilon$) and $\delta\tau\iota$ the proportion is still more striking, since out of more than 50

instances there are only four with a Verb of saying *.

271.] Form of the Relative Clause. It is characteristic of the Relative Clause that the Verb to be is often omitted: as—

ΙΙ. 8. 524 μῦθος δ' δς μεν νῦν ὑγιής, εἰρημένος ἔστω,

^{*} The figures are taken from Schmitt (Ursprung des Substantivsatzes), but include instances of 5 te which he refers to 5 te when.

and so $\sigma\sigma\sigma$ 01 'Axa101, of $\pi\epsilon\rho$ $\delta\rho$ 10 τ 01, $\tilde{\eta}$ τ 1s $\delta\rho$ 10 τ 1, $\tilde{\eta}$ 5s τ 2 at 100 $\tilde{\eta}$ 5s $\tau\epsilon$ 6 kal 0 $\tilde{\eta}$ 6k. Hence we should write in Il. 11. 535., 20. 500 at τ 10 τ 2s al $\pi\epsilon\rho$ 1 different in Il. 21. 353 lx θ 16cs of katà divas. So with the Adverbs; as Od. 10. 176 $\tilde{\theta}\phi\rho$ 2 ev η 1 θ 0 $\tilde{\eta}$ 3 θ 6 $\tilde{\omega}$ 6s τ 6 so long as there is food and drink in the ship.

1. This ellipse leads to a peculiar 'Attraction' into the Case of the Antecedent, found chiefly with ὅσος τε, as—

Od. 10. 113 την δὲ γυναῖκα | εὖρον ὅσην τ' ὅρεος κορυφήν, which is equivalent to τόσην ὅση ἐστὶ κορυφή; and so ὅσον τε, Od. 9. 322, 325., 10. 167, 517., 11. 25; also οἶόν τε, Od. 19. 233. The only instance in the Iliad is somewhat different:—

ΙΙ. 1. 262 οὐ γάρ πω τοίους ἴδον . . οἶον Πειρίθοον κτλ.

The later Attraction of the Relative into the Case of the Antecedent is not found in Homer. Kühner gives as an example τη. 5. 265 της γάρ τοι γενεής ής Τρωί περ εὐρυόπα Ζεὺς δῶκε. But there the Gen. is partitive: 'the brood from which Zeus gave' (§ 151 e). So II. 23. 649 (§ 153).

2. Another effect of this omission may be found in the use of double Relatival forms, especially ως ότε as (it is) when; which again may be used without any Verb following: e.g.—

II. 13. 471 ἀλλ' ἔμεν' ὡς ὅτε τις σῦς οὕρεσιν ἀλκὶ πεποιθώς, ὅς τε μένει κτλ.

So ώς εἰ and ώς εἴ τε as (it would be) if, as in Il. 5. 373 τίς νύ σε τοιάδ' ἔρεξε.. ώς εἴ τι κακὸν ρέζουσαν.

A similar account is probably to be given of the peculiar double

Relative—

II. 8. 229 $\pi \hat{\eta}$ έβαν εὐχωλαί, ὅτε δη φάμεν εἶναι ἄριστοι, απός δπότ' ἐν Λήμνω κενεαυχέες ἢγοράασθε when once (whenever it was) you made boast in Lennos.

- 3. The want of a finite Verb also leads to the construction of olos, &s, &c. with the Infinitive. This is only beginning in Homer: see § 235. It arises by a kind of mixture or 'contamination' of two simple constructions, viz.—
- (1) the ordinary Inf. with the Demonstratives $\tau \hat{o}los$, $\tau \eta \lambda \hat{l} \kappa o s$, &c. (§ 232); as $\tau \hat{o}los$ à $\mu \nu \nu \hat{e} \mu \epsilon \nu$ of the kind to defend (Od. 2. 60), $\mu \hat{e} \nu \epsilon \nu \nu$ et $\tau \eta \lambda \hat{l} \kappa o s$ of the age for remaining (Od. 17. 20);
- (2) the Correlative form, such as II. 5. 483 τοῖον οἶόν κ' ἠὲ φέροιεν 'Αχαιοὶ ἤ κεν ἄγοιεν: II. 7. 231 ἡμεῖς δ' εἰμὲν τοῖοι οἱ ἃν σέθεν ἀντιάσαιμεν.

Thus (e.g.) Od. 21. 172 $\tau \circ i \circ v$. $\circ i \circ v$ $\tau \in \dot{\rho} v \tau \dot{\eta} \rho a$ $\beta \circ i \circ \dot{\tau}$ $\dot{\epsilon} \mu \epsilon v a \iota$ $\kappa a \dot{\iota} \ddot{\sigma} \tau \dot{\omega} v$ combines the forms $\tau \circ i \circ v \dot{\epsilon} \mu \epsilon v a \iota$ of the kind to be and $\tau \circ i \circ v \dot{\epsilon} \iota \dot{\epsilon} \dot{\sigma} \tau \dot{\epsilon}$ of the kind that (is). In other words, the con-

struction of $\tau o \hat{i} o s$ is transferred to the Correlatives $\tau o \hat{i} o s - o \hat{i} o s$. Then $\tau o \hat{i} o s$ is omitted, and we get o $\hat{i} o s$ with the Inf. The same may be said of $\tilde{\omega} s$ $\tau \epsilon$ with the Inf., which is post-Homeric.

272.] Double Relative Clauses. When a Relative introduces two or more Clauses connected by $\kappa \alpha i$ or $\delta \epsilon$, it need not be construed with any Clause after the first: e.g.—

II. 1. 162 ϕ $\xi \pi \iota \pi \delta \lambda \lambda' \dot{\epsilon} \mu \delta \gamma \eta \sigma a$, $\delta \delta \sigma a \nu \delta \dot{\epsilon} \mu o \iota \upsilon \dot{\iota} \epsilon s' A \chi a \iota \hat{\omega} \nu$ for which I toiled, and which the sons of the Greeks gave me.

Od. 2. 114 τῷ ὅτεῷ τε πατὴρ κέλεται καὶ ἀνδάνει αὐτῷ κὰ and who is pleasing to herself. The Relative is not repeated in any Clause of this form; but its place is often taken by another Pronoun (usually an enclitic, or an unemphatic αὐτός):—

II. 1. 78 ἢ γὰρ ὀἱομαι ἄνδρα χολωσέμεν, δε μέγα πάντων ᾿Αργείων κρατέει καί οἱ πείθονται ᾿Αχαιοί.

Od. 9. 19 εἴμ' 'Οδυσεὺς Λαερτιάδης, δς πᾶσι δόλοισιν 4576 ανθρώποισι μέλω, καί μευ κλέος οὐρανὸν ἵκει.

This idiom, it should be observed, is not peculiar to Homer,

but prevails in all periods of Greek (Kühner, II. p. 936).

On the same principle, when a succession of Clauses is introduced by a Relatival Adverb, the first Verb may be in the Subj. or Opt., while the rest are in the Indic. This is especially noticeable in similes, as—

II. 2. 147 ώς δ' ὅτε κινήση Ζέφυρος βαθὰ λήϊον ἐλθών, λαβρὸς ἐπαιγίζων, ἐπί τ' ἠμύει ἀσταχύεσσι.

4. 483 η ρά τ' εν είαμενη έλεος μεγάλοιο πεφύκη λείη, ἀτάρ τέ οἱ ὄζοι επ' ἀκροτάτη πεφύασι.

Successive Relative Clauses not connected by a Conjunction are frequent in Homer. The Relative may be repeated for the sake of emphasis: Od. 2. 130 δόμων ἀέκουσαν ἀπῶσαι ἥ μ' ἔτεχ' ἥ μ' ἔθρεψε. Or the second Clause is epexegetic of the first: as—

II. 5. 403 σχέτλιος, δβριμοεργός, δε οὐκ ὅθετ' αἴσυλα ῥέζων, δε τόξοισιν ἔκηδε θεούε (so 6. 131., 17. 674, &c.).

Or it marks the return to the main thread of the narrative: as-

Od. 14. 288 δὴ τότε Φοῖνιξ ἦλθεν ἀνήρ, ἀπατήλια εἰδώς, τρώκτης, δς δὴ πολλὰ κάκ' ἀνθρώποισιν ἐώργει, ὅς μ' ἄγε παρπεπιθὼν κτλ. (ep. Il. 15. 461–3).

Where different Pronouns are used as Relatives in successive Clauses, the reason of the variety may often be traced. Thus in II. 16. 157 οἱ δὲ λύκοι ὡς ἀμοφάγοι, τοῖσίν τε περὶ φρεσὶν ἄσπετος ἀλκή, οἶ τ' ἔλαφον . . δάπτονσιν, the Art. τοῖσι gives a characteristic of all wolves, the Rel. οῖ passes to the wolves of the particular simile. In both the meaning is general, accordingly τε is used.

Again, we find os te introducing a general assertion, while os

relates to a particular fact: as Π. 4. 442 η τ' δλίγη μèν πρῶτα κορύσσεται.. η σφιν καὶ τότε κτλ.; 5. 545 'Αλφειοῦ, ὅς τ' εὐρὺ ρέξει Πυλίων διὰ γαίης, ὃς τέκετ' 'Ορσίλοχον: and in the reverse order, Π. 18. 520 οἱ δ' ὅτε δή ρ' ἵκανον ὅθι σφίσιν εἶκε λοχῆσαι ἐν ποταμῷ,

őθι τ' ἀρδμὸς ἔην.

The difference between \mathring{o}_s τις and \mathring{o}_s τε appears in Od. 6. 286 καὶ δ' ἄλλη νεμεσῶ ἢ τις τοιαῦτά γε ῥέζοι, ἢ τ' ἀέκητι φίλων πατρὸς καὶ μητρὸς ἐόντων ἀνδράσι μίσγηται. Here ἢ τις insists on the inclusion of all members of the class (any one who—), ἢ τε prepares us for the class characteristics (one of the kind that—).

CHAPTER XII.

Uses of the Moods.

Introductory.

273.] Classification of Sentences. Before entering upon an examination of the Homeric uses of the Moods, it will be convenient to give some account of the different kinds of Sentences and Clauses with which we shall have to deal.

A Simple Sentence—or the principal Clause in a Complex Sentence—may be purely Affirmative. Or, the affirmation may be turned (either by the use of a suitable Pronoun or Particle, or by the tone and manner in which it is uttered) into a question: i.e. the Sentence may be Interrogative. Or, a predication may be framed in order to be denied: in which case a Particle is added to make the Sentence Negative. Or, the Sentence may express Wish, Purpose, or Command; and any of these may again be combined with a Negative, so as to express some variety of Prohibition. Or, once more, the Sentence may be Conditional, i.e. may assert, deny, command, &c. subject to a hypothesis; and this hypothesis or condition may be expressed by a subordinate Clause, or by an Adverb or adverbial phrase (then, in that case, or the like): or the condition need not be expressed at all, but conveyed by the drift of the context.

A subordinate Clause may be so loosely connected with the principal Clause as to be virtually an independent sentence. We have seen that this is generally the case (for example) with Clauses introduced by the Article (§ 262). The Clauses which chiefly concern us now are—

1. Dependent Interrogative Clauses.

- 2. Prohibitive Clauses (μή = lest).
- 3. Relative Clauses proper (introduced by os).
- 4. Clauses introduced by a Relatival Adverb ($\dot{\omega}s$, $\delta\theta\iota$, $\delta\theta\epsilon\nu$, $\delta\tau\epsilon$, $\xi\omega s$, $\delta\phi\rho a$, &c.; also $\xi\nu\theta a$, $\xi\nu a$, and $\xi\pi\epsilon \iota$).
- 5. Clauses introduced by et if.

This classification is based upon the grammatical form of the Clause. If we look to the relation in point of meaning between the two Clauses of a Complex Sentence, we find that subordinate Clauses fall into a wholly different set of groups. Thus there are—

(1) Clauses expressing cause or reason: as-

Il. 2. 274 νῦν δὲ τόδε μέγ' ἄριστον ἐν 'Αργείοισιν ἔρεξεν,
 δε τὸν λωβητῆρα ἐπεσβόλον ἔσχ' ἀγοράων.

And clauses like II. 4. 157 ωs σ' ἔβαλον Τρῶες since the Trojans have thus shot at you; 6. 166 οἶον ἄκουσε at hearing such a thing (§ 267, 3): as well as in the regular Causal use of ὄ, ὅτι, ὅ τε (§ 269), and οὖνεκα.

(2) Clauses expressing the Object of Verbs of saying, knowing, thinking, &c. (i. e. the fact or thing said, &c.): as—

ΙΙ. 2. 365 γυώση ἔπειθ' ὅς θ' ἡγεμόνων κακός, ὅς τέ νυ λαῶν.

Od. 6. 141 ὁ δὲ μερμήριξεν 'Οδυσσεύς | ή . . ή κτλ.

Il. 18. 125 γυοίεν δ' ώς δή δηρον έγω πολέμοιο πέπαυμαι. 601 πειρήσεται α' κε θέησιν (tries if it will run).

(3) Clauses expressing condition or limitation; which may be introduced—

By δς: as τῶν οὶ νῦν βροτοί εἰσι of the mortals now living: ὅς κ' ἐπιδευής he who is in want: ὅς κε θεοῖς ἐπιπείθηται he who shall obey the gods: ὅ τι οἱ εἴσαιτο whatever seemed to him.

By a Relatival Adverb: of manner, as ως ἐπιτέλλω as I bid, ως ἃν ἐγων εἴπω as I shall speak; of time, ἐπεί, ὅτε, &c., also εως and ὄφρα when they mean so long as; of place, as ὁππόθι πιότατον πεδίον where is the richest of the plain.

By ei—the common form of Conditional protasis.

It will be convenient to term all these Clauses 'Conditional'—the word being taken in a wide sense, so as to include every Clause of the nature of a definition or limitation, as well as those in which actual priority in time is implied.

(4) Final Clauses, expressing end or purpose: introduced—

By os; as II. 4. 190 ἐπιθήσει φάρμαχ' ἃ κεν παύσησι will apply drugs which shall stay: II. 14. 107 νῦν δ' εἴη οs.. ἐνίσποι may there be one who may tell.

By ώς, ὅπως, ἴνα—the ordinary forms expressing purpose.

By εως (better written η̂ος in Homer *) and ὅφρα, when they mean till such time that. To these we may add εἰς ο until, which (like οῦνεκα) is practically a single word.

By ϵi or a i: as II. 1. 420 $\epsilon i \mu'$ $a v \tau \dot{\eta}$. . a i' $\kappa \epsilon$ $\pi i \theta \eta \tau a \iota$ I go in the hope that he will listen.

By $\mu \dot{\eta}$ lest (= $\forall \nu a \ \mu \dot{\eta}$).

It is important to observe that the several groups of Clauses now pointed out are generally indistinguishable in respect of grammatical form; so that Clauses of the same form (introduced by the same Pronoun or Particle, and with a Verb of the same Tense and Mood) often bear entirely different meanings. This will be shown in detail in the course of the present chapter; meanwhile a few instances may be noted as illustrations.

I. Final Clauses introduced by os are in the same form as the Conditional

or limiting Clauses such as ős κε τύχη, ὅττι κεν εἴπης, &c.

2. The regular Final Clauses with ώs and ὅπωs are in the same form as the limiting ώs ἀν ἐγὰν εἴπω as I shall speak, ὅπωs ἐθέλησιν as he pleases, &c.

3. Clauses with two and oppa may either be Conditional (when the Con-

junction means so long as), or Final (when it means until).

4. The Final Clause with et is indistinguishable in form from the ordinary Conditional Protasis: compare αἴ κε πίθηται to see if he will listen with II. 24. 592 μή μοι Πάτροκλε σκυδμαινέμεν αἴ κε πύθηαι be not angry in case you hear.

5. Clauses with μή may either be Final (when μή = ίνα μή), or Object-

Clauses after a Verb of fearing (δείδω μή).

From these examples it is evident that in this as in so many parts of Greek grammar the most important differences of meaning are not expressed by corresponding distinctions of form. The Pronoun or Conjunction which connects the subordinate with the principal Clause generally leaves the real relation between the two Clauses to be gathered from the context.

These different kinds of Sentence are distinguished to some extent by means of Particles, of which it will be enough to say here that—

- (1) Strong Affirmation is expressed by $\hat{\eta}$, and the same Particle is employed in *Interrogation* (especially with ironical force).
 - (2) Negation is expressed by οὐκί (οὐκ, οὐ), Prohibition by μή.
- (3) The Particle εἰ, in its ordinary use, marks a Conditional Protasis, i.e. a Clause stating a condition or supposition.
- (4) The Particles $\kappa \epsilon(\nu)$ and $\tilde{\alpha}\nu$ mark a predication as being *Conditional*, or made in view of some *limitation* to particular conditions or circumstances.

^{*} It is often convenient to use the Attic form $\xi \omega s$ as the name of the Particle, but this cannot be the true Homeric form. The metre shows that it must be a trochee; and the Doric δs (Ahrens, Dial. Dor. p. 200) represents contraction of δos : cp. the Cretan $\tau \delta \omega s$ for $\tau \delta \omega s$ (Hesych.). Hence we should have in Homer either $\hat{\eta} os$ (the older Ionic form, cp. $\nu \eta \delta s$) or $\delta \omega s$, which would properly be Doric or $\delta \omega s$ below the Adós &c. Of these $\delta \omega s$ is evidently the more probable. Nauck Met. G. B. $\delta \omega s$

The Subjunctive—in Principal Clauses.

274.] The Subjunctive in a Simple Sentence, or in the Principal Clause of a Complex Sentence, may be said in general to express either the will of the speaker or his sense of the necessity of a future event. Like the English must and shall, by which it may usually be rendered, it is intermediate in meaning between an Imperative and a Future. Sometimes (as in $to \mu \epsilon \nu$ let us go, or in Prohibitions with $\mu \dot{\eta}$) it is virtually Imperative; sometimes it is an emphatic or passionate Future. These varieties of use will be best understood if treated with reference to the different kinds of sentence—Affirmative, Interrogative, Negative, Prohibitive, &c.—in which they occur.

275.] In Affirmative sentences the force of the Subj. depends in great measure on the Person used.

(a) In the First Person the Subj. supplies the place of an M. Mandara Imperative, so far as such a thing is conceivable: that is, it of fordrands expresses what the speaker resolves or insists upon doing; e.g.—

Il. 9. 121 ὑμῶν δ' ἐν πάντεσσι περικλυτὰ δῶρ' ὀνομήνω (where the list of gifts immediately follows).

Od. 2. 222 σῆμά τέ οἱ χεύω καὶ ἐπὶ κτέρεα κτερείξω
πολλὰ μάλ' ὅσσα ἔοικε, καὶ ἀνέρι μητέρα δώσω
(the Subj. expresses the decisive action to be reference taken by Telemachus, viz. to acknowledge his father's death: the Fut. δώσω expresses what would follow as a matter of course).

12. 383 δύσομαι εἰς 'Ατδαο καὶ ἐν νεκύεσσι φαείνω (said by way of a threat).

Hence after a Clause containing an Imperative the Subj. is used to show what the speaker will do as his part of what he desires to be done: as—

Il. 6. 340 ἀλλ' ἄγε νῦν ἐπίμεινον, ἀρήϊα τεύχεα δύω do you wait, and I will put on my armour.

 416 σχέσθε, φίλοι, καί μ' οἷον ἐάσατε κηδόμενοί περ ἐξελθόντα πόληος ἱκέσθ' ἐπὶ νῆας 'Αχαιῶν, λίσσωμ' ἀνέρα τοῦτον κτλ.

450 δεῦτε, δύω μοι ἔπεσθον, ἴδωμ' ὅτιν' ἔργα τέτυκται. So after the phrases ἀλλ' ἄγε, εἰ δ' ἄγε, as Od. 6. 126 ἀλλ' ἄγ' ἐγὼν αὐτὸς πειρήσομαι ἠδὲ ἴδωμαι: 9. 37 εἰ δ' ἄγε τοι καὶ νόστον ἐμὸν πολυκηδέ ἐνίσπω. On the phrase εἰ δ' ἄγε see § 321.

To show that a purpose is *conditional* upon something else being done, the Subj. may be qualified by the Particle $\kappa \epsilon(\nu)$:

Il. 1. 137 εὶ δέ κε μὴ δώωσιν, ἐγὰ δέ κεν αὐτὸς ἔλωμαι if they do not give her, I will (in that case) &c.

Il. 14. 235 πείθευ, ενώ δέ κέ τοι είδεω χάριν obey, and I will feel thankfulness.

16. 129 δύσεο τεύχεα θασσον, έγω δέ κε λαον αγείρω.

Od. 17. 417 τῷ σε χρὴ δόμεναι καὶ λώϊον ἠέ περ ἄλλοι σίτου ' ἐγὼ δέ κέ σε κλείω κτλ.

So too II. 1. 183 $\tau \eta \nu \mu \epsilon \nu ... \pi \epsilon \mu \psi \omega$, $\epsilon \gamma \omega \delta \epsilon' \kappa' \delta \gamma \omega$ Briogito I will send her (as required), and then I will take Briseis—the Subj. expressing the speaker's own threatened action, and $\kappa \epsilon \nu$ marking that it is the counterpart to what is imposed upon him. It will be found that $\kappa \epsilon \nu$ is used when the Clause with the Subj. is introduced by $\delta \epsilon$, but not when it follows without a connecting Particle. I.e. it is when the two Clauses are set against one another by $\delta \epsilon$ that it becomes necessary to express also the conditional nature of the second Clause.

This use of κεν with the Subj. is not found except in Homer. The First Person Plural is similarly used, as Od. 3. 17 ἀλλ' ἄγε νῦν ἰθὺς κίε Νέστορος ἱπποδάμοιο εἴδομεν κτλ. And so in the common Hortatory Subj., as φεύγωμεν let us fly.

(b) A Subj. of the Second and Third Person in an Affirmative sentence is usually an emphatic Future, sometimes approaching the force of an Imperative. The only example of a pure Subj. (i. e. without κεν or ἄν) in this use appears to be the phrase καί ποτέ τις εἴπησι and men shall say (II. 6. 459, 479., 7. 87).

With av we find-

Il. 1. 205 $\mathring{\eta}$ s $\mathring{v}\pi\epsilon\rho\sigma\pi\lambda(\eta\sigma\iota\ \tau\acute{a}\chi'\ \mathring{a}v\ \pi\sigma\tau\epsilon\ \theta\nu\mu\grave{o}v\ \mathring{o}\lambda\eta\tau a\iota$ (in effect a threat of what the speaker will do).

22. 505 νῦν δ' αν πολλα πάθησι φίλου ἀπὸ πατρὸς αμαρτών but now he must suffer much &c.

With KEV the examples are rather more numerous:—

Od. 1. 396 τῶν κέν τις τόδ' ἔχησιν, ἐπεὶ θάνε διος 'Οδυσσεύς let one of them have this (emphatic assent).

4. 80 ἀνδρῶν δ' ή κέν τίς μοι ἐρίσσεται ήὲ καὶ οὐκί.

4. 391 καὶ δέ κέ τοι εἴπησι κτλ.

10. 507 ἦσθαι, τὴν δέ κέ τοι πνοιὴ Βορέαο φέρησι sit still, and her the breath of Boreas shall bear along (solemn prophetic assurance).

II. 9. 701 ἀλλ' ἢ τοι κείνου μὲν ἐάσομεν, ἢ κεν ἴησιν ἢ κε μένη (let him go or let him stay): cp. Od. 14. 183.

Note that where two alternatives are not expressed by the same Mood, the Subj. gives the alternative on which the stress is laid:

Π. 11. 431 σήμερον ἢ δοιοῖσιν ἐπεύξεαι . .
 ἤ κεν ἐμῷ ὑπὸ δουρὶ τυπεὶς ἀπὸ θυμὸν ὀλέσσης.

Il. 18. 308 στήσομαι, ή κε φέρησι μέγα κράτος ή κε φεροίμην I shall stand firm, let him gain the victory (= though he shall gain) or I may gain it.

Od. 4. 692 ἄλλον κ' ἐχθαίρησι βροτῶν, ἄλλον κε φιλοίη a king will (is sure to) hate one, he may love another.

A curious combination of Opt. and Subj. is found in-

 24. 654 αὐτίκ' ἂν ἐξείποι 'Αγαμέμνονι, ποιμένι λαῶν, καί κεν ἀνάβλησις λύσιος νεκροῖο γένηται

he would straightway tell Agamennon, and then there must be a delay in the ransoming of the dead. The Subj. appears to express the certainty of the further consequence, as though the hypothetical case $(a \hat{v} \tau i \kappa)$ $\hat{\epsilon} \xi \epsilon i \pi o i$ had actually occurred.

276.] In Negative Clauses properly so called (i.e. distinguished from Prohibitions) the Subj. is an emphatic Future. We find—

(a) The pure Subj. (expressing a general denial):—

II. 1. 262 οὐ γάρ πω τοίους ἴδον ἀνέρας οὐδὲ ἴδωμαι I have not seen—I never shall see.

 197 οὐ γάρ τίς με βίη γε ἐκὼν ἀέκοντα δίηται no man shall chase me against my will.

15. 349 οὐδέ νυ τόν γε γνωτοί τε γνωταί τε πυρὸς λελάχωσι θανόντα.

Od. 16. 437 οὐκ ἔσθ' οὖτος ἀνὴρ οὐδ' ἔσσεται οὐδὲ γένηται there is not, there never will or can be, the man who, &c. (so 6. 201).

24. 29 μοιρ' όλοή, την ού τις άλεύεται (cp. 14. 400).

(b) The Subj. with av:-

II. 3. 54 οὐκ ἄν τοι χραίσμη κίθαρις κτλ.
be sure that then your lyre will not avail you.

 386 εἰ μὲν δὴ ἀντίβιον σὰν τεύχεσι πειρηθείης, οὖκ ἄν τοι χραίσμησι βιὸς κτλ.

The reason for a in these places is obvious: in the following instances it seems to be used because there is a contrast:—

II. 2. 488 πληθὺν δ' σὐκ ἃν ἐγὼ μυθήσομαι σὐδ' ὀνομήνω but the multitude I cannot declare or tell by name.

Od. 6, 221 ἄντην δ' οὖκ ἃν ἔγωγε λοέσσομαι (ἄντην is emphatic : cp. Od. 4, 240., 11, 328, 517).

277.] In Interrogative sentences the Subj. generally expresses necessity, submission to some command or power; as Il. 10. 62 avol. 1.60 avol. 1.

πάθω; τί νύ μοι μήκιστα γένηται; what am I to suffer? what is to become of me? And rhetorically, with an implied negation—

II. 18. 188 πῶς τ' ἄρ' ἴω μετὰ μῶλον ; ἔχουσι δὲ τεύχε' ἐκείνοι how can I go into the battle? They have my arms.

ΙΙ. 1. 150 πῶς τίς τοι πρόφρων ἔπεσιν πείθηται 'Αχαιῶν;

One or two passages given by Delbrück under this head should perhaps be classed as Subordinate Clauses. A transitional instance may be seen in Od. 22. 166 σὺ δέ μοι νημερτὲς ἐνίσπες, ημιν ἀποκτείνω . ἡε σοὶ ἐνθάδ' ἄγω κτλ. tell me, am I to kill him, or bring him here? Here the Clause may be a distinct sentence; but not so Il. 9. 618 ἄμα δ' ἠοῦ φαινομένηφιν φρασσόμεθ' ἤ κε νεώμεθ' κτλ., because this does not express an actual but an intended future deliberation. So in Od. 16. 73 μητρὶ δ' ἐμῆ δίχα θυμὸς ἐνὶ φρεσὶ μερμηρίζει ἡ αὐτοῦ παρ' ἐμοί τε μένη κτλ. the form of expression is changed from the First to the Third Person, as in oratio obliqua (§ 280).

278.] With the *Prohibitive* Particle μή the Subj. has the character of an Imperative. We may distinguish however—

(a) Direct forbidding, usually with the First Person Plural (answering to the Hortatory Subj.), and the Second Person Sing.; sometimes also with the Third Person, as—

II. 4. 37 ἔρξον ὅπως ἐθέλεις μὴ τοῦτό γε νεῖκος ὀπίσσω σοὶ καὶ ἐμοὶ μέγ' ἔρισμα μετ' ἀμφοτέροισι γένηται I do not want this to become a quarrel.

Od. 22. 213 Μέντορ, μή σ' ἐπέεσσι παραιπεπίθησιν 'Οδυσσεύς see that Ulysses does not persuade you.

And with the First Person Sing., as II. 1. 26 μή σε κιχείω let me not catch you; II. 21. 475 μή σεν ἀκούσω.

(b) Fear, warning, suggestion of danger, &c.; e.g.—
 II. 2. 195 μή τι χολωσάμενος ρέξη (I fear he will &c.).

5. 487 μή πως ως άψισι λίνου άλόντε πανάγρου ἀνδράσι δυσμενέεσσιν έλωρ και κύρμα γένησθε see that you do not become a prey &c.

22. 123 μή μιν έγω μεν εκωμαι ιών, δ δέ μ' οὐκ έλεήσει.

Od. 5. 356 & μοι έγώ, μή τίς μοι ὑφαίνησιν δόλον αὖτε $\mathring{a}\theta$ ανάτων (I hope some god is not weaving &c.).

18. 334 μή τίς τοι τάχα 'Ίρου ἀμείνων ἄλλος ἀναστῆ see that a better than Irus does not rise up.

The construction is the same in principle when a Clause of this kind follows a Verb of fearing; and it is sometimes a question whether the Clause is subordinate or not. Thus the older editors (including Wolf) punctuated II. 11. 470 δείδω, μή τι πάθησι—as though δείδω were parenthetical. It is

probable, however, that in such cases the Clause with μή has acquired a subordinate character, serving as Object to the Verb (thing feared); see § 281.

On the other hand, the Clauses now in question are often explained by supposing an ellipse of a Verb of fearing: $\mu \dot{\eta}$ $\dot{\rho} \dot{\epsilon} \dot{\epsilon} \dot{\eta}$ for $\delta \dot{\epsilon} \dot{\delta} \dot{\omega} \ \mu \dot{\eta}$ $\dot{\rho} \dot{\epsilon} \dot{\epsilon} \dot{\eta}$. This is open to the objection that it separates Clauses which are essentially similar. For $\mu \dot{\eta}$ $\dot{\rho} \dot{\epsilon} \dot{\epsilon} \dot{\eta}$ I will not have him do (hence I fear he may do) is identical in form with $\mu \dot{\eta}$ $\dot{\rho} \dot{\epsilon} \dot{\epsilon} \dot{\eta}$ I will not have you do. In this case, then, we have the simple Sentence $\mu \dot{\eta}$ $\dot{\rho} \dot{\epsilon} \dot{\epsilon} \dot{\eta}$, as well as the Compound $\delta \dot{\epsilon} \dot{\epsilon} \dot{\delta} \omega \ \mu \dot{\eta}$ $\dot{\rho} \dot{\epsilon} \dot{\epsilon} \dot{\eta}$, into which it entered.

The combination μη οὐ—prohibition of a negative—is extremely rare in Homer. In II. 5. 233 μη τω μεν δείσαντε ματήσετον οὐδ' ἐθέλητον, and II. 16. 128 μη δη νηας ἔλωσι καὶ οὐκέτι φνκτὰ πέλωνται, the Particles are in distinct Clauses. It occurs in a Final Clause, II. 1. 28 μη νύ τοι οὐ χραίσμη κτλ., II. 24. 569: and after δείδω in II. 10. 39 δείδω μη οὔ τίς τοι κτλ.

The Subj. in this use does not take ker or ar, the prohibition

being always regarded as unconditional.

It is well known that the *Present* Subj. is not used as an Imperative of Prohibition (with μή). The rule is absolute in Homer for the Second Person. The Third Person is occasionally used when fear (not command) is expressed; the instances are,—Od. 5. 356 (quoted above); 15. 19 μή νύ τι... φέρηται; 16. 87 μή μιν κερτομέωσιν. The restriction does not apply to the First Person Plur., as II. 13. 292 μηκέτι ταῦτα λεγώμεθα. We shall see that a corresponding rule forbids or restricts the use of μή with the Aorist Imperative (§ 327).

279.] Homeric and Attic uses. In Attic the use of the Subj. in independent Clauses is either Hortatory, or Deliberative, or Prohibitive. Thus the use with ar (§ 275, a), the use in Affirmation (§ 275, b), and the Negative uses (§ 276) do not survive.

The Subjunctive in Subordinate Clauses.

280.] Clauses with $\mathring{\eta} \epsilon - \mathring{\eta} \epsilon$. Doubt or deliberation between alternative courses of action is expressed by Clauses of the form $\mathring{\eta} \epsilon (\mathring{\eta}) - \mathring{\eta} \epsilon (\mathring{\eta})$ with the Subj., dependent on a Verb such as $\phi \rho \acute{\alpha}$ -ζομαι, $\mu \epsilon \rho \mu \eta \rho \acute{\iota} \zeta \omega$, &c., or an equivalent phrase : e.g.—

Π. 4. 14. ἡμεῖς δὲ φραζώμεθ' ὅπως ἔσται τάδε ἔργα,
 ἡ ρ' αὖτις πόλεμόν τε κακὸν καὶ φύλοπιν αἰνὴν ὅρσομεν, ἡ φιλότητα μετ' ἀμφοτέροισι βάλωμεν.

Od. 19. 524 ως καὶ ἐμοὶ δίχα θυμὸς ὀρώρεται ἔνθα καὶ ἔνθα, ἢὲ μένω . . ἢ ἦδη ἄμ' ἔπωμαι κτλ. (cp. 22. 167).

This form is also found (but rarely) expressing, not the speaker's own deliberation, but that of a third person:—

Od. 16. 73 μητρί δ' ἐμῆ δίχα θυμὸς ἐνὶ φρεσὶ μερμηρίζει, η αὐτοῦ παρ' ἐμοί τε μένη καὶ δῶμα κομίζη, κτλ.

The speaker (Telemachus) here expresses himself from his mother's point of view, only putting the Third Person for the First.

So of doubt as to which of two possible results of the speaker's action will be realised:—

ΙΙ. 13. 327 εἴδομεν, ἢέ τω εὖχος ὀρέξομεν, ἢέ τις ἡμῖν.

 243 εἴσεται ή ρα καὶ οἶος ἐπίστηται πολεμίζειν ἡμέτερος θεράπων, ἡ οἱ κτλ.

where ἐπίστηται (is to know,=will prove to know) is used nearly as the Latin Subj. in Indirect Questions.* An example after a Past Tense is found in Il. 16. 646 ff.; see § 298 fin.

- 281.] Clauses with μή. These are mainly of two kinds —
- (1) Final Clauses: the Verb of the principal Clause being-
 - (a) an Imperative, or equivalent form: as—
 - ΙΙ. 3. 414 μή μ' έρεθε, σχετλίη, μη χωσαμένη σε μεθείω.
 - (b) a Present or Future in the First Person: as—
 - Od. 6. 273 των άλεείνω φημιν άδευκέα, μή τις όπίσσω μωμεύη.

In these places the governing Verb shows that the purpose expressed is the speaker's own. The only instance of a different kind is—

II. 13. 648 ἃψ δ' ἐτάρων εἰς ἔθνος ἐχάζετο κῆρ' ἀλεείνων, πάντοσε παπταίνων, μή τις χρόα χαλκῷ ἐπαύρη.

Here (if the reading $\epsilon \pi a i \rho \eta$ is right) the poet describes the fear as though it were present to himself (see however § 298 fin.).

The two groups of Clauses under discussion agree in using only the *pure* Subj. (not the Subj with KEV or aV). In this respect they adhere to the form of the Simple Prohibitive Clause (§ 278).

(2) Clauses following a Verb that expresses the fear of the speaker, as $\delta \epsilon i \delta \omega \ \mu \dot{\eta} \ \tau \iota \ \pi \dot{\alpha} \theta \eta \sigma \iota \ I fear that he will suffer. Here the Clause with <math>\mu \dot{\eta}$, although of the same form as the independent Clauses given in § 278, is practically subordinate, and serves as Object to the Verb. The Verb, it is to be observed, is always in a Present Tense, and in the First Person: i.e. it is the speaker's own present fear that is expressed.

^{*} It is impossible to agree with the scholars who explain $\epsilon\pi i\sigma\tau\eta\tau\alpha\iota$ here as an Indicative; see G. Meyer, G. G. § 485.

Such a Clause may be Object to a Verb of knowing, &c., as—
Il. 10. 100 δυσμενέες δ' ἄνδρες σχεδὸν ῆαται, οὐδέ τι ἴδμεν
μή πως καὶ διὰ νύκτα μενοινήσωσι μάχεσθαι.

The fear expressed by $\mu\dot{\eta}$ $\pi\omega_S$ $\kappa\tau\lambda$. is subordinated (or on the way to be subordinated) to $\eth \mu \epsilon \nu$: we do not know (said apprehensively) whether they will not be eager &c. So Od. 24. 491 $\dot{\epsilon} \xi \epsilon \lambda \theta \dot{\omega} \nu$ $\tau \iota s$ $\dot{\iota} \delta \iota \iota \iota \mu \dot{\eta} \delta \dot{\eta} \sigma \chi \epsilon \delta \dot{\delta} \nu$ $\dot{\omega} \sigma \iota \kappa \iota \dot{\sigma} \nu \tau \epsilon s$ some one go out and look whether they are not near. And in the Prohibitive use—

II. 5. 411 φραζέσθω μή τίς οἱ ἀμείνων σεῖο μάχηται, μὴ δὴν κτλ. let him see to it that no one &c., lest &c.

Od. 22. 367 εἰπὲ δὲ πατρὶ μή με περισθενέων δηλήσεται. So with a Verb of swearing, Od. 12. 298 δμόσσατε μή πού τις . . ἀποκτάνη swear that no one shall slay: Od. 18. 55.

282.] Relative Clauses. These fall into the two groups of Final Clauses and Conditional or limiting Clauses.

The Relative Clauses called Final in the strict sense of the word are those which follow a Clause expressive of will; and the reference to the future is shown in most cases by KEV: e.g.—

24. 119 δώρα δ' 'Αχιλληϊ φερέμεν τά κε θυμον ίηνη.

Od. 13. 399 ἀμφὶ δὲ λαῖφος ἔσσω, ὅ κε στυγέησιν ἰδὼν ἄνθρωπος ἔχοντα.

403 ὅνομ' εὕρεο ὅττι κε θῆαι.

With ellipse of the antecedent, so that the Clause supplies an Object to the governing Verb—

ΙΙ. 7. 171 κλήρω νθν πεπάλασθε διαμπερές δς κε λάχησι.

In other instances the notion of *End* is less distinctly conveyed, so that the Subj. need only have the emphatic Future meaning (§ 275, b): as—

 11. 126 μέλαιναν φρίχ' ὁπαίξει ἰχθύς, ὅς κε φάγησι Λυκάονος ἀργέτα δημόν.

Od. 10. 538 ἔνθα τοι αὖτίκα μάντις ἐλεύσεται, ὅρχαμε λαῶν, ὅς κέν τοι εἴπησι κτλ. (so 4. 389, 756., 11. 135).

The prophetic tone prevails in these places: cp. II. 8. 33 ἀλλ' ἔμπης Δαναῶν ὀλοφυρόμεθ' αἰχμητάων, οῖ κεν δὴ . . ὅλωνται, where the Subj. is used as in an independent sentence.

The chief examples of a pure Subj. in a Final Clause are—

 3. 286 τιμὴν δ' 'Αργείοις ἀποτινέμεν ἥν τιν' ἔοικεν, ἥ τε καὶ ἐσσομένοισι μετ' ἀνθρώποισι πέληται.

Od. 18. 334 μή τίς τοι τάχα ³Ιρος ἀμείνων ἄλλος ἀναστῆ, ὅς τίς σ' . . δώματος ἐκπέμψησι.

So Il. 18. 467 παρέσσεται οἶά τις . . θαυμάσσεται (unless this is Fut.): also the Object Clause Il. 5. 33 μάρνασθ', ὁπποτέροισι πατηρ Zεὺς κῦδος ὀρέξη to fight (out the issue) to which of the two Zeus shall give victory (i. e. till one or other wins). The want of κεν or ἄν is owing to the vagueness of the future event contemplated, i. e. the wish to exclude reference to a particular occasion.

The Relative is sometimes used with the Subj. after a Negative principal Clause—where there is necessarily no actual

purpose:--

Od. 6. 201 οὐκ ἔσθ' οὖτος ἀνὴρ . . ὅς κεν . . Ἱκηται (v. l. Ἱκοιτο).

Π. 23. 345 οὐκ ἔσθ' ὅς κέ σ' ἔλησι κτλ.

and without ker, Il. 21. 103 $v\hat{v}v$ δ' οὖκ ἔσθ' ὅς τις θάνατον φύγη $(v. l. \phi \dot{v} \gamma o \iota)$. In these places the construction evidently follows that of οὖ and οὖκ ἄν with the Subj. in Simple sentences (οὖκ ἔσθ' δς φύγη = οὕ τις φύγη). Otherwise we should have the Opt. $(\S 304, b)$.

The Subj. is quite anomalous in-

Od. 2. 42 οὕτε τιν' ἀγγελίην στρατοῦ ἔκλυον ἐρχομένοιο, ἥν χ' ὑμῖν σάφα εἴπω, ὅτε πρότερός γε πυθοίμην.

But here the speaker is repeating what has been said in the Third Person (30, 31), and with the regular Opt. (είποι, πύθοιτο). He evidently uses είπω

because είποιμι does not fit the metre.

It is worth notice that the Relative of purpose with the Subj. is much commoner in the Odyssey than in the Iliad. Of the group which Delbrück describes as Subjunctives of Will with kev, eleven are from the Odyssey, two (II. 9. 166., 24. 119) are from the Iliad (Synt. Forsch. I. pp. 130–132). In Attic the idiom survives in a few phrases, as $\xi\chi\epsilon\iota\ \tilde{\sigma}\ \tau\iota\ \epsilon\tilde{\iota}\pi\eta$ (Goodwin, § 65, n. 3).

- 283.] Conditional Relative Clauses. The numerous Clauses which fall under this heading may be divided again into two classes distinguished by the presence or absence of kev or av.
- (a) The pure Subj. is used when the speaker wishes to avoid reference to particular cases, especially to any future occasion or state of things. Hence the governing Verb is generally a Present or Perfect Indicative: examples are—
 - Il. 1. 554 τὰ φράζεαι, ἄσσ' ἐθέλησθα (whatever you choose).

14. 81 βέλτερον δς φεύγων προφύγη κακὸν ἢὲ ἀλώη.

Od. 8. 546 αντί κασιγνήτου ξείνός θ' ίκέτης τε τέτυκται ανέρι δς τ' δλίγον περ επιψαύη πραπίδεσσι.

In Similes this usage is extremely common; as-

 5. 5 ἀστέρ' ὀπωρινῷ ἐναλίγκιον, ὅς τε μάλιστα λαμπρὸν παμφαίνησι (3. 62., 5. 138., 10. 185, &c.).

Od. 13. 31 ως δ' ὅτ' ἀνὴρ δόρποιο λιλαίεται, ῷ τε πανῆμαρ νειὸν ἀν' ἔλκητον βόε οἴνοπε πηκτὸν ἄροτρον.

Where the principal Verb refers to the future, and KEV or av is not used, the intention is to make the reference quite general and sweeping; e.g.—

Od. 20. 334 ἀλλ' ἄγε σῆ τάδε μητρὶ παρεζόμενος κατάλεξον γήμασθ' ὅς τις ἄριστος ἀνὴρ καὶ πλεῖστα πόρησι.

Forms of the 3 Sing. Plapf. are sometimes given by the MSS. and older editions in Clauses of this kind: as πεφύκει (II. 4. 483), ἐστήκει (II. 17. 435), &c. These were corrected by Hermann (Opusc. ii. 44), reading πεφύκη, ἐστήκη, &c.: see La Roche on II. 4. 483.

(b) The Subj. with KEV indicates limitation to particular circumstances in the future. Hence it is used (with few exceptions) when the govering Verb is a Future, or implies futurity (an Imperative, Subjunctive or Optative): as—

ΙΙ. 1. 139 ὁ δέ κεν κεχολώσεται δυ κεν Ίκωμαι.

Od. 2. 25 κέκλυτε δη νῦν μευ, Ἰθακήσιοι, ὅττι κεν εἴπω.

Π. 21. 103 νῦν δ' οὐκ ἔσθ' ὅς τις θάνατον φύγη, ὅν κε θεός γε κτλ.

Od. 1. 316 δώρον δ' ὅττι κέ μοι δοῦναι φίλον ἦτορ ἀνώγη, αὖτις ἀνερχομένφ δόμεναι (cp. Od. 6. 28).

And after a Verbal in -ros expressive of necessity:-

Π. 1. 527 οὐδ' ἀτελεύτητον ὅ τι κεν κτλ.

3. 65 οὖ τοι ἀπόβλητ' ἐστὶ . . ὅσσα κεν κτλ.

The reference to a particular future occasion may be evident from the context: as:—

Od. 6. 158 κείνος δ' αὖ περὶ κῆρι μακάρτατος ἔξοχον ἄλλων, ὅς κέ σ' ἐέδνοισι βρίσας οἶκόνδ' ἀγάγηται.

In the following places this rule appears to be violated by $\kappa \dot{\epsilon}(v)$ being used where the reference is general; II. 1. 218., 3. 279., 6. 228, 229., 9. 313, 510, 615., 11. 409., 14. 416., 16. 621., 17. 99., 19. 167, 228, 260., 21. 24, 484., 23. 322., 24. 335, Od. 4. 196., 7. 33., 8. 32, 586., 10. 22, 74, 328., 14. 126., 15. 21, 55, 70, 345. 422., 19. 564., 20. 295., 21. 313, 345. There is strong reason, however, to believe that in most of these instances the appearance of the Particle is due to alteration of the original text. Of the three forms $\kappa \epsilon v$, $\kappa \epsilon$, κ' , the first is on the whole the most frequent in Homer. But out of the 35 places now in question the form $\kappa \epsilon v$ only occurs in six (not counting II. 14. 416 δs $\kappa \epsilon v$ $\delta \eta \tau a u$, where $\kappa \epsilon v$ is more than doubtful on account of the f); and these six are all in the Odyssey (8. 586., 15. 21, 55, 345., 20. 295., 21. 313). This can hardly be mere accident, and the obvious explanation is that in most of these places, at least in the Iliad, δs $\kappa \epsilon$ and δs κ' have been substituted for δs $\tau \epsilon$ and δs τ' . Thus we should probably read $(\epsilon \cdot g.)$ —

ΙΙ. Ι. 218 ος τε θεοις έπιπείθηται, μάλα τ' έκλυον αὐτοῦ.

508 δε μέν τ' αἰδέσεται κούρας Διὸς.
 510 δε δέ τ' ἀνήνηται καί τε κτλ. (cp. 23, 322).

(instead of the strange correlation μέν τε-δέ κε).

The real exceptions are most commonly passages in which a Singular is used after a Plural antecedent : as—

Od. 20. 294 οὐ γὰρ καλὸν ἀτέμβειν οὐδὲ δίκαιον ξείνους Τηλεμάχου, ὅς κεν τάδε δώμαθ᾽ ἵκηται.

With the change of Number we seem to pass from a general description to a particular instance. So in Od. 15. 345, 422, and perhaps in Il. 3. 279., 6. 228., 16. 621, Od. 7. 33: see § 362, 6.

- (c) The use of $\tilde{a}\nu$ in the Clauses of this kind is very rare. In the two places Il. 8. 10 and 19. 230 the reference to the future is plain. The remaining instance is Od. 21. 293 $\tilde{o}s$ $\tau\epsilon$ $\kappa a \tilde{a}$ $\tilde{a}\lambda\lambda o vs$ $\beta\lambda \tilde{a}\pi\tau\epsilon\iota$, $\hat{o}s$ $\tilde{a}v$ $\kappa\tau\lambda$, where there is the change from the Plural to the Singular just noticed.
- 284.] The Relatival Adverbs. The most important are: the Adverbs of manner, $\dot{\omega}_s$ and $\ddot{\omega}_s$; $\ddot{\nu}_a$, originally an Adverb of place (=where); and the Adverbs of time, $\ddot{\omega}_s$, $\ddot{\omega}_s$,

285. δς, όπως:

(1) Final Clauses with ωs or ὅπως and the Subj. generally depend upon an Imperative, or some equivalent phrase, i.e. they express the aim or purpose of something which the speaker himself does, or wills to be done: as—

ΙΙ. 1. 32 ἀλλ' ἴθι μή μ' ἐρέθιζε, σαώτερος ως κε νέηαι.

293 ἀγαθὸν καὶ νυκτὶ πιθέσθαι,
 ὡς σύ τ' ἐϋφρήνῃς πάντας κτλ.

The only instance in which the purpose expressed is not the speaker's own is—

Od. 14. 181 τον δε μνηστήρες άγανοι οίκαδ' ιόντα λοχώσιν, ὅπως ἀπὸ φῦλον ὅληται.

(2) With Verbs that by their own meaning imply aim or purpose a Clause of this kind becomes an Object Clause: thus—

Il. 4. 66 πειράν δ' ως κε Τρώες . . ἄρξωσι κτλ. (so Od. 2. 316).

9. 112 φραζώμεσθ' ως κέν μιν άρεσσάμενοι πεπίθωμεν.

Od. 1. 76 ἡμεῖς δ' οἴδε περιφραζώμεθα πάντες νόστον, ὅπως ἔλθησι (how he is to come).

 19 λίσσεσθαι δέ μιν αὐτὸς ὅπως νημερτέα εἴπη entreat him so that he shall speak (i. e. to speak).

Here the Clause expresses the *thing* to be tried, thought about, &c., rather than a consequence of such action.

The purpose is sometimes that of some other person, e.g.—

Od. 1. 205 φράσσεται ως κε νέηται he will devise how he is to return (cp. 2. 368., 14. 329).

Il. 1. 558 τῆ σ' ὀίω κατανεῦσαι ἐτήτυμον ὡς 'Αχιλῆα τιμήσης, ὀλέσης δὲ κτλ. (hast nodded to the effect &c.).

Regarding κεν and αν observe that in Final and Object Clauses after ως the Subj. with κεν is the commonest, occurring 32 times, while the Subj. with αν and the pure Subj. occur each 8 times. After ὅπως, which has a more indefinite meaning (in some such manner that), the pure Subj. occurs 7 times, the Subj. with κεν twice (Od. 1. 296., 4. 545,—both Object clauses).

(3) In Conditional or limiting Clauses:—

(a) After a Present the Subj. is pure in the phrase ὅπως ἐθέλησι as he pleases (Od. 1. 349., 6. 189). In Il. 16. 83 πείθεο δ' ὧς τοι ἐγὼ μύθου τέλος ἐν φρεσὶ θείω the pure Subj. indicates that θείω is really an unconditional expression of will: 'listen to me—I will tell you': cp. the independent sentences such as Il. 6. 340 ἐπίμεινον, ἀρήϊα τεύχεα δύω (§ 275, α).

The use of ws and ws TE in similes belongs to this head: e.g.—

ΙΙ. 5. 161 ώς δε λέων εν βουσί θορών εξ αὐχένα ἄξη κτλ.

 67 οἱ δ' ὧs τ' ἀμητῆρες ἐναντίοι ἀλλήλοισιν ὄγμον ἐλαύνωσιν κτλ.

In this use, as in the corresponding use of the Relative (§ 283), the Subj. is pure, the case supposed being not a particular one

actually expected, but a typical or recurring one.

Delbrück (Synt. Forsch. I. p. 161) makes the curious observation that if the simile begins (as in the second instance quoted) with a Demonstrative denoting the subject of the comparison, then the Adverb used is always ως τε. This rule appears to be without exception.

(b) The Subj. with $\tilde{a}\nu$ occurs in the formula $\tilde{\omega}s$ $\tilde{a}\nu$ $\tilde{\epsilon}\gamma\tilde{\omega}\nu$ $\tilde{\epsilon}i\pi\omega$ $\pi\epsilon i\theta\tilde{\omega}\mu\epsilon\theta a$, which refers to a speech about to follow.

The use of KEV in-

Il. 20. 242 Ζεὺς δ' ἀρετὴν ἄνδρεσσιν ὀφέλλει τε μινύθει τε ὅππως κεν ἐθέλῃσιν

is perhaps due to the *contrast* between opposite cases: so with $\delta \tau \epsilon$, § 289, 2, b.

286.] Tra is used in Final Clauses only. With a Subj. it usually expresses the speaker's own purpose; even in—

Od. 2. 306 ταθτα δέ τοι μάλα πάντα τελευτήσουσιν 'Αχαιοί, νῆα καὶ ἐξαίτους ἐρέτας, ΐνα θᾶσσον ἵκηαι

the meaning is 'I undertake that the Achaeans will do this for you.' Exceptions (out of about 80 instances) are: Il. 1. 203 $\mathring{\eta}$ "va $\mathring{\eta}\beta\rho\nu\nu$ $\mathring{\eta}\delta\eta$ is it that you may see &c.: Il. 9. 99., 12. 435., 24. 43, Od. 8. 580., 10. 24., 13. 327.

An Object Clause with wa is perhaps to be recognised in— Od. 3. 327 λίσσεσθαι δέ μιν αὐτὸς ενα νημερτες ενίσπη if the reading is right. The line may be an incorrect repetition

of 3. 19.

The pure Subj. only is used with \tilde{l} να, except in Od. 12. 156 \tilde{l} να $\epsilon l \tilde{b} \acute{o} t \epsilon s \, \tilde{\eta} \, \kappa \epsilon \, \theta \acute{a} \nu \omega \mu \epsilon \nu \, \tilde{\eta} \, \kappa \epsilon \nu \, \dot{a} \lambda \epsilon \nu \dot{a} \mu \epsilon \nu o \iota \, \theta \acute{a} \nu a \tau o \nu \, \kappa \alpha \tilde{\iota} \, \kappa \tilde{\eta} \rho a \, \phi \acute{\nu} \gamma o \iota \mu \epsilon \nu,$ where two alternatives are given by the correlative $\tilde{\eta} \, \kappa \epsilon \nu - \tilde{\eta} \, \kappa \epsilon \nu$: cp. § 275, b. But some MSS. have $\tilde{\eta} \, \tilde{\epsilon} \, \theta \acute{a} \nu \omega \mu \epsilon \nu$.

As Mr. Gildersleeve points out (Am. Jour. of Phil. iv. 425) to a is the only purely final Particle, i. e. the only one which does not limit the purpose by the notion of time ($\delta \phi \rho a$, $\delta \omega s$) or manner δs , $\delta \pi \omega s$). Hence Clauses with to do not take $\kappa \epsilon v$ or δv , because the purpose as such is unconditional.

287.] ὄφρα is sometimes Final, sometimes Conditional.

- (1) In Final Clauses ὄφρα either retains a distinctly temporal force—meaning so long till, till the time when,—or passes into the general meaning to the end that. Thus we have—
 - (a) ὄφρα = until (as shall be), used with κεν or αν, as—
 - Il. 1. 509 τόφρα δ' ἐπὶ Τρώεσσι τίθει κράτος, ὄφρ' ἃν 'Αχαιοὶ υἱὸν ἐμὸν τίσωσιν, ὀφέλλωσιν τέ ἐ τιμῆ.

22. 192 ἀνιχνεύων θέει ἔμπεδον, ὄφρα κεν εθρη.

With this meaning the pure Subj. is found in Il. 1.82 ἔχει κότον ὅφρα τελέσση he keeps his anger until he accomplishes it—a general reflexion: also in Il. 12.281 (in a simile).

- (b) ὄφρα = to the end that, used with the pure Subj., rarely with κεν or αν. The transition to this meaning may be seen in—
 - Il. 6. 258 ἀλλὰ μέν', ὅφρα κέ τοι μελιηδέα οἶνον ἐνείκω stay till I bring (=giving me time to bring).
- (2) Clauses with ὄφρα may be classed as Conditional when it means so long as; e.g.—
 - ΙΙ. 4. 345 ἔνθα φίλ' ὀπταλέα κρέα ἔδμεναι . . ὄφρ' ἐθέλητον.
 - Od. 2. 123 τόφρα γὰρ οὖν βίστόν τε τεὸν καὶ κτήματ' ἔδονται, ὅφρα κε κείνη τοῦτον ἔχη νόον.

The use of $\kappa \epsilon \nu$ or $\tilde{\alpha} \nu$ in these Clauses is governed by the same rule as with $\tilde{\sigma} s$, viz. it is used when the reference is to the future, and is not expressly meant to be general (as Il. 23. 47 $\tilde{\sigma} \phi \rho a$ $\zeta \omega o i \sigma \iota \mu \epsilon \tau \epsilon \iota \omega$). As to the form $\tilde{\sigma} \phi \rho$ $\tilde{\alpha} \nu \mu \epsilon \nu$, see § 363, 4.

In Il. 6. 112 ἀνέρες ἔστε, φίλοι, μνήσασθε δὲ θούριδος ἀλκῆς, ὅφρ' αν ἐγὼ βήω (cp. 8. 375., 17. 186, Od. 13. 412., 19. 17) the Clause seems to mean until I go, i. e. long enough for me to go. Delbrück however counts the uses of ὅφρα in Il. 6. 112, &c. as Conditional (Synt. Forsch. i. p. 170).

288.] τως (ἡος) and τὶς τ, used with the Subj., always take κτν. The meaning until, with implied purpose, is the usual one: as—

 3. 290 αὐτὰρ ἐγὰ καὶ ἔπειτα μαχήσομαι εἴνεκα κούρης αὖθι μένων, ἦός κε τέλος πολέμοιο κιχείω.

 48 νῶϊ δ' ἐγὼ Σθένελός τε μαχησόμεθ' εἰς ὅ κε τέκμωρ Ἰλίου εὕρωμεν.

The Conditional meaning is only found in the recurring expression ϵ is δ κ' ἀΰτμὴ ἐν στήθεσσι μένη καί μοι φίλα γούνατ' ὀρώρη (II. 9. 609., 10. 89)=so long as I have life.

289. | ὅτε, ὁπότε:

- (1) Clauses with ὅτε and ὁπότε may be counted as Final in a few instances in which the governing Clause contains an expression of time:
 - (a) with the pure Subj.-

Il. 21. 111 ἔσσεται ἢ ἢὼς ἢ δείλη ἢ μέσον ἦμαρ,
 ὁππότε τις καὶ ἐμεῖο Ἄρει ἐκ θυμὸν ἕληται.

So Il. 19. 336 ἐμὴν ποτιδέγμενον alεὶ λυγρὴν ἀγγελίην, ὅτ' ἀποφθιμένοιο πύθηται waiting for the message when he shall hear &c., i. e. 'waiting for the time when the news shall come that &c.' Here the clause with ὅτε becomes a kind of Object Clause.

(b) with ker or ar:-

ΙΙ. 4. 164 ἔσσεται ἦμαρ ὅτ' ἄν ποτ' ὀλώλη κτλ. (6. 448).

The use of $\tilde{a}\nu$ gives definiteness to the expectation, as though a particular time were contemplated. Cp. also II. 6. 454 $\tilde{o}\sigma\sigma\sigma\nu$ $\sigma\epsilon\tilde{\nu}$ ($\mu\epsilon\lambda\epsilon\iota$), $\tilde{o}\tau\epsilon$ $\kappa\epsilon\nu$ $\tau\iota s$. $\tilde{o}a\kappa\rho\nu\dot{o}\epsilon\sigma\sigma\alpha\nu$ $\tilde{a}\gamma\eta\tau\alpha\iota$ as I am concerned for you (in respect of the time) when &c., and 8. 373 $\tilde{\epsilon}\sigma\tau\alpha\iota$ $\mu a\nu$ $\tilde{o}\tau$ $\tilde{a}\nu$ $\kappa\tau\lambda$.

It is obvious that in these places the Clause is not strictly Final, since the Subj. expresses emphatic prediction (§ 275, b) rather than purpose. But they have the essential characteristic of Final Clauses, viz. that the time of the Clause is fixed by that of the governing Verb.

(2) Clauses with ὅτε or ὁπότε which define the time of the principal Clause may be regarded as Conditional. In regard to the use of κεν and ἄν they follow the rules which hold in the case of Conditional Relative Clauses (§ 283): viz.—

(a) The pure Subj. indicates that the speaker is supposing a case which may occur repeatedly, or at any time: as—

Od. 7. 71 οι μίν ρα θεδν ως εἰσορόωντες δειδέχαται μύθοισιν, ὅτε στείχησ' ἀνὰ ἄστυ

who look on him as a god, and salute him when he walks &c.
 II. 1. 163 οὐ μὲν σοί ποτε ἶσον ἔχω γέρας, ὁππότ' 'Αχαιοὶ

Τρώων ἐκπέρσωσ' εὖ ναιόμενον πτολίεθρον whenever the Greeks sack a Trojan town. So in maxims, &c.:—

ΙΙ. 1. 80 κρείσσων γὰρ βασιλεὺς ὅτε χώσεται ἀνδρὶ χέρηϊ.

Il. 15. 207 ἐσθλὸν καὶ τὸ τέτυκται ὅτ' ἄγγελος αἴσιμα εἰδῆ. And in similes, as Il. 2. 395 ὅτε κινήση Νότος ἐλθών. So with the regular ὡς ὅτε as when, ὡς ὁπότε as in any case when.

In a few instances &s δ ' $\delta\tau$ ' δv is found instead of &s δ ' $\delta\tau\epsilon$: viz.—

11. 15. 170 ως δ' ὅτ' ἀν ἐκ νεφέων πτῆται κτλ.

19. 375 ώς δ' ὅτ' ἀν ἐκ πόντοιο σέλας ναύτησι φανήη

Od. 5. 394 ως δ' ὅτ' ἀν ἀσπάσιος βίοτος παίδεσσι φανήη

23. 233 ώς δ' ὅτ' ἀν ἀσπάσιος γῆ νηχομένοισι φανήη

II. 11. 269 ώς δ' ὅτ' ἄν ἀδίνουσαν ἔχη βέλος ὀξὸ γυναῖκα 17. 520 ώς δ' ὅτ' ἀν ὀξὸν ἔχων πέλεκυν κτλ.

Also Il. 10. 5., 24. 480, Od. 22. 468. The resemblance that runs through these instances would seem to indicate some common source of the peculiar αv .

In the one or two places where the pure Subj. occurs after a Future there is an evident intention to speak quite generally: as Il. 21. 322 οὐδέ τί μιν χρεὼ ἔσται τυμβοχόης ὅτε μιν θάπτωσιν ᾿Αχαιοί: so Od, 16. 268., 23. 257. But κεν is used in the similar passage Il. 10. 130 οὕ τις νεμεσήσεται . . ὅτε κέν τιν ἐποτρύνη.

(b) KEV or av connects a supposition with a particular event or state of things: hence it is usually found after a Future, Subjunctive, or Imperative, as—

ΙΙ. 4. 53 τὰς διαπέρσαι ὅτ' ἄν τοι ἀπέχθωνται.

Od. 1. 40 ἐκ γὰρ 'Ορέσταο τίσις ἔσσεται 'Ατρείδαο όππότ' ἂν ἡβήση τε καὶ ἢς ἱμείρεται αἴης.

ΙΙ. 20. 130 δείσετ' ἔπειθ', ὅτε κέν τις κτλ.

Od. 2. 357 έσπέριος γὰρ ἐγὼν αἰρήσομαι ὁππότε κεν δὴ κτλ. So after μοῖρα (Od. 4. 475), followed by an Inf.

In other places it is not so clear why an event is treated as particular. Perhaps κεν or ἄν may be used with ὅτε, ὁπότε—

(1) When a contrast is made between supposed cases, as—
Il. 6. 224 τῷ νῦν σοὶ μὲν ἐγὼ ξεῖνος φίλος ᾿Αργεϊ μέσσφ εἰμί, σὺ δ᾽ ἐν Λυκίῃ, ὅτε κεν τῶν δῆμον ἴκωμαι.

20. 166 πρώτον μεν . . ἀλλ' ὅτε κέν τις κτλ.

Od. 20. 83 ἀλλὰ τὸ μὲν καὶ ἀνεκτὸν ἔχει κακόν, ὅππότε κέν τις κτλ.

11. 17 οὖθ' ὁπότ' ἀν στείχησι . . οὖθ' ὅτ' ἀν ἀψ κτλ.
 (Here we should read ὁπότε στείχησι, § 363, 4).

So perhaps II. 2. 397 παντοίων ἀνέμων, ὅτ' αν ἔνθ' ἢ ἔνθα γένωνται: 9. 101 κρηῆναι δὲ καὶ ἄλλφ, ὅτ' ἄν τινα κτλ. and Od. 13. 100 ἔντοσθεν δέ τ' ἄνευ δεσμοῖο μένουσι νῆες ἐνσσελμοι, ὅτ' αν ὅρμον μέτρον ἵκωνται (in contrast to those outside). But cp. the remark as to ὅτ' αν in the last note.

(2) When there is a change from Plural to Singular:—
 Il. 9. 501 λισσόμενοι, ὅτε κέν τις ὑπερβήη καὶ ἀμάρτη.

Od. II. 218 $\lambda\lambda\lambda$ ' αῦτη δίκη ἐστὶ βροτῶν, ὅτε τίς κε θάνησι. This last instance is doubtful, since the order ὅτε τίς κε is not Homeric (§ 365). We should probably read ὅτε τίς τε.

290.] εὖτε, ημος. The word εὖτε is only once found with a pure Subj., viz. Od. 7. 202 (in a general assertion): εὖτ' ἄν occurs after a Future (Il. 1. 242., 19. 158), and an Imperative (Il. 2. 34); also in one or two places where the use of ἄν is more difficult to explain, viz. Il. 2. 227 (read εὖτε πτολίεθρον ἕλωμεν), Od. 1. 192., 17. 320, 323., 18. 194. The combination εὖτε κέν is not found.

The pure Subj. with juos occurs in one place—

Od. 4. 400 $\mathring{\eta}\mu$ os δ ' $\mathring{\eta}\acute{\epsilon}\lambda\iota$ os $\mu\acute{\epsilon}\sigma$ ov οἰρανὸν ἀμφιβεβήκη where the reference is general, 'each midday.'

The Subjunctive with et, &c.

- 291.] Clauses with εί. The use of the Particle εί (or αῖ), in the Clauses with which we have now to do, is to make an assumption or supposition. In most cases (1) this assumption is made in order to assert a consequence (εί=if): in other words, it is a condition. But (2) an assumption may also be made in order to express end: είμι. αἴ κε πίθηται I go—suppose he shall listen= 'I go in order that if he will listen (he may do so):' accordingly the Clause may be virtually a Final Clause. Again (3) with certain Verbs an assumption may be the Object: e.g. τίς οἶδ' εἴ κεν. δρίνω who knows—suppose I shall rouse = who knows whether I shall rouse. We shall take these three groups of Clauses in order.
- 292.] Conditional Protasis with ϵl . The chief point of interest under this head is the use of $\kappa \epsilon \nu$ or $\tilde{\alpha} \nu$. The rules will be found to be essentially the same as those already laid down for the corresponding Clauses with the Relative (\S 283, b) and the Relatival Adverbs (see esp. \S 289, b), and to be even more uniform in their application.
 - (a) The pure Subj. is used in general sayings, and in similes:
 - II. I. 80 κρείσσων γὰρ βασιλεὺς ὅτε χώσεται ἀνδρὶ χέρηϊ εἴ περ γάρ τε χόλον γε καὶ αὐτῆμαρ καταπέψῃ, ἀλλά τε καὶ μετόπισθεν ἔχει κότον.
 - 12. 238 τῶν οὖ τι μετατρέπομ' οὐδ' ἀλεγίζω, εἴ τ' ἐπὶ δεξί ἴωσι πρὸς ἢῶ τ' ἠέλιόν τε, εἴ τ' ἐπ' ἀριστερὰ τοί γε κτλ.
 - Od. 16. 97 κασιγνήτοις . . οἶσί περ ἀνηρ μαρναμένοισι πέποιθε καὶ εἰ μέγα νεῖκος ὅρηται.

Il. 11. 116 $\dot{\eta}$ δ' εἴ πέρ τε τύχησι κτλ. (so Il. 4. 261., 9. 481., 10. 225., 16. 263., 21. 576., 22. 191, Od. 1. 188., 7. 204., 12. 96., 14. 373.

If the principal Verb is a Future (or implies reference to the future), the pure Subj. with εἰ indicates that the supposed occasion is indefinite,—one that happens repeatedly, or at any time, or may not happen at all; so Π. Ι. 340 εἴ ποτε δὴ αὖτε χρειὼ ἐμεῖο γένηται κτλ.; 12. 245 εἴ περ γάρ τ' ἄλλοι γε περικτεινώμεθα πάντες κτλ.; Od. I. 204 οὐδ' εἴ πέρ τε σιδήρεα δέσματ' ἔχησι. This form is naturally employed by a speaker who does not wish to imply that the occasion will actually arise: thus in—

Il. 12. 223 δις ἡμεῖς εἴ πέρ τε πύλας καὶ τεῖχος 'Αχαιῶν ρηξόμεθα σθένεϊ μεγάλφ, εἴξωσι δ' 'Αχαιοί, οὐ κόσμφ παρὰ ναῦφιν ἐλευσόμεθ' αὐτὰ κέλευθα

Polydamas is interpreting an omen which he wishes to remain unfulfilled. Similarly II. 5. 248 εἴ γ' οὖν ἕτερός γε φύγησι: II. 22. 86 εἴ περ γάρ σε κατακτάνη, οὖ σ' ἔτ' ἔγωγε κλαύσομαι ἐν λεχέεσσι: Od. 5. 221 εἰ δ' αὖ τις ῥαίησι θεῶν κτλ.: Od. 12. 348 εἰ δὲ χολωσάμενός τι . . νη̂' ἐθέλη ὀλέσαι κτλ. The object of the speaker in these examples is to treat the supposed case as imaginary or unpractical.

(b) The Subj. with $\kappa \epsilon \nu$ or $\tilde{a}\nu$ indicates that a particular future occasion is contemplated: hence—

ΙΙ. 4. 353 ὄψεαι ην ἐθέλησθα καὶ αἴ κέν τοι τὰ μεμήλη.

11. 404 μέγα μὲν κακὸν (sc. ἔσται) αἴ κε φέβωμαι.

24. 592 μή μοι . . σκυδμαινέμεν, αἴ κε πύθηαι κτλ.

Od. 2. 218 εἰ μέν κεν πατρὸς βίστον καὶ νόστον ἀκούσω, η τ' αν τρυχόμενός περ ἔτι τλαίην ἐνιαυτόν.

11. 112 εὶ δέ κε σίνηαι, τότε τοι τεκμαίρομ' ὅλεθρον (I prophesy your destruction).

So, though the Verb of the governing Clause is a Present-

II. 6. 442 αἰδέομαι Τρῶας καὶ Τρωάδας ἐλκεσιπέπλους, αἴ κε κτλ. (= I fear what they will think if &c.).

8. 477 σ ϵ θ ϵ ν δ' ϵ γ ω ο ὐκ ἀλ ϵ γ ίζωχωομένης, οὐδ' ϵἴ κ ϵ τὰ ν ϵ ι απ ϵ ίραθ' ἵκηαι= I do not care for you, (and shall not) even if &c.

Instances of KEV or av in a sentence of general meaning are—

 3. 25 μάλα γάρ τε κατεσθίει, εἴ περ ἂν αὐτὸν σεύωνται κτλ. (even in the case when—, § 363, 1, b).

 391 ἢ τ' ἄλλως ὑπ' ἐμεῖο, καὶ εἴ κ' ὀλίγου περ ἐπαύρη, ὀξὺ βέλος πέλεται.

12. 302 εἴ περ γάρ χ' εὕρησι παρ' αὐτόφι κτλ.

Od. 11. 158 τον οὖ πως ἔστι περῆσαι πεζον ἐόντ', ἢν μή τις ἔχη εὐεργέα νῆα.

But with εἴ κε there is the same doubt as with ος κε (§ 283), and ἐπεί κε (§ 296). As to ἥν, which occurs in a general saying in Il. 1. 166 and Od. 11. 159, see § 362.

293.] Final Clauses with $\epsilon \hat{\iota}$. After a principal Verb expressive of the speaker's will (an Imperative, or First Person), a Final Clause may be introduced by $\epsilon \hat{\iota}$ $\kappa \epsilon \nu$ or $\hat{\eta} \nu$: as—

ΙΙ. 8. 282 βάλλ' οὕτως εἴ κέν τι φόως Δαναοῖσι γένηαι.

11. 791 ταθτ' εἴποις 'Αχιληϊ δαΐφρονι εἴ κε πίθηται.

Od. 4. 34 δεῦρ' ἱκόμεθ' αἴ κέ ποθι Ζεὺς . . παύση κτλ.

The effect of using ϵi (instead of ω_s or $i\nu a$) is to express some degree of uncertainty. The end aimed at is represented as a

supposition, instead of being a direct purpose.

In the existing text the pure Subj. occurs only in II. 14. 165 ἀρίστη φαίνετο βουλὴ ἐλθεῖν.. εἴ πως ἱμείραιτο.. τῷ δ'.. χεύη (where we should perhaps read χεύαι; or change χεύη ἐπὶ το χεύειε); and in Od. 5. 471 εἰ δέ κεν.. καταδράθω, εἴ με μεθήη ρῖγος καὶ κάματος, γλυκερὸς δέ μοι ὕπνος ἐπέλθη, where the MSS. have the Opt. μεθείη, ἐπέλθοι. But if ἥν has sometimes crept in instead of εἰ, as is probable (§ 362) there may be other examples: as—

II. 22. 418 λίσσωμ' ἀνέρα τοῦτον . . ἤν πως κτλ.

Od. 1. 281 έρχεο πευσόμενος πατρός δην οίχομένοιο, ην τίς τοι είπησι κτλ.

294.] Object Clauses with εἰ. This term will serve to describe the form of Clause in which the supposition made by εἰ takes the place of an Acc. of the thing. It may be regarded as a special form of the Final Clause (cp. § 285, 2): thus II. 18. 600 ὡς ὅτε τις τροχὸν..πειρήσεται εἴ κε θέησι 'tries in respect to the supposition that it will run,' hence tries whether it will run:

ΙΙ. 4. 249 ὄφρα ἴδητ' εἴ κ' ὔμμιν ὑπερσχῷ χεῖρα Κρονίων.

15. 32 όφρα ίδη ήν τοι χραίσμη κτλ.

that you may see whether it will avail. Note that the Subj. here has a distinctly future meaning, as in Final Clauses; the same words taken as a Conditional Protasis would mean if it has availed. So after εἰπεῖν, Il. 7. 375 καὶ δὲ τόδ' [leg. τὸ] εἰπέμεναι πυκινὸν ἔπος, αἴ κ' ἐθέλωσι say the word supposing that they shall be willing (=ask if they will agree), Il. 17. 692 εἰπεῖν, αἴ κε τάχιστα νέκυν ἐπὶ νῆα σαώση: and οἶδα in the phrase τίς οἶδ' εἴ κεν who knows but (Il. 15. 403., 16. 860, Od. 2. 332), and οὐ μὰν οἶδ' εἰ (Il. 15. 16).

The use of the Accusativus de quo (§ 140, 3) should be noticed; especially after oida, anticipating the Clause with &: as—

II. 8. 535 αὔριον ἡν ἀρετὴν διαείσεται εἴ κ' ἐμὸν ἔγχος μείνη ἐπερχόμενου

meaning 'he will know as to his prowess whether it will enable him to withstand my spear.' So Od. 22. 6 σκοπὸν ἄλλον . . εἴσομαι αἴ κε τύχωμι (cp. § 140, 3, b).

In one place the Clause with & serves as explanation of a

Neuter Pronoun in the Nominative:

Il. 20. 435 άλλ' ἢ τοι μὲν ταῦτα θεῶν ἐν γούνασι κεῖται, εἴ κέ σε χειρότερός περ ἐὼν ἀπὸ θυμὸν ἔλωμαι.

295.] The Subj. with ώς εἰ occurs in a single place only, viz.—
Il. 9. 481 καί με φίλησ' ὡς εἴ τε πατὴρ ὃν παῖδα φιλήση.
Here the assumption εἰ . . φιλήση is made for the purpose of comparison. Thus the meaning is nearly the same as with ὡς ὅτε (§ 289, 2), and the Clause is essentially Conditional.

296.] ἐπεί with the Subj. The use of ἐπεί implies that the action is prior in time to the action of the principal Clause; hence Clauses with ἐπεί properly fall under the definition of the Conditional Clause.

A pure Subj. after ἐπεί is found in four places, one a gnomic passage, Od. 20. 86 ἐπεὶ ἃρ βλέφαρ' ἀμφικαλύψη (sleep makes men forget everything) when it has spread over their eyelids; the other three in similes, viz. II. 11. 478., 15. 363, 680. In II. 16. 453 the best MSS. give αὐτὰρ ἐπεὶ δὴ τόν γε λίπη ψυχή τε καὶ αἰών, πέμπειν μιν κτλ., others ἐπὴν δή. The pure Subj. implies that the command is meant to be general in form: cp. § 292, a.

κεν or αν is invariably used when the principal Verb is future. It is also found after a Present, and even in similes: e.g.—

 2. 474 τοὺς δ' ὥς τ' αἰπόλια πλατέ' αἰγῶν αἰπόλοι ἄνδρες ρεῖα διακρίνωσιν, ἐπεί κε νομῷ μιγέωσιν.

So ἐπεί κε(ν), II. 7. 410., 9. 324., 21. 575, Od. 8. 554., 11. 221., 24. 7: and ἐπήν, II. 6. 489., 19. 223, Od. 8. 553., 10. 411., 11. 192., 14. 130., 19. 206, 515. In II. 1. 168 should perhaps be read ἐπεί κεκάμω (instead of ἐπεί κε κάμω), and so II. 7. 5 ἐπεί κεκάμωσι, and II. 17. 657 ἐπεί ἃρ κεκάμησι.

Regarding $\epsilon \pi \epsilon (\kappa \epsilon(\nu))$ in this use there is the same question as with $\delta s \kappa \epsilon$ (§ 283). Out of 10 instances there is only one in which the form $\kappa \epsilon \nu$ appears, viz. Il. 21. 575 $\epsilon \pi \epsilon i \kappa \epsilon \nu$ $i \lambda a \gamma \mu \partial \nu$ akoú $\sigma \eta$, and there Zenodotus read $\kappa \nu \nu \nu \lambda a \gamma \mu \partial \nu$, which is strongly supported by the metre (§ 367, 2). Thus there is the same reason as before for supposing that $\kappa \epsilon$ is often merely a corrup-

tion of τε. The use of ἐπεί τε is sufficiently established in Homer

(§ 332).

The form ἐπήν is open to doubt on other grounds, which it will be better to discuss in connexion with other uses of the Particle ἄν (§ 362).

297.] πρίν with the Subj. In general, as we have seen (§ 236), πρίν is construed with an Infinitive. If, however, the event is insisted upon as a *condition*,—the principal Verb being an Imperative or emphatic Future,—the Subj. may be used; as—

II. 18. 134 άλλὰ σὰ μὲν μή πω καταδύσεο μῶλον "Αρηος πρίν γ' ἐμὲ δεῦρ' ἐλθοῦσαν ἐν ὀφθαλμοῖσιν ἴδηαι

do not enter the battle before you see me coming hither.

Od. 10. 174 ὧ φίλοι, οὐ γὰρ πρὶν καταδυσόμεθ' ἀχυύμενοί περ εἰs 'Aίδαο δόμους πρὶν μόρσιμον ἡμαρ ἐπέλθη.

So Il. 18. 190., 24. 551, 781, Od. 13. 336., 17. 9. The Subj. is used in these examples without κεν or αν, because it is not meant to lay stress on a particular occasion when the condition will be fulfilled. When such an occasion is contemplated Homer sometimes uses πρίν γ' ὅτ' αν before the time when (Od. 2. 374., 4. 477): ep. Il. 16. 62 οὐ πρὶν μηνιθμὸν καταπανσέμεν, ἀλλ' ὁπότ' ἀν κτλ. The use of πρὶν αν with the Subj. is post-Homeric.

It is evident that a conditional Clause of this kind can only occur after a negative principal Clause. 'Do not do this before I come' makes my coming into a condition, and a condition which may or may not be realised: but 'do this before I come'

is merely a way of fixing the time of doing.

This construction is usually explained from Parataxis: thus it is held that in Il. 24. 551 οὐδέ μιν ἀνστήσεις πρὶν καὶ κακὸν ἄλλο πάθησθα stands for—

οὐδέ μιν ἀνστήσεις· πρὶν καὶ κακὸν ἄλλο πάθησθα,

you will not raise him, sooner shall you suffer passing into 'you will not raise him before you suffer.' So Sturm (p. 26), and Goodwin (§ 624). But (1) this use of the Subj. in a Principal clause without keep or av, whether as a Future (§ 275, b) or as an Imperative, is not Homeric, and therefore cannot be used to explain a use which is only beginning in Homer. And (2) the change from you will not raise, you will suffer before you do to you will not raise before you suffer is not an easy one: it involves shifting πρίν as an Adverb from one clause to another. Above all (3) it is probable that the new construction of πρίν with the Subj. was directly modelled on the existing use with the Inf.: that is to say, πρὶν πάθησθα simply took the place of πρὶν παθείν when a more definite conditional force was wanted. This is confirmed by the analogy of the later change to the Indic.: thus in Aesch. P. V. 479 πρίν γ' ἐγώ σφισιν ἔδειξα is used instead of πρίν έμε δείξαι because the poet wishes to make the assertion έδειξα. So with the transition from the Inf. to the Indic. after ωστε (Goodwin, § 585): the finite mood is not a survival of parataxis, but is used when the Infinitive is not sufficiently positive.

298.] Subjunctive after a Secondary Tense. The rule in Homer is that the Subj. is not used in a Subordinate Clause to express a past purpose, condition, &c. It may be used however (1) when the governing Verb is a 'gnomic' Aorist:—

ΙΙ. 1. 218 ος κε θεοῖς ἐπιπείθηται μάλα τ' ἔκλυον αὐτοῦ.

Od. 20. 85 δ γάρ τ' ἐπέλησεν ἁπάντων ἐσθλῶν ἦδὲ κακῶν, ἐπεὶ ἃρ βλέφαρ' ἀμφικαλύψη.

Or an Aor. used to express a general denial, as-

Od. 10. 327 οὐδὲ γὰρ οὐδέ τις ἄλλος ἀνἢρ τάδε φάρμακ' ἀνέτλη, ὅς κε πίη κτλ. (cp. Od. 12. 66).

Or in a simile, as II. 4. 486 ἐξέταμ', ὅφρα ἴτυν κάμψη κτλ. Further (2) if the action expressed by the Subordinate Clause is still future at the time of speaking; as—

II. 5. 127 ἀχλὺν δ' αὖ τοι ἀπ' ὀφθαλμῶν ἕλον ἡ πρὶν ἐπῆεν, ὅφρ' εὖ γιγνώσκης ἡμὲν θεὸν ἡδὲ καὶ ἄνδρα

I have taken away the mist—that you may know &c.

7. 394 καὶ δὲ τόδ' ἠνώγει εἰπεῖν ἔπος, αἴ κ' ἐθέλητε κτλ.

18. 189 μήτηρ δ' οὖ με φίλη πρίν γ' εἴα θωρήσσεσθαι πρίν γ' αὐτὴν . . ἴδωμαι (before I shall see her &c.).

Od. 11. 434 οἱ τε κατ' αἶσχος ἔχευε καὶ ἐσσομένησιν ὀπίσσω θηλυτέρησι γυναιξί, καὶ ἢ κ' εὐεργὸς ἔησι.

So Il. 9. 99., 20. 126., 24. 781. In these places the governing Verb is generally to be translated by the English Perfect

with have (cp. § 73).

The real exceptions to this rule are not numerous, and may be due in several cases to alteration of the text through the influence of the later usage. The reading is uncertain (e.g.) in—

Od. 14. 327 τὸν δ' ἐς Δωδώνην φάτο βήμεναι ὅφρα θεοῖο (=19. 296) ἐκ δρυὸς ὑψικόμοιο Διὸς βουλὴν ἐπακούση, where the Subj. was read by Aristarchus, the Opt. ἐπακούσαι by Aristophanes and Herodian. Again in—

Od. 10. 65 η μέν σ' ἐνδυκέως ἀπεπέμπομεν, ὅφρ' ἃν ἵκηαι the best MSS. have ἵκηαι, but others have ὅφρ' ἃν ἵκοιο and ὅφρ' ἀφίκοιο. See also Il. 15. 23, Od. 15. 300., 22. 98: and cp.—

Π. 5. 567 μή τι πάθοι, μέγα δέ σφας ἀποσφήλειε
 15. 598 ἐμβάλοι . . Θέτιδος δ' ἐξαίσιον ἀρὴν πᾶσαν ἐπικρήνειε.

In these places the MSS. generally have $\pi \delta \theta \eta$, $\epsilon \mu \beta \delta \lambda \eta$: but the Opt. in the clause following has led the editors to adopt $\pi \delta \theta \omega$, $\epsilon \mu \beta \delta \lambda \omega$.

Other places where the Subj. is contrary to the rule now laid down are Il. 13. 649., 14. 165., 16. 650 (see La R.)., 19. 354., 24. 586, Od. 9. 102., 10. 24., 16. 369., 17. 60., 22. 467. In all

gu en red; varende life with andig everfaring of on reference til dennes the Opt. may be substituted without affecting the metre; and when we consider the number of places where the MSS. vary between Subj. and Opt. forms, we can hardly doubt that it would generally be right to make the change.

The Homeric rule is observed by Plato (see Riddell, Dig. §§

90, 91), but not by Attic writers in general.

The Optative in Simple Sentences.

299.] The uses of the Optative in Simple Sentences range from the expression of a wish on the part of the speaker to the expression of mere supposition, or admission of possibility.

Without KEV or av the Optative may express-

(a) Simple wish or prayer: as-

ΙΙ. 1. 42 τίσειαν Δαναοὶ ἐμὰ δάκρυα σοῖσι βέλεσσι.

Od. 1. 403 μη γαρ δ γ' έλθοι κτλ. never may he come &c.

Regarding the Opt. of wish with ϵi or αi , $\epsilon i \theta \epsilon$, $\alpha i \theta \epsilon$, &c. see § 311.

(b) A gentle or deferential Imperative, conveying advice, suggestion, or the like: as—

II. 4. 17 εὶ δ' αὖ πως τόδε πᾶσι φίλον καὶ ἡδὺ γένοιτο, ἢ τοι μὲν οἰκέοιτο πόλις Πριάμοιο κτλ. (=I presume the city is to remain inhabited).

Od. 4. 735 ἀλλά τις ὀτρηρῶς Δολίον καλέσειε γέροντα (as we say, would some one call &c.).

18. 141 τῷ μή τίς ποτε πάμπαν ἀνὴρ ἀθεμίστιος εἴη, ἀλλ' ὅ γε σιγῆ δῶρα θεῶν ἔχοι
I would have a man not be lawless, but &c.

Note especially this use of the Second Person, as in-

Od. 4. 193 πίθοιό μοι pray listen to me: so in the formal phrase η ρά νύ μοί τι πίθοιο (Il. 4. 93, &c.).

II. 11. 791 ταῦτ' εἴποις 'Αχιλῆϊ suppose you say this to Achilles.
 Od. 15. 24 ἀλλὰ σύ γ' ελθῶν αὐτὸς ἐπιτρέψειας ἔκαστα.

 3. 406 ἦσο παρ' αὐτὸν ἰοῦσα, θεῶν δ' ἀπόεικε κελεύθου, μηδ' ἔτι σοῖσι πόδεσσιν ὑποστρέψειας "Ολυμπον.

Hence in Il. 1. 20 we should read (with the best MSS.) παΐδα δ' έμοι λύσαιτε (not λῦσαί τε, Wolf's conjecture).

(c) Rhetorical wish, implying willingness, or indifference to the happening of some evil: as in imprecations—

ΙΙ. 2. 340 ἐν πυρὶ δὴ βουλαί τε γενοίατο μήδεα δ' ἀνδρῶν.

6. 164 τεθναίης, $\tilde{\omega}$ Προῖτ', $\tilde{\eta}$ κάκτανε Βελλεροφόντην (= I care not if you were dead, unless you &c.).

Od. 7. 224 $l\delta \acute{o} \nu \tau a \mu \epsilon \kappa a i \lambda l \pi o i a l \grave{\omega} \nu \kappa \tau \hat{\eta} \sigma i \nu \epsilon \mu \hat{\eta} \nu \kappa \tau \lambda$. (= I am content to die when I have seen $\&prescript{gc}$).

(d) Concession or acquiescence:-

Il. 21. 359 λῆγ' ἔριδος, Τρῶας δὲ καὶ αὐτίκα δῖος 'Αχιλλεὺς ἄστεος ἐξελάσειε (cease strife, and I consent that &c.).

Od. 1. 402 κτήματα δ' αὐτὸς ἔχοις καὶ δώμασι σοῖσιν ἀνάσσοις.

 2. 232 ἀλλ' alεὶ χαλεπός τ' εἴη καὶ αἴσυλα ρέζοι (i. e. he may as well be unjust as just).

Hes. Op. 270 $v \hat{v} v \delta \hat{\eta}$ έγ $\hat{\omega}$ $\mu \hat{\eta} \tau'$ αὐτὸς έν ἀνθρώποισι δίκαιος εἴην $\mu \hat{\eta} \tau'$ έ $\mu \delta s$ νίός.

The following are instances of the First Person used in this way:

Il. 15. 45 αὐτάρ τοι καὶ κείνω ενώ παραμυθησαίμην
I am willing to advise him (a concession).

So Il. 4. 318 μάλα μέν τοι έγων έθέλοιμι κτλ., but some MSS. have μέν κεν.

Il. 23. 150 νῦν δ' ἐπεὶ οὐ νέομαί γε φίλην ἐς πατρίδα γαῖαν, Πατρόκλω ἥρωϊ κόμην ὀπάσαιμι φέρεσθαι since I am not to return, I may as well &c.

Od. 16. 383 ἀλλὰ φθέωμεν ἐλόντες ἐπ' ἀγροῦ νόσφι πόληος ηματό δοῦ, βίοτον δ' αὐτοὶ καὶ κτήματ' ἔχωμεν δασσάμενοι κατὰ μοῖραν ἐφ' ἡμέας, οἰκία δ' αὖτε κείνου μητέρι δοῦμεν ἔχειν ἢδ' ὅς τις ὀπυίοι.

Here what the Suitors are to do for themselves is put in the Subj., what they do or allow to be done for Penelope in the Opt.

Compare Hdt. 7. 5. 4 τὸ μὲν νῦν ταῦτα πρήσσοις τά περ ἐν χερσὶ ἔχεις, ἡμερώσας δὲ Αἴγυπτον τὴν ἐξυβρίσασαν στρατηλάτεε ἐπὶ τὰς 'Αθήνας, i. e. ' I consent to your doing what you have in hand, but when it is done, march against Athens.'

- (e) Strong denial is sometimes implied, under the form of deprecation, by the Opt. with μή: as—
 - Od. 7. 316 μη τοῦτο φίλον Διὰ πατρὶ γένοιτο let us not admit that this is the will of father Zeus.

22. 462 μὴ μὲν δὴ καθαρῷ θανάτῳ ἀπὸ θυμὸν ἑλοίμην.

- (f) Admission of possibility, i.e. willingness to suppose or believe that the thing will happen. This use is rarely found without κεν or αν: an instance is—
- Il. 15. 197 θυγατέρεσσιν γάρ τε καὶ νἱάσι βέλτερον εἴη κτλ. Here the Opt. is in contrast to the preceding Imper. μή τί με δειδισσέσθω: 'let him not threaten me: for his own children it may be well enough that he should scold.' Other instances are negative, viz.—

ΙΙ. 19. 321 οὐ μὲν γάρ τι κακώτερον ἄλλο πάθοιμι.

Od. 14. 122 ὧ γέρον, οὔ τις κείνου ἀνὴρ ἀλαλήμενος ἐλθὼν ἀγγέλλων πείσειε γυναϊκά τε καὶ φίλον υἰόν.

So in the Relative clauses, Il. 5. 303 (= 20. 286) δ οὐ δύο γ' ἄνδρε φέροιεν, Od. 3. 319 ὅθεν οὐκ ἔλποιτό γε θυμῷ ἐλθέμεν. And in one or two interrogative clauses, with implied negation: Il. 11. 838 πῶς τ' ἄρ' ἔοι τάδε ἔργα; Od. 5. 100 τίς δ' ἃν ἔκὼν διαδράμοι (since we should probably read τίς δὲ Γεκὼν). In such case the absence of κεν or ἄν marks the negation as sweeping and unconditional. We should compare the corresponding Homeric use of οὐ with the pure Subj., which differs in the degree of confidence expressed: οὐδὲ ἴδωμαι I am sure I shall never see, οὐ πάθοιμι I suppose I shall never suffer.

300.] With kev or av the Optative does not express wish (which is essentially unconditional), or even direct willingness on the part of the speaker, but only willingness to admit a consequence: hence expectation in view of particular circumstances: e.g.—

ΙΙ. Ι. 100 τότε κέν μιν ίλασσάμενοι πεπίθοιμεν

then we may expect to appease him and gain grace.

The character of a Clause of this kind depends chiefly on the manner in which the *condition* is indicated. The following are the main points to be observed:—

(a) An Opt. with ker or ar often follows an independent Clause with a Future, Imperative, &c.:—

ΙΙ. 22. 108 ως ἐρέουσιν, ἐμοὶ δὲ τότ' αν πολύ κέρδιον είη κτλ.

Od. 10. 269 φεύγωμεν έτι γάρ κεν ἀλύξαιμεν κακὸν ημαρ.

ΙΙ. 3. 410 κείσε δ' έγων οὐκ είμι, νεμεσσητὸν δέ κεν είη.

(b) Or the preceding Clause may contain a wish:—

7. 157 εἴθ' ὡς ἡβώοιμι, βίη δέ μοι ἔμπεδος εἴη·
 τῷ κε τάχ' ἀντήσειε κτλ.

Cp. Il. 4. 93 (where the preceding Opt. is a gentle Imper.).

(c) The case supposed may be in past time, so that the Optative expresses what would have followed on an event which did not occur: e.g.—

II. 5. 311 καί νύ κεν ἔνθ' ἀπόλοιτο ἄναξ ἀνδρῶν Αλνείας, ελ μὴ ἄρ' δξὸ νόησε κτλ.

Od. 5. 73 ἔνθα κ' ἔπειτα καὶ ἀθάνατός περ ἐπελθὼν 242) θηήσαιτο ίδών.

So II. 2. 81., 3. 220., 4. 223, 429, 539., 5. 85, 311, 388., 12. 58., 13. 127, 343., 15. 697., 17. 70, 366, 398, Od. 7. 293., 13. 86. This use of the Optative is confined to Homer, and is chiefly found in the Iliad.

A somewhat similar idiom occurs in Herodotus; e.g. Hdt. 1. 2 ϵἴησαν δ΄ ἀν οὖτοι Κρῆτες 'these may have been Cretans' (= probably were), 7. 180 τάχα δ΄

ἄν τι καὶ τοῦ οὐνόματος ἐπαύροιτο. But there the meaning is different—not would have happened (= did not), but would be found to have happened (if we knew more).

(1) The case supposed may be vague or imaginary:—

ΙΙ. 8. 143 ἀνὴρ δέ κεν οὕ τι Διὸς νόον εἰρύσσαιτο,

where the emphatic $\partial v \dot{\eta} \rho$ suggests a condition: if a man, he cannot &c.; cp. Od. 4. 78., 23. 125, also—

Od. 12. 102 πλησίον ἀλλήλων καί κεν διοϊστεύσειας one may (on occasion arising) shoot an arrow across.

9. 131 οὐ μὲν γάρ τι κακή γε, φέροι δέ κεν ὥρια πάντα.

It is natural that an admission that something may happen should generally be made more or less in view of circumstances, given or supposed. Hence the use of kev or av with an Opt. of this force became the prevailing use, and exceptions are rare, even in Homer.

The principal clause or Apodosis of an ordinary Complex Conditional Sentence belongs to this head. It is erroneous, however, to regard the varieties now explained as complex sentences with the Protasis understood. In this, as in some other cases, the complex is to be explained from the simple, not vice versa.

In some instances the Opt. with KEV appears to be concessive (expressing willingness). Delbrück (Synt. Forsch. I. p. 200) gives

as examples—

Il. 22. 252 νῦν αὖτέ με θυμὸς ἀνῆκε στήμεναι ἀντία σεῖο. ἔλοιμί κεν ἤ κεν ἁλοίην.

Od. 8. 570 τὰ δέ κεν θεὸς $\mathring{\eta}$ τελέσειεν $\mathring{\eta}$ κ' ἀτέλεστ' εἴη, ὥς οἱ φίλον ἔπλετο θυμώ.

To which may be added Od. 14. 183 ἤ κεν ἁλοίη ἤ κε φύγοι κτλ. (but Il. 13. 486 is different). Possibly the use of κεν in these places is due to the opposition made between the two alternatives: cp. § 285, 3, b, § 286, and § 289, 2, b.

Il. 24. 618 ἀλλ' ἄγε δὴ καὶ νῶϊ μεδώμεθα, δῖε γεραιέ, σίτου ἔπειτά κεν αὖτε φίλον παῖδα κλαίοισθα.

Hes. Op. 33 τοῦ κε κορεσσάμενος νείκεα καὶ δῆριν ὀφέλλοις. Also Od. 16. 391., 21. 161. But these instances need not be separated from others in which expectation rather than concession is recognised. We may notice as on the border between the two meanings—

- (a) Uses of the First Person (esp. in the Odyssey): e.g.—
 Od. 15. 506 ηωθεν δέ κεν ὕμμιν ὁδοιπόριον παραθείμην.
 - 22. 262 ὧ φίλοι, ἥδη μέν κεν ἐγὼν εἴποιμι καὶ ἄμμιν κτλ.
 - 304 ἀλλ' οἶοι σύ τ' ἐγώ τε γυναικῶν γνώομεν ἰθύν,
 καί κέ τεο δμώων ἀνδρῶν ἔτι πειρηθεῖμεν.

14. 155 $\pi \rho i \nu$ δέ κε, καὶ μάλα περ κεχρημένος, οὔ τι δεχοίμην. So Od. 2. 219., 4. 347., 12. 387., 15. 313, 449., 18. 166., 19. 579., 20. 326., 21. 113, 193, II. 9. 417., 24. 664.

(β) Negative Clauses, with the Second Person:—

II. 14. 126 τῷ οὐκ ἄν με . . φάντες | μῦθον ἀτιμήσαιτε I do not think you will (I expect you not to) &c.

Od. 20. 135 οὐκ ἄν μιν νῦν, τέκνον, ἀναίτιον αἰτιόφο.

So Il. 2. 250 τῷ οὐκ ἂν βασιλῆας ἀνὰ στόμ' ἔχων ἀγορεύοις is to be understood as ironical courtesy (you will not if you are advised by me). This, again, when turned into a question yields another form of polite Imperative; as Il. 3. 52 οὐκ ἂν δὴ μείνειας will you not await? So Il. 5. 32, 456., 10. 204, Od. 6. 57., 7. 22.

The fact that où is the negative Particle in all these instances shows that the Optative is grammatically more akin to a Future than to an expression of wish. So far as wish is intended, the use is a rhetorical one, implying what it does not directly express,

like the similar use of the Future Indicative in Attic.

It will be seen that, except in one or two rare Homeric uses of the pure Opt., the usage of the Opt. in independent Sentences is nearly the same in Homer as in later Greek.

Optative in Subordinate Clauses.

301.] The classification which has been followed in discussing the Subordinate Clauses with the Subjunctive will also be the most convenient in the case of the Optative. Indeed there is so close a parallelism between the uses of these two Moods that little is now left to do except to take clauses of the several types already analysed, and show in each case the difference which

determines the use of one Mood rather than the other.

The reason for using an Optative will generally be found in the circumstance that the governing Verb is incompatible with a subordinate clause expressing either the will or the assured expectation of the speaker. If the occasion to which the whole sentence refers is past, or is a mere possibility, or an imaginary case, these two meanings of the Subjunctive are generally out of place—and we can only have the Mood which expresses a wish, or an admission of possibility. Hence it is a general rule—to which however we have found important exceptions (§ 298)—that the Optative must be used when the principal Verb is an Optative, or one of the Secondary Tenses.

302.] Clauses with $\dot{\eta} \dot{\epsilon} - \dot{\bar{\eta}} \dot{\epsilon}$. The Optative in the Homeric examples is generally to be explained as the translation of the Subjunctive into *oratio obliqua*; that is to say, it expresses a doubt or deliberation thrown back into the past.

[303.

Thus (a) we have past deliberation in—

16. 713 δίζε γὰρ ἢὲ μάχοιτο κατὰ κλόνον αὖτις ἐλάσσας,
 ἢ λαοὺς ἐς τεῖχος ὁμοκλήσειεν ἀλῆναι

he debated—should he fight &c., or should he call to the people &c.: so II. 1. 189., 5. 671, Od. 4. 117., 6. 141., 10. 50, &c.

(b) Past doubt is less common: the examples are—

Od. 4. 789 δρμαίνουσ' ή οἱ θάνατον φύγοι υἱὸς ἀμύμων ή ὅ γ' ὑπὸ μνηστῆρσιν ὑπερφιάλοισι δαμείη.

15. 304 συβώτεω πειρητίζων ἤ μιν ἔτ' ἐνδυκέως φιλέοι μεῖναί τε κελεύοι αὐτοῦ ἐνὶ σταθμῷ, ἦ ὀτρύνειε πόλινδε

Tysses tried the swineherd—whether would be still be hospitable and bid him stay, or &c.

- 303.] Clauses with μή. These are of two kinds, answering to the similar Clauses with the Subj. (§ 281):—
 - (1) Final Clauses: a single example will suffice:—
 Il. 5. 845 δῦν' "Αϊδος κυνέην μή μιν ἴδοι ὅβριμος "Αρης (so that) Ares should not see her.
 - (2) Object Clauses, with Verbs of thinking, &c.:-

Il. 21. 516 μέμβλετο γάρ οἱ τεῖχος ἐϋδμήτοιο πόληος,
 μὴ Δαναοὶ πέρσειαν (his care was that) the Greeks should not &c.: so Od. 16. 179., 19. 390.

Od. 21. 394 πειρώμενος ένθα καὶ ένθα μὴ κέρα ἶπες έδοιεν ἀποιχομένοιο ἄνακτος to see that worms should not have eaten it.

So in the common use with Verbs of fearing: as Il. 18. 34 δείδιε γὰρ μὴ λαιμὸν ἐπαμήσειε he feared lest &c. But in—

Il. 9. 244 ταῦτ' αἰνῶς δείδοικα κατὰ φρένα μή οἱ ἀπειλὰς ἐκτελέσωσι θεοί, ἡμῶν δὲ δὴ αἴσιμον εἴη κτλ.

the Subj. is used for the immediate object of the fear (the governing Verb being a Perfect), and the Opt. for the more remote event: see § 304, α . The true reading however may be $\epsilon i \eta$, a Subj. like $\mu \epsilon \tau - \epsilon i \omega$ (Il. 23. 47).

These Object Clauses may be regarded as the negative forms answering to the Clauses expressing past deliberation. As in the corresponding uses of $\mu\dot{\eta}$ with the Subj. and Opt. in principal Clauses (§ 278), the Mood is never qualified by $\kappa\epsilon\nu$ or $\tilde{\alpha}\nu$.

304.] Relative Clauses—Final and Object. Sometimes the Opt. in a Relative Clause is used precisely as in an independent sentence; the wish or supposition being expressed from the

speaker's présent point of view, not subordinated to the point of view fixed by the governing Verb. Thus in—

Od. 4. 698 ἀλλὰ πολὺ μεῖζόν τε καὶ ἀργαλεώτερον ἄλλο μνηστῆρες φράζονται, δ μὴ τελέσειε Κρονίων

we have an independent parenthetical wish: and in-

- Il. 3. 234 νῦν δ' ἄλλους μὲν πάντας δρω . . οὕς κεν ἐτ γνοίην κτλ.
- 5. 303 (= 20. 286) μ éya épyov, δ où δ vo γ ' åv δ pe ϕ épou ϵ v a parenthetical expectation (δ 299, f). In other places the Relative Clause is connected, by implication at least, with the action of the principal Clause, and expresses an intended or expected consequence. We may distinguish the following cases:—
 - (1) In Final Clauses—
- (a) The choice of the Opt. shows want of confident expectation of the result intended:—
 - II. 1. 62 ἀλλ' ἄγε δή τινα μάντιν ἐρείομεν ἢ ἱερῆα, . .
 ὅς κ' εἴποι κτλ. (with the view that he may tell: ep. 7. 342., 21. 336, Od. 5. 166).

7. 23Ι ἡμεῖς δ' εἰμὲν τοῖοι οὰ ἃν σέθεν ἀντιάσαιμεν καὶ πολέες (= many of us are ready to meet thee).

Od. 10. 431 τί κακῶν ἱμείρετε τούτων,
Κίρκης ἐς μέγαρον καταβήμεναι, ἥ κεν ἄπαντας
ἢ σῦς ἠὲ λύκους ποιήσεται ἠὲ λέοντας,
οἴ κέν οἱ μέγα δῶμα φυλάσσοιμεν καὶ ἀνάγκῃ.

Here ποιήσεται (Subj.) expresses the immediate result, φυλάσσοιμεν the further and therefore (in the nature of things) less confidently asserted consequence.

In this group of Clauses the Opt. always takes KEV or av (cp.

the corresponding Subj., § 282).

(b) The Opt. with KEV is especially common after a principal Clause of negative meaning (in which case the consequence is necessarily matter of mere supposition): as— Amus and H. S.A.

ΙΙ. 5. 192 ίπποι δ' οὐ παρέασι καὶ ἄρματα τῶν κ' ἐπιβαίην.

Od. 1. 253 ἢ δὴ πολλὸν ἀποιχομένου 'Οδυσῆος δεύη, ὅ κε μνηστῆρσιν ἀναιδέσι χεῖρας ἐφείη.

5. 16 οὐ γάρ οἱ πάρα νῆες ἐπήρετμοι καὶ ἑταῖροι, οἴ κέν μιν πέμποιεν.

The pure Opt. occurs in II. 22. 348 οὐκ ἔσθ' δs . . ἀπαλάλκοι.

(c) The Opt. is used if the governing Verb is an Optative, or a Secondary Tense: e.g.—

ΙΙ. 14. 107 νῦν δ' εἴη δς τῆσδέ γ' ἀμείνονα μῆτιν ἐνίσποι.

Od. 6. 113 ώς 'Οδυσεὺς ἔγροιτο, ἴδοι τ' εὐώπιδα κούρην, ή οἱ Φαιήκων ἀνδρῶν πόλιν ἡγήσαιτο.

- Od. 5. 240 αὖα πάλαι, περίκηλα, τά οἱ πλώοιεν ἐλαφρῶς dry, such as would float.
- (2) After Verbs that express asking or finding out the Clause acquires the force of a dependent Interrogative, and so of an Object Clause:—

Od. 9. 331 αὐτὰρ τοὺς ἄλλους κλήρφ πεπαλάσθαι ἄνωγον ος τις τολμήσειεν κτλ. (for the man) who should &c.

Il. 3. 316 κλήρους πάλλου . . ὁππότερος ἀφείη they cast lots for which of the two should throw.

507 (= 16. 283) πάπτηνεν δὲ ἔκαστος ὅπη φύγοι.

So Il. 6. 177., 10. 503, Od. 9. 88., 10. 101, 110., 19. 464. As to the form of the Relative Clause see § 267, 2, c.

The Dependent Interrogative properly so called is rare in

Homer :-

ΙΙ. 5. 85 Τυδείδην δ' οὐκ ἃν γνοίης ποτέροισι μετείη.

Od. 15. 423 εἰρώτα δὴ ἔπειτα τίς εἴη καὶ πόθεν ἔλθοι.

17. 368 αλλήλους τ' ερέοντο τίς είη καὶ πόθεν έλθοι.

It is evidently akin to the Optatives with $\tilde{\eta} - \tilde{\eta}$ which express past doubt (§ 302, b): τ is ϵ in who he should be comes to mean who he should prove to be. Cp. the Subj. in the corresponding Clauses relating to present time (§ 280).

- 305.] Relative Clauses—Conditional. When the event to which the condition attaches is matter of wish or mere expectation, or is in past time, the condition is generally expressed by the Optative. Hence we find the Optative—
 - (a) With an Optative of wish in the principal Clause:—

3. 299 ὁππότεροι πρότεροι ὑπὲρ ὅρκια πημήνειαν,
 ὧδέ σφ' ἐγκέφαλος χαμάδις ῥέοι ὡς ὅδε οἶνος.

Od. 1. 47 ως ἀπόλοιτο καὶ ἄλλος ὅτις τοιαῦτά γε ῥέζοι.

(b) With an Optative of expectation:-

Il. 9. 125 οὖ κεν ἀλήϊος εἶη ἀνὴρ ῷ τόσσα γένοιτο he will not be poor to whom such things come.

12. 228 ὧδέ χ' ὑποκρίναιτο θεοπρόπος δς σάφα θυμῷ εἰδείη τεράων καί οἱ πειθοίατο λαοί so will a diviner answer, who knows &c.

Od. 4. 222 δς τὸ καταβρόξειεν . .

οὖ κεν ἐφημέριός γε βάλοι κατὰ δάκρυ παρειῶν.

The Opt. of the governing Clause may be itself subordinate:—

Od. 2. 53 ως κ' αὐτὸς ἐεδνωσαιτο θύγατρα, δοίη δ' ὧ κ' ἐθέλοι καί οἱ κεχαρισμένος ἔλθοι.

(c) After a Present or Future, in one or two places where the time is purposely vague:—

Od. 6. 286 καὶ δ' ἄλλη νεμεσῶ, ἥ τις τοιαῦτά γε ρέζοι = I am ready to be angry with any other who &c.

19. 510 καὶ γὰρ δὴ κοίτοιο τάχ' ἔσσεται ἡδέος ὥρη, ὅν τινά γ' ὕπνος ἔλοι κτλ. (ἔλη La R.)

The Opt. avoids assuming that the case will ever occur.

The reading is very doubtful in II. 5. 407 ὅττι μάλ' οὐ δηναιὸς δε ἀθανάτοισι μάχοιτο, the Ambrosian and some others having μάχηται.

(d) When the principal Verb is in a past Tense; the Relative Clause generally expressing indefinite frequency, iteration, &c.: as—

II. 2. 188 ον τινα μεν βασιλήα καὶ εξοχον ἄνδρα κιχείη, τον δ' άγανοις επέεσσιν ερητύσασκε.

15. 22 δυ δὲ λάβοιμι βίπτασκου τεταγών κτλ.

Od. 22. 315 παύεσκον μνηστήρας ὅτις τοιαῦτά γε ῥέζοι.
In these uses, and generally, the Opt. is pure. Exceptions are—

Od. 4. 600 δῶρον δ' ὅττι κέ μοι δοίης κειμήλιον ἔστω (where the Opt. may be substituted for the Subj. for the sake of courtesy, to avoid assuming the certainty of the gift),—

Od. 21. 161 ἡ δέ κ' ἔπειτα γήμαιθ' ὅς κε πλεῖστα πόροι καὶ μόρσιμος ἔλθοι.

Clauses formed by a Relative and the pure Optative are strictly parallel to the Conditional Clauses formed by a Relative and the pure Subjunctive, such as χαίρει δέ μιν ὅς τις ἐθείρη, οτ βέλτερον δς φεύγων προφύγη (§ 283, α). In both groups of Clauses the reference is indefinite; but with the Subj. the instances must be thought of as future instances, and consequently the governing Verb must not imply that they are past or imaginary.

It may happen that the condition is expressed by the Subj. (because regarded as certain to be fulfilled), while the main action is uncertain, and therefore put in the Opt.: as—

Il. 14. 126 τῷ οὐκ ἄν με γένος γε κακὸν καὶ ἀνάλκιδα φάντες μῦθον ἀτιμήσαἰτε πεφασμένον, ὅν κ' ἐὰ εἶπω.

20. 250 όπποιόν κ' είπησθα έπος, τοιόν κ' έπακούσαις.

So with εἰ, as Od. 2. 218 εἰ μέν κεν ἀκούσω, ἢ τ' ἃν τλαίην, cp. 11. 104, 110., 12. 137. But the general rule is to let the subordinate Clause follow the Mood of the governing Verb: hence the so-called 'Attraction' of the Optative.

- 306.] Clauses with ώς, ὅπως, ἴνα and the Opt. are either Final or Object Clauses (not Conditional in Homer, see the note at the end of this section).
 - (1) In Final Clauses the Opt. may be used either (a) to

indicate that the consequence is not immediate or certain (the governing Verb having a present or future meaning), or (b) because the governing Verb is an Opt., or (c) a Secondary Tense. Thus we have the Opt.—

- (a) After a Present, &c. in the principal Clause; especially when the Clause bears a negative meaning (so that the occasion is necessarily imaginary):— Thus as all 1873
 - II. 1. 343 οὐδέ τι οἶδε νοῆσαι ἄμα πρόσσω καὶ ὀπίσσω, ὅππως οἱ παρὰ νηυσὶ σόοι μαχέοιντο ᾿Αχαιοί.

(μαχέοιντο however is not a good Homeric form, and makes an intolerable hiatus: read probably μαχέονται, cp. § 326, 3).

Od. 2. 52 οὶ πατρὸς μὲν ἐς οἶκον ἀπερρίγασι νέεσθαι Ἰκαρίου, ὥς κ' αὐτὸς ἐεδνώσαιτο θύγατρα.

But also after an affirmative Clause:—

- Od. 23. 134 ἡγείσθω φιλοπαίγμονος ὀρχηθμοῖο, ως κέν τις φαίη γάμον ἔμμεναι ἐκτὸς ἀκούων = so that any one who happens to hear may think &c.
 - 12. 156 ἀλλ' ἐρέω μὲν ἐγὼν ἵνα εἰδότες ἤ κε θάνωμεν ἤ κεν ἀλενάμενοι θάνατον καὶ κῆρα φύγοιμεν (the Opt. of the less emphatic alternative, § 275, b).
 - 17. 249 τόν ποτ' ἐγὼν ἐπὶ νηὸς ἐϋσσέλμοιο μελαίνης ἄξω τῆλ' Ἰθάκης, ἵνα μοι βίστον πολὺν ἄλφοι (ποτέ indicates a distant occasion).
 - 401 κυυζώσω δέ τοι ὅσσε πάρος περικαλλε ἐόντε,
 ως αν ἀεικέλιος πασι μυηστήρσι φανείης (so 16. 297).
 - 24. 532 ἴσχεσθε . . ὥς κεν . . διακρινθεῖτε (leg. διακρινθῆτε?).
- (b) After an Optative, either of wish or of expectation: especially in the Odyssey, as—
 - Od. 14. 407 τάχιστά μοι ἔνδον ἐταῖροι εἶεν, ἵν' ἐν κλισίη λαρὸν τετυκοίμεθα δόρπον.

15. 537 τῷ κε τάχα γυοίης . . ὡς ἄν τίς σε . . μακαρίζοι.

So Od. 18. 369., 20. 81: and à fortiori after an implied prohibition—

- Od. 3. 346 Ζεὺς τό γ' ἀλεξήσειε . . ως ὑμεῖς . . κίοιτε Zeus avert that you should go &c.
- (c) After a Past Tense—a use of which it is needless to give examples.

Regarding the use of KEV and av, it is to be observed that-

- 1. The Opt. with iνα and oπωs is always pure.
- 2. The Opt. with &s takes KEV or av in a few places where there is clear reference to a single occasion, as in Od. 2. 52

(quoted above), Il. 19. 331, Od. 17. 362; and in the combinations ωs αν τις (Od. 15. 538), ως κέν τις (Od. 23. 135).

(2) The corresponding Object Clause with ωs and ὅπως is found (a) after Verbs of trying, considering how, &c. as—

Π. 2. 3 ἀλλ' ὅ γε μερμήριζε κατὰ φρένα ὡς ᾿Αχιλῆα τιμήσει᾽ ὀλέσαι δὲ κτλ.

The reading τιμήσει is supported by Ven. A, which has τιμήσηι (τιμήσει εὐκτικόν Schol. A. B.): all other authorities have τιμήση, and all have ὀλέση.

11. 9. 181 πειρᾶν ὡς πεπίθοιεν (bade them try how to persuade).
 21. 137 ὥρμηνεν δ' ἀνὰ θυμὸν ὅπως παύσειε (so 24. 680).

Od. 14. 329 ὅππως νοστήσει' Ἰθάκης ἐς πίονα δῆμον.

This reading is proved (against νοστήση of the MSS.) by the parallel Od. 19. 298 ὅππως νοστήσειε φίλην ἐς πατρίδα γαῖαν. Cp. also Od. 9. 420., 11. 479.

In one place δs with the Opt, follows a Verb of saying, viz. in Od. 24. 237 $(\mu \epsilon \rho \mu \acute{\eta} \rho \mu \acute{\epsilon} \epsilon)$ $\epsilon l \pi \epsilon i \nu$ δs $\delta \lambda \theta o \kappa a i \kappa o i \prime$ $\epsilon l s$ $\pi a \tau \rho i \delta a$ $\gamma a i a \nu$ to tell how he had come. This is the only Homeric instance of δs with the Opt. in oratio obliqua. The next is H. Ven. 215 $\epsilon l \pi \epsilon \nu$ $\delta \ell$ $\epsilon \kappa a \sigma \tau a$, δs δc $\delta d \delta a \nu a \tau a$.

An example of δπωs and the Opt. with iterative meaning (nearly=ὅτε, § 308, 1, d) occurs in Hesiod, Theog. 156 καὶ τῶν μὲν ὅπως τις πρῶτα γένοιτο πάντας ἀποκρύπτασκε. This use is to be classed as Conditional, like the corresponding uses of ὡs and ὅπως with the Subj., § 285, 3.

307.] Clauses with ξως (ῆος) and ὄφρα. These also are Final in character: i.e. the Conjunction has the meaning till the time that, hence (commonly) in order that,—not while, so long as.

The notion of time is distinct in-

Od. 12. 437 νωλεμέως ἐχόμην ὄφρ' ἐξεμέσειεν ὀπίσσω until it should vomit forth again (50 12. 428., 20. 80).

Od. 23. 151 εἴρυσθαι μέγα δῶμα διαμπερὲς ἢος ἵκοιτο till he should come (so 5. 386., 9. 376).

It is indistinct, or lost, in the ordinary use of ὅφρα, as— Il. 6. 170 δεῖξαι δ' ἠνώγει ῷ πενθερῷ ὄφρ' ἀπόλοιτο.

Od. 12. 427 ἡλθε δ' ἐπὶ Νότος ὧκα, φέρων ἐμῷ ἄλγεα θυμῷ, ὅφρ' ἔτι τὴν ὀλοὴν ἀναμετρήσαιμι Χάρυβδιν to the end that I should measure again &c.

and with $\epsilon \omega s$ in Od. 4. 799 $\pi \epsilon \mu \pi \epsilon \delta \epsilon \mu \nu \nu .$. $\delta \omega s \Pi \eta \nu \epsilon \lambda \delta \pi \epsilon \iota \alpha \nu \nu \pi \alpha \delta \sigma \epsilon \iota \epsilon \kappa \lambda \alpha \nu \delta \mu \sigma \delta \omega s$, and other places in the Odyssey (5. 386., 6. 80., 19. 367).

The corresponding form of Object Clause with these Conjunctions may be traced in one instance of each, viz. Il. 4. 465 λελιη- Ε΄ςςς Ζ΄ μένος ὅφρα τάχιστα τεύχεα συλήσειε, and Od. 19. 367 ἀρώμενος ἡος

Troio. Here, after a Verb of wishing, the meaning until passes into the simple that.

With εως and όφρα the Opt. is nearly always pure: but we have όφρ' αν in Od. 17. 298 (until), 24. 334: and εως κεν in—

Od. 2. 77 τόφρα γὰρ ἃν κατὰ ἄστυ ποτιπτυσσοίμεθα μύθφ χρήματ' ἀπαιτίζοντες, ἕως κ' ἀπὸ πάντα δοθείη, where there is a stress on the particular time contemplated. So—

Il. 15. 69 ἐκ τοῦ δ' ἄν τοι ἔπειτα παλίωξιν παρὰ νηῶν αἰὲν ἐγὼ τεύχοιμι διαμπερές, εἰς ὅ κ' ᾿Αχαιοὶ εἶλιον αἰπὸ εκοιεν (the only instance with εἰς ὅ).

The similar uses of $\xi \sigma \tau \epsilon$, $\alpha \chi \rho \iota$, $\mu \epsilon \chi \rho \iota$ are post-Homeric.

The chief instance of ὅφρα with an Opt. following a Fut. or Subj. is II. 7. 339 πύλας ποιήσομεν.. ὄφρα.. ὁδὸς εἴη. But the example is open to doubt, partly because there may be a Subj. εἴη (see § 80), partly because the line also occurs (7. 349) where the governing Verb is an Imperfect, and it may have been wrongly inserted in v. 339. In other places—as II. 7. 72, Od. 5. 378., I5. 51., 22. 444—where some editions have Opt. forms, the Subj. is to be restored. It is true that the Opt. is found after the Future with other Conjunctions, to express remoteness or uncertainty; but a word which literally means till the time that could not naturally be used to express a remote end or consequence.

- 308.] Clauses with ὅτϵ, ὁπότϵ, &c. Most Clauses of this kind are essentially—
 - (1) Conditional. The Verb of the principal Clause may be—
 - (a) An Optative of wish: as—
 - Π. 21. 428 τοιοῦτοι νῦν πάντες, ὅσοι Τρώεσσιν ἀρωγοί, εἶεν ὅτ' ᾿Αργείοισι μαχοίατο (cp. Il. 18, 465, &c.).
 - (b) An Optative of expectation: as—
 - Od. 13. 390 καί κε τριηκοσίοισιν έγων ἄνδρεσσι μαχοίμην συν σοί, πότνα θεά, ὅτε μοι πρόφρασσ' ἐπαρήγοις.
 - Il. 14. 247 Ζηνὸς δ' οὐκ ἃν ἔγωγε Κρονίονος ἃσσον ἱκοίμην, οὐδὲ κατευνήσαιμ' ὅτε μὴ αὐτός γε κελεύοι.
- (c) A Future: in one place, viz. Il. 13. 317 al $\pi \dot{\nu}$ of $\dot{\epsilon}\sigma\sigma\epsilon\hat{\iota}\tau a\iota$. $\nu\hat{\eta}as$ $\dot{\epsilon}\nu\iota\pi\rho\hat{\eta}\sigma a\iota$ ő $\tau\epsilon$ $\mu\hat{\eta}$ ad $\tau\acute{o}s$ $\gamma\epsilon$ Kρονίων $\dot{\epsilon}\mu\beta\acute{a}\lambdaο\iota$ $\kappa\tau\lambda$., where the speaker does not wish to imply the fulfilment of the condition.

In Od. 24. 343 ἔνθα δ' ἀνὰ σταφυλαὶ παντοῖαι ἔασιν, ὁππότε δὴ Διὸς ὧραι ἐπιβρίσειαν the Present ἔασιν is open to suspicion, because all the rest of the description is in the past tense; with which the Opt. is in harmony.

In Il. 4. 263 ἔστηχ' ὥς περ ἐμοί, πιέειν ὅτε θυμὸς ἀνώγοι the Opt. is read by most MSS. It may be regarded as an Opt. of the remoter event (§ 305, c), depending on πιέειν, which is an Inf. of purpose (Goodwin § 555). But La Roche reads ἀνώγη.

- (d) A Past Tense, generally of an event which happens repeatedly or habitually, as—
 - ΙΙ. Ι. 610 ἔνθα πάρος κοιμᾶθ' ὅτε μιν γλυκὺς ὕπνος ἰκάνοι.

21. 265 δσσάκι δ' δρμήσειε κτλ. as often as he started &c.

Od. 8. 87 ή τοι ὅτε λήξειεν . . ἔλεσκεν (iterative).

So with ότε after πρίν, in Il. 9. 486 οὐκ ἐθέλεσκες . . πρίν γ' ὅτε

δη . . ἄσαιμι=you would only . . when &c.: cp. § 297.

In these cases the Opt. after a past tense answers to the pure Subj. after a Present, § 289, 2, a. In one place the Opt. with ὅτε represents the Subj. with ὅτε κεν, viz. in Od. 20. 138 ἀλλ' ὅτε δὴ κοίτοιο καὶ ὅπνου μιμνήσκοιτο, ἡ μὲν δέμνι' ἄνωγεν ὑποστορέσαι ὁμωῆσι bade them spread the couch against the time when he should bethink him &c.

In this group of uses the Opt. is pure, except in-

II. 9. 524 οὕτω καὶ τῶν πρόσθεν ἐπευθόμεθα κλέα ἀνδρῶν ἡρώων, ὅτε κέν τιν' ἐπιζάφελος χόλος ἵκοι,

where the $\kappa \epsilon \nu$ may be accounted for by the change from the Plural to the Singular: cp. § 283, b, c.

- (2) After a Past Tense of a Verb of waiting ὁπότε with the Aorist Opt. forms a kind of Object Clause; as Il. 7. 415 ποτιδέγμενοι ὁππότ' ἄρ' ἔλθοι waiting for (the time) when he should come; so Il. 9. 191., 18. 524, and (after μένοντες) 4. 334. Cp. § 289 (1).
- 309.] Clauses with ἐπεί. The few examples of this use show the same varieties as with ὅτε. Thus, (a) after another Opt.—

 9. 304 νῦν γάρ χ' Ἐκτορ' ἔλοις, ἐπεὶ ἃν μάλα τοι σχεδὸν ἔλθοι.

24. 226 αὐτίκα γάρ με κατακτείνειεν 'Αχιλλεύς ἀγκὰς έλόντ' ἐμὸν υἱόν, ἐπὴν γόου ἐξ ἔρον εἵην.

Od. 4. 222 δς τὸ καταβρόξειεν, ἐπὴν κρητῆρι μιγείη, κτλ.

(b) After a Present, in the statement of a supposed consequence—

Od. 24. 254 τοιούτω δὲ ἔοικας, ἐπεὶ λούσαιτο φάγοι τε, εὐδέμεναι (such a one as would sleep after that &c.).

(c) After a Past tense, in the iterative sense:—

Il. 24. 14 ἀλλ' ὅ γ' ἐπεὶ ζεύξειεν κτλ., Od. 2. 105 (= 19. 150., 24. 140) ἐπὴν δαίδας παραθεῖτο (v.l. ἐπεί).

The use of $d\nu$ is intelligible in the first of these passages (II. 9. 304), since it refers to an event in the immediate future; perhaps also in Il. 24. 227, after an Opt. of concession. But as to the form $d\nu$ see § 362.

310.] πρίν. The peculiar way of expressing a condition by a Negative followed by πρίν (§ 297) is transferred to the past, the Subj. becoming an Opt., in one passage—

ΙΙ. 21. 580 οὐκ ἔθελεν φεύγειν πρὶν πειρήσαιτ' 'Αχιλήος.

The Optative with &, &c.

311.] Optative with &—Conditional Protasis. The Clause with & expresses a supposition, made in order to lead up to the Clause which expresses the expected consequence: as—

Od. 1. 163 εἰ κεῖνόν γ' Ἰθάκηνδε ἰδοίατο νοστήσαντα, πάντες κ' ἀρησαίατ' ἐλαφρότεροι πόδας εἶναι κτλ.

Il. 7. 129 τοὺς νῦν εἰ πτώσσοντας ὑφ' Ἐκτορι πάντας ἀκούσαι, πολλά κεν ἀθανάτοισι φίλας ἀνὰ χεῖρας ἀείραι.

The Clause with & may follow the other, as-

ΙΙ. 22. 20 ή σ' αν τισαίμην, εί μοι δύναμίς γε παρείη.

The apodosis is generally given by the Opt. with κεν, as in the examples quoted: but we may have the Subj. with κεν, the Future, or the Present. In such cases there is some change of tone between Protasis and Apodosis: as Il. 11. 386 εἰ μὲν δὴ ἀντίβιον σὺν τεύχεσι πειρηθείης, οὐκ ἄν τοι χραίσμησι κτλ., where the Subj. is more peremptory than the Opt.: cp. Od. 17. 539 and (Fut.) Il. 10. 222. So with the εἰ-Clause following the other, as Il. 9. 388 κούρην δ' οὐ γαμέω, οὐδ' εἰ ἐρίζοι I shall not wed the maiden (and would not) even if she rivalled &c.; cp. Il. 2. 488, Od. 17. 539. The instances of the Opt. following a Present are nearly all in the Odyssey: I. 414 οὕτ' οὖν ἀγγελίη ἔτι πείθομαι εἴ ποθεν ἔλθοι, also 7. 52., 14. 56. In these cases the Present has the force of a general statement (see Goodwin, §§ 409–501). So when the Verb is understood, as—

ΙΙ. 9. 318 ἴση μοιρα μένοντι καὶ εἰ μάλα τις πολεμίζοι.

Od. 8. 138 οὐ γὰρ ἔγωγέ τί φημι κακώτερον ἄλλο θαλάσσης ἄνδρα γε συγχεῦαι, εἰ καὶ μάλα καρτερὸς εἴη no matter if he is very strong (= even if he should be).

The combination $\delta_S \in l$ (or $\delta_S \in \ell$ τ_E) expresses supposition for the purpose of *comparison*; the principal Clause being in a past Tense, as—

II. 2. 780 οἱ δ' ἄρ' ἴσαν ὡς εἴ τε πυρὶ χθὼν πᾶσα νέμοιτο (ep. Il. 11. 467., 22. 410, Od. 9. 314., 10. 416, 420., 17. 366). Or else negative—

ΙΙ. 11. 389 οὐκ ἀλέγω ὡς εἴ με γυνη βάλοι ἡ πάϊς ἄφρων.

The use of & with the Opt. in the iterative sense (if ever, whenever), which is common in later Greek, is not Homeric: the only passage which might be quoted as an example is—

II. 24. 768 ἀλλ' εἴ τίς με καὶ ἄλλος ἐνὶ μεγάροισιν ἐνίπτοι . . ἀλλὰ σὰ τόν γ' ἐπέεσσι παραιφάμενος κατέρυκες. 312.] Optative with &—Wish. The Conditional Protasis, when used without an Apodosis, becomes a form of expressing wish:—

II. 15. 569 'Αντίλοχ', οὖ τις σεῖο νεώτερος ἄλλος 'Αχαιῶν, οὖτε ποσὶν θάσσων οὖτ' ἄλκιμος ὡς σὰ μάχεσθαι· εἶ τινά που Τρώων ἐξάλμενος ἄνδρα βάλοισθα.

So Il. 10. 111., 16. 559., 24. 74. More frequently a wish is introduced by εἰ γάρ or αῖ γάρ, as in—

αὶ γάρ, Ζεῦ τε πάτερ καὶ 'Αθηναίη καὶ 'Απολλον, κτλ. Such a wish is sometimes used as a form of asseveration, as—

Il. 18. 464 αι γάρ μιν θανάτοιο δυσηχέος ὧδε δυναίμην νόσφιν ἀποκρύψαι, ὅτε μιν μόρος αἰνὸς ἱκάνοι, ὧς οἱ τεύχεα καλὰ παρέσσεται

i.e. fair arms shall be his as surely as I wish I could save him from death: so Il. 8. 538, Od. 9. 523: and ironically—

Od. 21. 402 αὶ γὰρ δὴ τοσσοῦτον ὀνήσιος ἀντιάσειεν, ώς οὖτός ποτε τοῦτο δυνήσεται ἐντανύσασθαι.

Here also we must place the wishes expressed by $\epsilon i\theta \epsilon$ or $\alpha i\theta \epsilon$, which have generally the character of hopeless regret: as $\epsilon i\theta$ as $i\beta \omega \omega \mu \kappa \tau \lambda$. It may be noted that in the Odyssey wish is not expressed by ϵi except in the combinations $\epsilon i \gamma d\rho$ and $\epsilon i\theta \epsilon$.

A wish is often followed by a Clause expressing an expected

consequence of its fulfilment; as-

II. 2. 371 αὶ γάρ, Ζεῦ τε πάτερ . . τῷ κε τάχ' ἢμύσειε πόλις Πριάμοιο ἄνακτος.

Od. 7. 331 Ζεῦ πάτερ, αἴθ' ὅσα εἶπε τελευτήσειεν ὅπαντα ᾿Αλκίνοος τοῦ μέν κεν ἐπὶ ζείδωρον ἄρουραν ἄσβεστον κλέος εἴη.

So we should probably punctuate—

13. 485 εἰ γὰρ ὁμηλικίη γε γενοίμεθα τῷδ' ἐπὶ θυμῷ'
 αἶψά κεν ἢὲ φέροιτο μέγα κράτος ἢὲ φεροίμην.

Or we may take $ai\psi \dot{a}$ $\kappa \epsilon \nu$ $\kappa \tau \lambda$. closely with the preceding line, and then it becomes the Apodosis to a Conditional clause. Other examples of this ambiguity are given in § 318.

313.] Optative with et κεν—Conditional Protasis. This is a comparatively rare form; it can generally be explained in accordance with the other uses of κεν:—

II. 5. 273 εἰ τούτω κε λάβοιμεν ἀροίμεθά κε κλέος ἐσθλόν κε εξιπέρεται if (as I propose) we take them, we should δς.
 (But perhaps we should read τούτω γε.)

141 εἰ δέ κεν ᾿Αργος ἱκοίμεθ' ᾿Αχαιϊκόν κτλ.
 if (as a further step) we reach Argos &c.

Od. 2. 76 εἴ χ' ὑμεῖς γε φάγοιτε, τάχ' ἄν ποτε καὶ τίσις εἴη if (as I say is better, see v. 74) you devour, then &c.

See also Il. 2. 123., 8. 196, 205., 13. 288., 23. 592, Od. 2. 246., 12. 345., 13. 389., 19. 590. And with the Clause with & following the other—

Il. 6. 49 τῶν κέν τοι χαρίσαιτο πατὴρ ἀπερείσι' ἄποινα, εἴ κεν ἐμὲ ζωὸν πεπύθοιτ' ἐπὶ νηυσὶν 'Αχαιῶν.

So Il. 1. 60., 10. 381; ep. Od. 7. 315., 8. 353, and the use of οὐδ' εἴ κεν not even in case, Il. 9. 445., 19. 322., 22. 220. 22.34.

There is one instance of the Opt. with εἰ—ἄν, viz.

ΙΙ. 2. 597 εἴ περ αν αὐταὶ Μοῦσαι ἀείδοιεν.

314.] Opt. with &—Final and Object Clauses. These are generally found after a past Tense in the Principal Clause; e.g.—

II. 2. 97 κήρυκες βοόωντες ἐρήτυον, εἴ ποτ' ἀὐτῆς σχοίατ', ἀκούσειαν δὲ κτλ.(in view that they should &c.)

Od. 4. 317 ἥλυθον, εὶ τινά μοι κληηδόνα πατρὸς ἐνίσποις
I have come in case you may tell me some &c.

With Verbs of seeking, trying, desiring, &c. the Clause with &c has the character of an Object Clause: as—

II. 4. 88 Πάνδαρον ἀντίθεον διζημένη εἴ που ἐφεύροι seeking in the hope of finding (= seeking to find).

So Il. 12. 333, Od. 13. 415., 22. 381.

With Verbs of telling, knowing, seeing, thinking, &c. this idiom is almost confined to the Odyssey; e.g.—

Od. 1. 115 οσσόμενος πατέρ' ἐσθλον ἐνὶ φρεσίν, εἴ ποθεν ἐλθὼν μνηστήρων τῶν μὲν σκέδασιν κατὰ δώματα θείη

i.e. with the thought in his heart, whether his father would come and scatter the suitors: cp. 5. 439., 9. 317, 421., 18. 375.

Od. 12. 112 εἰ δ' ἄγε δή μοι τοῦτο, θεά, νημερτες ἐνίσπες εἴ πως τὴν ὀλοὴν μεν ὑπεκπροφύγοιμι Χάρυβδιν tell me as to the hope that I may escape &c.

In a few places an Object Clause of this kind follows a present Tense:—

Od. 2. 350 . δυ σὺ φυλάσσεις κεῖνου ὀϊόμενου τὸυ κάμμορου εἴ ποθευ ἔλθοι.

14. 119 Ζεὺς . . οἶδε . . εἴ κέ μιν ἀγγείλαιμι ἰδών.

20. 224 άλλ' έτι τὸν δύστηνον ότομαι εἴ ποθεν . . θείη.

So in the only example of the kind found in the Iliad:-

ΙΙ. 11. 792 τίς δ' οἶδ' εἴ κέν οἱ σὺν δαίμονι θυμὸν ὀρίναις;

The pure Optative is used in all the places quoted, except the two in which $\epsilon \tilde{\iota}$ $\kappa \epsilon \nu$ follows of $\delta \epsilon$ (II. 11. 792, Od. 14. 119). In these the structure is the same as in the corresponding independent Clauses (\S 300). That is to say, the phrase τls of $\delta \epsilon \nu$ ϵl is treated as a mere 'perhaps' (Lat. nescio an).

An Opt. in a Final Clause depending upon a Subj. is perhaps to be found in Od. 5. 471 ϵ l δέ $\kappa\epsilon\nu$. . $\kappa\alpha\tau\alpha\delta\rho\acute{a}\theta\omega$ ϵ l $\mu\epsilon$ $\mu\epsilon\theta\epsilon\acute{i}\eta$ (so all MSS. : $\mu\epsilon\theta\acute{\eta}\eta$ Bekk.). Cp. § 293.

History of the Subjunctive and Optative.

315.] Uses in Independent Clauses. The uses of the Subj. and Opt. in independent Clauses have been shown to fall in each case into two main groups. In one set of meanings the Mood expresses desire on the part of the speaker; to this belong the Subj. of command and prohibition, and the Opt. of wish. In the other the Mood is a kind of Future; the Subj. being an emphatic or confident Future (like our Future with shall), the Opt. a softened Future, expressing expectation, or mere admission of possibility (the English may or should).

These two sets of meanings may be called the 'quasi-Imperative,' and the 'quasi-Future.' We must remember however that they are not always clearly separable, but are connected by transitional or intermediate uses: such as (e. g.) the Subj. which expresses necessity (§ 277), and the Opt. of concession (§ 299, d).

316.] Uses in Subordinate Clauses. Passing over for the present the question whether the quasi-Imperative or the quasi-Future use is to be regarded in each case as representing the original meaning of the Mood, we proceed to consider the uses in Subordinate Clauses. Here the main distinction is that between 'Final' and 'Conditional,' if these terms are used with some latitude: especially if we rank with the Final Clauses not only those which distinctly express the end or purpose of an action, but also all Clauses which are referred to the time of the governing Verb. It is true that this distinction does not always apply; e.g. to the Subj. in—

Δαναῶν δλοφυρόμεθ' αλχμητάων, οι κεν δὴ κακὸν οίτον ἀναπλήσαντες ὅλωνται·

or to the Opt. in-

άλλὰ πολὺ μείζου . . μυηστήρες φράζουται, δ μὴ τελέσειε Κρονίωυ. For there the Relative Clause is in sense a parenthesis, and is construed accordingly as an independent Sentence. Again, in—

έσσεται ήμαρ ὅτ' ἄν ποτ' ὀλώλη κτλ. φρασσόμεθ' ἡὲ νεώμεθ' ἐφ' ἡμέτερ' ἦε μένωμεν. δείδιε γὰρ μὴ λαιμὸν ἀποτμήσειε κτλ.

and generally in *Object* Clauses, the Subordinate Clause does not express *end*; but the time from which it is regarded as spoken is fixed by the governing Verb, in the same way that the time of a true Final Clause is fixed by the action of which it gives the end. For the present purpose, accordingly, there are two kinds of Clause to be considered, (1) Final and Object Clauses, and (2) Conditional Clauses.

Regarding the meaning of the Subjunctive and Optative in Final Clauses there can be little doubt. The Subj. in most instances follows either a First Person (Present or Future), or an Imperative: that is to say, it expresses the immediate purpose with which the speaker announces his own action, or commands the action of others. Hence, by a natural transference, it comes to express the purpose of another person (viz. the Subject of the Principal Clause). Similarly the Opt., whether as the Mood of wish or of expectation, comes to express a wish or expectation not now felt, but spoken of. Again, by virtue of its character as a softened or less confident Future, it naturally expresses a purpose that does not lie within the speaker's own sphere of action or direct influence.

It should be noticed, too, that the relation which we imply by the term 'Final Clause' may exist without grammatical Subordination, i.e. without a Particle such as ${\it lna}$ or ${\it lna}$ to introduce the clause. Thus in Il. 6. 340 ${\it lna}$ ${\it$

In Conditional Clauses, on the other hand, the condition or supposition is not subordinated to the time of the governing Verb, but is made from the *present* point of view of the speaker. The question arises: What is the original force of the Subj. and

Opt. in this use?

In the case of the Subj. we naturally look to the quasi-Imperative use. It is common to use the Imperative as a way of stating a supposition; as when we say 'let it be so,' meaning 'if it is so' (cp. Latin cras petito, dabitur). This view is confirmed by the fact that negative Conditional Clauses take μή, not οὐ: that is to say, they are felt to be akin to prohibition rather than denial. Thus ôs μὴ ἔλθη literally means not 'who will not come' Conactaristisk, at conj. med εἰ γραν fudes i det game lovsproj.

(ôs οὐκ ầν ἔλθη), but 'who shall not come,' i. e. whom we are not

to suppose coming.

Similarly we may understand the Opt, in these Clauses as the Mood of concession; 'admitting this to be so': and so in a negative sentence, δς μη έλθοι 'whom I agree to suppose not coming.' For the choice of the Mood does not depend on the greater or less probability of the supposition being true, but on the tone in which it is made—on the degree of vividness, as Mr. Goodwin says, with which it is expressed (Moods and Tenses, § 455).

It may be objected that on this view we ought to have ϵi ov. not $\epsilon i \mu \dot{\eta}$, whenever the Verb is in the Indicative. But there is no difficulty in supposing that μή was extended to the Indicative on the analogy of the Clauses with the Subj. and Opt.; just as μη ἄφελον is an extension from the common use of μή in wishes. And this is strongly supported by the circumstance that in fact el où with the Indicative occurs several times in Homer:

ΙΙ. 15. 162 εὶ δέ μοι οὐκ ἐπέεσσ' ἐπιπείσεται κτλ. (50 178). 20. 129 εί δ' 'Αγιλεύς οὐ ταῦτα θεῶν ἐκ πεύσεται ὀμφῆς. 24. 206 εί δέ τοι οὐ δώσει έὸν ἄγγελον κτλ.

Od. 2. 274 εί δ' οὐ κείνου γ' ἐσσὶ γόνος κτλ.

See also Il. 4. 160, Od. 12. 382., 13. 143. On the other hand, in the very few examples of el où with a Subj., the où goes closely with the Verb, viz. Il. 3. 289 (οὐκ ἐθέλωσιν), 20. 139 (οὐκ είῶσι). On the whole, therefore, it is probable that the Subj. in Conditional Clauses represents the tone of requirement in which the speaker asks us to suppose the condition to be true: and that the Opt. implies concession, or willingness to make the supposition involved.

- 317.] Original meaning. Whether the use of the Subj. as an emphatic Future was derived from its use to express Will, or vice versa, and whether the Optative originally expressed wish or supposition, are questions which take us back to a very early period in the history of Indo-European speech. The two Moods are found in the same uses (generally speaking) in Homer and in the Veda: the formation of these uses therefore belongs in the main to the period before the separation of the different languages,—to the period, indeed, when the original parent language was itself in course of formation. The problem therefore is one on which comparison of the earliest forms of the known Indo-European languages can hardly throw any light. It is as though we were asked to divine whether the use of shall in commands (thou shalt not kill) or in predictions (ye shall see me) is the older, without recourse to earlier English, or to other Germanic languages. Some considerations of a general character may however be suggested :-
- (a) The Subj. is strongly differentiated from the Imperative by its Person-Endings, and especially by the existence of a First Person.
- (b) In most languages it will be found that the Imperative meaning is expressed in more than one way. Thus in Sanscrit we find the Imperative

proper, the Injunctive, the Subj., and the Optative: in Greek the Imper., the Subj. and certain uses of the Future. The reason of this is evident. Variety in the expression of will and wish is one of the first needs of human society. The form which has been appropriated to express command is unsuitable to courteous request, still more unsuitable to humble entreaty. Accordingly other forms are used, precisely because they are not Imperatives. In time these acquire a quasi-Imperative character, and fresh forms are resorted to as the same want of a non-Imperative mode of expression is again perceived.

- (c) The use of the Secondary Endings in the Optative points to the conclusion that in its origin it was a Mood of past time. The tendency to use a past Tense in wishes, and in some kinds of suppositions, may be amply illustrated from English and other modern languages.
- (d) The uses with où go far to show that the quasi-Future sense of the Subj. and Opt. is at least as primitive as the quasi-Imperative sense. If the strong negation où $\gamma \acute{\epsilon} \nu \eta \tau a$ is derived by gradual change of meaning from a prohibition, the appearance of où is difficult to explain.
- e The use of the Subj. as an Imper. may be compared to the Attic use of the Future in a 'jussive' sense, and in Final Clauses to express purpose (Goodwin, p. 373). The change from an expression of will to one of expectation is one to which it would be much more difficult to find a parallel.
- 318.] Conditional Protasis with et. The derivations that have been proposed for the Particle & or at are too uncertain to furnish ground for any theory as to the manner in which the Conditional Protasis may have been formed. The question arises for us on the passages in which et with the Opt. is used to express a wish. Thus in εί τις καλέσειε I pray some one to call we may take the Clause as Conditional, with a suppressed Apodosis (καλῶς ἀν ἔχοι or the like). Or we may follow L. Lange in holding that the Clause is not Subordinate at all, the Particle & being originally a kind of affirmative Interjection, used to introduce expressions of wish and supposition; and we can thus explain the ordinary Complex Conditional Sentence as made up of two originally independent Clauses, viz. (1' a wish or supposition, introduced by el, and (2) an assertion of the consequence to be expected from its being realised. On this theory the Clause of Wish introduced by & is not an incomplete Sentence, derived from a Complex Sentence by omission of the Apodosis, but is one of the elements from which the Complex Sentence was itself developed.

The latter of these views has a priori the advantage of deriving the complex from the simple: and it has some apparent support in Homeric usage. We find in Homer—

(1) Wish, standing alone:-

ώς ἀπόλοιτο καὶ ἄλλος ὅτις τοιαῦτά γε ῥέζοι.

(2) Wish followed by an independent Clause expressing expectation of a consequence:—

Od. 15. 180 οὕτω νῦν Ζεῦς θείη, ἐρίγδουπος πόσις Ἡρης·
τῷ κέν τοι καὶ κεῖθι θεῷ ὡς εὐχετοψμην.
Π. 13. 55 σφῶϊν δ' ὧδε θεῶν τις ἐνὶ φρεσὶ ποιήσειεν,

αὐτώ θ' ἐστάμεναι κρατερῶς καὶ ἀνωγέμεν ἄλλους·
τῷ κε καὶ ἐσσύμενόν περ ἐρωήσαιτ' ἀπὸ νηῶν.

- (3) Wish, with εἰ, εἰ γάρ, εἴθε, &c., but without 'Apodosis':—

 Il. 4. 189 αἶ γὰρ δὴ οὕτως εἴη, φίλος ὧ Μενέλαε.

 11. 670 εἴθ' ὡς ἡβώοιμι, βίη δέ μοι ἔμπεδος εἴη, κτλ.
- (4) Wish, with εἰ, εἰ γάρ, εἴθε, &c., followed by a Clause of Consequence:— Il. 7. 157 εἴθ' ὡς ἡβώοιμι, βίη δέ μοι ἔμπεδος εἴη· τῷ κὲ τάχ' ἀντήσειε κτλ.

Od. 15. 536 αι γὰρ τοῦτο, ξείνε, ἔπος τελέσειε Κρονίων·
γνοίης χ' οιη ἐμὴ δύναμις και χείρες ἔπονται.

(5) Supposition, with el, followed by a Clause of expectation:— Il. 7. 129 τοὺς νῦν εἶ πτώσσοντας ὑφ' Ἐκτορι πάντας ἀκούσαι, πολλά κεν ἀθανάτοισι φίλας ἀνὰ χεῖρας ἀείραι.

The similarity in these examples is manifest. The type in the first four sets consists of a Clause of Wish, either alone (1 and 3) or followed by a Clause of Consequence (2 and 4). Again, (5) only differs from (4) in punctuation, so to speak: the two Clauses are taken together, and thus the et-Clause is no longer an independent supposition, but is one made with a view to the consequence expressed in the Clause with kev. And this, it is contended, was the result of a gradual process, such as we find whenever parataxis passes into hypotaxis.

319.] Final Clauses with ϵi . An argument for Lange's view of the original force of ϵi is found in the use in Final Clauses, such as $\epsilon i \mu \epsilon i \kappa \epsilon \pi i \theta \eta \tau a u$. The meaning here is essentially different from that of the Conditional sentence I go if he listens; and on the ordinary hypothesis, that ϵi originally expressed a condition, it is difficult to account for the two uses. But if ϵi is a mere interjection, introducing wish or supposition, it is intelligible that the Clause should be Conditional or Final, as the context may determine.

320.] The formula & δ' ἄγε, with the varieties & δ' ἄγετ' (II. 22. 381) and & δέ (II. 9. 46, 262), is often used in Homer to introduce an Imperative or Subjunctive (§ 275). It has generally been supposed to be elliptical, standing for & δ' ἐθέλεις ἄγε, or the like. And & δ' ἐθέλεις is actually found with an Imperative in a few places: II. 19. 142 & δ' ἐθέλεις ἐπίμεινον, Od. 16. 82., 17. 277 (cp. 3. 324). It has been pointed out, however, by Lange, in his dissertation on this question,* that & δ' ἐθέλεις is only found where it introduces a distinct second alternative. Thus in Od. 16. 82 the context is: 'I will send the stranger wherever he desires; or if you choose (& δ' ἐθέλεις τεξός κτλ. But with & δ' ἄγε this is not the case. We find it at the beginning of a speech; as—

ΙΙ. 6. 376 εὶ δ' ἄγε μοι, δμωαί, νημέρτεα μυθήσασθε.

Od. 2. 178 & γέρον, εἰ δ' ἄγε νῦν μαντεύεο κτλ.: so II. 16. 697., 17. 685, Od. 12. 112., 22. 391., 23. 35.

Or in the Apodosis of a Conditional sentence, as-

Od. 4. 831 εἰ μὲν δὴ θεός ἐσσι, θεοῖό τε ἔκλυες αὐδῆς, εἰ δ' ἄγε μοι κτλ.: so Il. 22. 379-381.

Or to express an appeal which is consequent upon something just said : as-

ΙΙ. Ι. 301 των οὐκ ἄν τι φέροις ἀνελων ἀέκοντος ἐμεῖο

εὶ δ' ἄγε μὴν πείρησαι (ay, come now and try): cp. Il. 8. 18.

^{*} De formula Homerica el 8' aye commentatio, Lipsiae 1873.

Il. 1. 523 έμοι δέ κε ταῦτα μελήσεται ὅφρα τελέσσω. εί δ' άγε τοι κεφαλή κατανεύσομαι (so come, I will nod my head). 23. 579 εί δ' ἄγ' ἐγὼν αὐτὸς δικάσω, καί μ' οὕ τινά φημι

'Αντίλοχ', εἰ δ' ἄγε δεῦρο . . ὅμνυθι κτλ.

come I will be judge myself . , so come, Antilochus, take this oath : see also Od. 1. 271., 9. 37., 21. 217., 24. 336.

Hence, Lange argues, it is probable that el does not express condition, but has an interjectional character 'ep. Latin eia age: and if so it may be the same with the use in Clauses expressing wish.

- 321.] Conclusion. Notwithstanding these arguments, the common explanation of the ci-Clause of wish as primarily a Clause of supposition seems to be the more probable one.* For-
- (1) The uses of ei present a marked correspondence with those of the Relative and its derivatives. Note especially the use of ὅτε μή as almost exactly = $\epsilon i \mu \dot{\eta}$.
- 2 The analogy είτα : εί :: επειτα : ἐπεί makes it likely that εί was originally temporal. The fact that εἶτα is not Homeric takes something from the force of this argument.
- 3) The use of alternative forms of wish, and the use of some form of supposition to express wish, are phenomena which can be exemplified from many languages: cp. the Latin o si, German wenn, wenn nur, &c. of the apodosis occurs with &clauses of other kinds; see § 324.*
- 14) The ei-clause, whether of supposition or of wish, is specifically Greek, whereas the chief meanings of the Optative-wish, concession, suppositionare much older, being common to Greek and Sanscrit. Hence the el-clause was formed at a time when the Opt. of wish had long been established in use. The presumption surely is that the el-clause, when it came to be used as a form of wish, was a new way of expressing wish. It would probably be adopted at first as a less direct form, suited for wishes couched in a different tone (as $\epsilon i\theta \epsilon$ is confined to hopeless wish).
- (5) The only use of ϵ i not obviously expressive of supposition is that which is seen in the isolated phrase εί δ' ἄγε, of which Lange has given an exceedingly probable analysis. Possibly however the εί of εί δ' ἄγε is not the same word as el if, but an interjection, like elev and Latin eia. We may go further, and point out that the be of el b' aye has been shown by Lange himself to be out of place, hence the true form may be εl' άγε, like Latin eia age.

It may be observed, in conclusion, that the question of the ci-clause is quite distinct from the question of the original meaning of the Optative. It is possible to combine Lange's theory of & with Delbrück's earlier view of the Optative as originally the Mood of wish, + but Lange himself does not do so. He regards the ci-clause of supposition (Fallsetzung) as developed independently of the el-clause of wish. His main thesis is that el does not

but is withdrawn in his recent work (Altindische Syntax, § 172).

^{*} This is also the conclusion maintained by Mr. Goodwin, who discusses the question very fully in the new edition of his Moods and Tenses (pp. 376 ff.). + This view was proposed in Delbrück's Syntaktische Forschungen (vol. i. p. 13),

imply a correlative particle, or an apodosis ($\kappa\alpha\lambda\hat{\omega}s$ åv $\tilde{\epsilon}\chi\omega$ or the like), so that the two meanings of ϵl $\gamma \dot{\epsilon}\nu\omega\tau\sigma$ —suppose it happened and would that it happened—belong to originally distinct meanings of the Opt. $\gamma \dot{\epsilon}\nu\omega\tau\sigma$. That is to say, the development of ϵl if with various Moods—Opt., Subj., Indic.—was parallel to an entirely distinct development of interjectional ϵl with the Opt. of wish.

322.] Homeric and Attic uses. The main difference between Homer and later writers in regard to the Moods may be said to be that the later uses are much more restricted. Thus the Subj. is used by Homer in Principal Clauses of every kind—Affirmative and Negative, as well as Prohibitive, Interrogative, &c. In Attic it is confined to the Prohibitive use with $\mu\dot{\eta}$, and the idiomatic 'Hortatory' and 'Deliberative' uses.

Again, in Subordinate Clauses the important Homeric distinction between the 'pure' Subj. and the Subj. with αv or $\kappa \varepsilon v$ is almost wholly lost in Attic. In Clauses of Conditional meaning, whether Relatival, Temporal, or introduced by εl , the Subj. with αv has become the only generally allowable construction: the pure Subj. being confined to a few instances in poetry. With the Optative, on the other hand, an equal uniformity has been attained by the loss of the use with αv or $\kappa \varepsilon v$. In short, of the four distinct Homeric constructions—

- δs ἔλθη (ὅτε ἔλθη, εἰ ἔλθη, &c.)
- 2. ôs âv (or ős $\kappa \epsilon v$) $\tilde{\epsilon} \lambda \theta \eta$ (ő τ ' âv $\tilde{\epsilon} \lambda \theta \eta$, $\tilde{\epsilon}$ âv $\tilde{\epsilon} \lambda \theta \eta$, &c.)
- 3. δς έλθοι (ὅτε έλθοι, εὶ έλθοι, &c.)
- 4. δs αν (οτ δs κεν) έλθοι (ὅτ' αν έλθοι, ἐὰν έλθοι, &c.)

the language dropped the first and last: with the result that as $a\nu$ always accompanied the Subj. and was absent from the Opt., it ceased to convey a distinct meaning, independent of the meaning given by the Mood. In other words, the use became a mere idiom. The change, though apparently slight, is very significant as an evidence of linguistic progress.

In regard to Final Clauses the most noticeable point is the use of the Relative with a Subjunctive. In this respect Homeric Greek agrees with Latin: while in later Greek the Subj. was replaced, generally speaking, by the Future Indicative. It is also worth observing here that in Homer, as has been said (§ 316), the Final Clause in the great majority of instances expresses the speaker's own purpose, not a purpose which he attributes to a person spoken of: see §§ 280, 281, 285, 286. In other words, the subordination of the Clause to the governing Verb does not often go so far as to put the Third Person for the First (e. g. φράσσεται ών κε νέηται = he will consider—'how am I to return'). The further license by which a past purpose is thought of as if still present—so that the Subj. is used instead of the Opt.—is not Homeric (§ 298).

Modal Uses of the Indicative.

323.] The Indicative is primarily the Mood of assertion: from which it is an easy step to the use in Negative and Interrogative sentences. It is also used in Greek (as in other languages) to express mere supposition: thus we have $\epsilon \hat{i}$ in a Conditional Protasis with all Tenses ($\epsilon \hat{i}$ $\hat{\eta}\nu$, $\epsilon \hat{i}$ $\hat{\epsilon}\sigma\tau\iota$, $\epsilon \hat{i}$ $\hat{\epsilon}\sigma\tau\alpha\iota$),

where there need be no implication either for or against the truth of the supposition thus made. Further, the Indicative may be used in certain cases in a Conditional Apodosis, expressing an imaginary consequence. Again, it may be used in Final and Object Clauses referring to the past or to the future. All such uses, in which the Indicative does not assert, may be called Modal Uses.

The tendency of language appears to be to extend the Modal Uses of the Indicative, and consequently to diminish the range of the other Moods. It is found possible, and more convenient, to show the modal character of a Clause by means of Particles, or from the drift of the context, without a distinct Verbal form. It will be seen, on comparing the Homeric and Attic usage, that the Indicative has encroached in several points upon the other Moods.

324.] Conditional Clauses (Apodosis). The Secondary Tenses or Tenses of past time (Aor. Impf. and Plupf.), are used with KEV or av to express a supposed consequence: as—

II. 4. 420 δεινὸν δ' ἔβραχε χαλκὸς ἐπὶ στήθεσσιν ἄνακτος ὀρνυμένου ὑπό κεν ταλασίφρονά περ δέος εἶλεν fear would have seized even the stout-hearted.

This way of speaking of a conditional event ordinarily implies that the condition on which it depended was not fulfilled. For if (e.g.) the assertion $\tilde{\eta}\lambda\theta\epsilon\nu$ he came is true, we can hardly ever have occasion to limit it by saying $\tilde{\eta}\lambda\theta\epsilon\nu$ and he came in that case. Hence a Past Tense with $\kappa\epsilon\nu$ or an naturally came to be used where the event in question had not happened, owing to the non-fulfilment of the condition.

The rule does not apply to events that occur repeatedly, or on no particular occasion; for there is no contradiction in saying of such an event that it happened when a condition was fulfilled. Hence the use in the iterative sense (as Hdt. 3. 119 κλαίεσκε ἀν καὶ ὀδυρέσκετο, Thuc. 7. 71 εἶ τινες ἴδοιεν . . ἀνεθάρσησάν τε ἀν κτλ.). This use, however, is not Homeric. In Od. 2. 104 ένθα κεν ἡματίη μὲν ὑφαίνεσκεν has slender authority, most MSS. reading ἔνθα καί. Another supposed instance is—

Od. 18. 263 ἵππων τ' ὧκυπόδων ἐπιβήτορας, οἵ κε τάχιστα ἔκριναν μέγα νείκος κτλ.,

where the commentators (Fäsi, Ameis, Merry) take $\tilde{\epsilon}\kappa\rho\nu\nu\alpha\nu$ as a 'gnomic' Aorist. The words as they stand can only mean 'who would most speedily have decided mighty strife' (so Goodwin, § 244): but this does not suit the context. The difficulty is best met by reading of $\tau\epsilon$: cp. § 283, b.

An exceptional use of a different kind is-

Od. 4. 546 ή γάρ μιν ζωόν γε κιχήσεαι, ή κεν 'Ορέστης κτείνεν ὑποφθάμενος.

Here **kev** marks the alternative (§ 283, n. 2): either you will find him alive or (in the other case) Orestes has killed him (i.e. must have killed him). Thrown into

a Conditional form the sentence would be: 'if you do not find him alive, then Orestes has killed him,' So with an Infinitive—

II. 22. 108 ἐμοὶ δὲ τότ' ἄν πολὸ κέρδιον εἴη ἄντην ἢ ᾿Αχιλῆα κατακτείναντα νέεσθαι ἢέ κεν αὐτῷ ὀλέσθαι ἐῦκλειῶς πρὸ πόληος.

In the Protasis $\kappa\epsilon\nu$ with the Indicative occurs only once, viz. Il. 23. 526 ϵi $\delta \epsilon' \kappa' \epsilon' \tau \iota \pi \rho \sigma \tau \epsilon' \rho \omega \gamma \epsilon' \nu \epsilon \tau \sigma \delta \rho \phi \mu \sigma s$ (see Leaf's note α , l.). This may be compared with the occasional use of $\kappa\epsilon\nu$ with ϵi and an Opt. (§ 313). The rarity of the use with an Indic. need not be felt as a difficulty: cp. the oracle in Hdt. 1. 174 Zeès $\gamma \acute{a}\rho \kappa' \epsilon \acute{e}\eta \kappa \epsilon \nu \acute{\eta} \sigma \sigma \nu \epsilon i' \kappa' \epsilon \acute{e}\beta \sigma \acute{\nu} \kappa \epsilon \tau \sigma$, also Erinna, fr. 4, 4, and Ar. Lys. 1098 (Hartung, ii. p. 240).

In later Greek the Imperfect with $\[Tilde{a}\]$ ν may express either a continuous action which would have occurred at some past time, or an action (continuous or momentary) which would have been occurring at the moment of speaking. The latter of these uses, as Mr. Goodwin points out (§ 435), is not Homeric. He sees an approach to it in Il. 24. 220 εὶ μὲν γάρ τίς μ' ἄλλος ἐκέλευεν were it any one else who bade me. Another may be found in Od. 20. 307 καί κέ τοι ἀντὶ γάμοιο πατὴρ τάφον ἀμφεπονεῖτο ἐνθάδε (if you had struck the stranger) your father would have had to busy himself here with your burial in place of wedding: ep. also Od. 4. 178 καί κε θάμ' ἐνθάδ' ἐόντες ἐμισγόμεθ', οὐδέ κεν ἡμέας ἄλλο διέκρινεν.

The Impf. without αν or κεν may express what ought to have been, if the meaning of fitness, obligation, &c. is given by the Verb or Predicate. Thus we have Od. 20. 331 κέρδιον ἦεν it would have been better. So in Attic with ἐχρῆν, ἔδει, and similar

words.

The Opt. with $\tilde{a}\nu$ or $\kappa\epsilon\nu$, as we have seen (§ 300, c), is not unfrequently used in Homer with the same meaning as the Aor. or Impf. with $\tilde{a}\nu$ has in later Greek. This is one of the points in which the use of the Indicative gained on that of the Optative.

- 324.*] Ellipse of the Apodosis. We may notice here the cases in which & with an Indic. or Subj. is not followed by a corresponding Clause expressing the consequence of the supposition made. This occurs—
- (a) When two alternative suppositions are made, the second being the one upon which the speaker wishes to dwell: as Il. 1. 135 εἰ μὲν δώσουσι γέρας . . εἰ δέ κε μὴ δώωσιν, ἐγὰ δέ κεν αὐτὸς ἔλωμαι if they give (there is nothing to be said), but if not, &c.
- (b) When the consequence is sufficiently implied in the el-Clause: as II. 6. 150 el δ' èθέλεις καὶ ταῦτα δαήμεναι if you wish to be told this (I will do so): II. 7. 375 al κ' èθέλωσι παύσασθαι

if they wish to cease (let them): Od. 21. 260 ἀτὰρ πελέκεὰς γε καὶ εἴ κ' εἰῶμεν ἄπαντας ἐστάμεν: Il. 19. 147., 20. 213., 21. 487, Od. 4. 388., 15. 80.

(c) When the speaker prefers to suggest the consequence in an indirect way: as II. 1. 580 εἴ περ γάρ κ' ἐθέλησιι 'Ολύμπιος ἀστεροπητὴς ἐξ ἐδέων στυφελίξαι, ὁ γὰρ πολὺ φέρτατός ἐστιν if he wishes (he will), for he is strong enough; II. 14. 331, 21. 567, Od. 3. 324.

There is a similar omission of the apodosis in Causal Clauses with $\epsilon \pi \epsilon \iota$ at the beginning of a speech, as II. 3. 59 Έκτορ, $\epsilon \pi \epsilon \iota$ $\mu \epsilon \kappa \alpha \tau$ αΐσαν $\epsilon \nu \epsilon \iota \kappa \epsilon \sigma \alpha s$: II. 6. 382 Έκτορ, $\epsilon \pi \epsilon \iota$ $\mu \iota \lambda \lambda$ ἄνωγας $\epsilon \tau \lambda$.; II. 13. 68, 77.5, Od. 1. 231., 3. 103, 211. The full form appears in II. 6. 333 $\epsilon \pi \epsilon \iota$ $\mu \epsilon \kappa \alpha \tau$ αΐσαν $\epsilon \nu \epsilon \iota \kappa \epsilon \sigma \alpha s$. $\tau \sigma \nu \nu \epsilon \kappa \iota$ τοι $\epsilon \rho \epsilon \iota$ $\epsilon \nu \epsilon \iota$

In such sentences as εἰ δ' ἐθέλεις.. δοήμεναι some commentators obtain an apodosis by taking the Inf. as equivalent to an Imperative: 'if you wish, then learn &e.' But this is exceedingly forced, and indeed impossible in some places, e. g. Il. 7. 375, Od. 21. 260. Elsewhere the apodosis is forgotten (anacoluthon); so after εἰ in Il. 22. 111, after ἐπεί in Il. 18. 101, Od. 4. 204, 6. 187, 262., 8. 236., 17. 185.

325.] Past Tense by 'Assimilation.' When a Past Tense relating to an event which has not happened is followed by a Subordinate Clause, the Verb of the Subordinate Clause may also be in a Past Tense (the event which it expresses being equally imaginary): as—

II. 6. 345 ως μ' όφελ' ήματι τῷ ὅτε . . οἴχεσθαι προφέρουσα κακὴ ἀνέμοιο θύελλα, ἔνθα με κῦμ' ἀπόερσε κτλ.

and so v. 350 åvδρὸς ἔπειτ' ὤφελλον . . δς ἤδη κτλ., and Od. 1. 218: also the use with πρίν, Od. 4. 178 οὐδέ κεν ἡμέας ἄλλο διέκρινεν . . πρίν γ' ὅτε δὴ θανάτοιο μέλαν νέφος ἀμφεκάλυψεν nothing would have parted us before the dark cloud of death had wrapped us round.

This idiom is the same in principle as the use of Past Tenses in Final Clauses, which is common in Attic with τνα and τς: as Soph. O. T. 1393 τί μ' οὐ λαβὼν ἔκτεινας εὐθύς, ὡς ἔδειξα μή ποτε κτλ. that so I might never have shown δν. When the context has once shown that we are dealing with a purely imaginary event, the Indicative serves to carry on the train of suppositions. The Indic. is similarly used in an Object Clause after a Verb of fearing, as δείδω μὴ δὴ πάντα θεὰ νημερτέα εἶπεν.

- 326.] Future Indicative. The following points have to be noticed:—
- 1. Homer not unfrequently uses κεν with the Future, the effect being (as with the Subj.) to indicate a limitation or condition: as—
 - Il. 1. 139 ὁ δέ κεν κεχολώσεται and he (if I do so) will be angry.

II. 1. 522 ἀλλὰ σὰ μὲν νῦν αὖτις ἀπόστιχε μή τι νοήση "Ηρη' ἐμοὶ δέ κε ταῦτα μελήσεται (to me, as my part).
4. 76 καί κέ τις ὧδ' ἐρέει in such case men will say.

This use of κεν is chiefly found after δέ, as Il. 1. 139., 6. 260., 8. 419., 14. 267, &c.: and in Relative Clauses, as Il. 12. 226., 17. 241., 22. 70, Od. 5. 36., 8. 318., 16. 438: perhaps with ὅτε, Il. 20. 335 ὅτε κεν συμβλήσεαι unless we read συμβλήεαι as 2 Aor. Subj. (Dindorf, Thes. Ling. Gr. s. v. βάλλω). Cp. the use of κεν with the Subj., § 275, b.

The Future with ar is very rare: see Il. 9. 167., 22. 66.

2. The use of the Future with the force of a gentle Imperative has been ascribed to Homer, but without sufficient ground. Where it appears to take the place of an Imperative it will be found in reality to express the indifference of the speaker; as—

II. 6. 70 ἀλλ' ἄνδρας κτείνωμεν ἔπειτα δὲ καὶ τὰ ἔκηλοι νεκροὺς ἃμ πεδίον συλήσετε τεθνηῶτας then you can (if you like) strip the dead of their arms.

20. 137 ἡμεῖς μὲν καθεζώμεσθα . . πόλεμος δ' ἄνδρεσσι μελήσει (we will leave war to men).

The forms οἴσετε and ἄξετε, which are sometimes given as instances of this use, do not belong to the Future, but are Imperatives of an Aorist (§ 41).

3. The Future is occasionally found in Final Clauses with nearly the force of the Subj.: viz. with the Conjunctions ὅπως in Od. 1. 57 θέλγει ὅπως Ἰθάκης ἐπιλήσεται charms so that he may forget Ithaca, also in Il. 1. 344 (if with Thiersch we read ὅππως μαχέουται ἸΑχαιοί for the anomalous μαχέουντο), and with ὅφρα, as—

Π. 8. 110 Τρωσὶν ἐφ' ἱπποδάμοις ἰθύνομεν, ὄφρα καὶ ὅΕκτωρ εἴσεται κτλ. (so Π. 16. 242, Od. 4. 163., 17. 6).

So with μή, Il. 20. 301 μή πως καὶ Κρονίδης κεχολώσεται, Od. 24.

544.

The Future with κεν in Relative Clauses sometimes appears to express end, as in II. 1. 174 πάρ' ἔμοιγε καὶ ἄλλοι οῖ κέ με τιμήσουσι: cp. 2. 229., 23. 675, Od. 8. 318., 16. 438. So without κεν in II. 24. 154, Od. 14. 333. In all these places, however, as in the corresponding uses of the Subj. (§ 282), and Opt. (§ 304), it is difficult to say how far the notion of end is distinctly expressed: in other words, how far the future action is subordinated to that of the main Verb.

4. The use of the Future in Object Clauses (common in Attic after Verbs of striving, &c.) may perhaps be seen in Il. 12. 59 μενοίνεον εἰ τελέονσι, also Od. 5. 24., 13. 376.

It is sometimes impossible to decide whether a form is a Future or an Aorist Subj.: e. g. in Od. 1. 269 σε δε φράζεσθαι ἄνωγα ὅππως κε μνηστῆρας

ἀπώσεαι, where the Verb may be a Future, as in the places now quoted, or a Subj., according to the commoner Homeric construction. So in Il. 10. 44, 282., 17. 144.

The use of the Future in Final Clauses is probably later than that of the Subjunctive. In general, as we have seen, the Subj. is akin to the Imperative, and therefore expresses the speaker's purpose directly, by its own force; whereas the Fut. Ind. properly expresses sequence. Thus θέλγει ὅπ λάθηται literally means 'charms so that he shall forget': θέλγει ὅπως λήσεται 'charms so that he will forget.' The same conclusion seems to follow from the rule that ὅπως and ὅφρα may be used with a Future, but not ὡς or ἵνα Goodwin, § 324. For ὡς in the manner that fits a direct purpose better than ὅπως in some such manner that, or ὅφρα till the time that. It would seem probable, then, that in Final Clauses the Future is a less emphatic and positive expression of end. Thus when Achilles prays II. 16. 242, 'embolden him so that Hector will know,' the Future conveys a shade of indifference, as though Hector's knowledge were the natural consequence rather than the direct object. And so in II. 1. 175 οῖ κὲ με τιμήσουσι who will (I presume) honour me.

5. In Clauses with ϵi the Future is chiefly used of events regarded as necessary, or as determined by some power independent of the speaker: as—

Il. 14. 61 ἡμεῖς δὲ φραζώμεθ' ὅπως ἔσται τάδε ἔργα, εἴ τι νόος ῥέξει (if wit is to be of any avail).

17. 418 εὶ τοῦτον Τρώεσσι μεθήσομεν (if we are going to &c.). So Il. 1. 61, 294., 5. 350., 12. 248, 249., 13. 375., 15. 162., 24. 57, Od. 2. 115.

We may compare the Conditional Relative Clause-

Il. 23. 753 ὅρνυσθ' οἱ καὶ τούτου ἀέθλου πειρήσεσθε rise, ye that will make trial of this contest.

And with KEV-

II. 15. 213 αἴ κεν ἄνευ ἐμέθεν . . πεφιδήσεται κτλ. So II. 2. 258., 5. 212., 17. 588, Od. 15. 524.

The Imperative.

327.] The Homeric uses of the Imperative present little or no difficulty. We may notice the use in concession, ironical or real:—

ΙΙ. 4. 29 ἔρδ', ἀτὰρ οὕ τοι πάντες ἐπαινέομεν θεοὶ ἄλλοι.

The forms ἄγε and ἄγετε are often combined with other Imperatives for the sake of emphasis: and sometimes ἄγε is treated as indeclinable, and used where the context requires a Plural; as—

Il. 2. 331 ἀλλ' ἄγε μίμνετε πάντες κτλ. (so 1. 62., 6. 376, &c.). Similarly ἴθι is a kind of Interjection in Il. 4. 362 ἀλλ' ἴθι, ταῦτα δ' ὅπισθεν ἀρεσσόμεθ' κτλ.: and so we have βάσκ' ἴθι (like εἴπ' ἄγε). And δεῦτε hither! is evidently an Imperative: cp. Il. 14. 128 δεῦτ' ἴομεν πόλεμόνδε. The corresponding 2 Sing. doubtless enters into the formation of δεῦρο; but it is not clear how that word is to be analysed.

328.] Prohibition. The Aorist Imperative is very rarely used with $\mu \dot{\eta}$: examples are—

II. 4. 410 τῷ μή μοι πατέρας ποθ' ὁμοίη ἔνθεο τιμῆ
 (so Od. 24. 248 σὰ δὲ μὴ χόλον ἔνθεο θυμῷ).

18. 13+ σὺ μὲν μή πω καταδύσεο μῶλον *Αρηος.

Od. 16. 301 μή τις ἔπειτ' 'Οδυσῆος ἀκουσάτω.

Π. 16. 200 μη λελαθέσθω.

For the rule which is the complement of this one, forbidding the use of the Present Subj. with $\mu\dot{\eta}$, see § 278 fin.

Regarding the origin of this curious idiom a very probable conjecture has been made by Delbrück (Synt. Forsch. iv. p. 120). In the Yeda it has been shown by Grassmann that the prohibitive Particle mâ is never found with the forms of the Imperative proper, but only with the so-called spurious Conjunctive' or 'Injunctive.' Hence it may be inferred that the Imperative was only used originally in positive commands, not in prohibitions. Again, it appears that in Sanscrit the Imperative is nearly confined to the Present Tense: and in Greek the forms of the First Aor. Imper. (κλέψον, Mid. κλέψαι) are certainly of late origin. The fine distinction which is made, in the Imperative as well as in other Moods, between the continuous action expressed by the Present Stem and the momentary action expressed by the Aorist belongs to the specific development of Greek. Accordingly Delbrück suggests that the extension of the Imperative to express prohibition took place at a time when the Aorist Imperative had not come into general use: and hence it was only carried into the Present Tense. In other words, the form μη κλέπτε came into use in pre-historic Greek as an extension of the positive κλέπτε, and superseded μή κλέπτης: but μή κλέψης kept its ground. because the form κλέψον did not then exist. This account of the idiom seems much more probable than any attempt to explain it on psychological grounds.

CHAPTER XIII.

THE PARTICLES.

329.] Under the term *Particles* it is convenient to group together a number of words that are mainly used to show the relations between other words, and between Clauses. In respect of this office they are akin to the various syllables or letters used as Endings: and with them go to constitute what are called the 'formal elements' of the language, in contradistinction to the roots or stems which compose its 'matter.'

The Particles which connect successive Clauses in any way form the *Conjunctions*. As such they may be distinguished, according to the nature of the connexion which they indicate,

as Copulative (καί, τε, ἠδέ, &e.), Adversative (δέ, ἀλλά, αὐτάρ), Disjunctive ($\mathring{\eta}$ — $\mathring{\eta}$), Conditional (εἰ, ἄν, κεν), Illative (ἄρα, δή, οὖν),

Causal (yáp), &c.

Those Particles, again, which affect single Clauses may either serve to show the character of the whole Clause (as Affirmative, Interrogative, Conditional, &c.), or to influence particular words in it. We cannot, however, make a satisfactory classification of the Particles on the basis of these uses, because some of them are employed in several distinct ways: and moreover they enter into various combinations in which they often acquire new meanings. It will be best therefore to take them separately, beginning with the most familiar.

καί.

330.] The uses of καί are in the main the same in all periods of Greek. It is (1) a Copulative Conjunction, conveying the idea of addition to what has preceded: Ζηνὶ φόως ἐρέουσα καὶ ἄλλοις to Zeus and the others besides: ὡς ἄρ' ἔφη καὶ κτλ. thus he spoke and thereupon &c.: and (2) a strengthening or emphasising Particle meaning also, even, just: as—

II. 1. 63 $\mathring{\eta}$ καὶ ὀνειροπόλον or even a dream-prophet.

176 τὸ καὶ κλαίουσα τέτηκα which is the very reason that
 I am wasted with weeping.

It is especially used with words that imply comparison, increase or diminution, extension of time or the reverse, &c.; as καὶ ἄλλος another (not this only), καὶ αὐτός himself (as well as others): καὶ πάλαι long ago (not merely now), καὶ αὖθις another time (if not now), καὶ μάλα, καὶ λίην (in a high degree, not merely in an ordinary degree): so with Comparatives, καὶ μείζον, καὶ ῥίγιον, &c. Both terms of a comparison may be strengthened in this way; as—

 11. 81 εἴ περ γάρ τε χόλον γε καὶ αὐτῆμαρ καταπέψη, ἀλλά τε καὶ μετόπισθεν κτλ.

Notice, too, the use at the beginning of an Apodosis, esp. with Adverbs of time, as—

II. 1. 477 ἡμος δ' ἠριγένεια φάνη ροδοδάκτυλος ἠώς, καὶ τότ' ἔπειτ' κτλ.

καί precedes the word which it emphasises, but is sometimes separated from it by other Particles, enclitic Pronouns, &c.: as II. 1. 213 καί ποτέ τοι τρὶς τόσσα (not merely compensation but) three times as much: 2. 292 καὶ γάρ τίς θ' ἔνα μῆνα μένων a man who stays even one month. So 7. 281 καὶ ἴδμεν ἄπαντες (=ἴσμεν καὶ πάντες).

καὶ εἰ and εἰ καί. The combination καὶ εἰ indicates that the

whole condition is an extreme one: even on the supposition that—. But with the order ϵi kai the kai emphasises particular words: ϵi kai $\mu \dot{\alpha} \lambda a$ kaptepós è oti even if he is (I will go so far as to say) very strong. Hence ϵi kai usually implies that the supposition is more or less true.

T€

- 331.] The enclitic $\tau\epsilon$ has two main uses which it is essential to distinguish; besides one or two special uses of less importance.
- (a) As a Conjunction τε connects clauses and single words. It is especially used when a new fact or new object is to take its place pari passu with what has been already said: κύνεσσιν οἰωνοῖσί τε πᾶσι to dogs and birds as well: αὶ πᾶσι κακὸν Τρώεσσι γένοντο οἱ τ' αὐτῷ which were a bane to all the Trojans, and to himself (equally). This meaning is given still more distinctly by the Correlative τε—τε: thus we have the pairs ἀνδρῶν τε θεῶν τε, δῆμός τε πόλις τε, κλαγγῷ τ' ἐνοπῷ τε, &c. and the pairs of Clauses expressing simultaneous action, such as—

άψ τ' ἀνεχώρησεν, ὧχρός τέ μιν είλε παρειάς.

Hence τε—τε sometimes marks that two things are mutually dependent: δλίγον τε φίλον τε='not less dear because small,' λυσόμενός τε θύγατρα φέρων τ' ἀπερείσι' ἄποινα=' bringing vast ransom for the deliverance of his daughter': Il. 5. 359 κόμισαί τέ με δός τέ μοι ἵππους.

The combinations τε—καί and τε—ἢδέ (or ίδέ) are also common in Homer, and not sensibly different in meaning from τε—τε; as—

φμωξέν τ' ἄρ' ἔπειτα καὶ ὡ πεπλήγετο μηρώ. χλαινάν τ' ἦδὲ χιτώνα.

As to the place of τε the general rule is that it follows the first word in the Clause. Hence when standing first in the pair τε—τε it does not always follow the word which it couples: e. g. II. 6. 317 ἐγγύθι τε Πριάμοιο καὶ Ἦπτορος near both Priam and Hector; II. 5. 878 σοί τ' ἐπιπείθονται καὶ δεδμήμεσθα ἕκαστος (cp. 2. 136, 198., 4. 505., 7. 294-5).

The use of $\tau\epsilon$ as a Particle of transition (to begin a fresh sentence after a pause) is not Homeric, though common in later Greek. This may indicate that the use as a connecting Particle was originally confined to the Correlative $\tau\epsilon$ — $\tau\epsilon$ (Delbrück, Synt. Forsch. iv. p. 145).

- 332.] (b) In its other use—which is distinctively Homeric re serves to mark an assertion as general or indefinite. Hence it is found in gnomic passages: as—
 - 11. 1. 218 ὅς κε θεοῖς ἐπιπείθηται, μάλα τ' ἔκλυον αὐτοῦ.
 - 9. 509 τον δε μέγ' ἄνησαν καί τ' ἔκλυον εὐξαμένοιο.
 - Od. 6. 185 μάλιστα δέ τ' ἔκλυον αὐτοί.

302

II. 16, 688 ἀλλ' αἰεί τε Διὸς κρείσσων νόος ἢέ περ ἀνδρῶν.

19. 221 αἶψά τε φυλόπιδος πέλεται κόρος (cp. Od. 1. 392).

Hes. Th. 87 αἶψά τε καὶ μέγα νεῖκος ἐπισταμένως κατέπανσε. So in many short maxims, such as ρεχθὲν δέ τε νήπιος ἔγνω—στρεπτοὶ δέ τε καὶ θεοὶ αὐτοί. In similes it is very common, and is often repeated in the successive Clauses; e.g.—

Il. 4. 482 ὁ δ' ἐν κονίησι χαμαὶ πέσεν, αἴγειρος ὥς, η ρά τ' ἐν εἰαμενη ἔλεος μεγάλοιο πεφύκη λείη, ἀτάρ τέ οἱ ὄζοι ἐπ' ἀκροτάτη πεφύασι την μέν θ' ἀρματοπηγὸς ἀνηρ αἴθωνι σιδήρω ἐξέταμ', ὄφρα κτλ.

16. 156 οἱ δὲ λύκοι ὡς ὡμοφάγοι, τοῖσίν τε περὶ φρεσὶν ἄσπετος ἀλκή, οῖ τ' ἔλαφον κεραὸν μέγαν οὕρεσι δηώσαντες δάπτουσιν' πᾶσιν δὲ παρήϊον αἵματι φοινόν' καί τ' ἀγεληδὸν ἵασιν ἀπὸ κρήνης μελανύδρου λάψοντες γλώσσησιν ἀραιῆσιν μέλαν ὕδωρ ἄκρον, ἐρευγόμενοι φόνον αἵματος' ἐν δέ τε θυμὸς στήθεσιν ἄτρομός ἐστι, περιστένεται δέ τε γαστήρ.

So where the meaning is frequentative:—

Od. 4. 102 ἄλλοτε μέν τε γόφ φρένα τέρπομαι (cp. 5. 55., 12. 64).

Il. 19. 86 καί τέ με νεικείεσκον (20. 28, Od. 5. 331, &c.). So Il. 1. 521 νεικεί καί τέ μέ φησι κτλ. and says (habitually) that I &c.: ep. 9. 410., 17. 174, Od. 1. 215., 4. 387., 10. 330., 17. 25. Hence it is used of names, as Il. 1. 403 ἄνδρες δέ τε πάντες (καλέονσι), 2. 814., 5. 306, &c.; of characteristic attributes, as—

II. 2. 453 οὐδ' ὅ γε Πηνειῷ συμμίσγεται . . ἀλλά τέ μιν καθύπερθεν ἐπιρρέει ἢΰτ' ἔλαιον.

5. 340 ἰχώρ, οἶός πέρ τε ῥέει μακάρεσσι θεοῖσι. And generally of any fixed condition of things, as Il. 4. 247 ἔνθα τε νῆες εἰρύατ' εὕπρυμνοι: 5. 477 οῖ πέρ τ' ἐπίκουροι ἔνειμεν: 15. 187 τρεῖς γάρ τ' ἐκ Κρόνου εἰμὲν ἀδελφεοί (a fact of permanent significance): 22. 116 ἥ τ' ἔπλετο νείκεος ἀρχή. It may be laid down as a general rule that τε in the combinations μέν τε, δέ τε, καί τε, γάρ τε, ἀλλά τε, and the like, is not a Conjunction, and does not affect the meaning of the Conjunction which it follows.

In a Conditional sentence of gnomic character the τε is often

used in both members, as—

 11. 81 εἴ περ γάρ τε χόλου γε καὶ αὐτῆμαρ κατεπέψη, ἀλλά τε καὶ μετόπισθευ ἔχει κότου.

The use with the Article and the different forms of the Relative has been already discussed in the chapter on the Pronouns (see §§ 263, 266). It was there pointed out that $\tau \epsilon$ is used when the Clause serves to describe a *class*, as—

ἄγρια πάντα, τά τε τρέφει οὖρεσιν ὕλη. ρεῖα δ' ἀρίγνωτος γόνος ἀνέρος ὧ τε Κρονίων κτλ.

or to express a permanent characteristic, as-

γῆρας καὶ θάνατος, τά τ' ἐπ' ἀνθρώποισι πέλονται. χόλος, ὅς τ' ἐφέηκε πολύφρονά περ χαλεπῆναι. Λωτοφάγων, οἴ τ' ἄνθινον εἶδαρ ἔδουσιν.

So $\tilde{\omega}_S$ $\tau\epsilon$, $\tilde{o}\tau\epsilon$ $\tau\epsilon$, $\tilde{v}u$ $\tau\epsilon$, $\tilde{e}v\theta$ a $\tau\epsilon$, $\tilde{o}\sigma o_S$ $\tau\epsilon$, $\tilde{o}\tilde{o}\tilde{o}$ $\tau\epsilon$, $\tilde{\omega}_S$ $\tilde{e}\tilde{i}$ $\tau\epsilon$, &c. Of these $\tilde{\omega}_S$ $\tau\epsilon$ (or $\tilde{\omega}\sigma\tau\epsilon$) and of \tilde{o} $\tau\epsilon$, with the adverbial $\tilde{u}\tau\epsilon$ and $\tilde{\epsilon}\phi$ $\tilde{\phi}$ $\tau\epsilon$, are the only forms in which this use of $\tau\epsilon$ has remained in Attic Greek. $\tilde{\epsilon}\pi\epsilon$ \tilde{i} $\tau\epsilon$, which is regular in Herodotus, is rare in Homer: see Il. 11. 87, 562., 12. 393.

Further, the Indefinite 715 is not unfrequently strengthened in

its meaning (any one) by TE (cp. Latin quisque):

II. 3. 12 τόσσον τίς τ' ἐπιλεύσσει ὅσον τ' ἐπὶ λᾶαν ἵησιν.
 14. 90 σίγα, μή τίς τ' ἄλλος . . ἀκούση (so Od. 19. 486).

So καὶ γάρ τίς τε, καὶ μέν τίς τε, and in Relative Clauses, ος τίς τε,

ότε τίς τε, ως τίς τε, &c.: also ήν τίς τε (Od. 5. 120).

Notice also the use with the disjunctive $\tilde{\eta}$ after a Comparative, in Od. 16. 216 $\tilde{\alpha}\delta\iota\nu\omega\tau\epsilon\rho o\nu \tilde{\eta} \tau'$ olwool. This is akin to the use in similes. So in II. 4. 277 $\mu\epsilon\lambda\dot{\alpha}\nu\tau\epsilon\rho o\nu \tilde{\eta}\dot{\nu}\tau\epsilon$ $\pi\iota\sigma\sigma a$ blacker than pitch. The true reading is probably $\tilde{\eta}\dot{\epsilon}\tau\epsilon$, as was suggested by Bekker (H. B. i. p. 312): see however Buttmann, Lexil., s. v. $\tilde{\eta}\dot{\nu}\tau\epsilon$. On $\tilde{\eta}$ $\tau\epsilon$ either—or see § 340.

The two uses of τε may sometimes be distinguished by its place in the sentence. Thus τε is a Conjunction in II. 2. 522 οῖ τ' ἄρα and who— (cp. εἶ τ' ἄρα, οὕτ' ἄρα), and in II. 23. 277 ἀθάνατοί τε γάρ εἰσι κτλ.; also in the combinations οὕτε τις, μήτε τις. With the indefinite τε we should have the order ἄρα τε, γάρ τε, τίς τε. Both uses may even occur in the same clause; as II. 5. 89 τὸν δ' οὕτ' ἄρ τε γέφυραι ἐεργμέναι ἰσχανόωσιν.*

The places in which $\tau\epsilon$ appears to be used in statements of single or definite facts can generally be corrected without difficulty. In several places $\delta\epsilon$ τ ($o\dot{v}\delta\epsilon$ τ), $\mu\eta\delta\epsilon$ τ) has crept into the

text instead of & er. Thus we find-

Π. 1. 406 τὸν καὶ ὑπέδεισαν μάκαρες θεοὶ οὐδέ τ' ἔδησαν (Read οὐδ' ἔτ',—they no longer bound, gave up binding).

 179 ἀλλ' ἴθι νῦν κατὰ λαὸν 'Αχαιῶν μηδέ τ' ἐρώει. (Read μηδ' ἔτ' with four of La Roehe's MSS.).

11. 437 οὐδέ τ' ἔασε (Read οὐδ' ἔτ' with the *Lipsiensis*, and so in Il. 21. 596).

^{*} The account now given of the uses of $\tau\epsilon$ was suggested (in substance) by Dr. Wentzel, whose dissertation (*Ueber den Gebrauch der Partikel* $\tau\epsilon$ *bei Homer*, Glogau, 1847) appears to have been overlooked by subsequent writers.

II. 23. 474 at $\delta \epsilon \tau'$ år $\epsilon v\theta \epsilon v$ (Read at δ' $\epsilon \tau'$ with the Townleianus).

Two isolated Epic uses remain to be noticed:—

(1) After an Interrogative in the combination τ' ἄρα, τ' ἄρ: as—
II. 1. 8 τίς τ' ἄρ σφωε θεῶν ἔριδι ξυνέηκε μάχεσθαι;
18. 188 πῶς τ' ἄρ' ἴω μετὰ μῶλον; (so πῆ τ' ἄρ II. 13. 307).

Od. 1. 346 μῆτερ ἐμή, τί τ' ἄρα φθονέεις κτλ.

The ancient grammarians regarded ταρ as a single enclitic patigle (so Harodian Schol II I 67). As the force of the re-

Particle (so Herodian, Schol. II. 1.65). As the force of the τε seems to have merged in the compound, this is probably right: just as γ' ἄρ having become a single Particle is written γάρ. But

if so, we must also recognise the form ταρα.

(2) With $\hat{\eta}$ in strong Affirmation: as $\hat{\eta}$ τ' $\hat{\epsilon}\phi \hat{\mu}\mu\eta\nu$ I did indeed think. This may originally belong to the same head as the indefinite use: $\hat{\eta}$ $\tau \epsilon = surely$ anyhow. But a distinct force of the $\tau \epsilon$ is no longer perceptible.

The Latin que, which is originally identical with $\tau\epsilon$, shows the same separation into two main uses. In the use as a Conjunction the agreement between $\tau\epsilon$ and que is close. It is less so in the other use, chiefly because $\tau\epsilon$ in Homer is still a distinct word, whereas que in Latin is confined to certain combinations, viz. at-que, nam-que (cp. $\kappa ai \ \tau\epsilon$, $ai \ ai \ ai$, $ai \ ai$, ai, ai,

86

333.] The chief use of the Adversative Particle $\delta \epsilon$ is to show that a Clause stands in some *contrast* to what has preceded. Ordinarily, however, it merely indicates the continuation of a narrative (i.e. shows that the new fact is not *simultaneous*). It is especially used to introduce a parenthesis or subordinate statement (whereas $\tau \epsilon$ introduces something parallel or coordinate: e.g.—

νοῦσον ἀνὰ στρατὸν ὧρσε κακήν, ὀλέκοντο δὲ λαοί, οῦνεκα κτλ.

Here a prose writer would say δλεθρίαν, or ὅστε ἀπόλλυσθαι τὸν λαόν, or ὑφ' ἦs ὁ λαὸς ἀπώλλυτο, &c. So—

' Αυτίλοχος δε Μύδωνα βάλ', ἡνίοχον θεράπουτα, εσθλον ' Ατυμνιάδην, ὁ δ' ὑπέστρεφε μώνυχας ἵππους, χερμαδίφ ἀγκῶνα τυχὼν μέσον.

I. e. 'struck him as he was turning the horses.'

δέ is nearly always the second word in the Clause. It is occasionally put after (1) a Preposition and Case-form, as $\hat{\epsilon}\pi'$ αὐτῶν δ' ὧμοθέτησαν, or (2) an Article and Numeral, as τŷ δεκάτη δ' κτλ.: but not after other combinations. Hence καὶ δέ, as Il. 7. 113 καὶ δ' Αχιλεύς and even Achilles (never καὶ Αχιλεύς δέ, as in later Greek).

334.] & of the Apodosis. While & generally stands at the beginning of a new independent Sentence, there are certain uses, especially in Homer, in which it marks the beginning of the principal Clause after a Relatival, Temporal or Conditional Protasis. This is found where there is an opposition of some kind between the two members of the Sentence: e.g.—

Π. 4. 261 εἴ περ γάρ τ' ἄλλοι γε κάρη κομόωντες 'Αχαιοὶ δαιτρὸν πίνωσιν, σὸν δὲ πλεῖον δέπας κτλ. (so 12. 245).

 260 αἴ κέν μοι πολύβουλος 'Αθήνη κῦδος ὀρέξη ἀμφοτέρω κτεῖναι, σὰ δὲ . . ἐρυκακέειν κτλ.

Od. 7. 108 ὅσσον Φαίηκες περὶ πάντων ἴδριες ἀνδρῶν νῆα θοὴν ἐνὶ πόντῳ ἐλαυνέμεν, ὡς δὲ γυναῖκες ἱστὸν τεχνῆσσαι (cp. Od. 14. 178, 405., 18. 62).

With od and μή, giving οὐδέ, μηδέ, as—

II. 5. 788 ὄφρα μὲν ἐς πόλεμον πωλέσκετο δῖος 'Αχιλλεύς, οὐδέ ποτε Τρῶες κτλ.

6. 58 μηδ' ον τινα γαστέρι μήτηρ κοῦρον ἐόντα φέροι, μηδ' δε φύγοι.

Od. 1. 16 ἀλλ' ὅτε δὴ ἔτος ἢλθε . . οὐδ' ἔνθα κτλ.

10. 17 ἀλλ' ὅτε δὴ καὶ ἐγὰ ὁδὸν ἤτεον . . οὐδέ τι κεῖνος κτλ.

This use, which was called by the ancient grammarians the δέ ἀποδοτικόν, or 'δέ of the apodosis,' has been variously explained by scholars.

1. In many places the Clause introduced by this $\delta \epsilon$ stands in a double opposition, first to the immediate protasis, and then to a preceding sentence. Thus in—

Il. 2. 716 οὶ δ' ἄρα Μηθώνην . . ἐνέμοντο, τῶν δὲ Φιλοκτήτης ἦρχεν κτλ. Philocetees is opposed as commander to the people of Methone, and the whole statement is opposed to the previously mentioned peoples with their commanders. So in a period composed of two pairs of correlated Clauses, as—

Il. 1. 135 ἀλλ' εἰ μὲν δώσουσι γέρας.
εἰ δέ κε μὴ δώωσιν, ἐγὼ δέ κεν αὐτὸς ἔλωμαι.
9. 508 ὃς μέν τ' αἰδέσεται κούρας Διὸς ἄσσον ἰούσας, τὸν δὲ μέγ' ἄνησαν καί τ' ἔκλυον εὐχομένοιο.
ὃς δέ κ' ἀνήνηται καί τε στερεῶς ἀποείπη, λίσσονται δ' ἄρα ταί γε Δία κτλ.

2. The $\delta\epsilon$ of the Apodosis is commonly regarded as a survival from a period in which the Relative Clause or Conditional Protasis was not yet subordinate, so that the Apodosis, if it followed the other, still needed or at least admitted of a connecting Particle. Such an explanation is attractive because it presents us with a case of the general law according to which the complex sentence or period is formed by the welding together of originally distinct simple sentences.† It is to be observed, however, that the phenomenon in question is not necessarily more than a particular use of $\delta\epsilon$. The survival may be, not of a paratactic form of sentence, but only of a use of $\delta\epsilon$ where it is not a Conjunction. Such a use has been already seen in the Particle $\kappa a \epsilon$. In the correlation $\delta \lambda \lambda$ $\delta \tau \epsilon$ $\delta \eta - \kappa a \lambda \tau \delta \tau \epsilon$ $\delta \eta$ we need find nothing

† On the danger of explaining the Syntax of complex sentences by recourse to a supposed survival of paratactic structure there is a timely warning given by Brugmann, Gr. Gr. § 203.

^{*} So in the first edition of this book, following the discussion of Nägelsbach in his Anmerkungen zur Ilias (p. 261 and p. 271, ed. 1834). The Excursus on the subject was omitted in later editions. For the view adopted in the text the author is indebted almost wholly to Dr. R. Nieberding, Ueber die parataktische Anknüpfung des Nachsatzes in hypotaktischen Satzgefügen, insbesondere bei Homer, Gross Glogau, 1882.

more than the ordinary use of $\kappa\alpha$ with the meaning also, even; that is to say, it emphasises the sequence of the apodosis, just as it often emphasises single words or phrases. Similarly $\delta\epsilon$ may have been used to mark the adversative character of an apodosis.

- 3. These points may be illustrated by the parallel between κai also, even and oùdé or $\mu \eta \delta \epsilon = not$ even, also not. In this use $\delta \epsilon$ is clearly not a Conjunction, but merely serves to mark the natural opposition between the negative and some preceding affirmation (expressed or implied). Thus it is closely akin to the use in apodosis, the difference being only that it belongs to a single word rather than a Clause.
- 4. It is a confirmation of this view that among the cases of $\delta\epsilon$ in the apodosis we never find one in which the protasis is introduced by the corresponding $\mu\epsilon\nu$.* Where this is apparently the case it will be found that the $\mu\epsilon\nu$ refers forward, not to the $\delta\epsilon$ of the immediate apodosis, but to a new sentence with $\delta\epsilon$ or some equivalent Particle: e.g.—

II. 2. 188 ὅν τινα μὲν βασιλῆα καὶ ἔξοχον ἄνδρα κιχείη,
 τὸν δ' ἀγανοῖς ἐπέεσσιν κτλ.
 ὃν δ' αὖ δήμου τ' ἄνδρα ἴδοι κτλ.

where the correspondence is not $\delta v \mu \hat{\epsilon} v - \tau \hat{\delta} v \delta \hat{\epsilon}$, but $\delta v \mu \hat{\epsilon} v - \delta v \delta \hat{\delta}$ are. See also Il. 9. 508, 550., 12. 10., 18. 257., 20. 41, Od.

9. 56., 11. 147., 19. 329.

It has been observed that when the Protasis is a Relative Clause, δέ of the Apodosis is generally found after a Demonstrative. The only exceptions to this rule are, Il. 9. 510 δs δέ κ' ἀνήνηται . . λίσσονται δ' ἄρο ταί γε κτλ., and Il. 23. 319 ἀλλ' δs μέν θ' ἵπποισι . . ἵπποι δὲ πλανόωνται κτλ. (Schömann, Opusc. Acad. ii. p. 97.)

335.] Enclitic &. There are two uses which may be noticed under this heading:—

(I) The δε of δ-δε, τόσοσ-δε, τοιόσ-δε is properly an Enclitic (as

the accent shows).

The form $\tau \circ \circ \sigma - \delta \epsilon \sigma \iota$ or $\tau \circ \circ \sigma - \delta \epsilon \sigma \sigma \iota$ may be a trace of an inflected Pronoun akin to $\delta \epsilon$ (related to it perhaps as $\tau \iota s$ to $\tau \epsilon$); or it may be merely a form created by the analogy of other Datives in $-\epsilon \sigma \sigma \iota$, $-\epsilon \sigma \iota$.

(2) The $\delta\epsilon$ which is suffixed to Accusatives expressing motion to is generally treated as an Enclitic in respect of accent: as οἶκόνδε, πόλεμόνδε. The ancient grammarians, however, wrote δε as a distinct orthotone word, hence οἶκον δε, πόλεμον δε, &c. (but οἵκαδε, φύγαδε were made exceptions).

It seems likely that the $-\delta\varepsilon$ of these two uses is originally the same. The force in both cases is that of a *local* Adverb. Whether it is to be identified with the Conjunction $\delta'\varepsilon$ is a further question.

άλλά, αὐτάρ, ἀτάρ, αὖ, αὖτε.

336.] The remaining Adversative Particles do not need much explanation.

άλλά and αὐτάρ are used (like δέ) in the apodosis, especially

after a Clause with $\epsilon i \pi \epsilon \rho$: as—

Il. 1. 81 εἴ περ γάρ τε . . ἀλλά τε (cp. 8. 153., 19. 164). 22. 390 εἰ δὲ θανόντων περ . . αὐτὰρ ἐγὼ κτλ.

αὐτάρ and ἀτάρ express a slighter opposition than ἀλλά, and accordingly are often used as Particles of transition; e.g. in such formulae as $\mathring{\omega}_s$ οἱ $\mathring{\mu}\grave{\epsilon}v$. . $αὐτ\grave{\alpha}ρ$ κτλ. A similar use of ἀλλά may be seen with Imperatives; as ἀλλ΄ ἴθι, ἀλλ΄ ἄγε $\mathring{\mu}$ οι τόδε εἰπέ, and the like. It is evident that the stronger Adversative is chosen where greater liveliness of tone is to be conveyed.

337.] $\vec{a}\vec{v}$ and $\vec{a}\vec{v}\tau\epsilon$ (again, on the contrary) have nearly the same force as $\vec{a}\vec{v}\tau\acute{a}\rho$, but do not begin the sentence: hence $\vec{v}\hat{v}v$ $\vec{a}\hat{v}$, $\tau\acute{t}s$ δ ' $\vec{a}\hat{v}$, $\tau\acute{t}\tau$ " $\vec{a}\hat{v}\tau\epsilon$, &c.: and so in correspondence to $\mu\acute{\epsilon}v$ or $\mathring{\eta}$ $\tau o\iota$, as II. 4. 237 $\tau \hat{\omega}v$ $\mathring{\eta}$ $\tau o\iota$. $\mathring{\eta}\mu\epsilon\hat{\iota}s$ $\vec{a}\hat{v}\tau\epsilon$ $\kappa\tau\lambda$. They also serve to mark the apodosis of a Relative or Conditional Clause, as II. 4. 321 ϵl $\tau\acute{o}\tau\epsilon$ $\kappa o\hat{v}\rho os$ $\check{\epsilon}a$, $v\hat{v}v$ $a\hat{v}\tau\acute{\epsilon}$ $\mu\epsilon$ $\gamma\hat{\eta}\rho as$ $\mathring{o}\pi\acute{a}\zeta\epsilon\iota$. Thus they have the two chief uses of $\delta\acute{\epsilon}$.

Originally, doubtless, at meant backwards, but in Homer this sense is only found in the form attis: though perhaps it survives in the sacrificial word attenuate.

The form ὅμως is later, the Homeric word being ἔμπης.

όμως is usually read in II. 12. 393 ὅμως δ' οὐ λήθετο χάρμης, and Od. 11. 565 ἕνθα χ' ὅμως προσέφην. In both places however the Scholia indicate that the word was anciently circumflexed by some authorities.

η̈́.

- 338.] The Particle $\hat{\eta}$ at the beginning of a sentence gives it the character of a strong affirmation:—
- Il. 1. 240 $\hat{\eta}$ $\pi \sigma \tau$ 'Axild $\hat{\eta}$ os $\pi \sigma \theta \hat{\eta}$ (xetai be sure that one day &c. So, with an ironical tone,—
 - Il. 1. 229 ἢ πολὺ λώϊόν ἐστι κατὰ στρατὸν εὐρὺν 'Αχαιῶν δῶρ' ἀποαιρεῖσθαι κτλ.

It is often used interrogatively, esp. in questions of surprise indignation, irony, &c.: as—

ΙΙ. 2. 229 η έτι καὶ χρυσοῦ ἐπιδεύεαι κτλ.

Od. 3. 312 η οὐχ ἄλις ὡς κτλ. (is it not—?=surely it is): cp. § 358, c.

Occasionally, in short parenthetical sentences, $\hat{\eta}$ has a concessive force, it is true that, hence and yet, although: as—

II. 3. 214 παῦρα μέν, ἀλλὰ μάλα λιγέως, ἐπεὶ οὐ πολύμυθος, ἐρεὶ οὐδ' ἀφαμαρτοεπής ἢ καὶ γένει ὕστερος ἢεν.

7. 393 οὖ φησιν δώσειν ἢ μὴν Τρῶές γε κέλονται (§ 344).

 362 ἐξ αὖ νὖν ἔφυγες θάνατον, κύον ἢ τέ τοι ἄγχι ἢλθε κακόν (so 18. 13).

22. 280 $\mathring{\eta}$ τοι $\check{\epsilon}\phi\eta\nu$ $\gamma\epsilon$ (=though I did think; so 22. 280).

The question whether \mathfrak{H} (or \mathfrak{H}) can be used to introduce a Dependent Interrogative depends upon a few passages. Bekker favours \mathfrak{H} in this use, and reads accordingly, e. g. II. 1. 83 od δè φράσαι \mathfrak{H} με σαώσεις. The majority of the editors recognise it in three or four places:—

ΙΙ. 8. ΙΙΙ είσεται ή καὶ έμον δόρυ μαίνεται κτλ.

Od. 13. 415 ώχετο πευσόμενος μετά σὸν κλέος, ή που ἔτ' είης.

16. 137 άλλ' άγε μοι τόδε εἰπὲ καὶ ἀτρεκέως κατάλεξον,
 ἡ καὶ Λαέρτη αὐτὴν ὁδὸν ἄγγελος ἔλθω.

 325 πῶς γὰρ ἐμεῦ σύ, ξεῖνε, δαήσεαι, ἥ τι γυναικῶν ἀλλάων περίειμι;

In all these places, however, there is manuscript support for ϵi , and so La Roche reads in the two last. For the use of ϵi with the Subj. see § 294, with the Opt. § 314. It is difficult to derive the use of $\tilde{\eta}$ which Bekker supposes either from the emphatic $\tilde{\eta}$, or from the disjunctive $\tilde{\eta} \epsilon$ or $\tilde{\eta}$ (Hom. Bl. p. 59). In any case there is no sufficient ground for deserting the MSS.

 $\mathring{\eta}$ is often combined more or less closely with other Particles: as $\mathring{\eta}$ τε (§ 332, 2), $\mathring{\eta}$ μάν, &c. (§§ 343–5), $\mathring{\eta}$ τοι (or $\mathring{\eta}$ τοι), $\mathring{\eta}$ δη (for $\mathring{\eta}$ δή), and the correlative $\mathring{\eta}$ μέν— $\mathring{\eta}$ δέ. In these combinations $\mathring{\eta}$ strengthens the other Particle. Note that—

ημέν—ήδέ are used of slightly opposed things, especially when alternation is implied: as—

Od. 2. 68 λίσσομαι ἠμὲν Ζηνὸς 'Ολυμπίου ἠδὲ Θέμιστος, η τ' ἀνδρῶν ἀγορὰς ἠμὲν λύει ἠδὲ καθίζει'

i. e. 'assembles and dissolves again in turn' (Lat. tum—tum). Cp. Il. 8. 395 ἡμὲν ἀνακλῖναι . . ἠδ' ἐπιθεῖναι : and so Il. 7. 301, Od. 1. 97., 8. 383, and probably Il. 6. 149 ἡμὲν φύει ἠδ' ἀπολήγει. The original emphasis may sometimes be traced, as in the formula Il. 14. 234 ἡμὲν δή ποτ' ἐμὸν ἔπος ἔκλνες ἠδ' ἔτι καὶ νῦν πείθεν surely you have heard me before, and even so listen now.

 $\mathring{\eta}$ δέ is also used (=and) without a preceding $\mathring{\eta}$ μέν: but not to begin a fresh sentence. Cp. § 331 fin. for the similar use of $\tau\epsilon$.

339.] η after τί, ἐπεί. In most editions of Homer we find the

forms $\tau i \eta$ (or $\tau i \dot{\eta}$) and $\epsilon \pi \epsilon i \dot{\eta}$, which are evidently τi , $\epsilon \pi \epsilon i$ with a

suffix -n of an affirmative or emphasising kind.

The ancient grammarians seem generally to have considered this η as a distinct word. They lay down the rule that after $\tilde{\epsilon}\pi\epsilon i$ it is circumflexed, after τi oxytone. The form $\tilde{\epsilon}\pi\epsilon i$ $\tilde{\eta}$ is supported by the fact that it is chiefly found in the combination $\tilde{\epsilon}\pi\epsilon i$ $\tilde{\eta}$ modù $\kappa\tau\lambda$. (Il. 1. 169., 4. 56, 307, &c.); also with $\mu\dot{\alpha}\lambda\alpha$ (Il. 1. 156 $\tilde{\epsilon}\pi\epsilon i$ $\tilde{\eta}$ $\mu\dot{\alpha}\lambda\alpha$ π 0d λ 1 π 1. 17. 34), and π 1 (Il. 20. 437, Od.

16. 442).

The case of τi is different. There is no ground for writing $\tau i \hat{\eta}$ (like $\epsilon \pi \epsilon i \hat{\eta}$). The form $\tau i \hat{\eta}$, which is adopted by the most recent editors on the authority of the ancients, is not satisfactory. If this $\hat{\eta}$ was originally the affirmative $\hat{\eta}$, the change of accent would indicate that it had lost its character as a separate word. And this is confirmed by the combination $\tau i \hat{\eta}$ $\delta \hat{\epsilon} \hat{\sigma} \hat{\nu} \kappa \tau \lambda$. (II. 6. 5.5. &c.), which as now written is contrary to the general rule for the place of $\delta \hat{\epsilon}$. Moreover the ancients were not unanimous on the point, since Trypho wrote $\tau i \eta$ in one word (Apollonius, de Conj. p. 523).

It may be observed that the opinion of the grammarians as to $\tau i\eta$ has more weight than in the case of $\epsilon \pi \epsilon i \eta$, since $\tau i\eta$ and $\delta \tau i\eta$ were Attic. We may suspect therefore that the accentuation

 $\epsilon \pi \epsilon i \hat{\eta}$ rests on mere inference.

With $\tau i\eta$ is to be placed the emphatic Nom. $\tau i\nu - \eta$ thou, a form which occurs in the Iliad only (cp. the Doric $\epsilon \gamma i\nu - \eta$).

$\dot{\eta} \acute{\epsilon}, \ \ddot{\eta}.$

340.] $\mathring{\eta} \epsilon$ and $\mathring{\eta}$ are used in Homer as equivalent forms of the same Particle: which is (1) Disjunctive (or) and (2) used after Comparatives (than).

The use of the Correlative $\mathring{\eta} \in (\mathring{\eta}) - \mathring{\eta} \in (\mathring{\eta}) = either - or$ is also common in Homer: as II. 1. 504 $\mathring{\eta} \in \pi \in \mathring{\eta} \in \pi \oplus \pi$ 3. 239 $\mathring{\eta}$ où

έσπέσθην . . ή δεύρω μεν έποντο κτλ.

When a question is asked in a disjunctive form, the accent of the Particle $\mathring{\eta} \acute{\epsilon}$, $\mathring{\eta}$ is thrown back, *i. e.* it is written $\mathring{\eta} \acute{\epsilon}$ or $\mathring{\eta} :=$

 13. 251 ἢέ τι βέβληαι, βέλεος δέ σε τείρει ἀκωκή, ἢέ τευ ἀγγελίης μετ' ἔμ' ἤλυθες;

Od. 4. 362 'Αντίνο', ή ρά τι ἴδμεν ἐνὶ φρεσίν, η ε καὶ οὐκί;

So when the first part of the question is not introduced by a Particle; Il. 10. 534 ψεύσομαι ἢ ἔτυμον ἐρέω; shall I speak falsehood or the truth? Od. 1. 226 είλαπίνη ἢε γάμος; cp. 4. 314, 372. Indeed the first half of the sentence need not be interrogative; as Od. 21. 193 ἔπος τί κε μυθησαίμην, ἢ αὐτὸς κεύθω;

I would say a word; or shall I keep it to myself? (so perhaps II. 14. 190).

One of the members of a disjunctive question may be itself

311

Disjunctive: e. q.—

II. 6. 377 πῆ ἔβη 'Ανδρομάχη λευκώλενος ἐκ μεγάροιο; ἢέ πη ἐς γαλόων ἢ εἰνατέρων ἐϋπέπλων, ἢ ἐς 'Αθηναίης ἐξοίχεται κτλ.

Here $\mathring{\eta}$ $\epsilon l \nu a \tau \acute{\epsilon} \rho \omega \nu$ offers an alternative for $\gamma a \lambda \acute{\epsilon} \omega \nu$, but the main question is between these two alternatives on one side and $\grave{\epsilon} s$

Αθηναίης κτλ. on the other.

Most editors of Homer recognise an interrogative use of the form $\mathring{\eta} \epsilon$, but erroneously.* The questions in which $\mathring{\eta} \epsilon$ is found are all disjunctive, so that we must write $\mathring{\eta} \acute{\epsilon} - \mathring{\eta} \epsilon$ (Il. 6. 378., 13. 251., 15. 735., 16. 12, 13, 17, Od. 1. 408., 2. 30., 11. 399). In—

Od. 13. 233 τίς γη ; τίς δημος ; τίνες ἀνέρες ἐγγεγάασιν ; η πού τις νήσων εὐδείελος, η τις ἀκτη | κείθ' κτλ.

 $\hat{\eta}$ move means surely methinks: the sense being, 'what land is this? It must be some island or else promontory.' Hence we should read $\hat{\eta}\epsilon$ in the last clause, not $\hat{\eta}\epsilon$ (as Ameis, &c.).

ηέ or $\eta = than$ is found after Comparatives; also after Verbs implying comparison, as βούλομαι I prefer, $\phi\theta$ άνω I come sooner.

The correlative $\mathring{\eta}$ τε— $\mathring{\eta}$ τε appears in three places, viz. II. 9. 276 $\mathring{\eta}$ τ' ἀνδρῶν $\mathring{\eta}$ τε γυναικῶν (where it seems to be= $\mathring{\eta}$ μέν— $\mathring{\eta}$ δέ), 11. 410 $\mathring{\eta}$ τ' ἔβλητ' $\mathring{\eta}$ τ' ἔβαλ' ἄλλον, and 17. 42 $\mathring{\eta}$ τ' ἀλκ $\mathring{\eta}$ s $\mathring{\eta}$ τε φόβοιο (where however Aristarchus read $\mathring{\eta}$ δ'— $\mathring{\eta}$ δέ). The single $\mathring{\eta}$ τε occurs with the meaning or in II. 19. 148 $\mathring{\eta}$ τ' ἐχέμεν παρὰ σοί: and with the meaning than in Od. 16. 216 (§ 332). Considering the general difficulty of deciding between εἰ and $\mathring{\eta}$ in the text of Homer, we cannot regard the form $\mathring{\eta}$ τε as resting on good evidence: see the next section.

341.] **Dependent Interrogative Clauses.** A Disjunctive question after a Verb of asking, saying, knowing, &c. is generally expressed by the Correlatives $\mathring{\eta} \epsilon (\mathring{\eta}) - \mathring{\eta} \epsilon (\mathring{\eta})$: as—

Od. 1. 174 καί μοι τοῦτ' ἀγόρευσον ἐτήτυμον, ὄφρ' ἐτ εἰδῶ, ἢε νέον μεθέπεις, ἢ καὶ πατρώϊός ἐσσι κτλ.

Il. 2. 99 τλῆτε φίλοι καὶ μείνατ' ἐπὶ χρόνον, ὅφρα δαῶμεν, ἡ ἐτεὸν Κάλχας μαντεύεται, ἡε καὶ οὐκί.

Other examples have been given in the account of the Subjunc-

^{*} This has been well shown by Dr. Praetorius, in a dissertation to which I am largely indebted (Der homerische Gebrauch von $\dot{\eta}$ ($\dot{\eta}\epsilon$) in Fragesätzen, Cassel, 1873). The rule as to the accentuation in a disjunctive question rests upon the unanimous testimony of the ancient grammarians, and is now generally adopted. The MSS and the older editors give $\dot{\eta}\dot{\epsilon}$ or $\ddot{\eta}$ only.

tive (§ 280) and the Optative (§ 302). In general it will be seen that these Dependent Clauses are the same in form as the corresponding direct questions.

In a very few instances the first member of a sentence of this

kind is without $\mathring{\eta} \epsilon (\mathring{\eta})$: as—

Od. 4. 109 οὐδέ τι ἴδμεν | ζώει ὅ γ' ἢ τέθνηκε (4. 837., 11. 464). ΗΨυβ So II. 10. 544 εἴπ' ἄγε . . ὅππως τούσδ ἵππους λάβετον, καταδύντες ὅμιλον Τρώων, ἢ τίς σφωε πόρεν κτλ., Od. 4. 643.

The combination $\epsilon \tilde{\iota} - \tilde{\eta} \epsilon$ ($\tilde{\eta}$) is often found in the MSS. of Homer; see Il. 2. 367., 8. 532, Od. 4. 28, 712, 789., 16. 238, 16. 260., 17. 308., 18. 265., 24. 217. La Roche (following Bekker) reads $\tilde{\eta} - \tilde{\eta} \epsilon$ ($\tilde{\eta}$) in all these places.

The common texts have in one place εἴ τε-ήε,

ΙΙ. 2. 349 γνώμεναι εἴ τε ψεῦδος ὑπόσχεσις ἦε καὶ οὐκί.

In this instance, if the reading is right, there is a slight irregularity: the speaker beginning as if he meant to use εἴ τε—εἴ τε, and changing to the familiar ἦε καὶ οὐκί. But the best MSS. have εἴ τε—εἴ τε.

A change of construction may also be seen in Od. 24. 235–8 $\mu\epsilon\rho\mu\dot{\eta}\rho\iota\xi\epsilon$.. $\kappa\dot{\nu}\sigma\sigma\alpha\iota$ $\kappa\alpha\dot{\iota}$ $\pi\epsilon\rho\iota\dot{\rho}\dot{\nu}\nu\alpha\iota$ $\mathring{\eta}$ $\pi\rho\hat{\omega}\tau'$ $\dot{\epsilon}\xi\epsilon\rho\dot{\epsilon}o\iota\tau o$ he debated about embracing &c., or should he first ask &c.

μάν, μήν, μέν.

342.] The three words $\mu \acute{\alpha} \nu$, $\mu \acute{\eta} \nu$, $\mu \acute{\epsilon} \nu$ agree so nearly in meaning and usage that they are to be regarded as etymologically connected, if not merely varieties of the same original form. The two former (with the long \bar{a} , η) express strong affirmation (= surely, indeed, &c.). The shorter form $\mu \acute{\epsilon} \nu$ is also originally a Particle of affirmation, but has acquired derivative uses of which the chief are: (1) the concessive use, preparing us for a Clause with an Adversative $\delta \acute{\epsilon}$, $a \grave{\nu} \tau \acute{a} \rho$, $a \grave{\lambda} \lambda \acute{a}$, &c.: and (2) the use in the second of two Clauses with the meaning yet, nevertheless.

Taking the generally received text of Homer, we find that μάν occurs 24 times, and that there are only two places in which it is not followed by a vowel. The exceptions are, II. 5. 895 ἀλλ' οὐ μάν σ' ἔτι δηρὸν ἀνέξομαι ἄλγε' ἔχοντα, where μάν may be due to the parallel II. 17. 41 ἀλλ' οὐ μὰν ἔτι δηρὸν ἀπέιρητος πόνος ἔσται, and II. 5. 765 άγρει μάν οἱ (i. e. Foι) ἔπορσον κτλ. (cp. II. 7. 450 ἄγρει μὰν ὅτ' ἀν κτλ.). On the other hand μήν, which occurs to times, is followed by a consonant in every place except II. 19. 45 καὶ μὴν οἱ τότε γ' εἰς ἀγορὴν ὅσαν. These facts have not yet been satisfactorily explained. Bekker in his second edition (1858) wrote μήν throughout for μάν, and sought to distinguish μήν and μέν as far as the metre allowed according to Attic usage H. B. pp. 34, 62). Cobet on the contrary proposed to restore μέν for μήν (Misc. Crit. p. 365), and so far as these two forms are concerned his view is probable enough. But how are we to explain the peculiar facts as to μάν? We can hardly account for it except as a genuine Homeric form, and such a form must have been used before consonants as well as vowels. If so, we

can only suppose that an original $\mu \acute{a}v$ was changed into $\mu \acute{e}v$ whenever it came before a consonant, and preserved when the metre made this corruption impossible.

It is to be observed also that $\mu\acute{a}\nu$ and $\mu\acute{\eta}\nu$ are almost confined to the Iliad, in which $\mu\acute{a}\nu$ occurs 22 times and $\mu\acute{\eta}\nu$ 7 times. In the Odyssey $\mu\acute{a}\nu$ is found twice, viz. in 11. 344., 17. 470, and $\mu\acute{\eta}\nu$ three times, in 11. 582, 593., 16. 440 (=Il. 23. 410). It appears then that $\mu\acute{\epsilon}\nu$ is the only form which really belongs to the language of the Odyssey. Consequently the substitution of $\mu\acute{\epsilon}\nu$ for $\mu\acute{a}\nu$ in the Iliad may have taken place very early. The change of $\mu\acute{\epsilon}\nu$ to $\mu\acute{\eta}\nu$ probably belongs to the later period when $\mu\acute{\eta}\nu$ had been established in Ionic and Attic prose.

343.] $\mu \dot{\alpha} \nu$ has an affirmative and generally a hortatory or interjectional force: as in $\ddot{\alpha}\gamma\rho\epsilon\iota$ $\mu\dot{\alpha}\nu$ nay come! (II. 5. 765., 7. 459), and $\mathring{\eta}$ $\mu\dot{\alpha}\nu$, où $\mu\dot{\alpha}\nu$, used when a speech begins in a tone of surprise, triumph, or the like; as—

Π. 2. 370 ἢ μὰν αὖτ' ἀγορῆ νικᾶς, γέρον, υἶας 'Αχαιῶν.

 318 οὐ μὰν ἀκληεῖς Λυκίην κάτα κοιρανέουσιν ἡμέτεροι βασιλῆες (cp. 4. 512., 13. 414., 14. 454, &c.).

An approach to the force of an emphatic yet appears in-

II. 8. 373 ἔσται μὰν ὅτ' ἃν αὖτε φίλην γλαυκώπιδα εἴπη· and in ἀλλ' οὐ μάν (II. 5. 895., 17. 41, 418, &c.), μὴ μάν (II. 8. 512., 15. 476., 22. 304).

- 344.] μήν with a hortatory force occurs in II. I. 302 εἰ δ' ἄγε μὴν πεἰρησαι come, do but try. The combination η μήν is affirmative (rather than merely concessive),—not so much admitting as insisting upon an objection or reply: II. 2. 291 η μὴν καὶ πόνος ἐστί it is true enough that there is toil: 7. 393 η μὴν Τρῶές γε κέλονται I assure you that the Trojans bid him: 9. 57 η μὴν καὶ νέος ἐσσί we must remember that you are young. In καὶ μήν it emphasises the fact introduced by καί: II. 19. 45 καὶ μὴν οῦ τότε γ' εἰς ἀγορὴν ἴσαν observe that even these then went.
- 345.] $\mu \epsilon \nu$ is very common in Homer. The original simply affirmative force appears especially in the combinations η^{2} $\mu \epsilon \nu$, and the like, in which it is indistinguishable in sense from $\mu \dot{\eta} \nu$.*

η μέν is regularly used in oaths, and is even found with an Inf. in oratio obliqua, as Il. 1. 76 καί μοι ὅμοσσον ἢ μέν μοι . . ἀρήξειν. So in a strong asseveration, as Il. 7. 97 ἢ μὲν δὴ λώβη τάδε γ' ἔσσεται this will really be a foul shame, Od. 19. 235 ἢ μὲν πολλαί γ' αὐτὸν ἐθηήσαντο γυναῖκες you may be sure that many women gazed with wonder at it. In these and similar passages μέν

^{*} On the uses of μέν see the dissertation of Carl Mutzbauer, Der homerische Gebrauch der Partikel MEN, Köln, 1884-86.

strengthens a purely affirmative $\mathring{\eta}$, and there is no sense of contrast. The adversative use may be perceived, as with the simple $\mathring{\eta}$ (§ 338) and $\mathring{\eta}$ $\mu\mathring{\eta}\nu$, when a speaker insists on his assertion as true along with or in spite of other facts: e.g. in Od. 10. 64 $\pi\mathring{\omega}s$ $\mathring{\eta}\lambda\vartheta\epsilon s$, 'O $\mathring{\delta}v\sigma\epsilon\mathring{v}$; $\imath\acute{t}s$ $\tau o\iota$ $\kappa\alpha\kappa\grave{o}s$ $\check{\epsilon}\chi\rho\alpha\epsilon$ $\mathring{\delta}a\acute{\iota}\mu\omega\nu$; $\mathring{\eta}$ $\mu\acute{e}v$ σ' $\grave{\epsilon}v\check{\delta}v\kappa\acute{\epsilon}\omega s$ $\mathring{\alpha}\epsilon\pi\acute{\epsilon}\mu\pi\circ\mu\epsilon\nu$ surely we sent you on your way with due provision: and in the common form of reproach, Il. 11. 765 $\mathring{\omega}$ $\pi\acute{\epsilon}\pi\circ\nu$, $\mathring{\eta}$ $\mu\grave{\epsilon}v$ $\sigma\acute{o}\iota$ $\gamma\epsilon$ Mero $\imath\iota$ \tauos $\mathring{\omega}\mathring{o}$ $\mathring{\epsilon}\pi\acute{\epsilon}\tau\epsilon\lambda\lambda\epsilon$ (cp. 5. 197., 9. 252). So with ironical emphasis, Il. 3. 430 $\mathring{\eta}$ $\mu\grave{\epsilon}v$ $\mathring{\delta}\mathring{\eta}$ $\pi\rho\acute{\iota}v$ γ' $\epsilon\check{v}\chi\epsilon'$ $\kappa\tau\lambda$. why surely you boasted &c., cp. 9. 348.

The corresponding negative form μὴ μέν occurs in formal oaths (§ 358, b), and with the Opt. in a sort of imprecation in Od. 22. 462 μὴ μὲν δὴ καθαρῷ θανάτῳ ἀπὸ θυμὸν ἐλοίμην κτλ. (cp. μὴ μάν). Denial insisted upon in view of some state of things is expressed by οὐ μέν, as II. 4. 372 οὐ μὲν Τυδέϊ γ' ὧδε φίλον πτωσκαζέμεν ἦεν

(why do you shrink?) surely Tydeus did not.

The form καὶ μέν answers closely to the Attic καὶ μήν, which is used to call attention to a fact, especially as the ground of an argument; as II. 18. 362 καὶ μὲν δή πού τις μέλλει βροτὸς κτλ. a mortal, remember, will accomplish his will: (much more a great gooldess): II. 1. 269 καὶ μὲν τοῦσιν ἐγὼ μεθομίλεον (these were the mightiest of men): yes, and I was of their fellowship. Sometimes the fact is first indicated, then dwelt upon in a fresh clause with καὶ μέν: II. 9. 497 στρεπτοὶ δέ τε καὶ θεοὶ αὐτοί, . . καὶ μὲν τοὺς θυέεσσι κτλ. even gods may be moved . . they are indeed turned from their anger by sacrifice &c.: ep. 24. 488, Od. 7. 325., 14. 85. Similarly when a new point in the narrative is reached: as II. 6. 194 καὶ μέν οἱ Λύκιοι τέμενος τάμον yes and (besides what the king gave) the Lycian people made him a τέμενος (cp. 6. 27., 23. 174., 24. 732).

The adversative sense—but yet, but surely—is chiefly found after a negative, $\mu \acute{\epsilon} \nu$ being used either alone or in combination

with an adversative Conjunction (ἀλλά, ἀτάρ): as—

Il. 1. 602 δαίνυντ', οὐδέ τι θυμὸς ἐδεύετο δαιτὸς ἐΐσης οὐ μὲν φόρμιγγος nor yet the phorminx.

2. 703 οὐδὲ μὲν οὐδ΄ οῖ ἄναρχοι ἔσαν, πόθεόν γε μὲν ἀρχόν.

Od. 15. 405 οὖ τι περιπληθης λίην τόσον, ἀλλ' ἀγαθη μέν.
Il. 6. 123 οὖ μὲν γάρ ποτ' ὅπωπα . . ἀτὰρ μὲν νῦν γε κτλ.

Also after a question—

11. 15. 203 ἢ τι μεταστρέψεις; στρεπταὶ μέν τε φρένες ἐσθλῶν.

With the Article μέν is sometimes used to bring in a parenthesis, which may be simply affirmative, or indicate some opposition:—

ΙΙ. 1. 234 ναὶ μὰ τόδε σκῆπτρου, τὸ μὲν οὖ ποτε φύλλα καὶ

όζους φύσει (=by this sceptre, even as it shall never &c.).

5. 892 μητρός τοι μένος ἐστὶν ἀάσχετον, οὐκ ἐπιεικτόν, "Ηρης, τὴν μὲν ἐγὼ σπουδῆ δάμνημ' ἐπέεσσι she is indeed one whom I can hardly tame.

Cp. Il. 10. 440., 15. 40., 16. 141. A less emphatic use (merely to bring out a new point in the story) is not uncommon: as Il. 2. 101 ἔστη σκῆπτρον ἔχων, τὸ μὲν κτλ.: cp. Il. 18. 84, 131., 23. 328, 808, Od. 9. 320, 321. Further, the interposed statement may have a double reference, a corresponding Clause with δέ or αὐτάρ serving to resume the narrative: as—

II. 8. 256 άλλὰ πολὺ πρῶτος Τρώων ἔλεν ἄνδρα κορυστήν, Φραδμονίδην 'Αγέλαον' ὁ μὲν φύγαδ' ἔτραπεν ἵππους, τῷ δὲ μεταστρεφθέντι κτλ. (so ibid. 268–271).

Again, the return to the main story after a digression may be marked by a similar form: e.g. in Od. 6. 13 (after a parenthetical account of the Phaeacians and Alcinous) $\tau \circ \hat{\nu} \stackrel{?}{\mu} \stackrel{?}{\epsilon} \nu \stackrel{?}{\epsilon} \beta \eta \pi \rho \hat{\rho} \hat{\sigma} \hat{\sigma} \hat{\nu} \mu \alpha \kappa \tau \lambda$. now it was to his house that she went: cp. Od. 9. 325.

TOL.

346.] The enclitic τοι seems properly to express a restricted affirmation, generally qualifying a preceding statement: at least, yet surely, &c. It is especially used of a concession, whether made by the speaker or claimed from the person addressed: as II. 4. 405 ἡμεῖς τοι πατέρων μέγ ἀμείνονες εὐχόμεθ εἶναι: 5. 801 Τυδεύς τοι μικρὸς μὲν ἔην δέμας, ἀλλὰ μαχητής Τydeus, you must admit, &c.: 5. 892 μητρός τοι μένος ἐστὶν ἀάσχετον I admit (as an excuse): 8. 294 οὐ μέν τοι ὅση δύναμίς γε πάρεστι παύομαι: ep. 5. 873., 6. 211., 10. 250, Od. 2. 280, &c. So again in maxims, Od. 2. 276 παῦροι γάρ τοι παῖδες κτλ. few children, it must be said, &c.: II. 23. 315 μήτι τοι δρυτόμος κτλ. it is by understanding, after all, that the woodman &c.: Od. 9. 27 οὕ τοι ἔγωγε ῆς γαίης δύναμαι κτλ. I cannot, when all is said, &c.: II. 22. 488, Od. 8. 329, &c.

τοι is combined in Homer with Adversative Particles, as αὐτόρ τοι, ἀλλά τοι (Il. 15. 45, Od. 18. 230); and with μέν (but not closely, as in the later μέντοι but). So with the Affirmative η in η τοι (οr ητοι), which expresses a restricted concession (Il. I. 140, 211., 5. 724, &c.). But the combinations καίτοι and yet, τοίνυν so then, and the Disjunctive ητοι either, or, are post-Homeric.

τοι has the first place in the sentence in the compound τοιγάρ, which is used to begin speeches; as II. 1. 76 τοιγὰρ ἐγὰν ἐρέω εο then I will speak. It is generally used with the First Person, and has a kind of apologetic force (=I will say, since I must speak). In Attic it survives in the compounds τοιγάρτοι, τοιγαροῦν: and the same meaning is commonly expressed by τοίνυν.

It has sometimes been thought that $\tau \sigma \iota$ is originally the same as the Dat. of $\sigma \iota \iota$, meaning 'I tell you' or the like. The orthotone $\tau \sigma \iota \gamma \iota \varphi \rho$, as some MSS, read is difficult to explain on this view. It has also been explained as the Locative of $\tau \iota \iota$: ep. the Dat. $\tau \iota \varphi = in$ that case, therefore. Or it may be from the same stem as $\tau \iota \iota$ s and $\tau \iota$ (as Kühner holds, § 507): cp. $\pi \sigma \iota \iota$ by $\pi \sigma \iota \iota$ but the Loc. of this stem exists already in the form $\pi \sigma \iota$ whither.

ἄρα, γάρ.

347.] The Adverb $\alpha \rho \alpha$ properly means fittingly, accordingly (root $\alpha \rho - to fit$). The forms $\alpha \rho$ and $\rho \alpha$ seem to be varieties produced by difference of stress, answering to the different values which the Particle may have in the sentence. Of these $\alpha \rho$ retains its accent, but $\rho \alpha$, the shortest form, is enclitic.

The ordinary place of $\tilde{a}\rho\alpha$ is at the beginning of a Clause which expresses what is consequent upon something already said. But occasionally it follows a Participle in the same Clause, as in the formula $\tilde{\eta}$ $\tau o\iota$ \tilde{o} γ' $\hat{o}s$ $\epsilon i\pi \hat{\omega}\nu$ $\kappa \alpha \tau'$ $\tilde{a}\rho'$ $\tilde{\epsilon}(\epsilon \tau o)$ (cp. II. 2. 310., 5.

748).

It is to be observed, however, that ἄρα may indicate a reason (as well as a consequence): that is to say, we may go back from a fact to the antecedent which falls in with and so explains it. E. g. Il. 1. 429 χωόμενον κατὰ θυμὸν ἐϋζώνοιο γυναικός, τήν ρα. απηύρων whom (and this was the reason of his anger) they had taken away. So in the combinations ὅς ρα, ἐπεί ρα, ὅτι ρα, οὕνεκ' ἄρα = because (and this is the explanation): also in γάρ ρα, as Il. 1. 113 καὶ γάρ ρα Κλυταιμνήστρης προβέβουλα.

ἄρα is also found in the first of two correlative Clauses, as—

εἴ τ' ἄρ' ὅ γ' εὐχωλῆς ἐπιμέμφεται εἴ θ' ἐκατόμβης.

ως άγαγ' ως μήτ' άρ τις ίδη μήτ' άρ τε νοήση.

The parallel form of the sentence enables us to regard the first Clause, by anticipation, as falling in with and completing the second.

The Attic $\[delta \rho a\]$ is unknown to Homer. Whether it is identical with $\[delta \rho a\]$ seems doubtful. It is worth while noticing that $\[delta \rho a\]$ answers in usage to the Homeric combination $\[delta \rho a\]$ $\[delta \rho a\]$ is it then—?).

348.] The Causal Particle $\gamma \alpha \rho$ is originally a compound of $\gamma \epsilon$ and $\alpha \rho \alpha$, but the two elements have so completely united into a new whole that the fresh combination $\gamma \alpha \rho \rho \alpha$ is found in Homer.

γάρ serves to indicate that the Clause in which it is used is a reason or explanation, usually of something just mentioned or suggested: as $\tau \hat{\varphi}$ γὰρ ἐπὶ φρεσὶ θῆκε θεὰ λευκώλενος "Ηρη' κήδετο γὰρ Δαναῶν, κτλ. Thus it follows the sequence of thought—by which we go back from a consequent to an antecedent—whereas

aρa more commonly (though not always) indicates the sequence of the facts themselves.

As subordinate or exceptional uses, we have to note the following:—

I. The use of γάρ to introduce a mere explanation, which became very common in Attic (e.g. Thuc. I. 8 μαρτύριον δέ Δήλου γὰρ κτλ.) and may be traced back to Homer. Thus—

Il. 8. 147 ἀλλὰ τόδ' αἰνὸν ἄχος κραδίην καὶ θυμὸν ἱκάνει Εκτωρ γάρ ποτε φήσει κτλ.

This idiom—by which the Clause with γάρ becomes a kind of Object-Clause, in apposition to a Pronoun—may be compared with the use of ὅτι and οὕνεκα with the meaning that, instead of because: see §§ 268, 269. In both cases the language does not clearly distinguish between the ground of a fact (which is properly a separate and prior fact), and a mere analysis, or statement of circumstances in which a fact consists.

2. The inversion (as it may be regarded) by which the Clause with γάρ precedes the fact explained; as—

II. 2. 802 Εκτορ, σοὶ δὲ μάλιστ' ἐπιτέλλομαι ὧδέ γε ῥέξαι πολλοὶ γὰρ κατὰ ἄστυ μέγα Πριάμου ἐπίκουροι, ἄλλη δ' ἄλλων γλῶσσα πολυσπερέων ἀνθρώπων τοισιν ἔκαστος ἀνὴρ σημαινέτω (II. 13. 736., 23. 890, Od. 1. 337., 9. 319., 10. 174, 190, 226, 383., 11. 69., 12. 154, 208, 320, &c.).

Here the speaker begins by stating something that leads up to his main point. Sometimes, especially when the reason is stated at some length, the main point is marked as an inference by $\tau \hat{\varphi}$ so, therefore: as—

II. 7. 328 πολλοὶ γὰρ τεθνᾶσι κάρη κομόωντες 'Αχαιοί, τῶν νῦν αἶμα κελαινὸν . .

331 τῷ σε χρὴ πόλεμον μὲν ἄμ' ἠοῦ παῦσαι 'Αχαιῶν.

So Il. 13. 228., 15. 739., 17. 221, 338., 23. 607; there is no instance in the Odyssey.

When the Clause with $\gamma \acute{a}\rho$ precedes, it may be opposed to the preceding context: hence the $\gamma \acute{a}\rho$ may be combined with adversative Conjunctions, as—

Il. 12. 326 νῦν δ' ἔμπης γὰρ κῆρες ἐφεστᾶσιν θανάτοιο . . . ἴομεν κτλ. (cp. Il. 7. 73., 17. 338., 24. 223).

Od. 14. 355 ἀλλ' οὐ γάρ σφιν ἐφαίνετο κέρδιον εἶναι μαίεσθαι προτέρω τοὶ μὲν πάλιν αὖτις ἔβαινον νηὸς ἐπὶ γλαφυρῆς (cp. Od. 19. 591).

άλλά-γάρ also occurs without a subsequent Clause :-

Od. 10. 201 κλαΐον δὲ λιγέως, θαλερὸν κατὰ δάκρυ χέοντες· άλλ' οὐ γάρ τις πρῆξις ἐγίγνετο μυρομένοισι.

Here it has the force of 'but be that as it may,' 'but the truth is' (Riddell, Dig. § 147). That is, ἀλλὰ—γάρ meets what has preceded not by a simple opposition, but by one which consists in going back to a reason for the opposite: which may be enough

to convey the speaker's meaning.

In these uses of γάρ the peculiarity is more logical than grammatical. The γάρ (or rather the ἄρα contained in it) indicates that the Clause gives a reason or explanation, which the speaker chooses to mention before the consequent or thing to be explained. The use only strikes us because the English for is restricted to causal clauses placed in the more natural order.

With $\delta \hat{\epsilon} - \gamma \hat{\alpha} \rho$ and $\hat{\alpha} \lambda \lambda \hat{\alpha} - \gamma \hat{\alpha} \rho$ it is incorrect (as Riddell shows, l.c.) to treat the Clause with $\gamma \hat{\alpha} \rho$ as a parenthesis (writing e.g. $\nu \hat{\nu} \nu \delta' - \tilde{\epsilon} \mu \pi \eta s \ \gamma \hat{\alpha} \rho \ \kappa \tau \lambda$.). The Clause so introduced is always in opposition to the preceding context, so that the $\delta \hat{\epsilon}$ or $\hat{\alpha} \lambda \lambda \hat{\alpha}$ has its

full force.

3. After the Relative os, n, o: as—

II. 12. 344 ἀμφοτέρω μὲν μᾶλλον ὁ γάρ κ' ὅχ' ἄριστον ἀπάντων εἴη (so II. 23. 9, Od. 24. 190).

Od. 1. 286 (Μενέλαος) δς γὰρ δεύτατος ἦλθεν (cp. 17. 172).

So with ώς γάρ = for thus, and ινα γάρ (Il. 10. 127).

These are generally regarded as instances of the original use of \mathring{o}_s as a Demonstrative (§ 265). But it is only the use of $\gamma \acute{a}\rho$ that is peculiar; or rather, this is only another case in which $\gamma \acute{a}\rho$ is not translated by for. It will be seen that $\mathring{o}_s \gamma \acute{a}\rho$ may always be replaced by $\mathring{o}_s \mathring{a}\rho a$ without changing the sense.

4. In abrupt questions, and expressions of surprise: as-

II. 1. 123 πῶς γάρ τοι δώσουσι γέρας μεγάθυμοι 'Αχαιοί; why, how are the Greeks to give you a prize?

18. 182 *Ιρι θεά, τίς γάρ σε θεῶν ἐμοὶ ἄγγελον ἦκε;

293 ἢ γάρ κεν δειλός τε καὶ οὐτιδανὸς καλεοίμην κτλ.
 why, I should be a coward &c.

So in the formulae of wish, $\epsilon i \gamma \delta \rho$, δc . In all such cases the $\gamma \delta \rho$ seems to be mainly interjectional. Properly it implies that the speaker is taking up the thread of a previous speech, and as it were continuing the construction: the new Clause being one that gives a reason, or affects to do so ironically. Particles so used easily acquire an irrational character. We may compare

the use of δέ and τ' ἄρα in questions, ως in expressions of wish, ἀλλά before an imperative (§ 336): also the English use of why, well, and similar pleonasms.

οὖν, δή, νυ, θην.

349.] οὖν in Homer does not properly express inference, or even consequence (like ἄρα). Its use is to affirm something with reference to other facts, already mentioned or known; hence it may generally be represented by a phrase such as after all, be this as it may, &c. E.g.—

Il. 2. 350 φημὶ γὰρ οὖν for I do declare that &c.

Od. 11. 350 ξείνος δὲ τλήτω, μάλα περ νόστοιο χατίζων, ἔμπης οὖν ἐπιμείναι ἐς αὕριον (nevertheless to wait).

Like ἄρα, it is used to emphasise correlative Clauses, but only

with the negative οὖτε—οὖτε and μήτε—μήτε: as—

Od. 6. 192 οὖτ' οὖν ἐσθῆτος δενήσεαι οὖτε τευ ἄλλου.

II. 16. 97 αἶγὰρ.. μήτε τις οὖν Τρώων .. μήτε τις 'Αργείων, κτλ. (so Il. 8. 7., 17. 20., 20. 7, Od. 1. 414., 2. 200., 11. 200., 16. 302., 17. 401).

The combination γ' our (not to be written $\gamma \circ \hat{v} v$ in Homer) occurs only twice, with the meaning in any case:—

 5. 258 εἴ γ' οὖν ἔτερός γε φύγησι if one of the two does (after all) escape.

30 μὴ ἐμέ γ' οὖν οὖτός γε λάβοι χόλος
 (cp. 19. 94 κατὰ δ' οὖν ἕτερόν γε πέδησεν).

As an emphatic Particle of transition οὖν is found in μὲν οὖν (II. 9. 550, and several times in the Odyssey), much more frequently in the combinations ἐπεὶ οὖν, ὡς οὖν. In these an approach to the illative force may perhaps be observed.

350.] δή is properly a temporal Particle, meaning now, at length (Lat. jam): hence it implies arriving at a result, as έξ οὖ δη τὰ πρῶτα διαστήτην from the time that the point was reached when they quarrelled: εἰ δή if it has come to this that, and so if finally, if really. With Superlatives it expresses that the highest stage has been reached, as II. I. 266 κάρτιστοι δη κεῖνοι κτλ. these were quite (finally) the mightiest. So in questions, πῶς δή how has it come to be that—; and prohibitions, μη δή do not go so far as to—.

δή may begin a sentence in Homer, as II. 15. 437 Τεῦκρε πέπον, δὴ νῶϊν ἀπέκτατο πιστὸς ἐταῖρος: and often in the combinations δὴ τότε (tum vero), and δὴ γάρ. The original meaning is best seen in these forms (where δή is emphatic), and in ἥδη (for ἦ δή), and ἐπεὶ δή.

As &n is one of the words which unite with a following vowel,

so as to form one syllable, it is sometimes written δ , and so is liable to be confused with $\delta \epsilon$. This occurs especially in the combinations $\delta \eta$ at, $\delta \eta$ at $\delta \eta$ ot $\delta \eta$ ot

Note that δητα, δηθεν (cognate or derivative forms) are post-

Homeric; as also are the combinations δήπου, καὶ δή.

351.] νυ is obviously a shortened form of νῦν now. It is used as an affirmative Particle (like δή, but somewhat less emphatic), especially in combinations such as ἢ ῥά νυ, καί νύ κε, οὖ νυ, μή νυ, ἐπεί νυ, and after Interrogatives, as τίς νυ who now, τί νυ why now (see Od. 1. 59-62).

The form νυ is exclusively Epic: νυν (ἔ), which is used by Attic poets (Ellendt, Lex. Soph. ii. p. 183) appears in Il. 10. 105 ὅσα πού νυν ἐέλπεται, and Il. 23. 485 δεῦρό νυν, ἢ τρίποδος

κτλ.: but it is probably not Homeric.

In II. 10. 105 the sense is distinctly temporal, and accordingly we should probably read $\nu\hat{\nu}\nu$ $\tilde{\epsilon}\lambda\pi\epsilon\tau\alpha$. The temporal sense also suits II. 23. 485, where moreover there is a variant $\delta\epsilon\hat{\nu}\rho\delta$ $\gamma\epsilon$ $\nu\hat{\nu}\nu$ $\tau\rho\hat{\iota}\pi\sigma\delta\sigma$, found in the Scholia on Aristophanes (Ach. 771, Eq. 788).

352.] $\theta\eta\nu$ is an affirmative enclitic, giving a mocking or ironical force, like the later $\delta\eta\pi\sigma\sigma$ and $\delta\eta\theta\epsilon\nu$ (which is perhaps originally $\delta\eta$ $\theta\eta\nu$): as II. 2. 276 οὔ θήν μιν πάλιν αὖτις ἀνήσει θυμὸς ἀγήνωρ his bold spirit will not I imagine impel him again: II. 13. 620 λείψετέ θην οὕτω γε methinks in this fashion you will leave &c. It is only Epic.

περ.

- 353.] The enclitic Particle $\pi\epsilon\rho$ is evidently a shorter form of the Preposition $\pi\epsilon\rho\iota$, which in its adverbial use has the meaning beyond, exceedingly (§ 185). Accordingly $\pi\epsilon\rho$ is intensive, denoting that the word to which it is subjoined is true in a high degree, in its fullest sense, &c.: e.g.—
 - Il. 23. 79 λάχε γεινόμενόν περ was my fate even from my birth.
 - Od. 1. 315 μή μ' έτι νῦν κατέρυκε λιλαιόμενόν περ όδοιο.
 - 8. 187 στιβαρώτερον οὐκ ὀλίγον περ.
 - Il. 2. 236 οἴκαδέ περ σὺν νηυσὶ νεώμεθα
 (=let us have nothing short of return home).
 - 8. 452 σφῶϊν δὲ πρίν περ τρόμος ἔλλαβε φαίδιμα γυῖα even beforehand trembling seized your knees.
 - 72 ἀρίγνωτοι δὲ θεοί περ gods, surely, are easily known.
 4. 34 αἴ κέ ποθι Ζεὺς | ἐξοπίσω περ παύση ὄϊζύος.

So with Relatives, δs $\pi \epsilon \rho$ the very one who, δs $\epsilon \sigma \epsilon \tau a \ell$ $\pi \epsilon \rho$ (Attic $\delta \sigma \pi \epsilon \rho$ kal $\epsilon \sigma \tau a \iota$) just as it will be, $\delta \tau \epsilon$ $\pi \epsilon \rho$ just when. Also $\epsilon \ell$ $\pi \epsilon \rho$

even if, and $\mathring{\eta} \acute{\epsilon} \pi \epsilon \rho$ or $\mathring{\eta} \pi \epsilon \rho$ even than.

οὐδέ νυ σοί περ not even to you.

The combination καί περ (or καίπερ) occurs in Homer in one

place only, viz. Od. 7. 224 καί περ πολλά παθόντα.

When καί precedes a word followed by $\pi\epsilon\rho$, it is always = even (not and). Hence in Il. 5. 135 καὶ $\pi\rho$ ίν $\pi\epsilon\rho$ $\mu\epsilon\mu$ αώs means even though formerly eager, and is to be taken with the preceding line, not with the succeeding $\delta \hat{\eta}$ $\tau \acute{o} \tau \epsilon$ $\mu \iota \nu$ κτλ. Thus there is no anacoluthon, as is generally assumed.

γε.

354.] Ye is used, like $\pi \epsilon \rho$, to emphasise a particular word or phrase. It does not however *intensify* the meaning, or insist on the fact as *true*, but only calls attention to the word or fact, distinguishing it from others: e.g.—

II. 1. 81 εἴ περ γάρ τε χόλον γε καὶ αὐτῆμαρ καταπέψη, ἀλλά τε καὶ μετόπισθεν ἔχει κότον.

Here $\gamma \epsilon$ shows that the word $\chi \delta \lambda o s$ is chosen in order to be contrasted with $\kappa \delta \tau o s$. So too—

II. 2. 379 εὶ δέ ποτ' ἔς γε μίαν βουλεύσομεν, οὐκέτ' ἔπειτα κτλ. (if we could ever agree, instead of contending).

Again, where an idea is repeated-

5. 350 εἰ δὲ σύ γ' ἐς πόλεμον πωλήσεαι, ἢ τέ σ' ὀτω ριγήσειν πόλεμόν γε.

Cp. also Il. 1. 299 ἐπεί μ' ἀφέλεσθέ γε δόντες since you have but

taken away what you gave (where we should rather emphasise δόντες): Od. 4. 193 οὖ τοι ἔγωγε τέρπομ' όδυρόμενος . . νεμεσσῶμαί γε μὲν οὐδὲν κλαίειν κτλ. I do not take pleasure in lamenting, but yet I do not say that I complain of a man weeping $\S c.: 9.393$ τὸ γὰρ αὖτε σιδήρου γε κράτος ἐστί that is the strength of iron (in particular): 10.93 οὖ μὲν γάρ ποτ' ἀέξετο κῦμά γ' ἐν αὖτῷ, οὖτε μέγ' οὕτ' ὀλίγον, λευκὴ δ' ἦν ἀμφὶ γαλήνη no wave at all (nothing that could be called a wave) rose in it, &c.

So too γε emphasises a word as a strong or appropriate one, or as chosen under the influence of feeling (anger, contempt, &c.). As examples may be quoted, Od. 9. 458 τῷ κέ οἱ ἐγκέφαλός γε . . ῥαίοιτο κτλ.: 17. 244 τῷ κέ τοι ἀγλαΐας γε διασκεδάσειεν ἀπάσας: Il. 7. 198 ἐπεὶ οὐδ' ἐμὲ νήϊδά γ' οὕτως ἔλπομαι κτλ. So in the phrase εἴ ποτ' ἔην γε, which means if he lived at all, and thus is a form of asseveration; e.g. Il. 3. 180 δαὴρ αὖτ' ἐμὸς ἔσκε κυνώπιδος εἴ ποτ' ἔην γε he was my brother-in-law if he was anything, i.e. that he was so is as sure as that there was such a person.

ye is common with the Article (§ 257, 2) and the Personal Pronouns (so that it is usual to write ove, evwye as one word), also with όδε, ούτος, κείνος, and the corresponding Adverbs ώδε, τότε, &c. It serves chiefly to bring out the contrast which these Pronouns more or less distinctly imply. Similarly with words implying comparison, as άλλος and έτερος, πρίν, πάρος, &c. When a special emphasis is intended, Homer usually employs περ, as Od. 1. 59 οὐδέ νυ σοί περ εντρέπεται φίλον ήτορ not even are you moved (who are especially bound to care for Ulysses). So too, as Nauck has pointed out (Mél. gr.-rom. iv. 501), πάρος γε means before (not now), while πάρος περ means even before (not merely now). Hence in Il. 13. 465 ος σε πάρος γε γαμβρός εων $\tilde{\epsilon}\theta\rho\epsilon\psi\epsilon$ the $\gamma\epsilon$ of the MSS. is right; and so we should read (with A against other MSS.) Il. 17. 587 δε τὸ πάροε γε μαλθακὸς αἰχμητής, but (again with A) in Il. 15. 256 ός σε πάρος περ ρύομαι.

takes γε, as Il. 5. 288 πρίν γ' ή έτερόν γε πεσόντα κτλ.

οὐ, μή.

355.] οὐκί, οὐκ, οὐ. The full form οὐκί occurs in the formula ηὲ καὶ οὐκί or else not (Il. 2. 238, &c.), and one or two similar phrases: Il. 15. 137 ος τ' αἴτιος ος τε καὶ οὐκί, and Il. 20. 255 πόλλ' ἐτεά τε καὶ οὐκί.

The general use of or is to deny the predication to which it is attached (while $\mu \dot{\eta}$ forbids or deprecates). In some instances, however, or does not merely negative the Verb, but expresses the opposite meaning: or $\phi \eta \mu \mu$ is not I do not say, but I deny, refuse; or $\delta \delta I$ forbid, &c. (Krüger, $\delta \delta \delta I$, I, I).

The uses of or in Subordinate Clauses, and with the Infinitive and Participle, will be best treated along with the corresponding

uses of $\mu \dot{\eta}$ (§§ 359, 360).

According to Delbrück (Synt. Forsch. iv. p. 147) the negative Particle was treated originally like the Prepositions, i.e. it was placed immediately before the Verb, and closely connected with it: as in the Latin ne-scio, ne-queo, nolo, and in some parallel Slavonic forms. The same relation appears in the accent of o \mathring{v} $\psi \eta \mu$, and in the use of o \mathring{v} in the combinations o \mathring{v} \mathring{v} \mathring{v} \mathring

356.] οὐδέ, μηδέ. These forms are generally used as negative connecting Particles (but not, and not). Sometimes however they have a strengthening or emphatic force, corresponding to the similar use of καί in affirmative sentences; as II. 5. 485 τύνη δ' ἔστηκας, ἀτὰρ οὐδ' ἄλλοισι κελεύεις you stand still (yourself'), and (what is more) do not call on the others to fight: and in combination with $\pi \epsilon \rho$, as II. 4. 387 ἔνθ' οὐδὲ ξεῖνός $\pi \epsilon \rho$ ἐὼν κτλ. So καὶ

os even he, oùo os not even he, &c.

οὐδείς is originally an emphatic form (like the later οὐδὲ εῖς). In Homer the Neut. οὐδέν is occasionally found, sometimes as an emphatic Adverb, = not at all, as II. 1. 244 ὅ τ' ἄριστον 'Αχαιῶν οὐδὲν ἔτισας (so II. 1. 412., 16. 274., 22. 332, 513., 24. 370, Od. 4. 195., 9. 287): sometimes as a Substantive, nothing at all (Nom. and Acc.), as Od. 9. 34 ὡς οὐδὲν γλύκιον no single thing is sweeter (cp. 18. 130., 22. 318). The adjectival use is found with ἔπος (Od. 4. 350., 17. 141), also in II. 10. 216 τῆ μὲν κτέρας οὐδὲν ὁμοῖον, and perhaps II. 22. 513 οὐδὲν σοί γ' ὄφελος (where οὐδέν may be adverbial). The Gen. Neut. appears in the Compound οὐδενόσ-ωρος worth nothing (II. 8. 178). The Masc. occurs only in the phrase τὸ δν μένος οὐδενὶ εἴκων (II. 22. 459, Od. 11. 515).

The form μηδείς is post-Homeric, except the form μηδέν, which

occurs only in Il. 18. 500 δ δ' αναίνετο μηδεν ελέσθαι.

357.] Double negation. This characteristic feature of Greek is caused by the tendency to repeat the negative Particle with any word or phrase to which the negation especially applies: as II. I. II4 ἐπεὶ οὔ ἐθέν ἐστι χερείων, οὖ δέμας κτλ. since she is not inferior—not in form &c. The emphatic οὖδέ and μηδέ are chiefly used in this way: as οὖ μὰν οὖδ' ᾿Αχιλεὺς κτλ. no, not even Achilles &c.: II. 2. 703 οὖδὲ μὲν οὖδ' οἷ ἄναρχοι ἔσαν: Od. 8. 280 τά γ'

οὕ κέ τις οὐδὲ ἴδοιτο, οὐδὲ θεῶν μακάρων: ΙΙ. 6. 58 μηδ' ὅν τινα γαστέρι μήτηρ κοῦρον ἐόντα φέροι μηδ' δς φύγοι.

358.] $\mu\dot{\eta}$ is commonly used (as we should expect) with the Moods expressive of *command* or wish, viz. the Imperative, the Subjunctive and the Optative. These uses having been discussed (§§ 278, 281, 299, 303, &c.), it only remains to notice some idiomatic uses in which $\mu\dot{\eta}$ is found with the Mood of simple assertion or denial.

With the Indicative μή is used in Homer—

- (a) In the phrase $\mu \dot{\eta}$ ὅφελλον (or ὅφελον) would that I had not δ.c. Logically the $\mu \dot{\eta}$ in this idiom belongs to the following Infinitive (cp. § 355).
 - (b) In oaths, to express solemn or impassioned denial:—
 Il. 10. 329 ἴστω νῦν Ζεὺς αὐτός, ἐρίγδουπος πόσις Ἦρης,
 μὴ μὲν τοῖς ἵπποισιν ἀνὴρ ἐποχήσεται ἄλλος
 (I swear that no one else shall ride &c.).

15. 36 ἴστω νῦν τόδε γαῖα . . . 41 μὴ δι ἐμὴν ἰότητα Ποσειδάων ἐνοσίχθων | πημαίνει. In this use μή denies by disclaiming (as it were) or protesting against a fact supposed to be within the speaker's power (=far be it from me that &c.). We should probably add—

ΙΙ. 19. 258 ἴστω νῦν Ζεὺς πρῶτα κτλ.

μὴ μὲν ἐγὼ κούρῃ Βρισητοι χεῖρ' ἐπένεικα, where the MSS. have ἐπενείκαι. The Indic. form was restored conjecturally by Stephanus.

(c) After η, to express incredulity, &c.:-

Od. 6. 200 η μή πού τινα δυσμενέων φάσθ' έμμεναι ἀνδρῶν (surely you do not suppose it is any enemy!)

405 ἡ μή τίς σευ μῆλα βροτῶν ἀξκουτος ἐλαύνει;
 ἡ μή τίς σ' αὐτὸν κτείνει δόλῳ ἡὲ βίηφι;
 (surely no one is driving off your sheep? &c.)

This is the common type of 'question expecting a negative answer,' viz. a strong form of denial uttered in a hesitating or interrogative tone. Compare the quasi-interrogative use of η (§ 338) to indicate surprise or indignation.

(d) After Verbs of fearing which relate to a past event:

Od. 5. 300 δείδω μὴ δὴ πάντα θεὰ νημερτέα εἶπεν. Here, as with the Subj. (§ 281, 1), the Clause with μή passes into an Object-Clause. The difference is that the Indicative shows the event to be past.

So perhaps Od. 13. 216 μή τί μοι οἴχονται I fear they are gone: but the better reading is οἴχωνται, the Subj. being understood as in II. 1. 555 μή σε παρείπη

lest she have persuaded thee (i.e. prove to have persuaded); cp. Od. 21. 395 μη κέρα ῗπες ἔδοιεν lest worms should (be found to) have eaten (§ 303, 1). Cp. Matth. xvi. 5 ἐπελάθοντο ἄρτους λαβεῖν they found that they had forgotten (Field's Otium

Norvicense, Pt. 3, p. 7).

The use of the Past Indicative after Verbs of fearing is closely parallel to the use in Final Clauses, noticed in § 325. While the Clause, as an expression of the speaker's mind about an event—his fear or his purpose—should have a Subj. or Opt., the sense that the happening of the event is matter of past fact causes the Indicative to be preferred. Cp. the Modal uses noticed in §§ 324–326, and the remark in § 323 as to the tendency in favour of the Indicative.

The essence of these idioms is the combination of the imperative tone—shown in the use of $\mu\dot{\eta}$ —with the Mood proper to a simple assertion. The tendency to resort to the form of prohibition in order to express strong or passionate denial may be seen in the use of $\mu\dot{\eta}$ with the Optative in deprecating a supposition (§ 299, e), and of $\mu\dot{\eta}$ with the Subj. in oaths, as Od. 12. 300., 18. 56.

359.] Conditional Clauses. The rule which prescribes μή as the negative Particle to be used in every Clause of Conditional

meaning does not hold universally. In Homer-

(a) When the Verb is a Subjunctive or Optative μή is used:
the very few exceptions being confined to οὐκ ἐθέλω (II. 3. 289.,
15. 492) and οὐκ ἐάω (II. 20. 139), which are treated almost as Compounds (§ 355). Cp. the use of οὐκ ἐθέλω in Final Clauses,
as II. 5. 233 μή . . ματήσετον οὐδ' ἐθέλητον κτλ.

(b) With the Relatives 3s, 3oos, &c. when the Verb is an Indicative of is generally used; as—

ΙΙ. 2. 143 πᾶσι μετὰ πληθύν, ὅσοι οὐ βουλῆς ἐπάκουσαν.

Od. 3. 348 ως τέ τευ ἡ παρὰ πάμπαν ἀνείμονος ἡὲ πενιχροῦ, ῷ οὕ τι χλαῖναι κτλ. (a general description).

Il. 2. 338 νηπιάχοις, οἶς οὖ τι μέλει κτλ. (so 7. 236., 18. 363). The only clear instance of μή is Il. 2. 301 ἐστὲ δὲ πάντες μάρτυροι, οὖς μὴ κῆρες ἔβαν θανάτοιο φέρουσαι, where the speaker wishes to make an exception to what he has just said. In Od. 5. 489 ῷ μὴ πάρα γείτονες ἄλλοι we may supply either εἰσί or ἔωσι: the latter is found in the similar cases Od. 4. 164., 23. 118. But Hesiod uses μή with the Indic.; see Theog. 387, Op. 225.

(c) With & and the Indicative ou is used when the Clause

with & precedes the Principal Clause: as—

Il. 4. 160 εἴ περ γάρ τε καὶ αὐτίκ' 'Ολύμπιος οὐκ ἐτέλεσσε, and similarly in Il. 9. 435., 15. 213, Od. 19. 85, and the (eight) other places quoted in § 316. But when the Clause with εἰ follows the other, μή is used, as in the sentences of the form—

ΙΙ. 2. 155 ἔνθα κεν .. νόστος ἐτύχθη | εὶ μὴ κτλ.

The only instance in which this rule fails seems to be—

Od. 9. 410 εἰ μὲν δὴ μή τίς σε βιάζεται οἶον ἐόντα, rοῦσόν γ' οὔ πως ἔστι Διὸς μεγάλου ἀλέασθαι.

Here μή τις may be used rather than οὖ τις in order to bring out more clearly the misunderstanding of the Οὖτις of Polyphemus.

This curious law was pointed out by A. R. Vierke, in a valuable dissertation the $\mu\dot{\eta}$ particulae cum indicativo conjunctue usu antiquiore (Lipsiae, 1876). With regard to the ground of it, we may observe that a Clause with ϵi in most cases precedes the apodosis; and this is probably the original order. When it is inverted it may be that the use of $\mu\dot{\eta}$ instead of $o\dot{v}$ has a prohibitive character, as though the condition were added as an afterthought, in bar of what has been already said. In any case the inversion throws an emphasis on the Clause, which would account for the preference for $\mu\dot{\eta}$; see § 358.

360.] Infinitive and Participle. It appears from comparison with the forms of negation in the oldest Sanscrit that the negative Particles were originally used only with *finite Verbs*. The negation of a Noun was expressed by forming it into a Compound with the prefix an- or a- (Greek àv-, à-): and the Infinitives and Participles were treated in this respect as Nouns. The first exception to this rule in Greek was probably the use of ou with the Participle—a use which is well established in Homer.

οὐ with the Infinitive is used in Homer (as in Attic) after Verbs of saying, thinking, knowing, &c. (§ 237); as in Il. 16. 61 ή τοι ἔφην γε οὐ πρὶν μηνιθμὸν καταπαυσέμεν κτλ.: Od. 5. 342

δοκέεις δέ μοι οὐκ ἀπινύσσειν.

This use however is to be compared with that noticed above (§ 355), in which an où which belongs in sense to the Infinitive is placed before the governing Verb; as où $\phi\eta\sigma\iota\nu$ désceu he says he will not give. Sometimes the Homeric language seems to hesitate between the two forms, or to use them indifferently: compare (e.g.) Il. 12. 106 où δ' $\check{\epsilon}\tau'$ $\check{\epsilon}\phi\alpha\nu\tau\sigma$ $\sigma\chi\dot{\eta}\sigma\epsilon\sigma\theta'$ $\kappa\tau\lambda$. And (a few lines further) l. 125 $\check{\epsilon}\phi\alpha\nu\tau\sigma$ $\gamma\dot{\alpha}\rho$ où $\kappa\dot{\epsilon}\tau'$ 'Axaioùs $\sigma\chi\dot{\eta}\sigma\epsilon\sigma\theta'$ $\kappa\tau\lambda$. Occasionally the negative is used with the Verb and repeated with the Infinitive:—

II. 17. 641 ἐπεὶ οὔ μιν ὀΐομαι οὐδὲ πεπύσθαι (cp. 12. 73).
 Od. 3. 27 οὐ γὰρ ὀΐω | οὕ σε θεῶν ἀέκητι γενέσθαι κτλ.

It may be conjectured that the use of où with the governing Verb is the more ancient; the use with the Infinitive is obviously the more logical.

361.] $\mu\dot{\eta}$ with the Infinitive and Participle. The Homeric uses of this kind are few and simple in comparison with those of later Greek.

The Infinitive when used for the Imperative (§ 241) naturally takes $\mu\dot{\eta}$ instead of $o\dot{u}$: as II. 4. 42 $\mu\dot{\eta}$ $\tau\iota$ $\delta\iota\alpha\tau\rho\iota\beta\epsilon\iota\nu$ $\tau\dot{o}\nu$ $\dot{\epsilon}\mu\dot{o}\nu$ $\chi\acute{o}\lambda o\nu$, $\dot{a}\lambda\lambda\dot{a}$ $\dot{\mu}'$ $\dot{\epsilon}\dot{a}\sigma\sigma\iota$.

An Infinitive which stands as Object of a Verb of saying, &c. takes μή when it expresses command or wish: as II. 3. 434 παύεσθαι κέλομαι μηδὲ κτλ. I bid you stop and not &c. (so 9. 12): Od.

1. 37 $\epsilon \pi \epsilon l$ πρό οἱ $\epsilon \tilde{l} \pi o \mu \epsilon v$ ἡμε $\epsilon \tilde{l} s$ μήτ' κτλ. we told him before not to δc . So Od. 9. 530 δὸs μὴ 'Οδυσσῆα . . ἰκέσθαι grant that Ulysses

may not come.

Again, a dependent Infinitive takes μή in oaths, as II. 19. 176 δμννέτω . . μή ποτε τῆς εὐνῆς ἐπιβήμεναι κτλ. let him swear that he never &c.; ep. Od. 5. 184 ἴστω νῦν τόδε γαῖα . . μή τί σοι αὐτῷ πῆμα κακὸν βονλενσέμεν ἄλλο, and II. 19. 258 (but see § 358 b). So generally after Verbs of promising, &c. as II. 14. 45 ὥς ποτ ἐπηπείλησεν . . μὴ πρὶν κτλ. threatened that he would not &c.; II. 18. 500 ὁ δ' ἀναίνετο μηδὲν ἐλέσθαι refused to accept anything (see Mr. Leaf's note a. l.). This use of μή is evidently parallel to the use with the Indicative, § 358. Compare also II. 19. 22 οῖ ἐπιεικὲς ἔργ' ἔμεν ἀθανάτων μηδὲ βροτὸν ἄνδρα τελέσσαι, where the μή may be emphatic (such as we must not suppose any mortal to have made).* Or this may be an instance of the use of μή in Relative Clauses containing a general description (§ 359, b).

The use of μή with the Participle appears in one Homeric

instance:-

Od. 4. 684 μὴ μνηστεύσαντες μηδ' ἄλλοθ' δμιλήσαντες ὕστατα καὶ πύματα νῦν ἐνθάδε δειπνήσειαν.

Here μή belongs to ὁμιλήσαντες, and expresses a wish: 'may they (after their wooing) have no other meeting, but sup now for the last time.' For the parenthetical $\mu\nu\eta\sigma\tau\epsilon\dot{\nu}\sigma\alpha\nu\tau\epsilon_{\rm S}$ and the repetition of the negative with ἄλλοτε, cp. the parallel place Od. II. 613 μὴ τεχνησάμενος μηδ' ἄλλο τι τεχνήσαιτο.

KEV and av.

362.] The Particles κεν and ἄν, as we have seen, are used to mark a predication as conditional, or made with reference to a particular or limited state of things: whereas τε shows that the meaning is general. Hence with the Subj. and Opt. κεν or ἄν indicates that an event holds a definite place in the expected course of things: in other words, κεν or ἄν points to an actual occurrence in the future.†

κεν is commoner in Homer than αν. In the existing text κεν occurs about 630 times in the Iliad, and 520 times in the Odyssey: while αν (including ην and ἐπην) occurs 192 times in

* This would be akin to the later use with Verbs of belief. As to the Verbs which take μή see Prof. Gildersleeve in the Am. Jour. Phil. vol. i. p. 49.

^{† &#}x27;Im Allgemeinen steht das Resultat durchaus fest: κεν beim Conjunctiv und Optativ weist auf das Eintreten der Handlung hin' (Delbrück, Synt. Forsch. i. p. 86). This view is contrary to the teaching of most grammarians (see especially Hermann on Soph. O. C. 1446). It will be found stated very clearly in an article in the Philological Mussum, vol. i. p. 96 (Cambridge 1832).

the Iliad and 157 times in the Odyssey. Thus the proportion is more than 3:1, and is not materially different in the two

poems

It is part of Fick's well known theory that av was unknown in the original Homeric dialect (see Appendix F): and a systematic attempt to restore the exclusive use of ker in Homer has been made by a Dutch scholar, J. van Leeuwen, * who has proposed more or less satisfactory emendations of all the places in which ar now appears. It is impossible to deny the soundness of the principles on which he bases his enquiry. When the poems were chiefly known through oral recitation there must have been a constant tendency to modernise the language. With Attic and Ionic reciters that tendency must have led to av creeping into the text, sometimes in place of KEV, sometimes where the pure Subj. or Opt. was required by Homeric usage. Evidence of this kind of corruption has been preserved, as Van Leeuwen points out, in the variae lectiones of the ancient critics. Thus in Il. 1. 168 ἐπεί κε κάμω is now read on the authority of Aristarchus: but ἐπὴν κεκάμω and ἐπήν κε κάμω were also ancient readings, and $\epsilon \pi \dot{\eta} v$ is found in all our MSS. Similarly in Il. 7. 5 Aristarchus read ἐπεί κε κάμωσιν, and the MSS. are divided between $\epsilon \pi \epsilon i \kappa \epsilon$ and $\epsilon \pi \eta \nu \kappa \epsilon$ (or $\epsilon \pi \eta \nu \kappa \epsilon \kappa$.). There is a similar variation between the forms ην and εί κε (or αί κε) in the phrases αἴ κ' ἐθέλησθα, αἴ κ' ἐθέλησι, &c. Thus in II. 4. 353 (=9. 359) the MSS. nearly all have-

όψεαι ην εθέλησθα καὶ αἴ κέν τοι τὰ μεμήλη,

but at κ' èdé $\lambda\eta\sigma\theta a$, which gives a better rhetorical effect, is found in Il. 8. 471 $\delta\psi\epsilon a$ at κ' èdé $\lambda\eta\sigma\theta a$ (so all MSS., $\hat{\eta}\nu$ èd. as a ν . ℓ . in A), also in Il. 13. 260., 18. 457, Od. 3. 92, &c. Similarly in Il. 16. 453 è $\pi\epsilon$ de $\delta\eta$ $\tau\delta\nu$ $\gamma\epsilon$ $\lambda(\pi\eta)$ the ν . ℓ . è $\pi\eta\nu$ is given by good MSS. (D, G, L, and as a variant in A). And the line II. 11. 797 Μυρμιδόνων, at $\kappa\epsilon\nu$ τ ι φόως $\Delta a \nu a o i \sigma \iota$ $\gamma\epsilon\nu\eta a \iota$ is repeated in Il. 16. 39 with the variation $\tilde{\eta}\nu$ τ 00 for at $\kappa\epsilon\nu$. In such cases we can see the intrusion of $\tilde{a}\nu$ actually in process.

admissible, since the reference is general).

Several reasons combine to make it probable that the forms y

^{*} De particularum κέν et ἄν apud Homerum usu (Mnemosyne, xv. p. 75). The statistics given above are taken from this valuable dissertation.

and emp are post-Homeric. The contraction of el av. emel av is contrary to Homeric analogies (§ 378*), and could hardly have taken place until av became much commoner than it is in Homer. Again, the usage with regard to the order of the Particles excludes the combinations $\hat{\eta}\nu$ $\delta\epsilon$, $\hat{\eta}\nu$ $\pi\epsilon\rho$, $\hat{\eta}\nu$ $\gamma\delta\rho$ —for which Homer would have εί δ' ἄν, εἴ περ ἄν, εἰ γὰρ ἄν (§ 365). Again, ην cannot properly be used in a general statement or simile, and whenever it is so used the metre allows it to be changed into ei: e.g. in Il. 1. 166 ἀτὰρ ἤν ποτε δασμὸς ἵκηται: Od. 5. 120 ἤν τίς τε φίλην ποιήσετ' ἀκοίτην (ή τίς τε in several MSS.): Od. 11. 159 ην μή τις έχη εὐεργέα νηα: Od. 12. 288 ην πως έξαπίνης έλθη: Il. 20. 172 ήν τινα πέφνη (in a simile). Similar arguments apply with even greater force to emiv. Of the 48 instances there are 18 in general sentences, and several others (Il. 4. 239., 16. 95, Od. 3. 45., 4. 412., 5. 348., 11. 119., 15. 36., 21. 159) in which the reference to the future is so indefinite that ἐπεί with a pure Subj. is admissible. It cannot be accidental that in these places, with one exception (Od. 11. 192), ἐπήν is followed by a consonant, so that ἐπεί can be restored without any metrical difficulty. the other hand, in 13 places in which ἐπήν is followed by a vowel the reference is to a definite future event, and accordingly we may read ἐπεί κ'. In the combination ἐπὴν δή, which occurs seven times, we should probably read $\xi \pi \epsilon l \delta \eta$, or in some places έπεί κεν (as in Od. 11. 221). The form ἐπειδάν occurs once, in a simile (Il. 13. 285): hence we should read ἐπεὶ δή (not ἐπεί κεν, as Bekker and Nauck, or αί κεν as Menrad).

The distinction between general statements and those which refer to an actual future occurrence has hardly been sufficiently attended to in the conjectures proposed by Van Leeuwen and others. Thus in Od. 5. 121 ἤν τίς τε φίλον ποιήσετ' ἀκοίτην (in a general reflexion) Van Leeuwen would read αι κέν τίς τε: and in Od. 12. 288 ἤν πως ἐξαπίνης ἔλθη he proposes αι κέ που. So in Il, 6. 489, Od. 8. 553 ἐπὴν τὰ πρῶτα γένηται (of the lot of man) he bids us read ἐπεί κε. If any change is wanted beyond putting ἐπεί for ἐπήν, the most probable would be ἐπεί τε: see § 332. On the other hand he would put ἐπεί for ἐπήν in such places as Od. 1. 293 αὐτὰρ ἐπὴν δὴ ταῦτα τελευτήσης τε καὶ ἔρξης (cp. Od. 5. 363., 18. 269), where a definite future occasion is implied, and consequently ἔπεί κεν (which he reads in Od. 4. 414) would be more Homeric. In Od. 6. 262 αὐτὰρ ἐπὴν πόλιος ἐπιβήομεν we should perhaps read ἐπεί κε πόλεος (υ-): see § 94, 2.

In a few places the true reading may be et or ἐπεί with the Opt.: as Od. 8. 511 alσα γὰρ ἢν ἀπολέσθαι, ἐπὴν πόλις ἀμφικαλύψη (ἐπεί... ἀμφικαλύψαι, as in Il. 19. 208 we should read ἐπεὶ τισαίμεθα): Od. 21. 237 (= 383) ἢν δέ τις... ἀκούση μή τι δύραζε προβλώσκειν (εἰ δέ τις... ἀκούσαι): Il. 15. 504., 17. 245., 22. 55, 487.

The form $\delta\tau'$ δv occurs in our text in 29 places, and in 22 of these the metre admits $\delta\tau\epsilon$ κ' (χ'), which Van Leeuwen accordingly would restore. The mischief however must lie deeper. Of the 22 places there are 13 in which $\delta\tau'$ δv appears in the leading clause of a simile (δs δ' δ'' δv), and in three

others (II. 2, 397, Od. 11, 18., 13, 101) the sense is general; so that $\delta\tau\epsilon$ κ' is admissible in six only (II. 7, 335, 459., 8, 373, 475, Od. 2, 374., 4, 477). It cannot be an accident that there are so many cases of $\delta\tau'$ $\delta\nu$ where Homeric usage requires the pure Subj., and no similar cases of $\delta\tau\epsilon$ $\kappa\epsilon\nu$: but for that very reason we cannot correct them by reading $\delta\tau\epsilon$ κ' . Meanwhile no better solution has been proposed, and we must be content to note the 16 places as in all probability corrupt or spurious.

It is one thing, however, to find that a has encroached upon KEV in Homer, and another thing to show that there are no uses

of ar which belong to the primitive Homeric language.

The restoration of $\kappa \epsilon(\nu)$ is generally regarded as especially easy in the combination ouk av, for which ou ker can always be written without affecting either sense or metre. The change, however, is open to objections which have not been sufficiently considered. It will be found that our av occurs 61 times in the ordinary text of Homer; while ou ker occurs of times, and ou ke 7 times. Now of the forms ker and ke the first occurs in the Iliad 272 times, the second 222 times. Hence, according to the general laws of probability, ou ker and ou ke may be expected to occur in the same proportion: and in the ordinary text this is the case (9:7). But if every ouk ar were changed into ou ker, there would be 70 instances of ου κεν against 7 of ου κε. This clearly could not be accidental: hence it follows that our av must be retained in all or nearly all the passages where it now stands.* And if our av is right, we may infer that the other instances of av with a negative -22 in number—are equally unassailable.

Another group of instances in which αν is evidently primitive consists of the dactylic combinations ὅς περ ἄν, ἢ περ ἄν, εἴ περ ἄν. Van Leeuwen would write ὅς κέ περ, &c.; but in Homer περ usually comes immediately after the Relative or εἰ, and before κεν (§ 365). Similarly οὐδὲ γὰρ ἄν (Il. 24. 566) and τόφρα γὰρ ἄν (Od. 2. 77) cannot be changed into οὐδέ κε γάρ, τόφρα κε γάρ, since the order γάρ κεν is invariable in Homer. In these uses, accordingly, ἄν may be defended by an argument which was inapplicable to οὐκ ἄν, viz. the impossibility of making the change to κεν.

The same may be said of the forms in which $\tilde{a}v$ occurs under the ictus of the verse, preceded by a short monosyllable (\smile \checkmark), as—

II. 1. 205 η ν ύπεροπλίησι τάχ' ἄν ποτε θυμὸν ὀλέσση.
Od. 2. 76 εἴ χ' ὑμεῖς γε φάγοιτε, τάχ' ἄν ποτε καὶ τίσις εἴη.
II. 9. 77 τίς ἂν τάδε γηθήσειε (so τίς ἄν, II. 24. 367, Od. 8. 208., 10. 573).

^{*} It will be seen that the argument is of the same kind as that by which it was shown above (§ 283 b) that $\tau \epsilon$ must have been often changed into $\kappa \epsilon$. The decisive fact in that case was the excessive occurrence of $\kappa \epsilon$: here it is the absence of any such excess which leads us to accept the traditional text.

II. 4. 164 ἔσσεται ἢμαρ ὅτ' ἄν ποτ' κτλ. (cp. 1. 519., 4. 53., 6. 448., 9. 101).

8. 406 ὄφρ' ϵ ίδ $\hat{\eta}$ γλαυκώπις ὅτ' αν $\hat{\psi}$ πατρὶ μάχηται (=420).

So kai av and $\tau \delta \tau'$ av (see the instances, § 363, 2, c), $\sigma \delta$ av (II. 6. 329), δs av (Od. 21. 294, cp. Od. 4. 204., 18. 27, II. 7. 231). In this group, as in the last, we have to do with recurring forms, sufficiently numerous to constitute a type, with a fixed rhythm,

as well as a certain tone and style.

- 363.] Uses of κεν and αν. It will be convenient, by way of supplement to what has been said in the chapter on the uses of the Moods, (1) to bring together the chief exceptions to the general rule for the use of κεν or αν in Subordinate Clauses; and (2) to consider whether there are any differences of meaning or usage between the two Particles.
- I. In Final Clauses which refer to what is still future, the use of kev or $\tilde{a}v$ prevails (§§ 282, 285, 288, 293, 304). But with certain Conjunctions (especially $\tilde{\omega}s$, $\tilde{\sigma}\pi\omega s$, $\tilde{v}va$, $\tilde{\sigma}\phi\rho a$) there are many exceptions: see §§ 285–289, 306–307. When the purpose spoken of is not an actual one, but either past or imaginary, the Verb is generally 'pure.'

In Conditional Clauses the Subj. and Opt. generally take KEV or When the governing Verb is in the Future, or in a Mood which implies a future occasion (Imperative, Subjunctive, Optative with KEV or W.). On the other hand in similes, maxims, and references to frequent or indefinite occasions, the Particle is

not used. But-

- (a) Sometimes the pure Subj. is used after a Future in order to show that the speaker avoids referring to a particular occasion: cp. Il. 21. III $\xi \sigma \sigma \epsilon \tau a i \ \mathring{\eta} \ \mathring{\eta} \mathring{\omega} s \ \mathring{\eta} \ \delta \epsilon (\lambda \eta \ \mathring{\eta} \ \mu \dot{\epsilon} \sigma \sigma v \ \mathring{\eta} \mu a \rho \ \delta \pi \pi \acute{\sigma} \tau \epsilon .$ $\xi \lambda \eta \tau a i$, and the examples quoted in § 289, 2, a and § 292, a.
- (b) In our texts of Homer there are many places in which $\kappa \epsilon \nu$ or $\vec{a}\nu$ is used although the reference is *indefinite*: but the number is much reduced if we deduct the places in which it is probable that $\kappa \epsilon$ (or κ) has crept in instead of $\tau \epsilon$ (τ): see § 283, b. The

real exceptions will generally be found where a Clause is added to restrict or qualify a general supposition already made:—

363.

Il. 3. 25 μάλα γάρ τε κατεσθίει, εἴ περ αν αὐτὸν σεύωνται (even in the case when &c.).

Od. 21. 293 οἶνός σε τρώει μελιηδής, ὅς τε καὶ ἄλλους βλάπτει, ὃς ἄν μιν χανδὸν ἕλη (in the case of him who takes it greedily).

So Il. 6. 225., 9. 501, 524., 20. 166, Od. 15. 344., 19. 332 (§§ 289, 292, 296). In these places we see the tendency of the language to extend the use of kev or av beyond its original limits, in other words, to state indefinite cases as if they were definite—a tendency which in later Greek made the use of av universal in such Clauses, whether the event intended was definite or not.

The change is analogous to the use of the Indicative in a general Conditional protasis: when, as Mr. Goodwin expresses it, 'the speaker refers to one of the cases in which an event may occur as if it were the only one—that is, he states the general supposition as if it were particular' (Moods and Tenses, § 467). The loss of the Homeric use of $\tau\epsilon$, and the New Ionic use of δ \hbar $\tau\delta$ as a Relative with indefinite as well as definite antecedents, are examples of the same kind.

- 2. Up to this point the Particles Kev and av have been treated as practically equivalent. There are however some differences of usage which remain to be pointed out.
- (a) In Negative Clauses there is a marked preference for "v. In the ordinary text of the Iliad av is found with a negative 53 times (nearly a third of the whole number of instances), wer is similarly used 33 times (about one-twentieth). The difference is especially to be noticed in the Homeric use of the Subj. as a kind of Future (§§ 275, 276). In affirmative clauses of this type wer is frequent, av very rare: in negative clauses av only is found.
- (1) KEV is often used in two or more successive Clauses of a Sentence: e.g. in both protasis and apodosis, as—
- Il. 1. 324 εἰ δέ κε μὴ δώησιν, ἐγὼ δέ κεν αὐτὸς ἔλωμαι κτλ. In Disjunctive Sentences, as—
 - ΙΙ. 18. 308 στήσομαι, ή κε φέρησι μέγα κράτος ή κε φεροίμην.
- Od. 4. 692 ἄλλον κ' ἐχθαίρησι βροτῶν, ἄλλον κε φιλοίη.

And in parallel and correlative Clauses of all kinds:—

- ΙΙ. 3. 41 καί κε τὸ βουλοίμην καί κεν πολὺ κέρδιον εἴη.
- 23. 855 δε μέν κε βάλη . . δε δέ κε μηρίνθοιο τύχη, κτλ.
- Od. 11. 110 τὰς εὶ μέν κ' ἀσινέας ἐάας νόστου τε μέδηαι, καί κεν ἔτ' εἰς Ἰθάκην κακά περ πάσχοντες ἵκοισθε· εἰ δέ κε σίνηαι κτλ.

 $\tilde{a}\nu$, on the other hand, is especially used in the *second* of two parallel or connected Clauses : as—

II. 19. 228 ἀλλὰ χρὴ τὸν μὲν καταθάπτειν ὅς κε θάνησι . . ὅσσοι δ' ἄν πολέμοιο περὶ στυγεροῖο λίπωνται κτλ.

Od. 19. 329 δε μεν ἀπηνης αὐτὸς ἔη καὶ ἀπηνέα εἰδη . . . δε δ' αν ἀμύμων αὐτὸς ἔη κτλ.

So Il. 21. 553 $\epsilon l \mu \epsilon \nu \kappa \epsilon \nu$.. $\epsilon l \delta' \delta \nu \kappa \tau \lambda$.; Il. 3. 288 ff. $\epsilon l \mu \epsilon \nu \kappa \epsilon \nu$ $\epsilon l \delta \epsilon \kappa \epsilon - \epsilon l \delta' \delta \nu$ (the last an alternative to the second).

The only instance of av in two parallel Clauses is-

Od. 11. 17 οὖθ' ὁπότ' ἃν στείχησι πρὸς οὐρανὸν ἀστερόεντα οὖθ' ὅτ' ἃν ἃψ ἐπὶ γαῖαν κτλ.

and there we ought to read $\delta\pi\delta\tau\epsilon$ $\sigma\tau\epsilon(\chi\eta\sigma\iota)$, according to the regular Homeric use of the Subj. in *general* statements (§ 289, 2, a).

(c) There are several indications of the use of αν as a more emphatic Particle than κεν. Thus the combination η τ' αν surely in that case occurs 7 times in the Iliad, η τέ κεν only twice. Compare the force of καὶ αν in—

II. 5. 362 (=457) δε νῦν γε καὶ ἄν Διὰ πατρὶ μάχοιτο
 Od. 6. 300 ρεῖα δ' ἀρίγνωτ' ἐστί, καὶ ἄν πάϊς ἡγήσαιτο.

So Il. 14. 244 ἄλλον μέν κεν . . ρεῖα κατευνήσαιμι, καὶ αν ποταμοῖο ρέεθρα 'Ωκεανοῦ I would put any other to sleep, even Oceanus, $\&cap{gray}$ c.

Cp. also τότ' αν (then indeed, then at length), in-

ΙΙ. 18. 397 τότ αν πάθον άλγεα θυμώ.

22. 108 έμοι δε τότ' αν πολύ κέρδιον είη κτλ.

24. 213 τότ' αν τιτὰ ἔργα γένοιτο.

Od. 9. 211 τότ' αν ού τοι αποσχέσθαι φίλον ήεν.

And τίς ἄν (quis tandem) in II. 9.77 τίς ἃν τάδε γηθήσειεν; II. 24. 367 τίς ἃν δή τοι νόος εἴη; Od. 8. 208 τίς ἃν φιλέοντι μάχοιτο; Od. 10. 573 τίς ἃν θεὸν οὐκ ἐθέλοντα κτλ.

The general effect of these differences of usage between the two Particles seems to be that $\vec{a}v$ is used either in an adversative sense—with a second or opposed alternative—or when greater

emphasis has to be expressed.

This account of the matter is in harmony with the predominance of ἀν in negative sentences. When we speak of an event as not happening in certain circumstances, we generally do so by way of contrast to the opposite circumstances, those in which it will happen; as οὐκ ἀν τοι χραίσμη κίθαρις the lyre will not avail you (viz. in battle—whatever it may do elsewhere).

The accent of the Particles must not be overlooked as a confirmation of the view now taken. Evidently $\tilde{a}v$ is more likely to convey emphasis than the enclitic $\kappa \epsilon v$. We may find an analogy

in the orthotone and adversative &, which stands to TE and the correlated TE-TE somewhat as we have supposed ar to stand to KEV and KEV-KEV.

- 364.] Original meaning of av and KEV. The identity of the Greek av with the Latin and Gothic an has been maintained with much force and ingenuity by Prof. Leo Meyer. The following are some of the chief points established by his dissertation.*
- I. The Latin an is used by the older poets in the second member of a disjunctive question, either direct, as egone an ille injurie facimus? or indirect, as utrum scapulae plus an collus calli habeat nescio (both from Naevius). The use in single questions is a derivative one, and properly implies that the question is put as an alternative: as-

Plaut. Asin. 5. 1, 10 credam istuc, si te esse hilarum videro. AR. An tu me tristem putas? do you then think me (the opposite, viz.) sad?

Amph. 3. 3, 8 derides qui scis haec dudum me dixisse per jocum. SO. an illut joculo dixisti? equidem serio ac vero ratus.

In these places + we see how an comes to mean then on the contrary, then in the other case, &c. So in Naevius, eho an vicimus? what then, have we conquered?

- 2. In Gothic, again, an is used in questions of an adversative character: as in Luke x. 29 an hvas ist mis néhvundja ('he willing to justify himself, said : and who is my neighbour?' John xviii. 37 an nuh thiudans is thu 'art thou a king then?'
- 3. These instances exhibit a close similarity between the Latin and the Gothic an, and suggest the possibility of a Disjunctive Particle (or, or else) coming to express recourse to a second alternative (if not, then --), and so acquiring the uses of the Greek av. This supposition, as Leo Meyer goes on to show, is confirmed by the Gothic aiththau and thau, which are employed (1) as Disjunctive Particles, or, or else, and (2) to render the Greek av, chiefly in the use with the Past Indicative. Thus we have, as examples of aiththau-

Matth. v. 36 ni magt ain tagl hveit aiththau svart gataujan thou canst not make one hair white or black,

Matth, ix. 17 aiththau distaurnand balgeis (neither do men put new wine into old bottles) else the bottles break.

John xiv. 2 niba vêseina, aiththau qvêthjau if it were not so, I would have told you [= it is not so, else I would have told you].

John xiv. 7 ith kunthêdeith mik, aiththau kunthêdeith &c. if ye had known me, ye should have known &c.

Similarly thau is used (1) to translate \(\tilde{\eta} \) in double questions, as in Matth. xxvii. 17 whom will ye that I release unto you, Barabbas or (thau) Jesus? and after a Comparative (=than): frequently also (2) in a Conditional Apodosis, esp. to translate dv with Past Tenses, as-

Luke vii. 39 sa ith vêsi praufêtus ufkunthedi thau this man, if he were a prophet, would have known,

examples will be found.

^{* &#}x27;AN im Griechischen, Lateinischen und Gothischen, Berlin 1880. The parallel between the Greek av and the Gothic thau and aiththau was pointed out by Hartung (Partikeln, ii. p. 227). + Taken from Draeger's Historische Syntax, i. p. 321, where many other

Sometimes also with the Present (where there is no av in the Greek),—the meaning being that of a solemn or emphatic Future:—

Mark xi. 26 ith jabai jus ni aflètith, ni thau.. aflètith if ye do not forgive neither will.. forgive $(o^i\delta\dot{\epsilon}$.. $d\phi\dot{\eta}\sigma\epsilon\iota)$.

Matth. v. 20 ni thau qvimith (except your righteousness shall exceed &c.) ye shall in no case enter &c. (où $\mu \dot{\eta} \in l \sigma \ell \lambda \theta \eta \tau \epsilon$).

This use evidently answers to the Homeric kev or $\tilde{a}v$ with the Subj. and Fut. Ind.: ni thau qvimith = $o\dot{v}\kappa$ $\hat{a}v$ $\tilde{a}\lambda\theta\eta\tau\epsilon$, ni thau afletith = $o\dot{v}\delta$ $\hat{a}v$ $\dot{a}\phi\dot{\eta}\sigma\epsilon\iota$.

- 4. If now we suppose that dv, like aiththau and thau, had originally two main uses, (1) in the second member of a Disjunctive sentence (=else, or else), and (2) in the Conditional apodosis (=in that case rather), we can explain the Gothic and Latin an from the former, the Greek dv from the latter. The idiomatic 'ellipse' in $\tilde{\eta}$ γdp $\tilde{v}v$... $\tilde{v}\sigma rara$ $\lambda \omega \beta \dot{\eta}\sigma au$ else you would outrage for the last time will represent an intermediate or transitional use. We can then understand why dv should often accompany negatives, and why it should be used in the latter Clause of a sentence. The main difference of the two uses evidently is that in the first the Clauses are co-ordinate, in the second the Clause with dv is the apodosis or principal Clause. Thus the two uses are related to each other as the two uses of $\delta \epsilon$ (1) as an adversative Conjunction, (2) in the apodosis.
- 5. The use of αν in Final Clauses may be illustrated by that of thau in Mark vi. 56 bêdun ina ei thau. attaitôkeina παρεκάλουν αὐτὸν ἵνα κὰν. . ἄψωνται that they might touch if it were but ζτ. With ἵνα, ὡs, &c. ἄν may have had originally the same kind of emphasis as κἄν in this passage: 'that in any case,' 'that if no more then at least &c.' The use in a Conditional Protasis following the Principal Clause may be compared with Luke ix. 13 niba thau. bugjaima (we have no more) except we should buy (=unless indeed we should buy).

The Particle $\kappa \epsilon(\mathbf{v})$ is found in Eolic, in the same form as in Homer (see Append. F), and in Doric, in the form κa . It is usually identified with the Sanscrit kam, which when accented means well (wohl, gut, bene), and as an enclitic appears to be chiefly used with the Imperative, but with a force which can hardly be determined (Delbrück, A. S. pp. 150, 503). A parallel may possibly be found in the German wohl, but in any case the development of the use of $\kappa \epsilon(\mathbf{v})$ is specifically Greek.

Order of the Particles and Enclitic Pronouns.

- 365.] The place of a Particle in the Homeric sentence is generally determined by stricter rules than those which obtain in later Greek: and similar rules are found to govern the order of the enclitic Pronouns and Adverbs.
- 1. The two enclities $\pi\epsilon\rho$ and $\gamma\epsilon$, when they belong to the first word in a clause, come before all other Particles. Hence we have the sequences ϵ ί $\pi\epsilon\rho$ $\gamma \acute{a}\rho$ — ϵ ί $\pi\epsilon\rho$ $\check{a}\nu$ — $\tau ο \hat{v}$ $\pi\epsilon\rho$ $\delta \acute{\eta}$ — $\tau \acute{o}\theta \epsilon \acute{o}\nu$ $\gamma\epsilon$ $\mu \acute{e}\nu$, &c. Exceptions are to be found in II. 9. 46 ϵ ls \ddot{o} $\kappa \acute{\epsilon}$ $\pi\epsilon\rho$ $T\rho \acute{o}i\eta\nu$ $\delta \iota a\pi \acute{\epsilon}\rho\sigma o \mu \epsilon \nu$ (read perhaps ϵ ls $\ddot{o}\tau\epsilon$ $\pi\epsilon\rho$), II. 7. 387 ϵ l κ l ϵ ϵ ρ \rlap{v} μμι . \rlap{v} ν \rlap{e} ν \rlap{v} ν \rlap{e} ν \rlap{e} 0 \rlap{e} 0 \rlap{e} 0 \rlap{e} 3. 321 \rlap{o} 0 \rlap{e} 0 \rlap{e}

2. μέν and δέ, also τε in its use as a connecting word, come before other Particles. Hence we have οἱ δὲ δή—εἰ δέ κεν—ἐγὼ

δέ κέ τοι—εὶ δ' ἄν—οὐ μὲν γάρ—οὕτε κε—οὕτ' ἄρα, &c.

μέν may be placed later when it emphasises a particular word, or part of a clause, especially in view of a following clause with δέ, as Il. 9. 300 εἰ δέ τοι ᾿Ατρείδης μὲν ἀπήχθετο . . σὰ δ᾽ ἄλλους περ κτλ., Od. 4. 23., 11. 385., 18. 67, &c.; and in such collocations as σοὶ δ᾽ ἢ τοι μὲν ἐγὰ κτλ., ἔνθ᾽ ἢ τοι τοὺς μὲν κτλ. Cp. also Od. 15. 405 οὖ τι περιπληθὴς λίην τόσον, ἀλλ᾽ ἀγαθὴ μέν.

The form $\delta \phi \rho'$ av $\mu \epsilon \nu$ is probably corrupt, see § 362 ad fin.

τε in its generalising use comes after other Particles: hence δέ $\tau \epsilon$ —μέν $\tau \epsilon$ —γάρ $\tau \epsilon$ —άλλά $\tau \epsilon$ —δ' ἄρα $\tau \epsilon$ —δ' ρά $\tau \epsilon$ —οῦτ' ἄρ $\tau \epsilon$ —

ού νύ τε.

4. The Indefinite τ_{is} and the corresponding Adverbs, π_{ov} , π_{os} , π_{ov} , $\pi_{o\tau}$, &c. follow the Particles. Hence we have $\delta \tau_{\epsilon}$ $\epsilon \epsilon_{v}$ τ_{is} — at ϵ_{v} ϵ

But $\tau\epsilon$ follows $\tau\iota_s$ (§ 332), as in $\kappa a i \gamma d\rho \tau ls \tau\epsilon$, $\delta s \tau ls \tau\epsilon$. And sometimes $\delta s \tau \iota_s$ is treated as a single word, as in $\delta v \tau \iota va \mu \epsilon v$ (II. 2. 188), $\delta s \tau \iota_s \delta \epsilon$ (II. 15. 743), $\delta s \tau ls \kappa \epsilon$ (II. 10. 44, Od. 3. 355). Similarly we find $\epsilon i \tau \sigma \tau \epsilon$ in the combination $\epsilon i \tau \sigma \tau \epsilon \delta \eta$, as well as the more regular $\epsilon l \delta \eta \tau \sigma \tau \epsilon$.

τις sometimes comes later, as II. 4. 300 ὄφρα καὶ οὖκ ἐθέλων τις κτλ.. especially after a Gen. which it governs, as II. 13. 55 σφῶϊν δ' ὧδε θεῶν τις κτλ.; cp. also II. 22. 494 τῶν δ' ἐλεησάντων κοτύ-

λην τις τυτθον έπέσχεν, and Od. 21. 374.

So ποτε, as in II. 4. 410 τῷ μή μοι πατέρας ποθ' ὁμοίη ἔνθεο τιμῆ, II. 6. 99 οὐδ' 'Αχιλῆά ποθ' ὧδε κτλ., II. 10. 453, Od. 2. 137. In these places ποτε seems to be attracted to an emphatic word. Cp. που in II. 12. 272, ποθεν in Od. 18. 376.

5. The enclitic Personal Pronouns come after the Particles and Pronouns already mentioned: οὖ ποτέ $\mu\epsilon$ —ἢ πή $\mu\epsilon$ —οὐδέ νύ πώ $\mu\epsilon$ —οὐ γάρ πώ ποτέ μ οι—ἐγὼ δέ κέ τοι—ἐπεὶ ἄρ κέ $\sigma\epsilon$ —ὁππότε κέν μ ιν—αἴ κέν πώς μ ιν—οὐ γάρ πώ σ φιν—ἢ πού τίς σ φιν, &c.

Sometimes however an enclitic form follows the emphatic Pronoun αὐτός: as Il. 5. 459 αὐτὰρ ἔπειτ' αὐτῷ μοι ἐπέσσυτο, Il. 22.

346 αι γάρ πως αὐτόν με κτλ.

Occasionally an enclitic is found out of its place at the end of

a line which has the bucolic caesura: II. 3. 368 οὐδ' ἔβαλόν μιν (v. l. οὐδ' ἐδάμασσα), 5. 104 εἰ ἐτεόν με, 7. 79 ὅφρα πυρός με, 11. 380 ὡς ὄφελόν τοι: so with τις, II. 4. 315 ὡς ὄφελέν τις; and without bucolic caesura, II. 17. 736 ἐπὶ δὲ πτόλεμος τέτατό σφιν.

- 6. The negative Particles où and μή, which regularly begin the clause, are often put later in order that some other word may be emphasised, and in that case the Indefinite $\tau\iota s$, $\pi o \tau \epsilon$, &c. follow où or $\mu \eta$: as $\mu \epsilon \tau \dot{\alpha} \lambda \lambda \eta \sigma \dot{\alpha} v \gamma \epsilon \mu \dot{\epsilon} v o v \tau \iota$ (for où $\mu \dot{\epsilon} v \tau \iota$ $\mu \epsilon \tau \dot{\alpha} \lambda \lambda \eta \sigma \dot{\alpha} v \gamma \epsilon$), $\kappa \dot{\epsilon} \iota v o \iota o v \dot{\alpha} v \tau \iota s$ (for où $\delta' \dot{\alpha} v \tau \iota s \kappa \dot{\epsilon} \iota v o \iota o v \dot{\delta} \epsilon \mu \eta \tau \iota$, $\tau \dot{\alpha} \mu \dot{\epsilon} v$ ov $\pi o \tau \epsilon$, &c. Similarly $\kappa \epsilon v$ and δv are attracted to the negation, as in $\pi \lambda \eta \theta \dot{\nu} v \dot{\nu} \dot{\alpha} v \dot{\epsilon} v v \dot{\epsilon}$
- 7. The place of the enclitic is perhaps explained by the pause of the verse in Od. 15. 118 ὅθ' ἐὸς δόμος ἀμφεκάλυψε | κεῖσέ με νοστήσαντα, Od. 14. 245 αὐτὰρ ἔπειτα | Αἴγυπτόνδε με κτλ. (unless we read κεῖσ' ἐμὲ, Αἴγυπτόνδ' ἐμὲ, cp. Od. 16. 310); and so in—
 - ΙΙ. 1. 205 ής ὑπεροπλίησι τάχ' ἄν ποτε θυμὸν ὀλέσση.
 - Ι. 256 ἄλλοι τε Τρώες μέγα κεν κεχαροίατο θυμφ.
 - 5. 362 Τυδείδης, δε νθν γε καὶ αν Διὶ πατρὶ μάχοιτο.
 - 22. 108 ως ερέουσιν εμοί δε τότ αν πολύ κερδιον είη.

Od. 1. 217 ώς δη ἐγώ γ' ὄφελον μάκαρός νύ τεν ἔμμεναι νίός.
The second half of the line is treated as a fresh beginning of a sentence.

Without assuming that the Homeric usage as to the place of Particles and Enclitics is invariable, we may point out that in several places where these rules are violated the text is doubtful on other grounds. Thus—

II. 3. 173 ώς ὄφελεν θάνατός μοι ἀδεῖν. Read ὥς μ' ὄφελεν θάνατος Γαδέειν: for the elision $\mu(\alpha)$ cp. II. 6. 165 ἕς μ' ἔθελεν φιλότητι μιγήμεναι (§ 376).

II. 6. 289 ἔνθ' ἔσαν οἱ πέπλοι κτλ. Read ἔνθα Γ' ἔσαν (see § 376). Similarly in II. 20. 282 κὰδ δ' ἄχος οἱ χύτο Van Leeuwen reads κὰδ δέ Γ' ἄχος χύτο.

Od. 1. 37 ἐπεὶ πρό οἱ εἴπομεν ἡμεῖς. Bekker would omit πρό (Hom. Bl. ii. 21).

Od. 2. 327 ἐπεί νύ περ ἵεται αἰνῶς (read νύ τε Γίεται?).

Od. 15. 436 όρκω πιστωθήναι ἀπήμονά μ' οἴκαδ' ἀπάξειν. Omit μ'.

Od. 11, 218 άλλ' αΰτη δίκη έστὶ βροτῶν, ὅτε κέν τε θάνωσιν, with v. l. (in five MSS.) ὅτε τίς κε θάνησιν. Read ὅτε τίς τε θάνησιν (§ 289 ad fin.).

Il. 20. 77 τοῦ γάρ βα μάλιστά ἐ θυμὸς ἀνώγει: so Aristarchus, but the other ancient reading was μάλιστά γε.

Il. 21. 576 εἴ περ γὰρ φθάμενός μιν ἢ οὐτάση κτλ.: for μιν the 'city-editions' had τις, but neither word is needed.

Od. 7. 261 (=14. 287) ἀλλ' ὅτε δὴ ὅγδοόν μοι ἐπιπλόμενον ἔτος ἢλθεν: Dind. reads ὀγδόστον, to avoid the unusual synizesis. Read ἀλλ' ὅτε δἡ μ' ὅγδωον: an earlier ὄγδωος (=Lat. octāvus) is almost necessary to account for ὄγδιος (Brugmann, M. U. v. 37).

11. 5. 273 εἰ τοίτω κε λάβοιμεν κτλ. For κε (without meaning here) read γε. Il. 14. 403 ἐπεὶ τέτραπτο πρὸς ἰθύ οἰ. The sense seems to require πρὸς ἰθύν τα the direction of his aim, cp. πᾶσαν ἐπ' ἰθύν for every aim, ἀν' ἰθύν straight onwards [Il. 21. 303, Od. 8. 377).

Il. 24. 53 μη . . νεμεσσηθέωμεν οἱ ήμεις. Read-θήομεν, omitting οί.

Λ less strict usage may be traced in the 10th book of the Iliad: cp. l. 44 $\tilde{\eta}$ τίς κεν. 242 εἰ μὲν δὴ ἔταρόν γε κελεύετέ μ' αὐτὸν ἐλέσθαι, 280 νῦν αὖτε μάλιστά με φίλαι, 344 ἀλλ' ἐῶμέν μιν, 453 οὐκέτ' ἔπειτα σὺ πῆμά ποτ' ἔσσεαι. The subject, however, needs more detailed investigation.

CHAPTER XIV.

METRE AND QUANTITY.

The Hexameter.

366.] The verse in which the Homeric poems are composed—the heroic hexameter—consists of six feet, of equal length, each of which again is divided into two equal parts, viz. an accented part or arsis (on which the rhythmical beat or ictus falls), and an unaccented part or thesis. In each foot the arsis consists of one long syllable, the thesis of one long or two short syllables; except the last thesis, which consists of one syllable, either long or short.

The fifth thesis nearly always consists of two short syllables, thus producing the characteristic $- \cup \cup - \subseteq$ which marks the end of each hexameter.

The last foot is probably to be regarded as a little shorter than the others, the time being filled up by the pause at the end of the verse. The effect of this shortening is heightened by the dactyl in the fifth place, since the two short syllables take the full time of half a foot.

367.] Diaeresis and Caesura. Besides the recognised stops or pauses which mark the separation of sentences and clauses there is in general a slight pause or break of the voice between successive words in the same clause, sufficient to affect the rhythm of the verse. Hence the rules regarding Diaeresis and Caesura.

By Diaeresis is meant the coincidence of the division between words with the division into feet. The commonest place of diaeresis in the hexameter is after the fourth foot: as—

ἡρώων αὐτοὺς δὲ ἐλώρια | τεῦχε κύνεσσιν. This is called the *Bucolic Diagresis*.

Caesura $(\tau o \mu \dot{\eta})$ occurs when the pause between two words falls within a foot, so as to 'cut' it into two parts. The caesura which separates the arsis from the thesis (so as to divide the foot equally) is called the *strong* or *masculine* caesura: that which falls between the two short syllables of the thesis is called the *weak* or *feminine* or *trochaic* caesura.

The chief points to be observed regarding caesura in the

Homeric hexameter are as follows:-

1. There is nearly always a caesura in the third foot. Of the two caesuras the more frequent in this place is the trochaic (τομη) κατὰ τρίτον τροχαῖον), as—

ἄνδρα μοι ἔννεπε Μοῦσα | πολύτροπον δς μάλα πολλά.

The strong caesura, or 'caesura after the fifth half-foot' (τομὴ πενθημιμερήs), is rather less common: as—

μηνιν ἄειδε, θεά, | Πηληϊάδεω 'Αχιλησος.

In the first book of the Iliad, which contains 611 lines, the trochaic caesura of the third foot occurs in 356, and the cor-

responding strong caesura in 247.*

On the other hand, there must be no diaeresis after the third foot; and in the few cases in which the third foot lies wholly in one word there is always a strong caesura in the fourth foot $(\tau o \mu \hat{\eta} \epsilon \phi \theta \eta \mu \iota \mu \epsilon \rho \hat{\eta} s)$, as—

ős κε θεοῖs ἐπιπείθηται | μάλα τ' ἔκλυον αὐτοῦ "Ηρη τ' ἦδὲ Ποσειδάων | καὶ Παλλὰs 'Αθήνη.

The division between an enclitic and the preceding word is not sufficient for the caesura in the third foot: hence in Od. 10. 58 we should read—

αὐτὰρ ἐπεὶ σίτοιό τ' | ἐπασσάμεθ' ἦδὲ ποτῆτος not σίτοιό τε πασσάμεθ' (as La Roche).

The remaining exceptions to these rules are-

Π. 1. 179 οἴκαδ' ὶὼν σὰν νηυσί τε σŷs καὶ σοῖς ἐτάροισι,

which is an adaptation of the (probably conventional) form $\sigma \partial \nu \nu \eta t \tau' \epsilon \mu \hat{\eta} \kappa \alpha t$ $\epsilon \mu \hat{\rho} i \epsilon \tau \hat{\epsilon} \rho \rho i \sigma i (1.183)$. We may help the rhythm by taking $\nu \eta \nu \sigma i \tau \epsilon \sigma \hat{\eta} s$ closely together, so as to avoid the break in the middle of the line.

ΙΙ. 3. 205 ήδη γὰρ καὶ δεῦρό ποτ' ήλυθε δίος 'Οδυσσεύς.

II. 10. 453 οὐκέτ' ἔπειτα σὺ πῆμά ποτ' ἔσσεαι ᾿Αργείοισι.

Where ποτέ, as an enclitic, is in an unusual place in the sentence (§ 365, 4), but it is perhaps in reality an emphatic 'one day.' Similarly, in—

ΙΙ. 3. 220 φαίης κε ζάκοτον τέ τιν έμμεναι ἄφρονά τ' αὕτως,

τινα may be slightly emphatic. Or should we read τὸν ἔμμεναι?

ΙΙ. 15. 18 ή οὐ μέμνη ὅτε τ' ἐκρέμω ὑψόθεν, ἔκ τε ποδοῖίν.

^{*} In this calculation no lines are reckoned twice, short monosyllables being taken either with the preceding or the following word, according to the sense.

- 2. Trochaic caesura of the fourth foot is very rare, and is only found under certain conditions, viz.—
- (1) when the caesura is preceded by an enclitic or short monosyllable (such as μέν, δέ, &c.); as—

καί κεν τοῦτ' ἐθέλοιμι Διός γε διδόντος ἀρέσθαι.

(2) when the line ends with a word of four or five syllables;

αὐτὰρ ὁ μοῦνος ἔην μετὰ πέντε κασιγνήτησι. πολλὰ δ' ἄρ' ἔνθα καὶ ἔνθ' ἴθυσε | μάχη πεδίοιο.

The commonest form of this kind of caesura (especially in the Iliad) is that in which these two alleviations are both present; as—

Θερσιτ' ἀκριτόμυθε, λιγύς περ έων ἀγορητής.

The first fifteen books of the Iliad contain eleven instances of trochaic caesura in the fourth foot, of which seven are of this form.

In Il. 9. 394 the MSS. give-

Πηλεύς θήν μοι έπειτα γυναῖκα | γαμέσσεται αὐτός.

But we should doubtless read, with Aristarchus,-

γυναϊκά γε μάσσεται αὐτός.

Similarly we should probably read $\tau \grave{a}$ δέ μ ' οὐκ ἄρα μ έλλον ὀνήσειν (Il. 5. 205, &c.), instead of ἔμελλον: and conversely θαλερὴ δ' ἔμιαίνετο χαίτη (Il. 17. 439), and ῥαφαὶ δ' ἐλέλυντο ἱμάντων (Od. 22. 186), instead of μ ιαίνετο, λέλυντο. In Od. 5. 272 we may treat ὀψὲ δύοντα as one word in rhythm. But it is not easy to account for the rhythm in Od. 12. 47 ἐπὶ δ' οὕατ' ἀλεῖψαι ἔταίρων.

The result of these rules evidently is that there are two chief breaks or pauses in the verse—the *caesura* in the third foot, and the *diaeresis* between the fourth and fifth—and that the *for*bidden divisions are the diaeresis and caesura which lie nearest to

these pauses. Thus—

Again-

It is also common to find a diaeresis with a slight pause after the first foot; cp. the recurring δs φάτο, δs έφατ', δs δ γε, αὐτὰρ δ , and forms of address, as τέκνον, δαιμόνι', δs φίλοι, δs πόποι, &c. Hence the occasional hiatus in this place, as Il. 2. 209 ἢχ $\hat{η}$, δs κτλ., Il. 1. 333 αὐτὰρ δs έγνω $\mathring{η}$ σιν ενὶ φρεσί.

368.] Spondaic verses. The use of a spondee in the fifth

place occurs most commonly in verses which end with a word of four or more syllables, as-

στέμματ' έχων εν χερσίν έκηβόλου 'Απόλλωνος.

"Αρεϊ δε ζώνην, στέρνον δε Ποσειδάωνι.

It is also found with words of three long syllables, as-

τῷ δ' ἦδη δύο μεν γενεαὶ μερόπων ἀνθρώπων.

And once or twice when the last word is a monosyllable: as

νωμήσαι βών (Il. 7. 238), έστήκει μείς (Il. 19. 117).

A spondee in the fifth place ought not to end with a word. Hence we should correct the endings $\mathring{\eta}\mathring{\omega}$ $\delta \widehat{\iota}av$ &c. by reading $\mathring{\eta} \delta a$, and $\delta \mathring{\eta} \mu ov \ \varphi \widehat{\eta} \mu \iota s$ (Od. 14. 239), by restoring the archaic $\delta \mathring{\eta} \mu oo$. In Od. 12. 64 the words $\lambda \grave{\iota}s$ $\pi \acute{\epsilon} \tau \rho \eta$ at the end of the line are scanned together.

Words of three long syllables are very seldom found before the

Bucolic diaeresis. Examples are:-

ΙΙ. 13. 713 οὐ γάρ σφι σταδίη | ὑσμίνη | μίμνε φίλον κῆρ.

Od. 10. 492 ψυχη χρησομένους | Θηβαίου | Τειρεσίαο.

The rarity of verses with this rhythm may be judged from the fact that it is never found with the oblique cases of $\tilde{\alpha}\nu\theta\rho\omega\pi\sigma\sigma$ ($\tilde{\alpha}\nu\theta\rho\omega\pi\omega\nu$ &c.), although these occur about 150 times, and in every other place in the verse: or with $\tilde{\alpha}\lambda\lambda\dot{\eta}\lambda\omega\nu$ &c., which occur about 100 times.

Syllabic Quantity-Position.

369.] The quantity of a syllable—that is to say, the time which it takes in pronunciation—may be determined either by the length of the vowel (or vowels) which it contains, or by the character of the consonants which separate it from the next vowel sound. In ancient technical language, the vowel may be

long by its own nature ($\phi \dot{v} \sigma \epsilon \iota$), or by its position ($\theta \dot{\epsilon} \sigma \epsilon \iota$).

The assumptions that all long syllables are equal, and that a long syllable is equal in quantity to two short syllables, are not strictly true of the natural quantity in ordinary pronunciation. Since every consonant takes some time to pronounce, it is evident that the first syllables of the words $\delta\phi$ is, $\delta\phi\rho$ is, $\delta\mu\phi\eta$, $\delta\mu\beta\rho$ os are different in length; and so again are the first syllables of $\Omega\tau$ os, $\delta\tau\rho\nu\nu$ ov. Again, the diphthongs η , $\eta\nu$, &c. are longer than the single vowels η , ω , &c., and also longer than the diphthongs ϵ i, $\epsilon\nu$, oi, oi. In short, the poetical 'quantities' must not be supposed to answer exactly to the natural or inherent length of the syllables. The poetical or metrical value is founded upon the natural length, but is the result of a sort of compromise, by which minor varieties of quantity are neglected, and the syllables thereby adapted to the demands of a simple rhythm.

It has been shown, however, that the general rule of Position rests upon a sound physiological basis. 'The insertion of a consonant may be regarded as equivalent in respect of time to the change of a short vowel into a long one.' Brücke, Die physiologischen Grundlagen der neuhochdeutschen Verskunst, p. 70; quoted by Hartel).

370.] Position. The general rule is that when a short vowel is followed by two consonants the syllable is long.

Regarding this rule it is to be observed that-

- (1) Exceptions are almost wholly confined to combinations of a Mute (esp. a tenuis) with a following Liquid. But even with these combinations the general rule is observed in the great majority of the instances.
- (2) Most of the exceptions are found with words which could not otherwise be brought into the hexameter: such as 'Αφροδίτη, 'Αμφιτρύων, βροτῶν, τράπεζα, προσηύδα, &c.
- (3) The remaining exceptions are nearly all instances in which the vowel is separated by Diaeresis from the following consonants: as Il. 18. 122 καί τινὰ Τρωϊάδων, 24. 795 καὶ τὰ γε χρυσείην.

The chief exceptions in Homer are as follows *:-

τρ: in 'Αμφιτρύων, ἐτράφην (Il. 23. 84—but see the note on § 42 in the Appendix, p. 390), τετράκυκλον (Il. 24. 324), φαρέτρης (Il. 8. 323), 'Οτρυντεύς (Il. 20. 383-4); and in ἀλλότριος (unless we scan -ιος, -ιου, &c.).

Βείοτε τράπεζα, τρίαινα, τρίτη (τριήκοντα, &c.), τραπείομεν (τράποντο, προ-τραπέσθαι, &c.), τράγους, τροποῖς, τρέφει (Od. 5. 422., 13. 410), τροφοῦ (Od. 19. 489), τρέμον (Od. 11. 527).

Before a diaeresis, καί τινα Τρωϊάδων (Il. 18. 122).

πρ: in ἀλλοπρώσαλλος (II. 5. 831); before προσηύδα, πρόσωπον, προϊκτης, πρόσω, and other Compounds of πρώ and πρώς (προκείμενα, προσαΐξας, &c.); also before πρὸς ἀλλήλους, πρὸ ἄστεος, and one or two similar phrases (cp. II. 13. 799., 17. 726).

Before Πριαμίδης (II.), πρίν (II. 1. 97 οὐδ' ὅ γε πρίν κτλ., cp. 19. 313, Od. 14. 334., 17. 597); πρώτος (Od. 3. 320., 17. 275), προσφάσθαι (Od. 23. 106).

κρ: in δακρύοισι (Od. 18. 173), δακρυπλώειν (Od. 19. 122), ἐνέκρυψε (Od. 5. 488), κεκρυμμένα (Od. 23. 110).

Before Κρονίων, Κρύνου παι̂s, κραταιόs, Κραταιίs, κράτος μέγα (Π. 20. 121), κράνεια, κρυφηδόν, κραδαίνω, κρατευτάων, κρεών.

Add II. 11. 697 είλετο κρινάμενος; Od. 8. 92 κατὰ κρᾶτα (κὰκ κρᾶτα?), 12. 99 δέ τε κρᾶτί.

βρ: in βροτός and its derivatives, as άβρότη, ἀμφίβροτος: also before βραχίων.

δρ: in ἀμφι-δρυφής (Il. 2. 700), and before δράκων, Δρύας, δρόμους. Also Il. 11. 69 τὰ δὲ δράγματα (unless we read δάργματα, as Hartel suggests).

θρ: in ἀλλό-θροος (Od. 1. 183, &c.), and before θρόνων, &c. and θρασειάων. Also in Π. 5. 462 ἡγήτορι Θρηκῶν.

^{*} They are enumerated by La Roche, Homerische Untersuchungen, pp. 1-41, with his usual care and completeness.

φρ: in 'Αφροδίτη: and Od. 15. 444 ἡμῶν δ' ἐπι-φράσσετ' ὅλεθρον. Cp. Hes. Op. 655 προπεφραδμένα,

cp: before crésos or crésos (Od. 8. 353) : and in Il. 23. 186 fodósepti de críen, Il. 24. 795 kal tá ge crossín.

τλ: in σχετλίη (Il. 3. 414), which however may be scanned - -.

κλ: in Πάτροκλε (II. 19. 287), ἐκλίθη (Od. 19. 470—should perhaps be read ἐτέρωσε κλίθη), προσέκλινε (Od. 21. 138, 165—read perhaps πρόσκλινε οτ ἕκλινε): and before Κλυταιμνήστρη, Κλεωναί, κλύδων, κλεηδών, κλιθῆναι (Od. 1. 366). Also, in Od. 12. 215 τύπτετε κληΐδεσσιν, 20. 92 τῆς δ' ἄρα κλαιούσης.

πλ: in the Compounds τειχεσι-πλητα (II. 5. 31, 455), πρωτό-πλοος, προσέπλαζε (Od. 11. 583—read perhaps πρόσ-πλαζε): before Πλάταια, πλέων sailing, πλέων more (II. 10. 252), πλέον full (Od. 20. 355). Add II. 9. 382 (= Od. 4. 127) Αλγυπτίας, δθι πλείστα (with v. l. \hat{y} πλείστα, ep. Od. 4. 229), and II. 4. 329 αὐτὰρ δ πλησίον.

χλ: in Od. 10. 234 καὶ μέλι χλωρόν, 14. 429 ἀμφὶ δὲ χλαίναν.

To these have to be added the very few examples of a vowel remaining short before $\sigma\kappa$ and ζ : viz. —

σκ: before Σκάμανδρος, σκέπαρνον (Od. 5. 237., 9. 391), σκίη (Hes. Op. 589).

\$: before Ζάκυνθος (II. 2. 634, Od. 1. 246, &c.), Ζέλεια (II. 2. 824, &c.).

στ: before στέατος in Od. 21. 178, 183—unless it is a case of Synizesis.

A comparison of these exceptions will show that in a sense we are right in attributing them to metrical necessity. There are comparatively few instances in which the two consonants do not come at the beginning of a word of the form \circ -, so that the last syllable of the preceding word must be a short one. On the other hand, the extent to which neglect of position is allowed for metrical convenience is limited, and depends on the natural quantity of the consonants in question, i.e. the actual time occupied by their pronunciation. Sonant mutes (mediae) are longer than surd mutes (tenues); gutturals are longer than dentals or labials; and of the two liquids \(\lambda \) is longer than \(\rho \). Thus shortening is tolerably frequent before πρ and τρ, less so before κρ, πλ, κλ, θρ, χρ. With other combinations of mute and liquid, as $\phi \rho$, $\beta \rho$, $\delta \rho$, and with $\sigma \kappa$ and ζ , it seems to be only admitted for the sake of words which the poet was absolutely compelled to bring in: such as 'Αφροδίτη, Σκάμανδρος, Ζάκυνθος, βροτός, with its compounds, &c. No exceptions are found before γρ, γλ, φλ, κν, κμ, or any combination other than those mentioned. In short, the harshness tolerated in a violation of the rule usually bears a direct relation to its necessity. It was impossible to have an Iliad without the names Aphrodite and Scamander, but these are felt and treated as exceptions.

The word ἀνδρότης, which appears in the fixed ending $\lambda ιποῦσ' ἀνδρότητα καὶ ήβην$, should probably be written ἀδρότης. As the original μρ of βροτός becomes either μβρ (as ἄ-μβροτος, φθισί-μβροτος), or βρ (as νὺξ ἀ-βρότη, ἀμφί-βροτος), so νρ might become νδρ (as ἀνδρός), or δρ. So perhaps Ἐνυαλίφ ἀνδρεϊφόντη should be Ἐνυαλίφ ἀδριφόντη (ωω--): cp. ἀνδρε-φόνος (Hdn. ap. Eustath. 183, 6).

The plea on which a short vowel is allowed before Σκάμανδρος and σκέπαρνον may be extended, as Fick points out (Bezz. Beitr. xiv. 316), to some forms of σκίδνημι now written without the σ, viz. κέδασθεν (Il. 15. 657), κεδασθέντες, &c. Metrical necessity, however, would not justify the same license with σκίδναται , ἐπικίδναται II. 2. 850, &c.), ἐ-σκίδνατο, ἐ-σκέδασσε (for which ἐσκέδασε is available).

Neglect of Position is perceptibly commoner in the Odyssey than in the Iliad. Apart from cases in which the necessities of metre can be pleaded. viz. proper names and words beginning with . -, it will be found that the proportion of examples is about 3:1. It will be seen, too, that some marked instances occur in Books 23 and 24 of the Iliad. In Hesiod and the Homeric Hymns the rule is still more lax. Thus in Hesiod a vowel is allowed to be In the scanty K/52 short before κν (Op. 567, Fr. 95), and πν (Theog. 319). fragments of the Cyclic poets we find πέπρωται (Cypria), πἄτρί (Little Iliad), μό 'Αγγίσαο κλυτὸν κτλ, (ibid.), ἄκριβέα (Iliupersis).

371.] Lengthening before ρ , λ , μ , ν , σ , δ . There are various words beginning with one of these letters (the liquids ρ , λ , μ , ν , the spirant σ , and the media δ), before which a short final vowel is often allowed to have the metrical value of a long syllable. Initial p appears always to have this power of lengthening a preceding vowel; but in the case of the other letters mentioned it is generally confined to certain words. Thus we have examples before—

- λ, in λίσσομαι, λήγω, λείβω, λιγύς, λιαρός, λιπαρός, λίς, λαπάρη, $\lambda \delta \phi os$, and occasionally in a few others: but not (e.g.) in such frequently occurring words as Λύκιος, λέχος, λείπω.
- μ, in μέγας, μέγαρου, μοῖρα, μαλακός, μέλος, μελίη, μάστιξ, μόθος: but not (e.g.) μάχομαι, μένος, μέλας, μάκαρ, μῦθος, τη κατά.
- ν, in νευρή, νέφος, νιφάς, νύμφη, νότος, νητός, νύσσα: once only before νηθs (Il. 13. 472): not before νέκυς, νόος, νέμεσις, &c.
- σ , in $\sigma \epsilon \dot{\nu} \omega$, $\sigma \dot{\alpha} \rho \dot{\xi}$: once before $\sigma \dot{\nu}$ (II. 20. 434), and once before σνφεός (Od. 10. 238).
- δ , in $\delta \epsilon \sigma s$, $\delta \epsilon \iota \nu \sigma s$, $\delta \epsilon \iota \sigma \sigma s$ &c. (Stem $\delta f \epsilon \iota \delta \sigma \nu$, $\delta \eta \nu \sigma \sigma \nu$).

This lengthening, it is to be observed, is almost wholly confined to the syllables which have the metrical ictus: the exceptions are, πολλά λισσομένη (Il. 5. 358, so Il. 21. 368., 22. 91), πυκυά ρωγαλέην (Od. 13. 438, &c.), πολλά ρυστάζεσκεν (Il. 24. 755). Further, it is chiefly found where the sense requires the two words to be closely joined in pronunciation: in particular—

- (1) In the final vowel of Prepositions followed by a Case-form: as έπὶ ρηγμίνι, ποτὶ λόφον, ὑπὸ λιπαροίσι, κατὰ μοίραν, ἐνὶ μεγάρω, κατὰ μόθον, διὰ νεφέων, ἀπὸ νευρήφιν, κατὰ συφεοίσιν, κατὰ δεινούς, $\epsilon \pi i \delta \eta \rho \delta \nu$, and similar combinations.
- (2) In fixed phrases: ως τε λίς (Il. 11. 239., 17. 109., 18. 318), κλαίον δε λιγέως (Od. 10. 201, &c.), ἀπήμονά τε λιαρόν τε (Il. 14. 164, &c.), καλή τε μεγάλη τε, είδός τε μέγεθός τε, Τρώες δε μεγά-

θυμοι, τρίποδα μέγαν, Πηλιάδα μελίην, ως τε νιφάδες, σὺν δὲ νεφέεσσι κάλυψε, ὅτε σεύαιτο, οὔ τι μάλα δήν, and the like.

be one that will apply to both groups of phenomena.

372. Origin of the lengthening.* The most probable account of the matter is that most of the roots or stems affected originally began with two consonants, one of which was lost by phonetic decay. Thus initial ρ may stand for Fρ (as in Fρήγ-νυμι), or σρ (as *σρέω, Sanscrit sravāmi): λίς is probably for λρίς (with a weaker Stem than the form seen in $\lambda \in F - \omega \nu$): vvós is for $\sigma \nu \nu \circ s$ (Sanser. snushā): vio-as goes back to a root sneibh (Goth. snaivs, snow): μοίρα is probably from a root smer: σέλμα is for σ ξέλμα (Curt. s. v.): and δει- in δει-νός &c. is for δΕει- (cp. δεί-δοικα for $\delta \epsilon - \delta f_{OKa}$). It is not indeed necessary to maintain that in these cases the lost consonant was pronounced at the time when the Homeric poems were composed. We have only to suppose that the particular combination in question had established itself in the usage of the language before the two consonants were reduced by phonetic decay to one. Thus we may either suppose (e.g.) that κατὰ ρόον in the time of Homer was still pronounced κατὰ σρόον, or that certain combinations—κατα-σρέω, έν-σροος, κατά σρόον, &c.—passed into κατα-ρρέω, ἐΰ-ρροος, κατὰ ἐρόον (or κατα ρόον). There are several instances in which a second form of a Thus we have word appears in combinations of a fixed type.

^{*} On this subject the chief sources of information are, La Roche, Homerische Untersuchungen (pp. 49-65); Hartel, Homerische Studien (Pt. i. pp. 1-55); and Knös, De Digammo Homerico Quaestiones (Pt. iii. 225 ff.).

It is true that the proportion of the words now in question which can be proved to have originally had an initial double consonant is not very great. Of the liquids, the method is most successful with initial ρ , which can nearly always be traced back to vr or sr. And among the words with initial v a fair proportion can be shown to have begun originally with σv ($vev \rho \dot{\eta}$, $vv \dot{o} s$, $vv \dot{\phi} \dot{o} s$, $v\dot{e} \omega$, $v\dot{v} \mu \phi \eta$). The difficulty is partly met by the further supposition that the habit of lengthening before initial liquids was extended by analogy, from the stems in which it was originally due to a double consonant to others in which it had no such etymological ground. This supposition is certainly well founded in the case of ρ , before which lengthening became the

373.] Final ι of the Dat. Sing. The final ι of the Dat. (Loc.) Sing. is so frequently long that it may be regarded as a 'doubtful vowel.' The examples are especially found in lines and phrases of a fixed or archaic type:—

η ρ΄α, καὶ ἐν δεινῷ σάκεϊ ἔλασ' ὅβριμον ἔγχος. οὕτω που Διὰ μέλλει ὑπερμενέϊ φίλον εἶναι (thrice in the II.). τὸ τρίτον αὖθ' τόδατι (Od. 10. 520., 11. 28). αὐτοῦ πὰρ νηὰ τε μένειν (Od. 9. 194., 10. 444). ἤλνθον εἰκοστῷ ἔτεϊ ἐς κτλ. (δ times in the Od.).

So in Αἴαντι δὲ μάλιστα, 'Οδυσσῆϊ δὲ μάλιστα, &c. and the fixed epithet Διὰ φίλος. Considering also that this vowel is rarely elided (§ 376), it becomes highly probable that τ as well as τ was originally in use.† εΨΕ

It is an interesting question whether these traces of -ī as the ending of the Homeric Dat. are to be connected with the occasional -ī of the Locative in the Veda (Brugmann, Grundr. ii. § 256, p. 610). The Vedic lengthening appears to be one of a group of similar changes of quantity which affect a short final vowel, and which are in their origin rhythmical, since they generally serve to prevent a succession of short syllables (Wackernagel, Das Dehnungsgesetz der griechischen Composita, p. 12 ff., quoted by Brugmann l. c.). The same thing may evidently be said of the Homeric -ī in many of the cases quoted, as

[†] The priority in this as in so many inferences from Homeric usage belongs (as Hartel notices) to H. L. Ahrens (*Philologus*, iv. pp. 593 ff.).

374.] Final α . The metrical considerations which lead us to recognise $-\bar{\iota}$ in the Dat. Sing. might be urged, though with less force, in favour of an original $-\bar{\alpha}$ as the ending of the Neut. Plur. We have—

Il. 5. 745 (= 8. 389) ες δ' όχεα φλόγεα ποσὶ βήσετο.

8. 556 φαίνετ' ἀριπρεπέα, ὅτε κτλ.

11. 678 (Od. 14. 100) τόσα πώεα οἰῶν (v. l. μήλων).

20. 255 πόλλ' ἐτεά τε καὶ οὐκί.

21. 352 τὰ περὶ καλὰ ῥέεθρα.

23. 240 ἀριφραδέα δὲ τέτυκται.

24. 7 ὅποσα τολύπευσε.

Od. 9. 109 ἄσπαρτα καὶ ἀνήροτα.

10. 353 πορφύρεα καθύπερθ'.

12. 396 οπταλέα τε καὶ ώμά.

14. 343 ρωγαλέα, τὰ καὶ αὐτός.

23. 225 ἀριφραδέα κατέλεξας.

In the majority of these instances, however, the final a is preceded by the vowel ϵ , from which it was originally separated by a spirant ($\delta\chi\epsilon$ - σ -a, $\pi o\rho\phi\psi\rho\epsilon$ - ι -a). Cp. II. I. 45 $\dot{a}\mu\phi\eta\rho\epsilon\phi\dot{\epsilon}a$ $\tau\epsilon$ $\phi a\rho\epsilon\tau\rho\eta\nu$, 5. 576 $\Pi\nu\lambda a\iota\mu\dot{\epsilon}\nu\epsilon a$ $\dot{\epsilon}\lambda\dot{\epsilon}\tau\eta\nu$, 5. 827 $\Lambda\rho\eta\bar{a}$ $\tau\delta$ $\gamma\epsilon$, 14. 3200 $\Pi\epsilon\rho\sigma\eta\bar{a}$ $\pi\dot{a}\nu\tau\omega\nu$, Od. I. 40 $\dot{\epsilon}\kappa$ $\gamma\dot{a}\rho$ Opé $\sigma\tau ao$ τ ($\sigma\iota s$). As two successive vowels are often found to interchange their quantity $(\beta a\sigma\iota\lambda\eta\hat{a}, \beta a\sigma\iota\lambda\dot{\epsilon}a)$, so perhaps, even when the first vowel retains its metrical value, there may be a slight transference of quantity, sufficient to allow the final vowel, when reinforced by the *ictus*, to count as a long syllable. Cp. § 375, 3.

The seanning ξα (in II. 4. 321 εἰ τότε κοῦρος ξα νῦν κτλ., ep. 5. 887, Od. 14. 352) may be explained by transference of quantity,

from na.

375.] Short syllables ending in a consonant are also occasionally lengthened in arsis, although the next word begins with a vowel: as—

οὖτε ποτ' ἐς πόλεμον ἄμα λαῷ θωρηχθῆναι. αἴθ' ὄφελες ἄγονός τ' ἔμεναι κτλ. χερσὶν ὑπ' ᾿Αργείων φθίμενος ἐν πατρίδι γαίη.

The circumstances under which this metrical lengthening is generally found differ remarkably, as has been recently

shown.* from those which prevail where short final vowels are lengthened before an initial consonant. In those cases, as we saw (§ 371), the rule is that the two words are closely connected, usually in a set phrase or piece of epic commonplace. In the examples now in question the words are often separated by the punctuation: and where this is not the case it will usually be found that there is a slight pause. In half of the instances the words are separated by the penthemimeral caesura, which always marks a pause in the rhythm. Further, this lengthening is only found in the syllable with the *ictus*. The explanation, therefore, must be sought either in the force of the *ictus*, or in the pause (which necessarily adds something to the time of a preceding syllable), or in the combination of these two causes.

In some instances, however, a different account of the matter

has to be given: in particular—

(1) With ω_s following the word to which it refers: as Il. 2. 190 κακὸν ω_s ((--)), and so $\theta\epsilon$ òs ω_s , κύνες ω_s , $\delta\rho\nu\nu\theta$ ες ω_s , $\delta\theta$ άνατος ω_s , &c. In these instances the lengthening may be referred to the original palatal ι or ι of the Pronoun (Sanser. yas, yā, yad= δ_s , $\tilde{\eta}$, $\tilde{\delta}$). It is not to be supposed that the actual form $\iota \omega_s$ existed in Homeric times: but the habit of treating a preceding syllable as long by Position survived in the group of phrases. Others explain this ω_s as 'F ω_s (Sanser. $\delta \nu$ a-), comparing Gothic $\delta \nu$ e' 'as' (Brugmann, δr . δr . § 98); or $\delta \omega_s$ (§ 108, 3).

(2) In the case of some words ending with -is, -iv, -us, -uv, where the vowel was long, or at least 'doubtful,' in Homer.

In βλοσυρῶπις and η̈νις the final syllable is long before a vowel even in thesis. So the ι may have been long in θοῦρις (cp. the phrase θοῦριν ϵπιϵιμϵνος ἀλκήν): and traces of the same scansion may be seen in the phrases ϵρις ἄμοτον μϵμανῖα, Διτ μητιν ἀτάλαντος, although ϵρῖς, μη̂τῖς are more common.

Final -us (Gen. -uos) is long in Feminine Substantives (§ 116, 4), as $l\theta \dot{v}s$ aim (\bar{v} in thesis, Il. 6. 79., 21. 303), $\pi\lambda\eta\theta \dot{v}s$ (Il. 11. 305), $\dot{\alpha}\chi\lambda\dot{v}s$ (Il. 20. 421), $l\lambda\dot{v}s$ (Gen. - $\bar{v}os$), $\beta\rho\omega\tau\dot{v}s$ (Od. 18. 407) and other Nouns in - $\tau\dot{v}s$: also in the Masc. $l\chi\theta\dot{v}s$, $v\dot{\epsilon}\kappa vs$, $\beta\dot{o}\tau\rho vs$

(βοτρῦδόν), and perhaps πέλεκυς (Il. 17. 520). ΜΕΙΕΙΕ

(3) Where the vowel of the final syllable is preceded by another, especially by a long vowel; as οἰκῆας ἄλοχόν τε (II. 6. 366), 'Αχιλλῆος ὁλοὸν κῆρ (II. 14. 139), δς λαὸν ἤγειρα (Od. 2. 41), δμῶες ἐνὶ οἴκφ (Od. 11. 190), πλεῖον ἐλέλειπτο (Od. 8. 475), χρεῖος ὑπαλύξαι (with r. l. χρείως, Od. 8. 355): and so in νῆας (ā, II. 2. 165., 18. 260), νηός (Od. 12. 329), Τρῶες (II. 17. 730), βοός (II. 11. 1761) also 'Αρηα, Περσῆα, and the other examples given in § 374. In such cases there is a tendency to lengthen the second

^{*} By Hartel, in the Homeric Studies already quoted, i. p. 10.

vowel, as in the Attic forms βασιλέα, 'Αχιλλέωs, &c. In Homer we may suppose that the second of the two vowels borrows some of the quantity of the other, so that with the help of the ictus it can form the arsis of a foot. Actual lengthening of the second vowel may be seen in Homer in the form ἀπ-ήωροs hanging loose (cp. μετ-ήωροs and the later μετ-έωροs) also in δυσαήων (Gen. Plur. of δυσαήs).

(4) In the Ending -our of the Dual, as $\check{\omega}\mu o i \bar{\nu}$ (Il. 13. 511., 16. 560, Od. 6. 219), $\check{\iota}\pi\pi o i \bar{\nu}$, $\sigma\tau a\theta\mu o \hat{\iota}\bar{\nu}$: also in $\nu o \hat{\iota}\bar{\nu}$, $\sigma\phi o \hat{\nu}\bar{\nu}$. We may compare the doubtful ι of $\check{\eta}\mu \hat{\iota}\nu$, $\check{\nu}\mu \hat{\iota}\nu$, and the two forms of the Dat. Plur. in Latin (- $b\check{\iota}\bar{\nu}s$, - $b\bar{\iota}\bar{s}$). Similarly there are traces of $\bar{\iota}$ in $\mu \acute{\nu}$ (Il. 5. 385., 6. 501., 10. 347., 11. 376, &c.). In the case of -oi $\bar{\nu}$ and -oi $\bar{\nu}$ the account given under the last head would apply.

In a few places it appears as though the 3 Plur. of Secondary Tenses in -ν (for -ντ) were allowed to be long: as έφαν ἀπιόντες (Od. 9. 413), καὶ κύνεον ἀγαπαζόμενοι (Od. 17. 35, &c.), &c. This is confined (curiously enough) to the Odyssey and the Catalogue of the Ships. In the latter it occurs seven times: 504,539,574,56 in the Odyssey eleven times, in the rest of the Iliad once (7. 206).

Elision, Crasis, &c.

376.] A final vowel cut off before a word beginning with a vowel is said to suffer Elision (ἔκθλιψις): as $\mu\nu\rho\ell$ 'Αχαιοῖς ἄλγε' ἔθηκε. Whether an elided vowel was entirely silent, or merely slurred over in such a way that it did not form a distinct syllable, is a question which can hardly be determined.

The vowels that are generally liable to elision are α, ε, ο, ι. But—

(1) The o of δ, τό, πρό is not elided.

Final -0 is not elided in the Gen. endings -010, -\(\bar{a}\)0, and very rarely in the Pronouns $\hat{\epsilon}\mu\hat{\epsilon}\hat{\iota}0$, &c. This however may be merely because the later forms of these endings, viz. -00, -\(\epsilon\)0, -\(\epsilon\)0, -\(\epsilon'\)0), -\(\epsilon'\)0, -\(\epsilon'\)0, -\(\epsilon'\)0, when a vowel followed. In the case of \(\bar{a}\)0 this supposition is borne out by the fact that -\(\epsilon\) is often found before a vowel, as $\Pi\eta\lambda\eta$ i\(\alpha\)0\(\epsilon\)0 (\lambda\) \(\epsilon\)0, \(\epsilon\)1, \(\epsilon\)1, \(\epsilon\)0, \(\epsilon\)1, \(\epsilon\)2, \(\epsilon\)1, \(\epsilon\)2, \(\epsilon\)2, \(\epsilon\)2, \(\epsilon\)2, \(\epsilon\)2, \(\epsilon\)2, \(\epsilon\)3, \(\epsilon\)2, \(\epsilon\)2, \(\epsilon\)3, \(\epsilon\)2, \(\epsilon\)3, \(\epsilon\)3, \(\epsilon\)3, \(\epsilon\)3, \(\epsilon\)4, \(\epsilon\)3, \(\epsilon\)4, \(\epsilon\)4, \(\epsilon\)5, \(\epsilon\)5

(2) The ĭ of τί, περί is not elided in Homer; regarding ὅτι see
 § 269. But περί is elided in Hesiod: as περοίχεται, περίαχε.

(3) The -ι of the Dat. Sing. is rarely elided; but see § 105, 1. Exceptions are to be seen in Il. 4. 259 ἢδ' ἐν δαίθ' ὅτε κτλ.; 5. 5 ἀστέρ' ἀπωρινῷ κτλ.; Il. 3. 349., 10. 277., 12. 88., 16. 385., 17. 45, 324., 23. 693., 24. 26, Od. 5. 62, 398., 10. 106., 13. 35., 15. 364., 19. 480. The τ of the Dat. Plur. is often elided in the First and Second Declensions, and in the forms in -σσι of the Third Declension. On the other hand, elision is very rare in the forms in -εσι, -ἄσι, -ὕσι, &e.

The diphthong -aι of the Person-Endings -μαι, -σαι, -ται, -νται, -σθαι is frequently elided: as βούλομ' ἐγώ, κείσοντ' ἐν προθύροισι, πρὶν λύσασθ' ἐτάρονς. But not the -αι of the I Aor. Inf. Act. or of the Inf. in -ναι: hence in Il. 21. 323 read τυμβοχόης, not the

Inf. τυμβοχοήσ'.

The diphthong -οι of the enclitic Pronouns μοι and σοι (τοι) is elided in a few places: II. 6. 165 ős μ' ἔθελεν φιλότητι μιγήμεναι οὐκ ἐθελούση; 13. 481 καί μ' οἴφ ἀμύνετε (so Od. 4. 367); 17. 100 τῷ μ' οὔ τις νεμεσήσεται: also II. 1. 170., 9. 673., 13. 544., 23. 310, 579, Od. 1. 60, 347., 23. 21 (Cobet, Misc. Crit. p. 345). Other instances may be recovered by conjecture: thus in II. 3. 173 ὡς ὄφελεν θάνατός μοι ἁδεῖν should probably be ὡς μ' ὄφελεν θάνατος ἀδέειν (§ 365); and in II. 24. 757 νῦν δέ μοι ἑρσήεις Van Leeuwen reads νῦν δέ μ' ἐερσήεις.

In the case of the enclitic of ('Foi) elision involved the disappearance of the Pronoun from the later text. In Il. 6. 289 (= Od. 15. 105) $\tilde{\epsilon}\nu\theta'$ $\tilde{\epsilon}\sigma a\nu$ of $\pi \epsilon \pi \lambda oi$ the original was probably $\tilde{\epsilon}\nu\theta a$ 'F'(oi) $\tilde{\epsilon}\sigma a\nu$ (cp. Od. 15. 556 $\tilde{\epsilon}\nu\theta a$ of $\tilde{\eta}\sigma a\nu$ $\tilde{\nu}\epsilon s$). In Il. 5. 310 (= 11. 356) $\tilde{\epsilon}u\theta a$ de $\tilde{\epsilon}u\theta a$ of $\tilde{\epsilon}u\theta a$ of $\tilde{\epsilon}u\theta a$ de $\tilde{\epsilon}u\theta a$

ἔφατ', αὐτάρ οἱ αὖτις, read αὐτάρ 'F'.*

377.] Crasis. When a final vowel, instead of being elided, coalesces with the initial vowel of the next word, the process is termed *Crasis*.

The use of Crasis in Homer is limited. It is seen in οὖνεκα and τοὖνεκα, also in τάλλα for τὰ ἄλλα (Il. 1. 465, &c.), καὐτός for καὶ αὐτός (in Il. 6. 260., 13. 734, Od. 3. 255., 6. 282—the three last being passages where κ' αὐτός for κε αὐτός is inadmissible), and χἡμεῖς for καὶ ἡμεῖς (Il. 2. 238). In these cases either Crasis or Elision is required by the metre. Most texts also have ἄριστος, οὑμός (Il. 8. 360), ωὐτός for ὁ αὐτός (Il. 5. 396), κἀγώ, τώμῷ, τἡμῆ: also προὖ- for προ-ε- (in προὔφαινε, προὖχούσας, &c.). But since the full forms ὁ ἄριστος, &c. are equally allowed by the

metre we cannot but suspect that the spelling with Crasis may be due to later usage. The forms κἀκεῖνος, κἀκεῖσε, &c. (for καὶ κεῖνος, &c.) are certainly wrong, as ἐκεῖνος is not the Homeric form.

378.] Synizesis is the term used when the two coalescing vowels are written in full, but 'sink together' $(\sigma \nu \nu \iota \zeta \acute{a} \nu \omega)$ into

one syllable in pronunciation.

The Particle δή unites with the initial vowel of a following vowel, especially with αὖ, αὖτός and οὕτως (§ 350); also with 'Αντιμάχοιο (Π. 11. 138), ἀφνειότατος (Π. 20. 220), ἄγρην (Od. 12. 330).

Synizesis is also found with $\hat{\eta}$, in the combination $\hat{\eta}$ où χ (II. 5. 439, &c.), $\hat{\eta}$ els δ $\kappa \epsilon \nu$ (II. 5. 466), $\hat{\eta}$ el $\pi \epsilon \nu$ (Od. 4. 682); with $\epsilon \pi \epsilon \nu$ (Od. 4. 352, &c.); with $\epsilon \pi \epsilon \nu$ (Od. 4. 165); and in—

II. 17. 89 ἀσβέστω οὐδ' νίὸν λάθεν 'Ατρέος: where we may perhaps read ἀσβέστω οὐδ' νἷα λάθ' 'Ατρέος.

18. 458 υίεῖ ἐμῷ ἀκυμόρῳ (one or two MSS. give υἶ' ἐμῷ).
 Od. 1. 226 εἰλαπίνη ἢὲ γάμος κτλ.

In Il. 1. 277 Πηλείδη ἔθελ', and Od. 17. 375 $\hat{\omega}$ ἀρίγνωτε the case is different: a short vowel is absorbed in a preceding long one.

Other examples of Synizesis are to be found in the monosyllabic pronunciation of $\epsilon \alpha$, $\epsilon 0$, $\epsilon \omega$, both in Verbs (§ 57) and Nouns (§ 105, 3). It will be seen that in the cases now in question (apart from some doubtful forms) an E-sound (η , $\epsilon \iota$, ϵ)

merges in a following a or o.

The term Synizesis may also be applied to the monosyllabic pronunciation of the vowels in $\lambda l \gamma \nu \pi \tau l \eta$ (Od. 4. 229), &c. $\sigma \chi \epsilon \tau \lambda l \eta$ (II. 3. 414), $l \sigma \tau l a a$ (II. 2. 537). It has been thought that in these cases the l was pronounced like our g: but this is not a necessary inference from the scansion. In Italian verse, for instance, such words as mio, mia count as monosyllables, but are not pronounced myo, mya. For $\pi \delta \lambda los$ (logorallow - in Il. 2. 811., 21. 567) it is better to read $\pi \delta \lambda \epsilon os$ (logorallow 10. 311., 21. 560, 574) $\pi \delta \lambda l s$. The corresponding Synizesis of logorallow is generally recognised in the word logorallow (commonly scanned logorallow in the phrase logorallow logorallow

378.*] Contraction. The question of the use of contracted forms has been already touched upon in connexion with the different grammatical categories which it affects: see §§ 56, 81, 105. It will be useful here to recapitulate the results, and to notice one or two attempts which have been made to recover the original usage of Homer in this respect.*

^{*} See especially J. van Leeuwen, Mnemosyne, Nov. Ser. xiii. p. 215, xiv. p. 335: and Menrad, De contractionis et synizeseos usu Homerico (Monachii, 1886).

- 1. Contraction is most readily admitted between similar sounds, or when the second is of higher vowel pitch, i.e. higher in the scale o, ω , α , η , ϵ . Thus we have many instances with the combinations $\epsilon\epsilon$, oo, $\alpha\epsilon$, o ϵ ; few with $\epsilon\alpha$, $\alpha\omega$, ao, still fewer with $\epsilon\omega$, ϵ o.
- 2. In most cases in which contraction is freely admitted we find that the sound which originally separated the vowels was the semi-vowel ι or y. In case of the loss of σ it is comparatively rare; with F it is probably not Homeric at all (§ 396). Hence (e,g) although it is common with the combinations $\epsilon \epsilon$, $\epsilon \epsilon \iota$ in most Verbs in $-\epsilon \omega$ (§ 56), it is not found in $\chi \epsilon \omega$ ($\chi \epsilon F \omega$) and is extremely rare in $\tau \rho \epsilon \omega$ ($\tau \rho \epsilon \sigma \omega$, see § 29, 6). But it is admitted with loss of $\sigma \iota$, as in the Gen. ending $-\omega$ from $-\omega \omega$ ($-\omega \iota$ 0, $-\omega \iota$ 0), and the Verbs in $-\epsilon \omega$ from stems in $-\epsilon \sigma$, as $\nu \epsilon \iota \kappa \epsilon \omega$ ($\nu \epsilon \iota \kappa \epsilon \sigma \iota \omega$).
- (a) On these principles we should expect the 2 Sing. endings ear, eo, nar, -ao (for -eau, &c.) to remain uncontracted; and this view is borne out on the whole by the very careful investigation made by J. van Leeuwen. Omitting the Verbs in -αω and -εω we find that there are about 522 occurrences of these endings, and that of these 434 present uncontracted forms: while in 66 instances the contracted syllable comes before a vowel, so that it can be written with elision of -aι or -o (e.g. Il. 3. 138 κεκλήσε' ἄκοιτις, for κεκλήση: Il. 9. 54 ἔπλε' ἄριστος, for ἔπλευ). In the case of -εο this mode of writing finds some support in the MSS.: e.g. ψεύδε' (Il. 4. 404), παύε' (Il. 9. 260, Od. 1. 340), εύχε' (II. 3. 430, Od. 4. 752), also επε', read by Aristarchus in II. 10. 146 (επευ MSS.). Against these 500 instances there are only 22 exceptions, 7 in the Iliad and 15 in the Odyssey, some of which can be readily corrected. Thus Il. 4. 264 (=19. 139) ὅρσευ πόλεμόνδε should be ὅρσο πτόλεμόνδε (Nauck): in Il. 2. 367 γνώσεαι δ' εί omit δὲ (Barnes): in Il. 24. 434 for ὅς με κέλη read δε κέλεαι, and so in Od. 4. 812., 5. 174. In Od. 18. 107 for ἐπαύρη read the Act. ἐπαύρης (Van L.): as in Il. 1. 203 we may retain ἴδης so the MSS.; Ar. ἴδη,—but the corruption lies deeper). The greater frequency of instances in the Odyssey (and in book xxiv of the Iliad) is hardly enough to indicate a difference of usage within the Homeric age.
- (b) In the corresponding forms of Verbs in -aw and -ew there is a concurrence of three vowels, which in our text are always reduced to two syllables, either by contraction, as in albeto, $\mu\nu\theta\epsilon\hat{a}a$, $\nu\epsilon\hat{i}a$, $\mu\nu\hat{a}$, or by hyphaeresis (§ 105), as $\mu\nu\theta\hat{\epsilon}a$, $a\tilde{i}\rho\epsilon o$, $\epsilon\hat{k}\lambda\epsilon o$, $\pi\hat{b}\lambda\epsilon a$ (Od. 4.811). A single vowel appears in $\pi\epsilon\iota\rho\hat{a}$ for $\pi\epsilon\iota\rho\hat{a}-\epsilon a\iota$, $\hat{i}\rho\hat{\omega}$ for $\hat{\eta}\rho\hat{a}-\epsilon o$. The metre requires albeto, alpeo, exheo, exheo, $\pi\hat{b}\lambda\epsilon\hat{a}a$; for $\pi\epsilon\iota\rho\hat{a}$ it allows $\pi\epsilon\iota\rho\hat{a}a\iota$ (becoming $\pi\epsilon\iota\rho\hat{a}$ in II. 24. 390, 433, Od. 4. 545). The isolated form $\delta\rho\eta a\iota$ (Od. 14. 343) for $\delta\rho\hat{a}-\epsilon a\iota$ should perhaps be $\delta\rho\hat{a}a\iota$ or $\delta\rho\hat{a}$. If the ending is in its original form it belongs to the Non-Thematic conjugation (§ 19): another example may be found in $\delta\rho\hat{\eta}\tau o$ (or $\delta\rho\eta\tau o$), read by Zenodotus in II. 1. 56.
- (c) In the Future in $-\epsilon \omega$ (for $-\epsilon \sigma \omega$) contraction is less frequent than in the Present of Verbs in $-\epsilon \omega$ ($-\epsilon_i \omega$ or $-\epsilon \sigma_i \omega$). Forms such as δλείται, καμείται, μαχείται, δμείται, κομιώ, κτεριώ, κτεριούσι, evidently could not otherwise come into the verse. In II. 17. 451 σφωϊν δ' ἐν γούνεσσι βαλώ we may read βάλω (Fick).

- Il. 4. 161 ἔκ τε καὶ δψὲ τελεῖ we should take τελεῖ as a Present. The remaining exceptions are, κτενεῖ in Il. 15. 65, 68 (probably an interpolation), κατακτενεῖ in Il. 23. 412, and ἐκφανεῖ in Il. 19. 104.
- (d) Similarly in the declension of stems in - $\epsilon\sigma$ the ending - $\epsilon\epsilon$ s is rarely contracted. In the phrase $\phi a'\nu \nu \nu \tau a$ (or $\phi a'\nu \epsilon \sigma \theta a \iota$) $\dot{\epsilon} \nu a \rho \gamma \epsilon \hat{\epsilon}$ s (II. 20. 131, Od. 7. 201., 16. 161) Fick happily reads $\dot{\epsilon} \nu a \rho \gamma \dot{\epsilon}$ s, to be taken as an adverb. The same remedy is applicable in II. 9. 225 $\delta a \iota \tau \delta s$ $\mu \dot{\epsilon} \nu \dot{\epsilon} \dot{\tau} \sigma \eta s$ $o \dot{\nu} \kappa \dot{\epsilon} \pi \iota \delta \epsilon \nu \epsilon \hat{\epsilon} s$, and II. 13. 622 $\ddot{a} \lambda \lambda \eta s$ $\mu \dot{\epsilon} \nu \lambda \dot{\omega} \beta \eta s$ $\tau \epsilon$ $\kappa a \iota$ $\ddot{a} \sigma \chi \epsilon \sigma s$ $o \dot{\nu} \kappa \dot{\epsilon} \pi \iota \delta \epsilon \nu \epsilon \dot{\epsilon} s$, where the Nom. Plur. is unexplained: read $o \dot{\nu} \kappa \dot{\epsilon} \pi \iota \delta \epsilon \nu \dot{\epsilon} s$ there is no lack. Od. 19.255
- (e) The contraction of ε0 to εν is rare in the Gen. of stems in -εσ (§ 105, 3), but frequent in the Pronominal Genitives $\dot{\epsilon}\mu\epsilon\hat{v}$ ($\mu\epsilon v$), $\sigma\epsilon\hat{v}$, $\epsilon\hat{v}$, $\tau\epsilon\hat{v}$. Here again, however, we are struck by the number of cases in which we can substitute the forms in - 60 or - 60, with elision of -o. In our MSS. the elision actually occurs in ἐμεῖ' (Il. 23. 789, Od. 8. 462) and σεῖ' (Il. 6. 454, also Hom. H. xxxiv. 19). In Il. 17. 173 νῦν δέ σευ ἀνοσάμην Zenodotus is said to have read νῦν δέ σε, i.e. probably νῦν δέ σε'. The full forms in -ειο or -εο occur 121 times, and may be restored without elision 9 times, with elision 56 times. To these we should add the instances in which we may put the form * $\mu\epsilon o$ (6 times) or $\mu\epsilon'$ (10 times). There remain altogether about fifty-five exceptions, which are discussed by J. van Leeuwen (Mnemos. xiii. 215). In the phrase κέκλυτέ μευ, which occurs 19 times, he would read µo, according to the Homeric construction (§ 143, 3). So in the formula κέκλυτε δή νῦν μευ, Ἰθακήσιοι (5 times in the Odyssey), where however we are tempted to restore ἐμεῖ' (cp. Il. 3. 97 κέκλυτε νῦν καὶ ἐμεῖο). He suggests putting the Dat. for the Gen. also in Od. 10. 485 οι μευ φθινύθουσι φίλον κῆρ, Od. 15. 467 οι μευ πατέρ' ἀμφεπένοντο, Od. 16. 92 ή μάλα μευ καταδάπτετ' ἀκούοντος φίλον ήτορ. In the last passage it is needless to alter the Gen. ἀκούοντος (§ 243, 3, d), and we may even read in II. 1. 453 έμοι πάρος εκλυες εὐξαμένοιο (cp. Il. 16. 531 ὅττι οι ὧκ' ἤκουσε μέγας θεός εὐξαμένοιο). The substitution of the Dat, seems the most probable correction in various places where Leeuwen proposes other changes: Od. 4. 746 ἐμεῦ δ' έλετο μέγαν δρκον (ep. Il. 22. 119 Τρωσίν δ' αὖ . . δρκον ελωμαι`, Il. 2. 388 ίδρώσει μέν τευ τελαμών άμφι στήθεσφι, Π. 22. 454 αι γαρ άπ' ούατος είη έμεῦ έπος (ep. 18. 272); also Il. 1. 273., 9. 377., 16. 497., 19. 185., 20. 464., 24. 293, 311, 750, 754, Od. 5. 311., 9. 20., 13. 231., 19. 108., 24. 257; and perhaps Il. 19. 137 καί μευ φρένας ἐξέλετο Ζεύς (unless the με of some MSS. is right), so Il. 9. 377 and Il. 9. 335. In Od. 19. 215 νῦν μὲν δὴ σεῦ, ξεῖνε, ὀίω πειρήσεσθαι εἰ κτλ. Leeuwen restores the Acc. of (as in Il. 18. 600). In Od. 17. 421 (=19. 77) we may perhaps read καὶ ὅτι κεχρημένος ἔλθοι (ὅτῖ as in Il. 20. 434 οἶδα δ' ὅτι σὰ μὲν κτλ.). The remaining exceptions are Il. 5. 896 ἐκ γὰρ ἐμεῦ γένος ἐσσί, Il. 23. 70 οὐ μέν μευ ζώοντος ἀκήδεις, Il. 24. 429 δέξαι έμεῦ πάρα, and Il. 1. 88 ού τις έμεῦ ζῶντος κτλ., where the contraction ζῶντος and the Dat. Plur. κοίλης before a consonant are also suspicious (Fick, Ilias, p. xvii).
- (f) The contraction of \mathbf{oa} , \mathbf{oe} (from $o\sigma$ -a, $o\sigma$ -e) is doubtful in the Nouns in $-\omega$ and $-\omega$ s (§ 105, 6), but appears in the forms of the Comparative, viz. $\mathring{a}\mu e \acute{\nu} \omega$, $\mathring{a}\rho e \acute{\nu} \omega$, \mathring
- (g) Vowels originally separated by F are so rarely contracted that instances in our text must be regarded with suspicion. Thus $\delta \kappa \omega \nu$ ($\delta f \epsilon \kappa \omega \nu$) should

PRINCEPELL OF SELECTION OF SELE

In sip

always be ἀξκων: ἄτη (ἀράτη) may be written ἀάτη except in Il. 19. 88 $\phi \rho \epsilon \sigma l \nu$ ξμβαλον ἄγριον άτην (where the use of ἄγριον as a Fem. is also anomalous, § 119). In Il. 3. 100., 6. 356., 24. 28 (where ἄτης comes at the end of the line) the better reading is ἀρχῆς. κοίλος may be κόϊλος (cp. Lat. cavus), except in Od. 22. 385. είδον (ξ-Γιδον) may be ξίδον, except in four places (Il. 11. 112., 19. 292, Od. 10. 194., 11. 162). πολέως (Acc. Plur. of πολύς) is not uncommon, but should probably be πολύς (§ 100): πολέων occurs once (Il. 16. 655). Other instances with Nouns in -υs and -ευs are rare (Nauck, Μεθ. gr.-rom. iii. 219; Menrad. p. 60). The Fem. in -εῖα is not contracted from -εΓια, -εῖα but comes directly from -εΓια. So οἰός, οἰῶν for ὁΓι-ός, ὀΓι-ῶν (cp. ὅεσσι for ἀρ-εσσι), and δῖος for δίΓ-ιος. τως and τέως, which occur several times in our text, are nearly always followed by a Particle (μέν, περ, &c.), which has evidently been inserted for the sake of the metre (ξως μέν for ἢος, &c.). For ἀλλοειδία in Od. 13. 194 we should doubtless read ἀλλο-ῖδέα (§ 125, 2).

εἴρυσα may be from έ-Fρυσα (but see Schulze in K.Z. xxix. 64): as to ἴαχον, which has been supposed to stand for εἴαχον, from ϵ-FℓFαχον, see § 31, 1.

The most important example of contraction notwithstanding F is the word πάϊς (παι̂ς, παιδός, &c.). Other words which present the same difficulty are: ασε (Od. 11, 61), ασατο (Il. 19, 95)—in both places Nauck would read ἄασε άθλοφόρος (Il. 9. 266., 11. 699), άθλεύων (Il. 24. 734), δίθλον (Od. 8. 160), ἄσαμεν we slept (Od. 16, 367), ἐά (Il. 5, 256) and other forms of ἐάω (Il. 10, 344, 23, 77, Οd. 21. 233), νέα (Od. 9. 283), ρέα (Π. 12. 381., 17. 461., 20. 101, 263), κρέα (Od. 9. 347), χείσθαι (Od. 10. 518), τιμηντα (II. 18. 475), τεχνήσσαι (Od. 7. 110), ήλιος (Od. 8. 271), ξωσφόρος (Il. 23. 226), πλέων (Od. 1. 184), τεθνεῶτι (Od. 19. 331), πεπτεώτα, -τας (Il. 21. 503, Od. 22. 384), βεβώσα (Od. 20. 14), νόου (Il. 24. 354), καιρουσσέων (Od. 7. 107), the compounds of εννέα-εννημαρ, εννέωρος. έννεόργυιοs—and the proper names Εὐρύκλεια 'Αντίκλεια (-κλέεια Nauek). Some of these may be disposed of by more or less probable emendation: others occur in interpolated passages (e.g. ηκιος in the Song of Demodocus): others (as $\pi \lambda \hat{\epsilon} \omega \nu$, $\tau \epsilon \theta \nu \epsilon \hat{\omega} s$) may be explained by the loss of F before ω , o (§ 393). On the whole they are too few and isolated to be of weight against the general usage of Homer.

The general result of the enquiry seems to be that the harshness of a synizesis or a contraction is a matter admitting of many degrees. With some combinations of vowels contraction is hardly avoided, with others it is only resorted to in case of We have already seen that the rules as to lengthening by Position (§ 370) are of the same elastic character. And as there is hardly any rule of Position that may not be overborne by the desire of bringing certain words into the verse, so there is no contraction that may not be excused by a sufficiently cogent metrical necessity. Thus the synizesis in such words as Intiaia, Alγυπτίους, χρυσέοισι stands on the same footing as the neglect of Position with Σκάμανδρος or σκέπαρνον: and again the synizesis in τεμένεα, ἀσινέας, or the contraction in πονεύμενος, ἀμφιβαλεθμαι is like the shortening of a vowel before προσηύδα, or the purely metrical lengthening of a short vowel (§ 386).

On the same principles harshness of metre may be tolerated for the sake of a familiar phrase: e.g. the hiatus $\check{a}\phi\theta\iota\tau a$ alei in

II. 13. 22 (ἄφθιτον ἀεί in II. 2. 46, 186., 14. 238). So when the formula καί μιν φωνήσας ἔπεα κτλ. is used of a goddess (II. 15. 35, 89) it becomes καί μιν φωνήσασα ἔπεα. Again the harsh lengthening in μέροπες ἄνθρωποι (II. 18. 288, at the end of the line) is due to the familiar μ ερόπων ἀνθρώπων.

Hiatus.

379.] Hiatus is a term which is used by writers on metre in more than one sense. It will be convenient here to apply it to every case in which a word ending with a vowel or diphthong is followed by a word beginning with a vowel, and the two vowelsounds are not merged together (as by elision, crasis, &c.) so as

to form one syllable for the metre.

It would be more scientific, perhaps, to understand the word Hiatus as implying that the two vowels are separated by a break or stoppage of vocal sound, so that the second begins with either the rough or the smooth 'breathing.' Thus it would be opposed to every form of diphthong (including synizesis), the characteristic of which is that the two vowels are slurred together, by shifting the position of the organs without any perceptible interruption of the current of breath. This definition, however, might exclude the case of a long vowel or diphthong shortened before an initial vowel (as $\tau \hat{\eta} v \delta' \hat{\epsilon} \gamma \hat{\omega} o \hat{v}$, where the final ω seems to be partly merged in the following ou). Again when a final ι or ι comes before a vowel without suffering elision, it is probable that the corresponding 'semi-vowel' (=our γ or v) is developed from the vowel-sound, and prevents complete hiatus.

380.] Long vowels before Hiatus. The general rule is that a long final vowel or diphthong coming before a vowel forms a short syllable in the metre. This shortening is very common in Homer: cp. Il. 1. 299 οὖτε σοὶ οὖτε τ φ ἄλλ φ , ἐπεὶ κτλ., where it occurs in three successive feet.

But the natural quantity may be retained before hiatus when the vowel is in the arsis of the foot, as $A\tau\rho\epsilon\hat{t}\delta\eta$ $A\gamma\alpha\mu\epsilon\mu\nu\rho\nu\nu$, δs ϵ $\epsilon\tilde{t}\pi\rho\iota$ $\delta\tau\iota$ $\kappa\tau\lambda$. And in a few instances a long vowel or diphthong is allowed to remain long in thesis, as II. I. 39 $\Sigma\mu\nu\theta\epsilon\hat{v}$ $\epsilon\tilde{t}$ $\pi\rho\tau\epsilon$ $\tau\rho\iota$ $\kappa\tau\lambda$.

The readiness with which long syllables are allowed before hiatus varies with the several long vowels and diphthongs;

partly also it depends on the pauses of the sense.

The long diphthongs (as they may be called), viz. η and ω, ભાગા are the most capable of resisting the shortening influence of hiatus; next to them are ευ and ου, and the long vowels η and ω: while ει, οι and αι are at the other end of the scale. A

measure of this may be gained by observing how often each of these terminations is long before a vowel, and comparing the number with the total number of times that the same termination occurs. Thus it appears that out of every 100 instances of final φ, it is long before hiatus about 23 times. Similarly final -η is long 19 times, -ευ 6.7 times, -ου 6 times, -η 5.7 times, -ω 4 times, -ει 1.8 times, -οι 1.6 times, and -αι only 1.3 times. Thus hiatus after φ and η is scarcely avoided, while after ει, οι and αι it is very rare.

In a large proportion of the instances in which a long vowel retains its quantity before hiatus it will be found that the hiatus coincides with a division either in the sense or the rhythm. Of the examples in the arsis of the foot, more than half occur before the penthemimeral caesura, where there is almost always a pause: while in thesis the same thing is chiefly found to occur either after the first foot, as Il. 2. 209 $\eta \chi \hat{\eta}$, $\hat{\omega}$ s $\delta \tau \epsilon \kappa \tau \lambda$., Od. 11. 188 $\hat{\alpha} \gamma \rho \hat{\omega}$, $\hat{\omega}$ $\hat{\omega}$ $\hat{\kappa}$ $\hat{\tau}$ $\hat{\kappa}$ $\hat{\tau}$ $\hat{\kappa}$ $\hat{\tau}$ $\hat{\kappa}$ $\hat{\tau}$ $\hat{\tau}$

diaeresis).

- 381.] Shortening of diphthongs before Hiatus. Regarding the nature of the process by which a diphthong before hiatus was reduced to the time or metrical value of a short syllable two probable views have been maintained.
- 1. Curtius holds that whenever long syllables are shortened by the effect of hiatus something of the nature of Elision takes place. Thus η and ω lose the second half of the vowel sound, while $\alpha\iota$, $\epsilon\iota$, or lose the ι . In support of this he points to the facts of Crasis: thus $\kappa a \ell \gamma \omega$ in becoming $\kappa \dot{a} \gamma \omega$ may be supposed to pass through the stage $\kappa a \dot{\epsilon} \gamma \omega$.
- 2. According to an older view, which has been revived and defended with great ingenuity by Hartel,* the ι or υ in a diphthong is turned into the corresponding spirant; so that $\kappa a \iota \epsilon \gamma \omega$ becomes $\kappa a \iota \epsilon \gamma \omega$, and $\epsilon \kappa \Pi \iota \lambda \delta v \iota \lambda \delta \omega v$ becomes $\epsilon \kappa \Pi \iota \lambda \delta \kappa \Gamma \iota \lambda \delta \omega v$.

It is certainly in favour of this latter supposition that it does not oblige us to suppose the frequent elision of the two vowels which in general are the least liable to be elided. The explanation however is not a complete one. It does not account for the shortening of η and ω , which on the principle assumed by Hartel would become η_k , ω_k . On the whole it seems most probable that the shortening in question was effected, for diphthongs as well as for simple long vowels, by a process in which ancient grammarians would have recognised rather 'Synizesis'—viz. the slurring of vowels together without complete loss of any sound—

than either Elision or Contraction. And this conclusion is supported by the general tendencies of the Ionic dialect, which was especially tolerant of hiatus, and allowed numerous combinations of vowels, such as $\epsilon \alpha$, ϵo , $\epsilon \omega$, $\epsilon o \iota$, to have the value either of one syllable or two.*

Hiatus is also tolerated occasionally in the pauses of the verse:

- (1) In the trochaic caesura of the third foot: as-
 - Il. 1. 569 καί δ' ἀκέουσα καθήστο, ἐπιγυάμψασα κτλ. 🕅 🚈 144 Od. 3. 175 τέμνειν, ὄφρα τάχιστα ὑπὲκ κτλ.
- (2) In the Bucolic diaeresis: as-
 - ΙΙ. 8. 66 όφρα μεν ήως ην και αέξετο ίερον ημαρ.
 - Od. 2. 57 είλαπινάζουσιν πίνουσί τε αίθοπα οίνον.

The vowel of the Person-endings -70, -v70 seems to be especially capable of standing before hiatus in these places. It appears in more than a fourth of the whole number of instances given by Knös (pp. 42-45).

Hiatus in the Bucolic diaeresis is commoner in the Odyssey than in the Iliad, in the proportion 2: I. Hiatus after the vowel ϵ is also comparatively rare in the Iliad: Knös reckons 22 instances (many of them doubtful), against 40 in the Odyssey. It is worth notice that in both these points books xxiii and xxiv of the Iliad agree with the Odyssey, also that book xxiv of the Odyssey contains an unusual number of instances of hiatus, both legitimate (ll. 63, 215, 328, 374, 466) and illegitimate (ll. 209, 351, 430).

Illegitimate hiatus, like other anomalies, may be diminished by emendation. Thus in Od. 5. 135 ήδὲ ἔφασκον we may read ἠδὲ Γ' ἔφασκον: in 5. 257 ἐπιχεύατο ὕλην we may insert ἄρ', on the model of Il. 5. 748 ἐπεμαίετ' ἄρ' ἵππονς. But in Il. 13. 22 ἄφθιτα αἰεί must stand because ἄφθιτος αἰεί is a fixed phrase. It is unlikely, then, that Hiatus was ever absolutely forbidden in Epic verse,

Doubtful Syllables.

383.] Besides the cases in which the metrical value of a syllable may be made uncertain by its place in a particular verse—i. e. by the circumstances of Position, Hiatus, Ictus, &c.—there are many instances in which the 'natural' quantity of the vowel appears to be indeterminate.

^{*} The use of ϵo for ϵu in Ionic inscriptions shows, not indeed that ϵu and ϵo were identical in pronunciation, or that ϵo was a true diphthong, but certainly that ϵo was very like ϵu , and might be monosyllabic in scansion. Probably monosyllabic ϵo (when it was not a mere error for ϵu) stood to ϵu as the Synizesis ϵo , ϵo , ϵo , ϵo , &c. to the contracted η , ω , oi. See Erman in Curl. Stud. v. 292 ff.

Under the heading of 'doubtful vowels' should be classed, not only the words in which the same letter may stand either for a long or a short vowel, as " $A\rho\eta s$, $\dot{\alpha}\nu\dot{\eta}\rho$, but also those in which the change is shown by the spelling, i.e. in which a short vowel interchanges with a long vowel or diphthong: as $\nu\epsilon\dot{o}s$ and $\nu\eta\dot{o}s$, $\dot{o}\nu\rho\mu a$ and $o\dot{\nu}\nu\rho\mu a$, &c. And with these variations, again, we may place, as at least kindred phenomena, the doubtful syllables which arise from the interchange of single and double consonants: ' $O\delta\nu\sigma\sigma\epsilon\dot{v}s$ and ' $O\delta\nu\sigma\epsilon\dot{v}s$, ' $A\chi\iota\lambda\lambda\epsilon\dot{v}s$ and ' $A\chi\iota\lambda\epsilon\dot{v}s$. As we speak of doubtful vowels, these might similarly be called 'doubtful consonants.'

In all such words the variation of quantity may either mean that there were two distinct forms between which the poet had a choice, or that the quantity as it existed in the spoken language was in fact intermediate. The former case would usually arise when a vowel or syllable which had come to be short in the spoken language was allowed to retain its older quantity as a poetical archaism. In the latter case the poet could give the syllable either metrical value; or (as in so many instances) he might treat the syllable as ordinarily short, but capable of being lengthened by the *ictus*, or by the pauses of the verse.

384.] Doubtful vowels appear to rise chiefly in two ways:—

- (1) By the shortening of a long vowel or diphthong before a vowel: viz.
 - ā, in laos (ā in Il. 1. 583, ă in Il. 9. 639., 19. 178).
 - η, in the oblique cases of νηῦς (except the Dat. νηt) and of several Nouns in -ευς, as Πηλῆος, Πηλέος: the forms ἤαται and ἔαται (ἦμαι): ἀφήη and ἀφέη (§ 80); ἢτς and ἐτς, ληϊστοί and λεϊστή (Π. 9. 408); perhaps also in Θρήϊκες, δήϊος, ἤϊα, which shorten η when the case-ending is naturally long (Θρητκων, δητων, ἢτων, &c. scanned Ο Ο –, unless we suppose contraction or synizesis).
 - τ, in ἱερός, κονίη, λίην: Comparatives in -ιων: Patronymics, as Κρονίων: ἴομεν, ἵημι (ἀφἴει, &τ.), ἰαίνω, and Verbs in -ιω, as τίω, ὀτω (§ 51, 1): probably also in the abstract Nouns in -ιη, the ι being treated as long in ὑπεροπλίη, προθυμίη, ὑποδεξίη, ἀτιμίη, ἀκομιστίη.
 - ũ, in Verbs in -υω (§ 51, 4).
 - ω, in ηρωος (- υ υ in Od. 6. 303): ηρω, leg. ηρωϊ (Il. 7. 453).
 - αι, in ἀεί for αἰεί, ἔμπαιος (- ο ο in Od. 20. 379), and the Compound χαμαιεῦναι, χαμαιευνάδες: also Verbs in -αιω, as ἀγαιόμενος and ἀγάασθε, κέραιε and κεράασθε, ναῖον and νάει, νάουσι.

- ει, in ὧκέα, βαθέης (for ὧκεῖα, βαθείης): Adjectives in -ειος, as χάλκειος and χάλκεος: ῥεῖα and ῥέα: πλεῖον, &c. and πλέονες: βείομαι and βέομαι (§ 80), and many Verbs in -εω (§ 51, 3).
- οι, in όλοός and όλοιός; also οίος (00), as in Il. 13. 275 οίδ' ἀρετην οίός έσσι, cp. Il. 18. 105, Od. 7. 312., 20. 89.
- ευ, in δεύομαι and δέομαι, έχευα and έχεα, ήλεύατο and ἀλέασθαι. υι, in νίός (Π. 4. 473., 5. 612, &c.).

The Gen. endings $-\bar{\alpha}\omega\nu$, $-\epsilon\omega\nu$ fall under this head, if $-\epsilon\omega\nu$ represents an older Ionic $-\eta\omega\nu$.

In some cases of this kind our texts have $\epsilon \iota$ where it is probable that the original vowel was η : so in $\pi \lambda \epsilon \hat{\iota} os full$ (Attie $\pi \lambda \epsilon \omega s$ from $\pi \lambda \hat{\eta} os$), $\chi \rho \epsilon \hat{\iota} os debt$ and $\chi \rho \epsilon \iota \omega \omega$ need (from $\chi \rho \eta$ -, $\chi \rho \tilde{\iota}$ -). See Appendix C.

η for $\epsilon \mathbf{u}$ may perhaps be seen in $\hat{\eta} \epsilon i \delta \eta s$, $\hat{\eta} \epsilon i \delta \epsilon \mathbf{u}$ ($\hat{\epsilon} - \hat{F} \epsilon i \delta \epsilon \alpha s$, $-\epsilon \epsilon$):

but see the explanation suggested in § 67, 3.

Interchange of quantity is occasionally found: στέωμεν, κτέωμεν, φθέωμεν for στήσμεν, &c. (§ 80): έως and τέως (if these forms are Homeric) for ησς and τησς. So the Gen. ending -εω, for -ασ (-ησ).

- (2) By compensatory lengthening, of-
- ε to ει, in ξείνος (ξέν Γος) but ξενίη, κεινός and κενός, πείραρ and πέρας (ἀπειρέσιος), είνατος, είνεκα.
- o to ou, μοῦνος (but μονωθείς Il. 11. 470); οὖρος (a watcher) but όρ-άω: οὖρεα and ὄρος (δρΓος?).

ă in παρέχη (παρ-σέχω), Od. 19. 113; ŭ in συνεχές, Il. 12. 26.

Under this head we should place double forms arising by Epenthesis, as $\tilde{\epsilon}\tau a\rho os$ and $\tilde{\epsilon}\tau a\hat{i}\rho os$ (for $\tilde{\epsilon}\tau a\rho$ -i os): $\tilde{\epsilon}\nu l$, $\tilde{\epsilon}\nu$ and $\epsilon l\nu$. But $\tilde{\epsilon}\alpha \epsilon \rho \epsilon l\sigma los boundless$ should be $\tilde{\epsilon}\alpha \epsilon \rho \gamma \sigma los$, from $\pi \epsilon \rho \gamma (\pi \epsilon \rho \gamma \nu)$.

Other variations, of which no general account can be given, are seen in *Apηs, ἀνήρ, ἀμάω I reap ($\bar{\alpha}$ generally in the simple Verb, $\bar{\alpha}$ in the compounds); φίλος ($\bar{\iota}$ in φίλε κασίγνητε); ἄτ $\bar{\iota}$ τος and τἴτός; ὕδωρ, ἀντικρύ; δύο and δύω, δε $\hat{\nu}$ ρο and (once) δε $\hat{\nu}$ ρω, Διόννσος and Διώννσος. The chief cases of a doubtful vowel

being long without the help of the ictus are, ἀρή, ἀλῶναι (ἀλόντε with ā in Il. 5. 487), πρίν, ίμάς, πιφαύσκω.

385. Double consonants, causing doubtful syllables: chiefly σσ, in the First Aorist (§ 39, 1), and Dat. Plur. (§ 102); also οσσος, μέσσος, νεμεσσάω (where σσ = τι), 'Οδυσσεύς. So for i σασι (-- υ) we should write i σσασι (for i δ-σασι, δ, δ, δ).

λλ, in 'Αχιλλεύς.

κκ, in $\pi \epsilon \lambda \epsilon \kappa \kappa \omega$ ($\kappa \kappa = \kappa F$?), ep. $\pi \epsilon \lambda \epsilon \kappa \nu s$.

As to $\pi\pi$ and $\tau\tau$, in $6\pi\pi\omega$ s, $6\tau\tau\iota$, &c. see § 108, 2.

386.] Metrical licence. In a few cases the use of a vowel as long appears to be merely due to the necessities of the metre. Such are:-

- α in αθάνατος, ακάματος, απονέεσθαι, αποδίωμαι, αγοράασθε, γενικών οδ.
- ε in ἐπίτονος (Od. 12. 423), ζεφυρίη (Od. 7. 119).
- ι in Πριαμίδης, διά (in διὰ μὲν ἀσπίδος κτλ. Il. 3. 357, &c.).
- υ in θυγατέρες (Il. 2. 492, &c.), δυναμένοιο (Od. 1. 276, &c.).

In these cases there is every reason to believe that the vowel was naturally short, and the lengthening must therefore be regarded as a necessary licence, to be compared with the neglect of Position before Σκάμανδρος, &c. (§ 370), or the synizesis of Alyuπτίη and 'Ιστίαια (§ 378 fin.). The diphthong of elapivos (έαρ), εἰρεσίη, οὐλόμενος, οὕνομα, Οὐλύμποιο, is of the same nature. The ου of πουλύς perhaps began in compounds in which it was required by the metre, as πουλυβότειρα, &c., and was extended to the simple word. It is apparently a poetical form only (but see H. W. Smyth, Vowel System, p. 98).

Similarly a short vowel between two long syllables is sometimes treated as long: as in ηγάασθε (Od. 5. 122), Ἡρακληείη (properly -κλεειη), Ὁϊκλείης (Od. 15. 244). So τετράκυκλος is scanned - - - v in Od. 9. 242, but v v - v in Il. 24. 324.

Vocatives.

387.] The short final syllable of the Vocative appears in several places as a metrically long syllable: as—

Il. 4. 155 φίλε κασίγνητε, θάνατον κτλ. and so 5. 359: also Il. 19. 400 Ξάνθε τε καὶ Βάλιε, 21. 474 νηπύτιε, Od. 3. 230 Τηλέμαχε.

4. 338 ω νίε Πετεωο κτλ. od. 11.478

18. 385 ὄρσο Θέτι τανύπεπλε: so Od. 24. 192 Λαέρταο πάϊ.

14. 357 Ποσείδαον ἐπάμυνε: so Il. 24. 569., Od. 8. 408, &c.

23. 493 Αΐαν Ίδομενεῦ τε.

513. 4452, 615, a. 482. - 5's X 236; Se 154. Bopins 15, 4195. 416519. - TTETV (105, 5402, T475. - First. prol. Il p. 1201

The reason may be found (as Hartel thinks*) in the nature of the Vocative as an interruption of the natural flow of a sentence. It is very possible, however, that the Nominative ought to be read in these places: see § 164.

The Digamma.

388.] In seeking to arrive at general conclusions as to the rules and structure of the Homeric hexameter, it was necessary to leave out of sight all the words whose metrical form is uncertain on account of the possible or probable loss of an initial consonant. It is time to return to this disturbing

element of the enquiry.

The scholars who first wrote on this subject had few materials for their investigations outside of the Homeric poems. To them, therefore, the 'Digamma' was little more than a symbol—the unknown cause of a series of metrical anomalies. In the present state of etymological knowledge the order of the enquiry has been to a great extent reversed. It is known in most cases which of the original sounds of the Indo-European languages have been lost in Greek, and where in each word the loss has taken place. Hence we now come to Homer with this knowledge already in our possession. Instead of asking what sounds are wanting, we have only to ask whether certain sounds, of whose former existence we have no doubt, were still living at the time when the poems were composed, and how far they can be traced in their effect on the versification.

389.] Nature of the evidence from metre. The questions which are suggested by the discovery in Homer of traces of a lost 'Digamma' cannot be answered without some reference to

the very exceptional circumstances of the text.

Whatever may be the date at which writing was first used in Greece for literary purposes, there can be no doubt that the Homeric poems were chiefly known for some centuries through the medium of oral recitation, and that it was not till the time of the Alexandrian grammarians that adequate materials were brought together for the study and correction of the text. Accordingly when these scholars began to collect and compare the manuscripts of Homer, they found themselves engaged in a problem of great complexity. The various readings, to judge from the brief notices of them preserved in the Scholia, were very numerous; and they are often of a kind which must be attributed to failure of memory, or the licence of oral recitation, rather than to errors of transcription. And the amount of

interpolation must have been considerable, if there was any ground for the suspicions so often expressed by the ancient critics.

It follows from these circumstances that an attempt to restore the lost f throughout the text of Homer cannot be expected to succeed. Such an attempt necessarily proceeds on the assumption that the text which we have is sound as far as it goes, or that it is so nearly right that we can recover the original by conjecture. With an imperfect text the process can only be approximate. We may be satisfied if the proportion of failure is not greater than the history of the text would lead us to

expect.

The loss of the F-sound, moreover, must have been itself a cause of textual corruption. It led to irregularities of metre, especially to frequent hiatus, and there would be a constant tendency to cure these defects by some slight change. insertion of the ν έφελκυστικόν was almost a matter of course (see however § 391). The numerous alternative forms used in the poetical language, and the abundance of short Particles such as γε, τε, ρα, &c. made it easy to disguise the loss of F in many places. We cannot be surprised, therefore, if we have often to make the reverse changes.

A few instances will serve to show the existence in pre-Alexandrian times of corruption arising from the tendency to repair defects of metre.

In Il. 9. 73 the MSS. have πολέεσσι δ' ἀνάσσεις, Aristarchus read πολέσιν γάρ άνάσσεις. Both are evidently derived from πολέσιν δε άνάσσεις (i. e. Faváoous), corrected in two different ways.

In Il. 13. 107 the MSS, have νῦν δ' ἔκαθεν, the reading of Aristarchus: but Zenodotus and Aristophanes had vûv δè eκas (i. e. Féras).

In Il. 9. 88 the reading of Aristarchus was τίθεντο δὲ δόρπα έκαστος: other ancient sources had δόρπον (the reading of most MSS.).

In Il. 14. 235 πείθευ, έγὼ δέ κέ τοι εἰδέω χάριν ήματα πάντα, the order χάριν είδέω was preferred by Aristarchus.

Two very similar instances are-

ΙΙ. 5. 787 κάκ' ἐλέγχεα, είδος ἀγητοί (Ατ. έλεγχέες). 9. 128 γυναίκας ἀμύμονα ἔργα ἰδυίας (Ar. ἀμύμονας).

In Od. 5. 34 ήματί κ' εἰκοστῷ . . ἵκοιτο the 'common' texts of Alexandrian times (αί κοινότεραι) omitted the κ', which is not necessary, and may have been inserted in imitation of ήματί κε τριτάτφ κτλ. (Il. 9. 363).

In Od. 1. 110 of μεν ἄρ' οἶνον ἔμισγον some MSS. omit ἄρ'. So in Od. 3. 472

most MSS. have οίνον οίνοχοεῦντες (vulg. ἐνοινοχ.).

In Od. 2. 331., 8. 174., 13. 125 the e of abre is elided before a word with f. But in each case there is MS. authority for reading av.

In Od. 8. 526 the MSS, are divided between ἀσπαίροντ' ἐσιδοῦσα and ἀσπαίροντα ίδοῦσα.

It should be observed that the argument from these instances is equally good, whether the readings ascribed to Zenodotus, Aristarchus, &c. are conjectures made by them, or were derived (as is more probable) from older sources. They equally serve to illustrate the process by which traces of an

original f were liable to be gradually effaced. And it is not likely that there was any deliberate attempt to emend Homer on metrical grounds. It is enough to suppose that the metre helped to determine the preference given (consciously or unconsciously) to one or other of the existing variants.

390. Words with initial F. The former existence of the F in a given Homeric word may be inferred either from its appearance in some other dialect of Greek, or (where this kind of evidence fails) from the corresponding forms in the cognate languages. Thus an original Feirogi is supported by the forms Fίκατι and Fείκατι on Doric and Boeotian inscriptions, by the Laconian βείκατι (given by Hesychius), and again by Latin viginti, Sanscrit vimçati, &c.: an original Fέσπερος by the form $F_{\epsilon\sigma\pi\alpha\rho\ell\omega\nu}$ on a Locrian inscription, as well as by Latin vesper: original Γιδείν, Γοίδα, &c. by Γίστορες on inscriptions, γοίδα and γοίδημι in Hesychius (erroneously so written, as Ahrens showed, for Fοίδα and Fοίδημι), and also by Latin video, Sanscrit vedmi, veda, Engl. wit, &c. We do not, however, propose to discuss the external evidence, as it may be called, by which the loss of an initial f is proved, but only to consider the degree and manner in which the former existence of such a letter can be shown to have affected the versification of Homer. For this purpose it will be enough to give a list of the chief words in question, and in a few cases a statement, by way of specimen, of some of the attempts made to restore the f to the text.*

άγνυμι.

The initial F is to be traced by the hiatus in Il. 5. 161 $\epsilon\xi$ avxéva å $\xi\eta$, Il. 8. 403 κατά θ' åρματα å $\xi\omega$ (similar phrases in 8. 417., 23. 341, 467); less decisively by the lengthening of the final - $\iota\nu$ of the preceding word in Il. 4. 214 πάλιν ἄγεν ὀξέες ὄγκοι. The evidence against an initial consonant is very slight. In Od. 19. 539 πᾶσι κατ' ανχένας ἢ $\xi\varepsilon$ we should read ανχέν' ἔα $\xi\varepsilon$ (Bekk.), understanding the Singular distributively (§ 170). In Il. 23. 392 for ἵππειον δέ οἱ ἢ $\xi\varepsilon$ may be read ἵππειόν οἱ ἔα $\xi\varepsilon$.

^{*} The first systematic attempt to restore the digamma was made by Heyne in his edition of the Iliad (1802). It was based upon Bentley's manuscript annotations, of which Heyne had the use. The first text with restored F was published by Payne Knight (1820). Much was done by the thorough and methodical quaestiones Homericae of C. A. J. Hoffmann (Clausthal, 1842-48). The F was again printed in the text of Bekker's second edition (Bonn, 1858). The light of the comparative method was brought to bear upon it by Leskien (Rationem quam I. Bekker in restituendo digammo secutus est examinavit Dr. A. Leskien, Lipsiae, 1866). The most complete treatise on the subject is that of Knös (Upsaliae, 1872). The most important contributions, in addition to those mentioned, have been made by Leo Meyer (K. Z. xviii. 49), and by W. Hartel (Hom. Stud. iii). Most of the conjectures given in this chapter come from one or other of these sources.

αναξ (άνασσα, ανάσσειν).

The words of this group occur in Homer about 300 times, and in about 80 instances they are preceded by a final short vowel which would ordinarily be elided. This calculation does not include the phrase ἰφι ἀνάσσειν, or the numerous examples of hiatus after the Dat. Sing. in -ι and the Genitives in -οιο, -ειο, -αο.*

The cases in which a slight correction of the text is needed to make room for the F are as follows:—

Il. 1. 288 πάντεσσι δ' ἀνάσσειν (read πᾶσιν δέ).

9. 73 πολέεσσι δ' ἀνάσσεις (read πολέσιν δέ, § 389).

2. 672 Χαρόποιό τ' ἄνακτος (read Χαρόπου τε).

7. 162 (=23. 288) $\pi \rho \hat{\omega} \tau os \mu \hat{\epsilon} \nu \text{ ava} \xi \text{ (read perhaps } \pi \rho \hat{\omega} \tau \iota \sigma \tau a$).

15. 453 κροτέοντες ἄναξ (read κροτέοντε, the Dual).

371 (=507) λίπον ἄρματ' ἀνάκτων (read ἄρμα, § 170).

523 σύ πέρ μοι, ἄναξ, τόδε καρτερον έλκος ἄκεσσαι (read με).

23. 49 ὅτρυνον, ἄναξ (read ὅτρυνε, the Pres. Imper.).

517 ős βά τ' ἄνακτα (read ős τε or ős βα).

Od. 9, 452 η σύ γ' άνακτος (omit γ').

17. 189 χαλεπαὶ δέ τ' ἀνάκτων (omit τ').

21. 56 (=83) τόξον ἄνακτος (read τόξα).

The Imperfect $\eta \nu a \sigma \sigma \epsilon$, which occurs five times, can always be changed into $\dot{\epsilon} \dot{a} \nu a \sigma \sigma \epsilon$. The remaining passages are:—

Il. 19. 124 σὸν γένος οὕ οἱ ἀεικὲς ἀνασσέμεν ᾿Αργείοισιν (a verse which is possibly interpolated).

20. 67 έναντα Ποσειδάωνος άνακτος (in the probably spurious θεομαχία).

24. 449, 452 ποίησαν ἄνακτι.

Od. 14. 40 ἀντιθέου γὰρ ἄνακτος κτλ.

395 εὶ μέν κεν νοστήση ἄναξ. 438 κύδαινε δὲ θυμὸν ἄνακτος.

24. 30 η ερ ανασσες.

ἄρνα (ἄρνες, &c.).

The F is supported by three instances of hiatus, viz. Il. 4. 158 αἷμά τε ἀρνῶν, 4. 435 ὅπα ἀρνῶν, 8. 131 ἢΰτε ἄρνες: and by the metrical length given to the preceding syllable in Il. 3. 103 ἐs δίφρον ἄρνας, 16. 352 λύκοι ἄρνεσσι.

The passages which need correction are—

Il. 3. 103 οἴσετε δ' ἄρν' (the $\delta \acute{\epsilon}$ is better omitted).

119 ήδ' ἄρν' ἐκέλευεν (read ἰδὲ ἄρν').

22. 263 οὐδὲ λύκοι τε καὶ ἄρνες (omit τε).

Od. 4. 86 ΐνα τ' άρνες άφαρ κεραοί τελέθουσι (omit τ').

226 ἐρίφους τε καὶ ἄρνας.

^{*} For a complete analysis of the examples in the Iliad see Dawes, Miscellanea Critica, Sect. IV.

Note, however, that the evidence for F is confined to the Iliad, and that the derivative $\acute{a}pvei\acute{o}s$ shows no trace of it.

ἄστυ.

The presence of an initial consonant is shown by hiatus in nearly 80 places. In two places the text is uncertain: Il. 24. 320 ὑπὲρ ἄστεος (but διὰ ἄστεος in the Bankes papyrus, and several MSS.), Od. 3. 260 ἐκὰς ἄστεος (ἐκὰς Ἄργεος in most MSS.).

Two passages admit of the easiest correction :-

Il. 3. 140 ἀνδρός τε προτέροιο καὶ ἄστεος (read προτέρου).

15. 455 τοὺς μὲν ὅ γ' ᾿Αστυνόμφ (omit γε or μέν).

Two remain, viz.-

Il. 11. 733 ἀμφίσταντο δὴ ἄστυ (ἀμφέσταν Bekk.).

18. 274 νύκτα μέν είν άγορη σθένος έξομεν άστυ δὲ πύργοι (έξετε Bekk.).

The changes made by Bekker in these places are not improbable, but are hardly so obvious as to exclude other hypotheses.

έαρ, εἰαρινός.

Hiatus is found in Il. 8. 307 νοτίησί τε ελαρινήσι, and a short final syllable is lengthened in Od. 19. 519 ἀείδησιν ἔαρος. In the phrase ὅρη ἐν ελαρινή we should doubtless omit the ἐν, as in Od. 5. 485 ὅρη χειμερίη (Bentl.).

εἴκοσι.

The F appears in ἀνὰ εἴκοσι (Od. 9. 209), and the combination καὶ εἴκοσι (which occurs 9 times, including the compounds with δυωκαιεικοσι-). Id 1.220: ἐξετησιν εξιπονίν εξιπ

In II. 11. 25 χρυσοῖο καὶ εἴκοσι read χρυσοῦ: and in the combination τε καὶ εἴκοσι (in three places) omit τε. In the recurring ἤλυθον εἰκοστῷ ἔτεῖ κτλ. Bekker reads ἦλθον ἐεικοστῷ (Cobet well compares Od. 23. 102 ἔλθοι ἐεικοστῷ κτλ.). On Od. 5. 34 ἤματί κ' εἰκοστῷ κτλ. see § 389.

εἴκω.

Two instances of hiatus indicate F, in Il. 24. 100, 718, besides many places in which the word is preceded by a Dat. Sing., as οὐδένι εἴκων, κάρτεϊ εἴκων.

Two places may be easily corrected: II. 4. 509 μηδ' εἴκετε (read μὴ εἴκετε, with asyndeton, as Od. 24. 54 ἴσχεσθ' ᾿Αργεῖοι, μὴ φεύγετε), and 12. 48 τῆ τ' εἴκουσι (omit τε). In Od. 12. 117 for θεοῖσιν ὑπείξεαι read θεοῖς ὑποείξεαι (Bekk.) There remains II. 1. 294 εἰ δὴ σοὶ πᾶν ἔργον ὑπείξομαι.

ἔοικα, ἐΐσκω, εἴκελος.

The F of ἐοικα appears from hiatus in 46 instances (not counting the numerous places in which it follows a Dative in -1). The adverse instances are 11 in number, besides the form ἐπ-ἐοικε (which occurs 11 times). The corresponding Present εἴκω is generally recognised in Il. 18. 520 ὅθι σφίσιν εἶκε λοχῆσαι where it suited them to be in ambush. The form ἐτοκω has hiatus before

it in 3 places, but twice rejects F (Od. 9. 321., 11. 363). The adjective εἴκελος or τκελος usually needs an initial consonant (except Il. 19. 282, Od. 11. 207).

It seems probable that this is the same word as **eike** to yield. The notion of giving way easily passes into that of suiting or fitting, hence conforming to, resembling.

έκών, εκητι, εκηλος.

Hiatus indicating F is found in 22 places (not reckoning οὖ τι ξκών Il. 8. 81, &c.).

In Od. 4. 649 for αὐτὸς ἐκών we may read αὐτὸς ἐγών (cp. Od. 2. 133, where both these forms are found in good MSS.). In Od. 17. 478 ἔσθι ἔκηλος two MSS. have ἔσθὶ (i. e. ἔσθε). The remaining exceptions are; with ἑκών, Il. 23. 434, 585, Od. 5. 100 (where we may read τίς κε, or perhaps τίς δὲ ἑκὼν . . διαδράμοι; the Opt. without ἄν being used as in negative Clauses, § 299 f): with ἕκηλος, Il. 8. 512, Od. 2. 311 (ἐῦφραίνεσθ) ἐὕκηλον Βekk.).

έκάς, έκατος, &c.

Traces of F are to be seen in the hiatus $v\hat{v}v$ δὲ ἐκάς (Il. 5. 791., 13. 107), ἀλλὰ ἐκάς (Od. 15. 33), οὐδὲ ἑκηβολίαι (Il. 5. 54): and in the lengthening in ᾿Απόλλωνος ἑκάτοιο (Il. 7. 83., 20. 295), ἐϋπλόκαμος Ἑκαμήδη, &c.

The exceptions are, Il. 1. 21, 438., 17. 333., 20. 422., 22. 15,

302, Od. 7. 321-mostly admitting of easy correction.

EKATTOS.

The original F of this word (recently found on a Locrian inscription, see *Curt. Stud.* ii. 441 ff.) is traced by means of hiatus in 115 places. The adverse instances, however, are about 50 in number, and the proportion that can be removed by emendation is not so large as in most cases (see L. Meyer, K. Z. viii. 166. About a fourth of the exceptions appear in the recurring phrase $\mu \acute{\epsilon} \nu o s \kappa a i \theta \nu \mu \grave{\delta} \nu \acute{\epsilon} \kappa \acute{a} \sigma \tau o v$.

The form ἐκάτερθε shows slight traces of initial f in Od. 6. 19 σταθμοῖτν ἐκάτερθε, 11. 578 γῦπε δέ $\mu\nu$ ἐκάτερθε, 22. 181 τὰ δ' ἔσταν ἐκάτερθε. It is preceded by elision in Il. 20. 153 (omit δ), and in Il. 24. 273, Od. 7. 91 (omit δ).

είλω (έλσαι, ἐάλην), άλῶναι, ἄλις.

The F is shown by hiatus in II. 1. 409 ἀμφ' ἄλα ἔλσαι: 16. 403 ἢστο ἀλείς (and five other examples of this Tense, viz. II. 5. 823., 21. 571, 607., 22. 308, Od. 24. 538): II. 18. 287 κεκόρησθε ἐελμένοι: II. 12. 172 ἢὲ ἀλῶναι (so 14. 81), II. 21. 281 εἴμαρτο ἀλῶναι (so Od. 5. 312., 24. 34), II. 81. 495 τῆ γε ἀλώμεναι. Before ἄλις hiatus occurs in about 12 places: cp. also II. 23. 420 εἰνάτερες ἄλις ἦσαν.

In Il. 21. 236 κατ' αὐτὸν ἄλις ἔσαν some MSS. read ἔσαν ἄλις, and at l. 344 the same transposition may be made. The only other instance against F is Il. 17. 54 ὅθ' ἄλις ἀναβέβρυχεν (ἀναβέβροχεν Zenod.), where Bentley read ὁ ἄλις ἀναβέβροχεν.

έλίσσω, είλύω.

Before ἐλίσσω hiatus is found in four places, and the recurring phrases καὶ ἔλικας βοῦς and εἰλίποδας ἔλικας βοῦς point in the same direction. The only exceptions are Od. 12. 355 βοσκέσκουθ' ἔλικες κτλ., and Il. 18. 401 γυαμπτάς θ' ἔλικας.

It is probable that in many places the forms ἐλέλικτο, ἐλελίχθη, &c. are old errors for ἐfέλικτο, ἐfελίχθη, &c.: see Dawes, Misc. Crit. 177: also Heyne on II. 1. 530.

Traces of f in εἰλύω should perhaps be recognised in Od. 5, 403 (ἐρευγόμενον, εἴλυτο) and 15, 479 σάκεσιν εἰλυμένοι: cp. Il. 20, 492 φλόγα εἰλυφάζει. In Il. 18, 522 τζοντ' εἰλυμένοι it is easy to read τζον (as Bekker). The Aor. Part. ἐλυσθείs has no f: but it may be from a different Verb-stem (see Buttm. Lexil. s. v. εἰλύω).

έλπω (έολπα).

The initial F of this word is proved by 10 instances of hiatus (including $\kappa a i \ \epsilon \lambda \pi i \delta o s$, Od. 16. 101., 19. 84). The Perfect $\epsilon o \lambda \pi a$ also shows traces of F in the reduplicated syllable, viz. in Od. 2. 275., 3. 375., 5. 379.

In Il. 8. 526 εὔχομαι ἐλπόμενος should be εὔχομ' ἐελπόμενος (Hoffm.) or perhaps (as Zenodotus read) ἔλπομαι εὐχόμενος. In four places Γέλπω can be restored by very slight corrections:—

Il. 15. 701 Τρωσίν δ' έλπετο (Τρωσί δέ Heyne).

18. 194 άλλὰ καὶ αὐτὸς ὅδ', ἔλπομ' (αὐτὸς ἐέλπομ' Heyne).

Od. 2. 91 (=13. 380) πάντας μέν β' έλπει (omit β').

Two others are less easy; Il. 15. 539 πολέμιζε μένων, ἔτι δ' ἔλπετο (μένων δ' ἔτι ἔλπετο Bentl.), and Il. 24. 491 ἐπί τ' ἔλπεται (καὶ ἔλπεται Bentl.).

The passages which tell against ΓέΓολπα are II. 20. 186 χαλεπῶς δέ σ' ἔολπα τὸ βέξειν (read σὲ ἔολπα), 21. 583 μάλ' ἔολπας (μάλα ἔλπε' Hoffm.), 22. 216 νῶί γ' ἔολπα (omit γ'), Od. 8. 315., 24. 313.

έπος, εἰπεῖν.

The \digamma of ξ mos is supported by about 26 instances of hiatus, and a much larger number in which preceding syllables are lengthened (as in the common line $\kappa \alpha \ell$ $\mu \nu \dot{\alpha} \mu \epsilon \nu \beta \delta \mu \epsilon \nu o s \xi \pi \epsilon \alpha \kappa \tau \lambda$.).

Of the apparent exceptions, about 35 are removed by reading ἔπεσσι for ἐπέεσσι (as in II. 5. 40 χειρδι ἐλοῦσὶ ἀπέεσσι προσηύδα, read ἐλοῦσα ἔπεσσι). This is justified by the fact that in similar words (esp. βέλοι) the form in -εεσσι is less frequent than that in -εσσι. A group of 11 may be corrected by scanning ἔπεα as a disyllable (ω -) in the formula φωνήσασα ἔπεα πτερόεντα προσηύδα. Another small group of exceptions is formed by phrases such as Od. 4. 706 ὀψὲ δὲ δή μιν ἔπεσσιν μτλ., where perhaps ἐ may be put for μιν. There remain two instances in the Iliad (5. 683., 7. 108), and seven in the Odyssey (11. 146, 561., 14. 509., 15. 375., 16. 469., 17. 374., 24. 161).

In εἰπεῖν the F is proved by about 80 instances of hiatus, besides lengthening such as we have in the forms ὧδε δέ τις εἴπεσκε, ὧς ἄρα οἱ εἰπόντι, &c. The exceptions number about 35.

Of these exceptions 10 are found in the recurring line $\delta \phi \rho'$ $\epsilon \tilde{u}\pi \omega \tau \hat{u}$ $\mu \epsilon \theta \nu \mu \hat{u} \hat{s} \epsilon \nu \hat{u}$ $\sigma \tau \hat{\eta} \theta \epsilon \sigma \sigma \iota \kappa \epsilon \lambda \epsilon \hat{v} \epsilon \iota$. It has been suggested as possible that $\epsilon \tilde{u}\pi \omega$ has here taken the place of an older $\tilde{\epsilon}\pi \omega$ ($f \epsilon \tilde{u}\pi \omega$, or $\tilde{\epsilon}\sigma \pi \omega$ (cp. $\tilde{\epsilon}\sigma \pi \epsilon \tau \epsilon$). This supposition would of course explain other instances of neglected F, as Il. 1. 64., 11. 791, Od. 1. 10, 37, &c.

ἔρδω, ἔργον, &c.

The Verb ἔρδω is preceded by hiatus in two clear instances, II. 14. 261, Od. 15. 360. In II. 9. 540 πόλλ' ἔρδεσκεν there is an ancient v. l. ἔρρεζεν. In II. 10. 503 ὅτι κύντατον ἔρδοι we may read κύντατα. But there are several instances on the other side in the Odyssey (viz. 1. 293., 5. 342, 360., 6. 258., 7. 202., 8. 490., 11. 80).

The reduplicated form ἔοργα (for ΓέΓοργα) is preceded by hiatus in 7 places. Instances on the other side are, II. 3. 351 ο με πρότερος κάκ' ἔοργε (where the Aor. ἔρεξεν is more Homeric, cp. § 28), 21. 399 ὅσσα μ' ἔοργας (ὅσσα ἔοργας Ambr.), 22. 347 οἶά μ' ἔοργας (here also με may be omitted), Od. 22. 318 οὐδὲν ἐοργώς (read οῦ

ть, ер. § 356).

The Noun ἔργον, with its derivative ἐργάζομαι, occurs in Homer about 250 times, and the F is required to prevent hiatus in about 165 places. There are about 18 instances against F.

εἴρω, ἐρέω.

The f of $\epsilon \tilde{\iota} \rho \omega$ is required by hiatus in the three places where it occurs, viz. Od. 2. 162., 11. 137., 13. 7; that of $\epsilon \rho \epsilon \omega$ by about 50 instances of lengthening (such as $\epsilon \lambda \lambda \lambda' \epsilon \kappa$ to $\epsilon \rho \epsilon \omega$, $\epsilon \kappa \delta \kappa \delta \kappa$ and the like), against which are to be set three instances of elision (II. 4. 176., 23. 787, Od. 12. 156).

εννυμι, είμα, ἐσθής.

The F is shown by hiatus in more than 80 places, including the instances of the Perfect Mid. ($\epsilon l\mu a\iota$, $\epsilon \sigma \sigma a\iota$, &c., see § 23, 5). The contrary instances are of no weight. The superfluous $\hat{\rho}$ may be omitted in $\epsilon \pi \epsilon \iota$ $\hat{\rho}$ $\epsilon \sigma \sigma a\nu \tau o$ (three places), and τ similarly in Od. 14. 510., 24. 67. This leaves II. 3. 57, Od. 6. 83., 7. 259.

ἐμέω.

The F (which is inferred from Lat. vomo) may be restored by reading $\epsilon F \epsilon \mu \epsilon \sigma \sigma \epsilon$ for $\epsilon \pi \epsilon \mu \epsilon \sigma \sigma \epsilon$ (Il. 14. 437) and $\epsilon \pi \mu \epsilon \mu \epsilon \sigma \sigma \epsilon$ (possibly $\epsilon \pi \mu \omega \nu$ (L. Meyer), for $\epsilon \pi \mu \nu \nu$ (Il. 15. 11).

ἔσπερος.

Hiatus occurs in six places, after the Prepositions $\pi \sigma \tau i$ (Od. 17. 191) and $\epsilon \pi i$. There are no instances against ϵ .

ETOS.

The F is supported by the lengthening of the preceding syllable in five places, such as Il. 24. 765 ἐεικοστὸν ἔτος ἐστί.

In the only adverse instance, Il. 2. 328 $\tau o \sigma \sigma a \hat{v} \hat{r}$ $\tilde{\epsilon} \tau \epsilon a$, we may read and scan $\tau o \sigma \sigma a \hat{v} \tau a$ $\tilde{\epsilon} \tau \epsilon a$, as in the case of $\tilde{\epsilon} \pi \epsilon a$ (supra).

ιάχω, ιαχή, ήχή.

The F in $l\acute{a}\chi\omega$ and $la\chi\acute{\eta}$ is chiefly indicated by 23 instances of a peculiar hiatus, viz. after a naturally short final vowel in arsis; as $\acute{\eta}$ $\delta\grave{\epsilon}$ $\mu\acute{\epsilon}\gamma a$ $l\acute{a}\chi o \nu \sigma a$, $\acute{\eta}\mu \epsilon l\acute{s}$ $\delta\grave{\epsilon}$ $l\acute{a}\chi o \nu \tau \epsilon s$, $\gamma\acute{\epsilon}\nu \epsilon \tau o$ $la\chi\acute{\eta}$, and the like. There are 3 instances of lengthening by Position. The F is also proved by $a\imath l\acute{a}\chi o s$ (= \grave{a} - $FlFa\chi o s$) without a cry. The exceptions are confined to the Aor. or Impf. $l\acute{a}\chi o \nu$ ($l\acute{\iota}$), which never admits F in Homer: see § 31, 1, note.

The derivative $\eta \chi \dot{\eta} \epsilon \iota s$ follows hiatus in two places (II. I. 157, Od. 4. 72): elsewhere in Homer $\dot{\eta} \chi \dot{\eta}$ only occurs at the beginning of the line. The compound $\delta \nu \sigma - \eta \chi \dot{\eta} s$ ($\pi o \lambda \dot{\epsilon} \mu o \iota o \delta \nu \sigma \eta \chi \dot{\epsilon} o s$, II. 2. 886, &c.) is best derived from $\check{a} \chi o s$ (see Wackernagel, Dehnungs-

gesetz, p. 42).

ίδειν, οίδα, είδος.

In the different forms of the Second Aor. $i\delta\epsilon\hat{\imath}\nu$ the F is shown by upwards of 180 instances of hiatus, and about 12 instances of lengthening of a short syllable. The Indicative $(\epsilon\hat{\imath}\delta\sigma\nu)$ in Attic) is nearly always a trisyllable $(i.e.\ \epsilon F\iota\delta\sigma\nu)$ in Homer. On the other side we have to set nearly 50 instances of neglected F, about half of which are susceptible of easy emendation (such as putting $i\delta\epsilon\hat{\imath}\nu$ for $i\delta\epsilon\epsilon\nu$, omitting superfluous $\delta\epsilon$, and the like).

In the Perfect of δα there are about 125 instances of hiatus, against 24 which need emendation. Of these, however, only about seven or eight present any difficulty. The proportion is much the same with the other forms, as εἴδομαι, εἴσομαι, &c., ϵ ἐωίν ε and the Nouns εἶδος (11 instances of hiatus, two adverse), ἴστωρ,

ίδρείη, είδωλου, &c.

Tov ($l\delta\epsilon\iota s$, $l\delta\delta\nu\epsilon\phi\dot{\epsilon}s$).

The F is supported by hiatus in Od. 4. 135., 9. 426, and is nowhere inadmissible.

is, ioi (ioia), ives.

These words, with the derived proper names ${}^{\prime}$ I $\phi \iota \alpha \sigma \sigma a$, ${}^{\prime}$ I $\phi \iota \tau \sigma s$, &c., show F in about 27 places, while seven or eight places need slight emendation. ${}^{\prime}$ I $\phi \theta \iota \mu \sigma s$, which shows no trace of F, is probably from a different root.

loos.

The f is traced in about 30 instances of hiatus; the adverse passages being 8 or 9 in number. In three of these, containing the phrase ἀτεμβόμενος κίοι ἴσης (II. 11. 705, Od. 9. 42, 549) the form ἴσης should perhaps be changed to αισης share. Or we may recognise the Æolic form of the word, viz. ἴσσα (Fick, Odyssee, p. 20). The other places are easily corrected.

ζτυς, ὶτέη.

The f is shown by hiatus (II. 4. 486, Od. 10. 510). The Particle τε may be left out before καὶ ἰτέαι in II. 21. 350.

οίκος.

The f is required in 105 places by hiatus, in 14 by the lengthening of a short syllable. About 25 places are adverse.

olvos.

The f is required by hiatus in nearly 100 places. The adverse places are about 20 (including the names Olveús and Olvóµaos).

391.] Words with initial σF ('F). Since the change of initial σ into the rough breathing must have been much earlier than the loss of F, it may be presumed that words which originally began with σF were pronounced at one time with the sound 'F (=our wh). The following are the chief examples in Homer:—

€o, oî, €, os, &c.

The F is proved by hiatus in upwards of 600 instances, by lengthening of a preceding short syllable in 136 instances. There are also about 27 places in which a short vowel in arsis is lengthened before it: as $\mathring{a}\pi\mathring{o}$ $\mathring{e}o$, $\pi\rho\sigma\mathring{v}$ of $(\smile --)$, $\theta\nu\gamma\alpha\tau\acute{e}\rho\alpha$ $\mathring{\eta}\nu$, $\pi\alpha\tau\acute{e}\rho\iota$ $\mathring{\phi}$, &c. About 43 places do not admit F without some change; of these 30 are instances of the Possessive $\mathring{o}s$.

This Pronoun is noticeable as the only word in which the original F is recognised in the spelling of our texts. The moveable $-\nu$ is not used before the forms of, $\tilde{\epsilon}$: thus we have dase of, $\tilde{\omega}_{S}$ $\kappa \epsilon'$ of, &c.; and, similarly, of of, of $\tilde{\epsilon}\theta \epsilon \nu$ (not of of, of, of $\tilde{\epsilon}\theta \epsilon \nu$). This rule is observed not only in Homer but also in the later Elegiac and Lyric poets, and even the lyrical parts of Tragedy (Soph. El. 195, Traeh. 650). It does not apply, however, to the forms of the Possessive of.

When the forms ' $F\epsilon$, ' $F\iota$ suffer elision (§ 376), the word is reduced to 'F' and consequently disappears from our texts. Thus in Il. 24. 154 ôs $\check{a}\xi\epsilon\iota$ $\kappa\tau\lambda$. it is plain from the parallel l. 183 $\check{a}s$ $\check{a}s$ $\check{a}s$ $\check{a}t$ that the original was $\check{a}s$ 'F' $\check{a}\xi\epsilon\iota$ (Bekker, Hom. Bl. i. 318). Other corrections of the kind are:—

Il. 1. 195 πρὸ γὰρ ἦκε, read πρὸ δέ 'F,' as in l. 208 πρὸ δέ μ ' ἦκε.

4. 315 ώς όφελέν τις ανδρων άλλος έχειν, read ως 'F.'

16. 545 μὴ ἀπὸ τεύχε' ἕλωνται, read μή 'F' (Cobet, Misc. Crit. 265).

Od. 5. 135 ἢδὲ ἔφασκον θήσειν ἀθάνατον, read ἢδέ 'F.' Examples of the restoration of ' $F(o\iota)$ will be found in § 376.*

^{*} The whole subject is fully treated by J. van Leeuwen, Mnemos. xiii. 188 ff. from whom these emendations are taken.

άνδάνω, ήδύς, ήδος.

The F appears in 12 or 15 instances of hiatus, and in the 2 Aor. form $\epsilon \mathring{v}a\delta\epsilon$ (for $\epsilon Fa\delta\epsilon$). The exceptions are, Il. 3. 173 is $\mathring{o}\phi\epsilon\lambda\epsilon\nu$ $\theta \mathring{a}\nu\alpha\tau \acute{o}s$ $\mu \acute{o}\iota$ $\mathring{a}\delta\epsilon \mathring{u}\nu$ (read is $\mu \acute{o}$) $\mathring{o}\phi\epsilon\lambda\epsilon\nu$ $\theta \mathring{a}\nu\alpha\tau \acute{o}s$ $\mathring{a}\delta\epsilon \acute{\epsilon}\iota\nu$, see § 365) and 6 places with $\mathring{\eta}\delta \mathring{v}s$, two of which (Il. 4. 131, Od. 19. 510) may be easily emended. The Substantive $\mathring{\eta}\delta os$ occurs chiefly in the phrase $\mathring{\epsilon}\sigma\sigma\epsilon\tau a\iota$ $\mathring{\eta}\delta os$, where $\mathring{\epsilon}\sigma\tau a\iota$ may perhaps be read.

έθος, ήθος.

The F is indicated by the hiatus $\kappa \alpha \tau \tilde{\alpha}$ $\tilde{\eta}\theta \epsilon a$ (Od. 14. 411). In $\mu \epsilon \tau \hat{\alpha} \tau' \tilde{\eta}\theta \epsilon a$ $\kappa \alpha \hat{\alpha} \nu o \mu \hat{o} \nu \tilde{\iota} \pi \pi \omega \nu$ (II. 6. 511., 15. 268) the $\tau \epsilon$ is better omitted. The Pf. $\epsilon \tilde{\iota} \omega \theta a$ or $\tilde{\epsilon} \omega \theta a$ probably had no initial F, since σF - would give in reduplication $\sigma \epsilon \sigma F$ - or $\tilde{\epsilon} \sigma F$ - (not $\sigma F \epsilon \sigma F$ -).

έκυρός.

The only place bearing on the question before us is II. 3. 172 $\phi i\lambda \epsilon \ \epsilon \kappa \nu \rho \epsilon$, where the metre points to an initial consonant.

ĕξ.

The F may be traced by hiatus in Il. 5. 270 $\tau \hat{\omega} \nu$ of $\hat{\epsilon} \xi \kappa \tau \lambda$., by lengthening in Il. 24, 604, Od. 10. 6. Adverse instances are Il. 23. 741, Od. 3. 115, 415., 14. 20.

ἔτης.

The F appears from hiatus in seven places, and can always be restored. The word is probably formed from the pronominal stem $\sigma F \epsilon$ - (so that it is=unus e suis).

392.] F inferred from metre. A few words may be added here which in all probability had initial F, though the traces of it in the metre are not supported by independent evidence.

άραιός

The hiatus in three places indicates the loss of a consonant.

čθνος (perhaps akin to čθος, ήθος).

Hiatus precedes in 12 places, and there is only one instance on the other side, viz. Il. 11. 724 τὰ δ' ἐπέρρεον ἔθνεα πεζῶν (where ἐπέρρεε is better, see § 172).

ἐρύω, ἔρρω.

Hiatus is found before ἐρύω to draw in 14 places (not counting those which are indecisive, such as ξίφος ὀξὺ ἐρυσσάμενος, or ἐπ' ἢπείροιο ἔρυσσαν), and preceding short syllables are lengthened in 17 places. There are 17 instances against F, one of the strongest being II, I. 141 νῆα μέλαιναν ἐρύσσομεν (= Od. 8. 34., 16. 348). The Verb ῥύομαι to protect is unconnected with ἐρύω.

The Verb ἔρρω (probably Lat. verro) shows hiatus in the phrase

ενθάδε έρρων (II. 8. 239., 9. 364); cp. από-ερσε, απο-έρσειε.

ήνοψ.

The word occurs six times (counting the proper name ${}^{\circ}\text{H}\nu\nu\psi$), and except in one place (where it begins the line) always requires an initial consonant.

ήρα.

In the phrase ἐπὶ ἡρα φέρειν: referred to the root var meaning to choose or wish.

ήρίον.

The only instance of this word (II. 23. 126 $\mu\acute{e}\gamma a \ \mathring{\eta}\rho\acute{l}o\nu$) is in favour of initial F.

ιεμαι.

An initial consonant is shown by hiatus in 23 places (δ δὲ ἴετο, οἴκαδε ἱεμένων, &c.): there are four adverse places, viz. II. 18. 501, Od. 2. 327., 10. 246., 14. 142. It is not connected with ἵημι, but is to be referred to root vī, meaning to aim at, wish (L. Meyer, Bezz. Beitr. i. 301).

"Ilios.

An initial consonant is indicated in about 50 places; the number of adverse instances is 14. The derivation of this important word is unknown.

"lpos, "lpis.

These words may be connected with $\epsilon i\rho\omega$ to tell. If so, the F of 'lois is to be traced in $\omega \kappa \epsilon a$ 'lois (19 times), $\omega s \epsilon \phi a\tau$ ', $\omega \rho \tau o \delta \epsilon$ 'lois (three times), $\beta \delta \sigma \kappa$ ' $i\theta \iota$, 'loi $\kappa \tau \lambda$.; that of 'loos, Od. 18. 73, 334 (but not always, see vv. 38, 56, 233).

393.] Loss of f in Homer. The chief instances in which loss of an original f can be shown to have taken place in the language of Homer fall under the following rule:—

When the original initial F is followed by the vowels o, ω , or the diphthong ou, it produces no effect on the metre of Homer.

The following are words to which this rule will apply *:-

δράω, οὖρος (and οὖρεύς) a watcher; ὄρεσθαι to watch. The original F (Germ. wahr-) will account for the forms ἐώρων and ἐπί-ουρος, but there are no traces in the metre of such forms as Fοράω, &c.

ὄρος mountain (cp. Βορέας), and δρθός upright, which may be from the same root (cp. the Laconian Αρτεμις Βωρθία). There is only one instance of hiatus (viz. Od. 3. 290 ໂσα ὄρεσσιν).

ὄρτυξ (Sanser. vartakas a quail) appears in the name 'Ορτυγίη, which does not admit F (Od. 5. 123).

^{*} See an article by Leo Meyer, K. Z. xxiii. pp. 49 ff.

ὄχος chariot (Lat. veho); ὄχλος (lit. movement, tossing), ὀχλέω to disturb (cp. ὀχλεύς and Lat. vectis); ὀχθέω (Lat. vehe-mens). A trace of F appears in the form συνεοχμός (II. 14. 465).

οψ, ὄσσα, δμφή voice. The traces of F are, one instance of hiatus before ὅπα (Od. 11. 421), two of lengthening of a short syllable (II. 18. 222, Od. 12. 52), and one or two phrases such as ἀμειβόμεναι ὁπὶ καλῆ, &c.; while there are three undoubtedly adverse places (II. 11. 137., 21. 98, Od. 5. 61). In the case of δμφή the evidence is clear against F; in ὅσσα it is indecisive.

οὐρανός (Sanser. varunas).

οὐλοί coarsely ground barley, connected with the root Fελ-, meaning to roll, &c. Neither this word nor the derivative οὐλοχύται admits F.

οὐλαμός crowd, press of battle, shows traces of initial F in II. 20. 379 ἐδύσετο οὐλαμὸν ἀνδρῶν and the phrase ἀνὰ οὐλαμὸν ἀνδρῶν (II. 4. 251, 273., 20. 113). It does not occur except in these places.

οὐτάω, ἀτειλή wound: cp. ἄ-ουτος unwounded, and the form γατάλαι in Hesychius.

ώθέω (ξώθεον, ξωσα), root vadh to beat.

ώνος price, Impf. ἐωνούμην (Sanser. vasnas, Lat. vēnum).

Other words which may have originally had initial F are, όρκος (cp. ἐπί-ορκος), ὀνίνημι (ἐρι-ούνιος), ὀΐγνυμι (ἀνα-οίγεσκον, $\dot{a}\nu\dot{\epsilon}\omega\gamma\epsilon$, &c.), $\dot{o}\pi\nu\dot{a}\omega$, $\ddot{o}\kappa\nu\sigma$, $\dot{o}\dot{\nu}\rho\dot{\eta}$, &c. (L. Meyer, l. c.). However this may be, none of them show traces of F in Homer. There remain the forms of the Possessive os to which the rule would apply, viz. ov, ov, w, wv, ovs. Hiatus is found before ov in 18 places (before ὅνδε δόμονδε seven times, ὃν κατὰ θυμόν six times, in προτί ου four times), ους twice (II. 2. 832., 11. 330), ου once (Od. 15. 358). On the other hand there are 22 places in which the forms in question do not admit F. The significance of this proportion appears when we know that in the case of the remaining forms of the Possessive os the places with hiatus number 50, the adverse instances 8, and that with the forms of the Personal Pronoun (&o, oi, &c.) the proportion is 728 to 19. It seems probable, therefore, that in the forms of, or, &c. the F was no longer pronounced, though traces of the former pronunciation remained (as in the case of οὐλαμός and ὄψ). Similarly in English the sound of w is lost before the vowel o in who, whom, whose, but retained in which, what, &c.

The retention of f before the diphthong or, as in ot, oto, ots, also in others and others, may indicate that o before ι had not its ordinary sound, but one approaching to ϵ (possibly like French eu). This agrees with the fact that or

and υ were afterwards identical in sound, and that in the modern language both are $=\!\iota.$

Words with initial \mathbf{v} are not found in Homer with \mathbf{f} ; but we cannot in this case speak of the loss of \mathbf{f} —the combination $\mathbf{f}\mathbf{v}$ having been originally impossible.

The remaining instances in which loss of F may be assumed in Homeric words are few, and for the most part open to question.

ἔλκω, root valk or vlak (Knös, following Curtius): F is perhaps seen in κατὰ ἀλκα (Il. 13. 707., Od. 18. 375). This account of the word separates it from Lat. sulcus,

έλεῖν, ἔλωρ, possibly to be connected with Lat. rollur the bird of prey. The instances of hiatus before ἔλωρ are hardly enough to prove \digamma .

ελοs, from which the name Velia is said by Dionysius Hal. (Arch. 1. 20) to be derived, has no F in Homer (II. 2. 584, 594., 20. 221, Od. 14. 474). The F of this word is also wanting in the Cyprian dialect (Deecke and Siegismund, Curt. Stud. vii. 249).

 7 Ηλις, 7 Ηλεῖος is without $_{f}$ in Homer: $_{F}$ αλήτοι is the form found on Elean and Laconian inscriptions.

ίδίω, ίδρώς (root svid): the σF is lost in Homer.

ϊκω, ἱκνέομαι: the derivation from the root viç is quite uncertain.

ίστίη (Lat. Vesta): the forms ἀν-έστιος, ἐφ-έστιος show that the F is lost in Homer (as also in the Laconian, Locrian, and Bocotian dialects, see § 404).

394.] Initial δF. This combination is to be recognised in two groups of words:—

δ ει- (δ ει-), έδεισα (so Ar.), δέος, δεινός, δειλός, &c.

A short vowel is frequently lengthened before these words, as II. 1. 515 ov τοι έπι δέος, II. 11. 37 περὶ δὲ Δεῦμός τε Φόβος τε, Od. 5. 52 őς τε κατὰ δεινούς, Od. 9. 236 ἡμεῖς δὲ δείσαντες.

The cases in which a vowel is allowed to count as short before the δ of this root are extremely few: II. 8. 133 $\beta\rho\rho\nu\tau\dot{\eta}\sigma$ 35 δ $\delta\rho$ 40 $\delta\epsilon\iota\nu\dot{\nu}\nu$, Od. 12. 203 $\tau\hat{\omega}\nu$ 5 $\delta\rho$ 40 $\delta\epsilon\iota\sigma\dot{\omega}\nu$ 600 (read $\delta\rho$); II. 13. 165 $\delta\sigma$ 40 $\delta\epsilon\dot{\omega}$ 60 $\delta\epsilon\dot{\omega}$ 66. There remain only II. 13. 278 $\delta\nu$ 9 δ 0 $\delta\epsilon\dot{\omega}$ 60 $\delta\epsilon\dot{\omega}$ 60 $\delta\epsilon\dot{\omega}$ 60 $\delta\epsilon\dot{\omega}$ 60, $\delta\epsilon\dot{\omega}$ 70, $\delta\dot{\omega}$ 90, $\delta\dot$

δήν, δηρόν, δηθά.

In $\delta \dot{\eta} \nu$ the \dot{F} is required in the phrases ov $\tau \iota \mu \dot{\alpha} \lambda \alpha \delta \dot{\eta} \nu$, ov $\delta' \ddot{\alpha} \rho'$ $\ddot{\epsilon} \tau \iota \delta \dot{\eta} \nu$, &c.; there are no contrary instances. In $\delta \eta \rho \delta \nu$ it is traced in two places, Il. 9. 415 $(\dot{\epsilon} \pi \iota \delta \eta \rho \delta \nu \delta \dot{\epsilon} \mu \iota \iota \alpha \dot{\epsilon} \dot{\alpha} \nu)$, Od. 1. 203: but is more commonly absent $(o\dot{\nu} \kappa \dot{\epsilon} \tau \iota \delta \eta \rho \dot{\epsilon} \nu, \&c.)$. The instances of $\delta \eta \theta \dot{\alpha}$ do not show anything.

It is to be observed that except in $\xi \delta \epsilon \iota \sigma a$ the original δF does not lengthen a vowel without the ictus. Compare the rule as to initial F lengthening a short syllable by Position, δ 391.

395.] Initial $F\rho$, &c. The metrical value of an initial $\dot{\rho}$ which represents $F\rho$ differs in the several words. It has always the effect of a double consonant in $\dot{\rho}\dot{\eta}\gamma\nu\nu\mu\iota$, $\dot{\rho}\dot{\iota}\pi\tau\omega$, $\dot{\rho}\dot{\alpha}\kappa\sigma$ s, $\dot{\rho}\nu$ - (in $\dot{\rho}\nu\tau\dot{\sigma}s$, &c.), $\dot{\rho}\eta$ - (in $\dot{\rho}\eta\tau\dot{\sigma}s$, $\dot{\rho}\eta\tau\dot{\eta}\rho$), and nearly always in $\dot{\rho}\iota\nu\dot{\sigma}s$ (except Od. 5. 281), $\dot{\rho}\dot{\iota}\zeta a$ (Od. 9. 390). But lengthening is optional in $\dot{\rho}\dot{\epsilon}\zeta\omega$, $\dot{\rho}\iota\gamma\dot{\epsilon}\omega$, $\dot{\rho}\dot{\epsilon}\iota\dot{\alpha}$: thus we have $\dot{\epsilon}\rho\rho\dot{\epsilon}\xi a$ and $\dot{\epsilon}\rho\dot{\epsilon}\xi a$ (in 27 places); $\ddot{\iota}\pi\tau\sigma\iota$ $\delta\dot{\epsilon}$ $\dot{\rho}\dot{\epsilon}a$ (Il. 8. 179), but $\dot{\epsilon}\nu\theta a$ $\kappa\dot{\epsilon}$ $\dot{\rho}\dot{\epsilon}\iota\dot{\alpha}$ $\kappa\tau\lambda$.; $\dot{\epsilon}\rho\rho\dot{\iota}\gamma\eta\sigma\sigma\nu$, but $\dot{\delta}s$ $\dot{\phi}\dot{\alpha}\tau\sigma$ $\dot{\rho}\dot{\iota}\gamma\eta\sigma\epsilon\nu$ $\delta\dot{\epsilon}$ $\kappa\tau\lambda$. As to $\dot{\rho}$ - standing for an older $\sigma\rho$ -, and the other letters (λ, μ, ν) which lengthen a preceding short vowel, see § 371.

396.] f not initial. The metrical tests by which initial f is discovered generally fail us when the sound occurs in the middle of a word. Loss of F may be shown either (1) by the contraction or synizesis of two vowels originally separated by it, or (2) by the shortening of the first of two such vowels. We have seen that the instances of contraction and synizesis are too rare or doubtful to prove much (§ 378*, 4). The cases in which hiatus is indicated by the shortening of a vowel are somewhat more important. In the declension of vnûs the forms $v \in \acute{o}s$. νέες, νεών, νέεσσι, νέας (§ 94, I) cannot be derived phonetically from $\nu\eta F \acute{o}s$, &c., unless we suppose loss of F to have taken place. The same applies to the double forms of Nouns in $-\epsilon us$, as $\Pi n \lambda \hat{n} os$ and IInhéos, &c. Unless the short vowel is explained on some other hypothesis (e.g. by variation in the stem, as in $Z_{\epsilon \hat{\nu} s}$ and $\beta o \hat{v}_s$, § 106, 2), we must suppose that F had ceased to be sounded in the middle of a word. The loss of F would also explain the metathesis of quantity in εως for η̃os in Od. 2. 79 (see § 171, 1), τέως for τησς in Il. 19. 189 αὖθι τέως ἐπειγόμενος (where G. Hermann read αὐτοῦ τῆος), Il. 24. 658, Od. 18. 190: but this, as these instances show, is even rarer than synizesis in these words, and is almost certainly post-Homeric.

xypiov, lest xyyis, inc x suit = 0 word; xis 3 ... is 3 ... ed wo.

ἀπούρας (§ 13), ἀκουή. It is very possible that many more such forms were to be found in the original text: cp. § 384, 1.

397.] Loss of initial σ and ι (y). The traces of these sounds in the metre of Homer are chiefly of interest for the purpose

of comparison with the facts relating to F.

The effects of initial σ may be seen in a few cases of the non-elision of prepositions: $\epsilon\pi\iota$ - $\epsilon\hbar\lambda\mu\epsilon\nu$ os (Lat. salio), $\epsilon\lambda\mu\phi$ i- $\epsilon\hbar$ ov (Lat. $\epsilon\nu$), $\epsilon\lambda\mu\phi$ i- $\epsilon\hbar$ ov (Lat. $\epsilon\nu$), $\epsilon\lambda\mu\phi$ i- $\epsilon\mu$ 0, $\epsilon\mu$ 0, $\epsilon\mu$ 0, $\epsilon\mu$ 0, and the lengthening in $\epsilon\mu$ 0, $\epsilon\mu$ 1, $\epsilon\nu$ 1, $\epsilon\nu$ 2, $\epsilon\nu$ 3, and $\epsilon\nu$ 1, $\epsilon\nu$ 4. Hiatus is also found twice before $\epsilon\nu$ 1, $\epsilon\nu$ 3, and $\epsilon\nu$ 4, $\epsilon\nu$ 5, $\epsilon\nu$ 6, once before $\epsilon\nu$ 7, once before $\epsilon\nu$ 7, and $\epsilon\nu$ 8, and $\epsilon\nu$ 8, and $\epsilon\nu$ 9, and $\epsilon\nu$ 9, $\epsilon\nu$ 9. (Od. 10. 68), and $\epsilon\nu$ 9, and $\epsilon\nu$ 9, $\epsilon\nu$ 9. (These instances however are too few to prove anything.

Initial ι or \jmath is chiefly traced in the Adverb ω_s , which when used after the Noun to which it refers is allowed to lengthen the final syllable: as $\theta \epsilon \delta s \, \omega_s$, $\delta \rho \nu \iota \theta \epsilon s \, \omega_s$, &c. (so in 36 places). On the other hand there are nearly as many places which do not admit an initial consonant: as $\kappa \tau i \lambda_0 s \, \omega_s$ (Il. 3. 196), $\lambda \epsilon o \nu \theta' \, \omega_s$ (Il. 11. 383., 12. 293., 16. 756), $\theta \epsilon \delta s \, \delta' \, \delta s \, \kappa \tau \lambda$. Probably therefore no spirant was heard, and the lengthening of the syllable before ω_s was a mere 'survival' or traditional rule (§ 375, 1).

398.] Summary. According to the computation of Prof. Hartel there are 3354 places in which the effect of the Digamma can be traced on the metre of Homer. In 2324 places its presence is shown by hiatus after a short vowel (i.e. it prevents elision); in 359 places it justifies the lengthening of a short syllable ending in a consonant, in other words, it helps to make 'Position;' in 164 places it follows a long vowel or diphthong which is without ictus: in 507 places it follows a long vowel or diphthong with ictus. It is further to be noticed that in many places a short final vowel in arsis is lengthened before the F: see especially the instances given under to (§ 390), and iάχω (§ 389).* On the other hand there are 617 places where the F is neglected. Short vowels suffer Elision before it in 324 places: it fails to lengthen by Position after another consonant in 215 places: and long vowels or diphthongs are shortened before it in 78 places. Also the power to lengthen by Position is confined, except in the case of the enclitic to, oi, to lengthening of syllables which have the ictus.

399.] Theories of the f. The main question which arises on these facts evidently is: How can the great number of passages

in which the F affects the metre of Homer be reconciled with the not inconsiderable number of passages in which it is neglected?

The scholars who first became aware of the traces of a lost letter in Homer assumed that in the original form of the poems this letter, or at least the consonantal sound for which it afterwards stood, was consistently used—that it was in fact one of the ordinary sounds of the language-; and accordingly they directed their efforts to restoring it to the text. This was the principle on which Bentley made his famous series of emendations: and which was carried out by Bekker in his edition of 1858. Of late years, however, different views of the matter have been taken. Leskien seems to have been the first to maintain that the passages which do not admit f are not necessarily corrupt or spurious, but are to be regarded as evidence of an original fluctuation in the use of the sound. His view is adopted and defended by Curtius (Grundz, p. 560, 5th ed.). Prof. Hartel has more recently put forward a theory which agrees with that of Curtius in treating the apparent neglect of the F as part of the original condition of the text. But he ascribes this neglect, not to irregularity in the use of the sound. but to the intermediate half-vowel character of the sound itself.

400.] If we are not satisfied that the F had the value of an ordinary consonant at the time when the Homeric poems were produced (or when they received their present form), we may explain the influence which it has on the metre in several ways.

Hypothesis of alternative forms. We may suppose that each word that originally had initial F was known to Homeric times in two forms, an older form with the F—confined perhaps to the archaic or poetical style—and a later in which F was no longer heard. Just as the poet could say either σῶς or τς, either πόλις or πτόλις, either τελέσσαι or τελέσαι, so he may have had the

choice between Fáras and aras, Fydús and hdús, &c.

In order to test the probability of this hypothesis, let us take a few common words of different metrical form, and which show no trace of F, the words "Αρης, ἄριστος, ἔγχος, ἡμαρ, ὅμιλος, ὁφθαλμός, ὕδωρ, ὅπνος. These words, with their immediate derivatives, occur in the Iliad 1022 times; and the places that would not admit an initial consonant number 684, or just two-thirds of the whole. Again, take some of the commonest words with F, ἄναξ, ἄστυ, ἔργον, οἶκος, and the Aorist ἶδεῖν. These occur in the Iliad 685 times, and the exceptions are hardly 50, or about one-fourteenth. Compared with the other proportion this surely proves that the recognition of the F in these words was not arbitrary, but was the rule in Homeric verse.

401. Explanation from fixed phrases, &c. The traces of f

may also be ascribed to the conventional phrases of the early epic style. The word ἄστυ, for example, is found very frequently in the combinations προτὶ ἄστυ, ἀνὰ ἄστυ, κατὰ ἄστυ, &c.; but these do not prove the pronunciation Γάστυ for Homeric times any more than (e. g.) ἐπιεικής proves an Attic ἐπιΓεικής. Such phrases, it may be said, were handed on ready-made, with a fixed metrical value, and served as models for fresh combinations, in which the hiatus was retained as part of the familiar rhythm.

This explanation is inadequate, for the following reasons:-

- (1) The instances of F are not confined to the commonest words, or to frequently recurring phrases. Thus it is found in τον a riolet, ττυς the fellow of a wheel, ττίη a willow, τρνες lambs. And it is used (generally speaking) in all the different forms of each Verb or Noun, whether of common occurrence or not (ίδεῖν as well as ίδέειν, ἴνεσι as well as ἴς and ῖφι, &c.).
- (2) The other cases in which tradition can be shown to have had the effect of retaining older phrases and combinations are not really parallel. In the Homeric Hymns the F can be clearly traced: but the proportion of instances which do not admit f is markedly different. Taking the words already used as examples, viz. αναξ, αστυ, έργον, οίκος, ίδειν, we find them in the Hymns 152 times, while the F is neglected in 36 places, or nearly one-fourth of the whole. Again if we look at the words which begin with o, as οὐλαμός, ὄψ, &c. (§ 393), we find similar conditions. The traces of F are undoubted, but do not predominate as with avas or aotu. Other examples may be seen in the traces of the double consonants, σρ, σλ, σν, fρ discussed in § 371. Compare the free use of alternate forms, as ἔρεξα and ἔρρεξα, προ-ρέω and ἐπιρρέω, with the almost invariable recognition of &F in Séos, Seivas, &c. We seem to be able to draw a broad distinction between the predominating influence of the F in Homer and the arbitrary or occasional influence of the older forms in other cases. And these other cases, we may conclude, give us a measure of the force of tradition in such matters, while in the case of the Homeric F the effect is due to its retention as a living sound.
- (3) A further argument in favour of F as a real sound in Homer has been derived from the places in which F_{ϵ} , F_{0i} suffer elision (§ 391); see Leaf's note on Il. 24. 154. The argument has much force, and would be conclusive if we could assume that an elided vowel was not sounded at all.
- 402.] Hiatus &c. as a survival. Another supposition, akin to the last discussed, is that in the words which originally had initial F the ordinary effects of an initial consonant remained after the sound itself was no longer heard. Such a phenomenon would be by no means without parallel in language. In French,

for instance, elision is not allowed before certain words beginning with h, as le héros, la hauteur, though the h is no longer pronounced. Similarly, then, it may be held that the facts of Homeric metre only prove the habit or rule of treating certain

words as if they began with F.

On the other side it may be urged that the h of $h\acute{e}ros$, hauteur, &c. is only traced in one way, viz. by hiatus, and that only in a small number of combinations; whereas the F not only protects hiatus, but also makes Position. Moreover the retention of a traditional usage of this kind is very much easier in an age of education. Anomalies which would naturally disappear in a few years are kept alive by being taught to successive generations of children. It seems difficult to believe that the F would have kept its present place in the memory of the poets unless it were familiar, either to the ear as a present sound, or to the eye as a letter in the written text.

403.] Explanation from the nature of the F. The theory recently advanced by Prof. Hartel is one to which it is difficult to do justice in a short statement. The careful re-examination which he has made of the metrical facts has convinced him that the influence of the F is not occasional or arbitrary, but in the strictest sense universal in Homer. He does not however regard the passages in which the F appears to be neglected as corrupt or spurious, but explains them on the theory that the F in Homer has not the full value of an ordinary consonant: comparing it, for instance, not with the initial V of Latin, but with the sound which that letter has in the combination QV.

Hartel's chief argument is that hiatus after short vowels is the most common of the metrical facts pointing to a lost F, and especially that it is much commoner than lengthening by Position, the numbers being 2995 and 359 respectively. But the force of this argument depends in the case of each word on the metrical form: thus before a word of iambic form the syllable must be short, hence we may find hiatus, but not lengthening: before an anapaest the reverse holds good. If (using Hartel's list) we take the instances in which F is followed in the verse by two short syllables—the words being α̈γεν, αλις, ἔαρος, ἔλικες (with ἐλίκωπες, &c.), ἔπος, ἐρύω, ἔτος, ἰαχή, ἴδον—we shall find that they number 415, and the F makes Position in 98. But this is not materially different from the proportion which will be found to obtain in the case of any common word of the same metrical form (such as πόλεμος).

404.] f in other Greek dialects. It seems desirable here to say something of the uses of the Digamma which are found on the older inscriptions of the chief Doric and Æolic dialects.

The forms preserved on these inscriptions do not indeed prove anything directly as to the Homeric digamma. We cannot infer from them, for instance, that the symbol F was ever used in any written copies of the poems, or that the sound which it represented in other dialects was known to the Homeric language. But they may serve by way of analogy to direct our conjectures on these questions.

The most striking examples of F are found on the inscriptions of Corinth and its colony Coreyra (as Γεκάβα, Γιόλα σος, Γίφιτος, ΔΕεινίας, Αίτας, Ξέντων, Ξεντάρεος, ορίος, Τλασίατο, &c.). With these may be placed the Argive inscriptions (in one of which occurs $\Delta(Fi)$, and the few Laconian inscriptions. In the older monuments of these dialects initial F is never wanting; but omission in the body of the word is occasionally found, as in Δαίφοβος and Πολυξένα (on the same Corinthian vase), and several names ending in -κλη̂s (for -κλέξηs), and -λas (for -λafos). The scanty Phocian inscriptions yield the important forms $F \in \xi$, alf ϵi , $\kappa \lambda \epsilon f$ os, with no early examples of omission; and the little known Pamphylian dialect is equally constant, so far as it has been made out. The Locrian dialect shows more decided indications of falling off in the use of the digamma. On the inscriptions of that dialect (discussed by Prof. Allen in Curt. Stud. iii. 207 ff.) we find it in Fαστός, Γέκαστος, Γεκών, Γέτος, Γεσπάριος, Foiκos and its compounds (ἐπίΓοικος, &c.), also in καταιΓεί, ΓεΓαδηκότα: but not in δαμιωργός, ξένος, έννέα, Όπώντιος (for original 'OποΓέντιος'). The only initial f which is wanting is in the word ἱστίαι (we may compare the Laconian and Homeric $\dot{\epsilon}\phi\dot{\epsilon}\sigma\tau\iota\sigma$). Similarly in the older Elean inscriptions initial F is regular (Γάργον, Γέπος, Γράτρα, &c.); and we have also Έργαοιοι (people of Heraea?), εξέρεν (prob. an Infinitive), but ξένος, Διός without F. In the great inscription of Gortyn initial F appears in Fós (suus), Fίν (='Fοι), Γέκαστος, Γεκάτερος, Γέρξαι, Γεργασία, Fήμα (είμα), Γείπαι, Γοικεύς, Γοίνος, Γίκατι, Γεξήκοντα, and is only lost in ἀνά, ἀνάω (before ω, § 393). The F is also found in Compounds, as ενδοική, προδειπάτω, δυοδεκαδετίες, and in the body of the word FioFómoipos, but disappears between vowels, as in λάω (Gen. of λαος a stone), αλεί, παιδίον, the oblique Cases of Nouns in -us and -eus (viées, Foikéa, δρομέες, &c.), and the contracted words $\tilde{a}\tau a$ ($\tilde{a}f\tilde{a}\tau\eta$) and $\tilde{a}s$ (for $\tilde{a}fos$, = $\tilde{\epsilon}\omega s$). It is also lost before ρ , as in $\partial \pi \rho \rho \rho \eta \theta \dot{\epsilon} \nu \tau \iota$.*

A somewhat later stage in the use of F is well exemplified by the numerous Boeotian inscriptions. In these the general rule is that initial F is retained: the only word from which it is regularly absent is $\tilde{\epsilon} \kappa \alpha \sigma \tau \sigma s$. On the other hand the only instances of

^{*} Baunack, Die Inschrift von Gortyn, pp. 37-39, 68.

F in the body of a word are, the compound $F\iota\kappa\alpha\tau\iota F\acute{\epsilon}\tau\iota\epsilon\varsigma$ (ε $\iota\kappa\sigma\sigma\iota$ ετέες), and a group of derivatives of ἀείδω (αὐλαFυδός, τραγα-Fυδός, &c.). The same rule applies to the Arcadian inscriptions, which however are too few to be of importance. The further progress of decay may be seen in the Doric dialect of Heraclea, of which a specimen remains in the well known Tabulae Heracleenses (of the 4th cent.). We there find $f\acute{\epsilon}\xi$, $F\acute{\epsilon}\tau os$, $F\acute{\epsilon}\delta\iota os$, $F\acute{\epsilon}\kappa a\tau\iota$ and the compound $\acute{\epsilon}\gamma$ - $F\eta\lambda\eta\theta\iota \omega\tau\iota$ (= $\acute{\epsilon}\xi$ - $\epsilon\iota\lambda\eta\theta\omega\sigma\iota$), but $\acute{\epsilon}\kappa a\sigma\tau os$, $\iota\sigma os$, $\iota\sigma e\rho\xi\acute{o}\nu\tau\iota$, $\tau\epsilon\nu\tau a\acute{\epsilon}\tau\eta\rho\iota s$, $\iota\rho\gamma\iota o\iota$ εναι oικία, $\iota\rho\iota$ ητρα: from which it follows that the use of F even as an initial sound must have been fluctuating. A similar condition of at least partial loss of F is found in inscriptions of Melos.

If we do not confine our view to the character F, but look to the other indications of the sound which it represented, the most important evidence is that furnished by the Cyprian inscriptions. The forms which they yield belong, generally speaking, to an earlier period of the language than is known from alphabetical inscriptions. Yet the use of the sounds answering to F is not uniform: we have $\Delta \iota F \delta s$ and $\Delta \iota \delta s$, $\beta a \sigma \iota \lambda \delta f \delta s$ and $\beta a \sigma \iota \lambda \delta \delta s$.

An original F is represented by β in several parts of Greece, especially Laconia, Elis, Crete: but probably the β is merely a graphical substitute for F. It is found in the inscriptions of later times, when β was probably = our v.

The substitution of \mathbf{v} for f is characteristic of the Æolic of Lesbos, as $\epsilon \mathring{v}\iota \delta \epsilon$ (for $\mathring{\epsilon} F\iota \delta \epsilon$), $a\mathring{v}\omega s$, $\delta \epsilon \acute{v}o\mu a\iota$, $\mathring{\epsilon}v\delta \epsilon v \acute{\eta}s$ ($=\mathring{\epsilon}v\delta \epsilon \acute{\eta}s$). In these forms the f is vocalised; ep. Homeric $a\mathring{v}\iota a\chi os$ ($=\mathring{a}-F\iota a\chi os$), $\epsilon \mathring{v}a\delta \epsilon$, $\tau a\lambda a\mathring{v}\rho \iota vos$.

It is necessary here to notice a group of uses of the F in which it seems to have been developed from a neighbouring vowel (υ or ο). The vowel usually precedes, as in Laconian ἐδήδοΓας, ἐδήδοΓες, Coreyrean ἀριστεύΓοντα, Boeotian ΕὐΓαρα, βακευΓαι, Cyprian ΕὐΓάλθων, ΕὐΓαγόρω, κατεσκεύΓασε: but we also find ΤλασίαΓο (Coreyr.), ΓίλγαΓος (Cypr.), ΤιμοχάριΓος (Cypr.), Γότι (Loer.). So perhaps the Boeotian αὐλαΓνδός, τραγαΓνδός, &c. (see above). With the former instances we might compare Italian Genŏva, Padŏva (for Genua, Padua); with the latter the u of Italian uomo, uopo, the w of whole, the provincial English wuts for oats, &c. With Γότι we should compare the form NαΓπάκτιος, also Locrian. Both are exceptional, and indeed must be considered as mere errors:* but they help to show how near F was to a pure vowel sound. It is evident that this redundant F, growing

^{*} The ordinary form Nαύπακτος occurs on the inscription 19 times, the form with Nα_f- only once. Similarly against the single instance of f⁶τι are to be set 2 instances of δτι, and 5 others of the Relative δς, in the older Locrian inscription. See Allen in Curt. Stud. iii. p. 252; Brugmann, ibid. iv. p. 133, n. 57: Tudeer, De digammo, p. 45.

out of the vowel v or o, is a parallel phenomenon to the loss of F before these vowels which was noticed above as a characteristic of Homer (§ 393).

- 405.] F in Ionic. There remains the interesting question whether the existence of the F in Ionic can be traced in inscriptions. The evidence appears to be as follows (Tudeer, De digammo &c. pp. 5 ff.):—
- (1) The form AFΥTO (= αὐτοῦ) on a Naxian inscription of the end of the 6th century B.C. But, as has been pointed out,* the F of ἀFυτός indicates at most a special way of pronouncing the υ, and is to be compared with the erroneous NάFπακτος noticed above.
- (2) The name of the city of Velia, which was founded by exiles from Phocaea (Fέλεα marshes; but see § 393).

(3) The forms FIO, ΓΑΡΥΓΟΝΕΣ, OFATIEΣ—all proper names—on vases found in Magna Graecia, and supposed to have come from Chalcis in Euboea, or one of its Italian colonies.

It is inferred by Tudeer (?.c.) that the F must have been a living sound in the Ionic dialect of Euboea at the time when the colonies of Chalcis were sent to Magna Graecia, i.e. probably in the 8th century B.C. On the other hand, since there is no example on the inscriptions of Euboea itself, the sound does not seem to have survived there down to the date of the earliest examples of writing, viz. the 6th century B.C. Hence Tudeer puts the loss of the f in Ionic Euboea at some time between the 8th and the 6th centuries.

It has been recently pointed out by P. Kretschmer (K. Z. xxxi. 285) that the Ionic change of \bar{a} to η cannot be placed very early. The name Mηδοι underwent the change,—the original \bar{a} appears in the form Mάδοι on the monument of Idalion—and the Medes must therefore have become known to the Ionians before it was completed. The Persian names which reached Ionia later— $\Delta \bar{a} \rho \epsilon \hat{i} o s$, Mιθριδάτηs, &c.—retain their \bar{a} . Similarly the old Carian Μίλατοs became the Ionic Μίλητοs. Hence the Ionic η is later than the contact of Ionians with the nations of Asia Minor. Now the anomalous η after ρ in the Attic κόρη and δέρη is to be explained from the older forms κόρδη, δέρδη (ep. κόρρη from κόρση). Consequently the loss of δ in Attic must be later than the change of \bar{a} to η , and a fortiori later than the Ionian migration. This inference is confirmed by the σ of the Comparatives κενότεροs and στενότεροs, pointing as it does to the forms

^{*} By Brugmann, Curt. Stud. iv. p. 132, n. 55, and Tudeer, p. 7.

κευΓός, στευΓός (since the lengthening of the ε, as in Ionic κεινός,

στεινός, never took place in Attic).

The former use of F as a letter in all Greek alphabets is shown by its use as a numeral, and also by the existence of the first non-Phoenician letter, Υ . The addition of Υ , which was the earliest made, and perhaps contemporaneous with the introduction of the alphabet, shows that the Greeks felt the need of a vowel distinct from the labial spirant Vau. Otherwise the Phoenician Vau would have served for the vowel υ , just as the Yod was taken for the vowel ι . And as there is no Greek alphabet without Υ , it follows that the consonant F was equally universal.*

Combining these inferences with the independent evidence furnished by the metre, we may arrive at some approximate conclusions regarding the value of f in the Ionic of Homer.

- (a) Initial F had the value of a consonant, except before o or o (§ 393).
- (b) δF was retained, not only at the beginning of a word (§ 394), but also in $\xi \delta F \epsilon \iota \sigma a$, $\delta \epsilon \delta F \iota a$, &c.: we can hardly suppose compensatory lengthening in these forms.
- (c) F between vowels is more doubtful (§ 396). Since initial F was lost as early as Homer before \circ or ω , it probably vanished before most Case-endings of the Second Declension, and before the -os, - ω v of the Third Declension. Thus for $\lambda a F \delta s$, &c. we should have $\lambda a \delta s$, $\lambda a \delta v$, &c. (but F possibly in $\lambda a F \delta \iota$, $\lambda a F \delta \iota v$): and again $\dot{\eta} \delta \dot{v} s$, $\dot{\eta} \delta \dot{\epsilon} o s$, $\dot{\eta} \delta \dot{\epsilon} f \iota$, &c., $\Pi \eta \lambda \dot{\epsilon} \dot{v} s$, $\Pi \eta \lambda \dot{\eta} o s$, $\Pi \eta \lambda \dot{\eta} f \iota$, &c. Then other Cases might follow the analogy of the Gen. Sing. and Plur., and so drop the F altogether. However this may be, it is clear that F between vowels was generally lost much earlier than F at the beginning of the word (cp. Italian amai for amavi, &c.). The absence of contraction proves little, as we see from the Attic $\chi \dot{\epsilon} \omega$, $\dot{\epsilon} \chi \dot{\epsilon} a$, and the same time we occasionally find a partial survival of F in a vocalised form, making a diphthong with the preceding vowel (§ 396).

^{*} As the Vau is written \forall on the Moabite Stone, it has been suggested that it was the source of the Greek T. It seems not improbable that the letters \digamma and T were at first only two forms of Vau, appropriated in course of time to the consonant \digamma and vowel \mathfrak{v} ,—just as our u and v come from the two uses of Latin V. If this is so, the place of T at the end of the then alphabet is significant, as showing the importance attached to the original order of the letters. See Roberts, Greek Epigraphy, § 11: Taylor, The Alphabet, ii. p. 82.

APPENDIX.*

C. On n and et in Homer.

This seems the most convenient place for a short statement of the question as to the spelling of the Subjunctives formed from Stems in $-\eta$, and of some other forms about which similar doubts have arisen.

- 1. In the case of Stems in which -η represents an older -ā the MSS. usually have ει before ο, ω, but η before ε, η. Thus in the Subj. of ἔβην, ἔστην we find βείω, στείωσι, &c., but βήης, στήετον, &c. There are one or two exceptions: καταβήομεν once in A (II. 10. 97), ἐπιβήομεν in good MSS. of the Odyssey (6. 262., 10. 334). Aristarchus however wrote περιστήωσ' in II. 17. 95 (where all the MSS. have περιστείωσ'), and βήομαι in II. 22. 431 (where the MSS. have either βείομαι or βίομαι): from which it may be inferred that he wrote η in all similar forms.
- 2. In the Subjunctives from Stems in $-\eta$ (the short Stem ending in $-\epsilon$), the MSS. always have ϵ 1 before ϵ , ω , and usually before ϵ , η . Thus we find $\theta\epsilon i\omega$, $\theta\epsilon i\eta s$, $\theta\epsilon i\eta$, and less commonly $\theta\eta\eta s$, $\theta\eta\eta$, &c. But Aristarchus wrote $\theta\eta\eta s$, $\theta\eta\eta$, &c., and so in all similar cases, $\delta a\mu\eta\eta$, $\sigma a\pi\eta\eta$, &c. As to $\theta\epsilon i\omega$, $\delta a\mu\epsilon i\omega$, &c., no express statement of his opinion has been preserved. If we may argue from this silence, we should infer that the question had not arisen, and therefore that with these Stems the spelling $-\epsilon \iota \omega$, $-\epsilon \iota \omega \mu \epsilon \nu$, &c. was anciently universal.
- 3. The spelling with ει appears in some forms of the Aor. ἔκηα (for ἔκηνα, see § 15), esp. κείωμεν, κείωντες, κείωντο, κειάμενοι, κακ-κεῖωι; also in the Pf. Part. τεθνειώς, and the 3 Plur. forms εἴαται, εἴατο, ἀκαχείατο. Aristarchus certainly wrote ἕκηα, τεθνηώς: and the form ἤαται (for ἥσ-αται) is supported by ancient authority (Eust. Od. 20. 354.)
- 4. In the declension of Stems in $-\epsilon\epsilon\sigma$ (for $-\epsilon F\epsilon\sigma$ -) we sometimes find η throughout, as ' $H\rho\alpha\kappa\lambda\hat{\eta}\sigma$ s, ' $H\rho\alpha\kappa\lambda\hat{\eta}\sigma$ s, ' $H\rho\alpha\kappa\lambda\hat{\eta}\sigma$ s, sometimes η before $\epsilon\iota$ and ι , but $\epsilon\iota$ before α , α , ω : as $d\kappa\lambda\eta\epsilon\hat{\iota}s$, $\zeta\alpha\chi\rho\eta\epsilon\hat{\iota}s$, but $d\kappa\lambda\epsilon\hat{\iota}\hat{\omega}s$, $\epsilon\hat{\nu}\kappa\lambda\epsilon\hat{\iota}\alphas$, $\epsilon\hat{\nu}\rho\rho\epsilon\hat{\iota}\sigma$ s, $\zeta\alpha\chi\rho\epsilon\hat{\iota}\hat{\omega}\nu$. So $\delta\epsilon\hat{\iota}\sigma$ s, $\sigma\pi\epsilon\hat{\iota}\sigma$ s, but $\sigma\pi\hat{\eta}\tilde{\iota}$, $\sigma\pi\hat{\eta}\epsilon\sigma\sigma\iota$. In all these cases, however, the uncontracted $\epsilon\epsilon$ should probably be substituted for η or $\epsilon\iota$ (§ 105, 15). In $\chi\epsilon\rho\eta\tilde{\iota}$, $\chi\epsilon\rho\eta\epsilon s$, $\chi\epsilon\rho\epsilon\iota\alpha$ (Aristarchus and most MSS.) the origin of the long vowel is not quite certain (§ 121).

ίω (z 280)

^{*} The matter contained in the Appendix to the first edition under the headings A, B, D and E has now been incorporated with the body of the work.

5. The Attic -εω- in πλέως, κρεω-φάγος, χρεωκοπέω points to original πλη̂ος, κρη̂ας, χρη̂ος, instead of the usual πλεῖος, κρεῖας, χρεῖος. And έως, τέως are for η̊ος, τῆος (not εἴως, as in the MSS.).

 So Attic -εā points to -ηa, and accordingly we should have φρῆαρ, στῆαρ (instead of φρεῖαρ, &c.); and similarly ὅνηαρ.

The rule adopted by Bekker and La Roche is phonetic. They write ϵ_{ι} before o, ou, ω , a, but η before ϵ , ϵ_{ι} , η , ι . Thus they give $\sigma\tau\epsilon\iota\omega$, $\sigma\tau\eta\eta s$; $\theta\epsilon\iota\omega$, $\theta\eta\eta s$; $\mathring{\eta}\mu a\iota$, $\epsilon \mathring{\iota}a\tau a\iota$: and so on. This rule, however, is purely empirical.

On the other hand the scholars who look at the question as an etymological one are inclined to prefer n in all the instances in question. They hold that if (e.g.) we find the strong Stem $\theta \eta$ - in $\tau i \theta \eta$ μι, θή-σω, ἔθηκα, &c., it must also be found in the Subjunctive. And they point out that in this and similar cases there is a special reason for distrusting, not only the extant MSS. (which are admittedly liable to error from itacism), but also the statements of the ancient grammarians, so far at least as they may be regarded as founded upon MSS. of the 4th century B.C. The older alphabet, which was used in Athens down to 400 B.C., employed the same character E for three distinct sounds, viz. the short ϵ , the long η , and (in many words) the diphthong et. This would not lead to practical difficulty with a living language, but in the case of Homeric forms there was nothing to prevent confusion except the metre, and (it may be) the traditional pronunciation of the rhapsodists. There is therefore no good ground for believing that the spelling even of the 4th century B.C. could be trusted to decide between n and & in any form which was then obsolete.

The substitution of $\epsilon \iota$ for η , however, is not a matter of chance, but depends on the circumstance that in later Greek $\epsilon \iota$ represented a single long vowel of the same quality as the short ϵ (probably a close e, such as French \hat{e}), while η was of different quality (a more open e, French \hat{e}). Accordingly when Homeric η passed into ϵ in Attic, as in $\tau \epsilon \theta \nu \eta \omega s$, $\tau \epsilon \theta \nu \epsilon \omega s$, there was a special tendency to make the archaic long vowel (which the metre requires) as like as possible to the ϵ of the living speech. So the forms $\sigma \tau \dot{\eta} \omega$, $\theta \dot{\eta} \omega$, $\sigma \tau \dot{\eta} \omega \mu \epsilon \nu$, &c. would be liable to change their η to $\epsilon \iota$ under the influence of the New Ionic $\sigma \tau \dot{\epsilon} \omega$, $\sigma \tau \dot{\epsilon} \omega \mu \epsilon \nu$, &c.; and so too $\dot{\eta} o s$, $\tau \dot{\eta} o s$ became $\dot{\epsilon} \dot{\omega} s$, $\tau \dot{\epsilon} \dot{\omega} s$ from the influence of $\dot{\epsilon} \omega s$, $\tau \dot{\epsilon} \omega s$. We may even suppose that η first became ϵ , and this ϵ was afterwards lengthened to fit the metre,—just as Wackernagel supposes $\dot{\delta} \rho \dot{\omega} \omega$ to have been changed to $\dot{\delta} \rho \dot{\omega} \omega$ through the intermediate form $\dot{\delta} \rho \dot{\omega}$ (§ 55).

A similar account is to be given of the forms which exhibit ει for ευ or εf, as πνείει breathes, θείειν to run, χείη (Subj.) shall pour, πλείοντες sailing, κλείονσι celebrate (§ 29, 3). The original Present is preserved in σεύω and δεύομαι, cp. the Aorists ἔχευα, ἢλεύατο. When -ευω passed into -εfω and then -εω, the ε was lengthened by the force of the metre, and became ει. So the ει of κείαντες (for κηύαντες or κήαντες, from καίω) is to be attributed to the Attic I Aor. Part. κέας. But the Verbs in -ειω (§ 51, 3), or some of them, may be Verbs in -ηω: e.g. ὀκνήω, like Æolic ποθήω, ἀδικήω.

It is probable that in the same way the \bar{a} of φάεα (Plur. of φάος), ἀήρ, ἀείδω, ἄασε, ἄιον, ἄεσα, ἄορ, ἀλιαής, ζαής, &c. represents au. The lengthening cannot well be merely metrical, as in ἀθάνατος &c. (§ 386).

In some cases ϵ_{ι} takes the place of an ϵ which was long by Position: as $\delta \epsilon i \delta o \iota \kappa a$ for $\delta \epsilon \delta F o \iota \kappa a$, and perhaps $\epsilon i \delta a \rho$ for $\epsilon \delta F a \rho$.

The readiness to put ει for ε, especially before a vowel, appears in Ionic inscriptions of the 4th century B.C. where we find (e.g.) the forms δειόμενον, δείηται, δείωνται, ἐννεία, ἱδρύσειως, πόλειως, and Genitives in -κλειους (H. Weir Smyth, The Vowel System of the Ionic Dialect, in the Trans. of the Am. Phil. Ass. xx. p. 74: G. Meyer, Griech. Gr.² § 149). It is worth observing that these inscriptions belong to the same period as the MSS. in which, as we gather from the criticism of Aristarchus, such forms as τεθνειῶτας, στείωσι, βείω, &c. first found their way into the text.

F. Fick's theory of the Homeric dialect.

The theory put forward by Aug. Fick in his two works on Homer (Die homerische Odyssee in der ursprünglichen Sprachform wiederhergestellt, 1883: Die homerische Ilias nach ihrer Entstehung betrachtet und in der ursprünglichen Sprachform wiederhergestellt, 1886) admits of being stated in a very few words. He holds that the poems (with certain exceptions) were originally composed in an Æolic dialect; that some three centuries later (about 540 B.C.) they were translated into Ionic; and that in this process every Æolic word for which there was no metrically equivalent form in Ionic was simply left unchanged. Thus, in his view, was formed the Epic dialect of literature,—a dialect mainly Ionic, but with a considerable admixture of Æolic forms.

The arguments which Fick advances in favour of this theory are not entirely linguistic. The scene of the Iliad, he reminds us, is

laid in Æolis; the heroes and legends are largely those of the Æolic race; the parts of Ionia which tradition connects with Homer adjoin Æolic settlements; and Smyrna, which figures in some of the oldest traditions as his birthplace, was for a time an Æolic city. Now if the poems were first composed in some Æolic district of the northwest of Asia Minor, and passed thence to Ionia, they would take an Ionic form; and, as the result of the supremacy of Ionia in art and literature, that form, though full of anomalies and half-understood archaisms, would naturally hold its ground as the accepted text of Homer, and become the standard to which later poets, both of the Homeric and the Hesiodic school, would be obliged to conform.

The linguistic arguments upon which Fick chiefly relies are as follows:

I. The f or 'digamma,' which is required by the metre of Homer, is an Æolic letter, unknown to the earliest extant Ionic. Moreover the vocalisation of the f seen in a number of Homeric words (ablaxos and the like, § 396) is characteristically Æolic: cp. the Æolic $\epsilon \tilde{u} \delta \epsilon$ (for $\tilde{\epsilon} - f \epsilon \delta \epsilon$), $a \tilde{v} \eta \rho$ (for $a f f \rho$), $a \tilde{v} a \tau a$ ($= \tilde{a} \tau \eta$), &c. The prothetic ϵ - of $\tilde{\epsilon} \epsilon \delta v a$ ($\tilde{\epsilon} - f \epsilon \delta v a$), $\epsilon \epsilon (\kappa \sigma \sigma \tau)$, $\epsilon \epsilon \epsilon \rho \gamma \omega$, &c. is also Æolic.

In order to prove that f never existed in Ionic Fick appeals to the Ionic inscriptions, and the early Ionic poets. This evidence, however, does not go back beyond the 7th century B.C., and therefore proves nothing for the original language of Homer. As we have seen (§ 405), there is reason to believe that the loss of f in the Ionic dialect was subsequent to the first settlements of Ionians in Asia.

2. The Æolic accent and breathing are found in a number of Homeric words. Thus the barytone accent appears in the Nominatives in -ἄ (as μητίετα, &c.), in the Perfect forms ἀκάχησθαι, ἀκαχήμενος, ἀλάλησθαι, ἀλαλήμενος, ἐγρήγορθαι, also in ἀπούρας, ζάης, ἄλλυδις, πόποι; the smooth breathing in ἄλτο (ἐπ-άλμενος), ἔμμορε, ὑββάλλειν, ἤμβροτον, ἤμαρ, ἄμαξα, ἄμυδις, ἀμόθεν, ἦμος, ἐπ-ίστιον, αὐτ-όδιον (ὁδός); and both peculiarities in the Pronouns ἄμμες and ὕμμες.

The answer is suggested by Fick himself,—though he makes it apply to a small part only of these forms.* It is that the accent and breathing of the Æolic words in Homer was determined by the

^{* &#}x27;Für ὅμμες, ὅμμεν, ὅμμε und ὑββάλλειν mag die psilose aus dem äolischen dialect erschlossen sein, in den übrigen fällen liegt wohl ächte überlieferung vor '(Odyssee, p. 12). Where is the evidence of any such tradition? Whenever the grammarians have to do with a form which was obsolete or archaic in their time, they are evidently quite at a loss.

living Æolic dialect. Let us take the form $\tilde{\alpha}\mu\mu\nu(\nu)$ as a typical instance. Fick holds that the Æolic $\tilde{a}\mu\mu\tilde{\iota}(\nu)$ was adopted by the Ionic reciters and preserved with all its Æolic features—the double μ , the smooth breathing, the barytone accent—for several generations, because the Ionic $\tilde{\eta}\mu\tilde{\iota}\nu$ is metrically different (— instead of — \cup). The alternative is to suppose that the original Homeric language had a form with short $\tilde{\iota}$ —as in Doric $\tilde{a}\mu\tilde{\nu}\nu$ —and that in later times, when this form had gone out of use, the Æolic $\tilde{\iota}\mu\mu\nu(\nu)$ took its place in the text. Such a substitution is eminently natural. The rhapsodists were doubtless familiar with the Æolic Pronouns, and their adoption of the form $\tilde{\iota}\mu\mu\nu(\nu)$ was simply putting the known in place of the unknown. In the case of $\tilde{\iota}\mu\mu\nu(\nu)$ and $\tilde{\iota}\beta\beta\hat{\iota}\lambda\lambda\epsilon\nu$ Fick himself takes this view. But if the form $\tilde{\iota}\mu\mu\nu(\nu)$ was maintained by the influence of contemporary Æolic, we need go no further for an explanation of the whole group of forms of which it is the type.

3. Several of the inflexional forms of Æolic are more or less frequent in Homer, and their occurrence, according to Fick, is subject to a law which holds almost without exception, viz. that the Æolic form is used (1) whenever the corresponding Ionic form is different in quantity, and therefore is not admitted by the metre, and (2) when the word itself is wanting in Ionic. In either case the simple substitution of Ionic for Æolic was impossible. On the other hand the Ionic of Homer can be translated back into Æolic without encountering any difficulty of the kind.

The forms to which Fick applies his argument are: the Fem. Voc. in -ἄ (νύμφᾶ), the Gen. in -οιο (-οο), -ᾶο, -ᾶων: the Dat. Plur. in -εσσι(ν): the Gen. of Pronouns in -θεν: the forms ἄμμες, ἄμμιν, ὔμμες, ὔμμιν, ὔμμε: the Pres. in -ᾶω. -ηω (-ειω), -ωω: the Inf. in -μεναι and -μεν: the Pf. Part. in -ων (as κεκλήγων for κεκληγώς): the Nouns in -ᾶος, -ᾶων (λαός, ὀπάων, διδυμάων, and many proper names); θεά, Nαυσικάα, and some proper names in -ειᾶ, -ειᾶς (in Ionic -εης). Other Æolic words in Homer are γελος (γέλως), πλέες (πλέονες), πίσυρες (Ion. τέσσερες), ἤμβροτον (ἤμαρτον)—all metrically different from the Ionic form. In several instances the corresponding Ionic form would have suited the metre, but was not in use; so θεά (Ionic only θεός), πολυπάμων (Æol. πέπαμαι=κέκτημαι), ἔμμορε (in Ionic only Middle εἴμαρμαι), ἐννῆμαρ, ἐννοσίγαιος, ἀργεννός, ἐρεβεννός. So ὅππως was retained because the Ionic form was ὅκως, never ὅκκως: and ὅππως again led to the retention of ὅπως.

In order to determine how far these forms are proofs of an Æolic

Homer, it is necessary to distinguish between those which are specifically Æolic, i.e. Æolic modifications of a common original, and those which are simply the older forms, which Ionic and other dialects modified each in its own way. To the latter class belong the Gen. endings -o.o (Indo-Eur. -osyo), -āo, -āων (New Ion. -εω, -εων), the Voc. in -ἄ, the Inf. in -μεναι, -μεν. These are forms which would be found everywhere in Greece, if we could trace the different dialects far enough back. They are 'Æolic' only because they were retained in Æolic (among other dialects), but were altered or lost in Attic and Ionic. The same may be said of the endings of the Pronouns ἄμμεs, &c. They appear also in the corresponding Doric forms ἁμεs, ἑμεs, Dat. ἑμμεs, ἑμεν, ἑμεν. In these cases, then, we only know that a form is archaic, not that it belongs to any one dialect.*

On the other hand there are some forms to which this account does not apply. The Dat. Plur. in -eooi is not proved to be 'Panhellenic,' and is certainly less primitive than the form in -ou (§ 102). The case stands thus: Ionic has only -oi, Æolic only -cooi, in Homer both are found (-εσσι being rather less frequent). Therefore, says Fick, the language of Homer is Æolic, -not the later Æolic, in which every Dat. Plur. ended in -cool, but an earlier, in which -cool had begun to take the place of -or. The same may be said mutatis mutandis of the Genitives εμέθεν, σέθεν, εθεν, and the Participles κεκλήγων, κεκόπων (§ 27). The argument here has greater weight than in the case of Pan-hellenic inflexions, but it is not conclusive. The forms now in question are not confined to Æolic: they appear occasionally in Doric, and in the dialects of northern Greece. There was therefore a general tendency towards these forms, and the dialect of Homer may have shared in this tendency without being thereby proved to be non-Ionic.

In the case of the Genitives in -o10 and the Voc. in -a the argument may be pressed somewhat further. The forms -o10 and -o10, which are found together in Homer, represent different steps of a phonetic process (-010, -010, -00): therefore they cannot have subsisted together in any spoken dialect, and -o10 in Homer must be an archaism, preserved by literary tradition. This conclusion is

^{*} Undue stress has been laid upon the variety of forms of the Infinitive in Homer: e.g. $\theta \neq \mu e \nu$, $\theta \neq \mu e \nu$, $\theta \in \mu e \nu$. Originally there were as many Infinitive endings as there were different ways of forming an abstract Substantive. In Vedic Sanscrit, where the Infinitive is less developed than in Greek, the variety of formation is much greater (Whitney, § 970).

confirmed by the Homeric use of the ending (§ 149, 3). If then Fick is right in regarding -oto in Alcaeus as taken from the living Eolic of Lesbos (Odyssee, p. 14), it follows that Lesbian retained a form which had died out of the supposed old Eolic of Homer's time. Again, the Fem. Voc. in - $\check{\alpha}$ appears to be regular in Lesbian Eolic: whereas in Homer it is found only in the isolated $\nu \acute{\nu} \mu \rho \check{\alpha}$. This is therefore another point in which historical Eolic is more primitive than Homer. The argument would apply also to the Gen. in - $\check{\alpha}$ o and - $\check{\alpha}\omega\nu$, if it were certain that - $\varepsilon\omega$ and - $\varepsilon\omega\nu$ belong to the original Homeric language.

4. Among the forms now in question there are many instances of ā for which Ionic must have had η, and which therefore—Fick argues—cannot have come to Homer from Ionic. Such are, the Gen. in -āo, -āων, which must have appeared in Old Ionic as -ηο, -ηων, whence New Ionic -εω, -εων: the Participles πεινάων, διψάων: the Nouns in -āos, -āων: the word θεά, and some proper names, Έρμείαs, Αἰνείαs, 'Ρεία, Φεία, Ναυσικάα: the words λᾶαs, ἀήρ (Gen. ἡέροs), δαήρ (§ 106, 1), τετρ-άοροs (Od. 13. 81), perhaps also the Perfects ἐāδώs, ἔāya (§ 22, 1). The normal change to η appears in νηῦς (νηός for νηξός, &c.), νηός temple, ἡώς, ἡέλιος, παρ-ήορος, δήῦςς (Æol. δāξιος), κληΐς, ῥηΐδιος, πηός. Against the Nouns in -αων we can only set the single form παιήων.

In the first place, it is very probable (as has been shown in § 405), that the Ionic of Homer's time still had the sound of \bar{a} in all these forms. This however is not a complete answer to Fick. We have to explain how this primitive \bar{a} was retained in these particular cases, when the change of \bar{a} to η took place generally in the dialect. For we can hardly suppose that the change of $-\bar{a}$ 0, $-\bar{a}$ 0 to $-\eta$ 0, $-\eta$ 0 (on the way to $-\epsilon$ 0, $-\epsilon$ 0) could have been made in the spoken language without extending to the recitation of poetry.

The true answer seems to be that the retention of ā in Homer was due, generally speaking, to the influence of the literary dialects, especially Attic and Æolic.

Let us take the case of $\lambda \alpha \delta s$ ($\lambda \tilde{a} f \delta s$), which in some ways is typical. The Ionic form $\lambda \eta \delta s$ is quoted from Hipponax (fr. 88 Bergk), and is preserved, as Nauck acutely perceived (Mél. gr.-rom. iii. 268), in the Homeric proper names $\lambda \eta \tilde{u} \tau o s$, $\lambda \epsilon \iota \omega \kappa \rho \iota \tau o s$ (for $\lambda \eta \delta \kappa \rho \iota \tau o s$), and $\lambda \epsilon \iota \omega \delta \eta s$ ($\lambda \eta o - f \delta \delta \eta s$). Fick supposes that when Homer was translated into Ionic the form $\lambda \eta \delta s$ had become antiquated, and accordingly, as $\lambda \epsilon \omega s$ was metrically different, $\lambda \alpha \delta s$ was retained. If so, however, the proper names would δs fortiori have remained in their Æolic form

(Λάιτος, Λαόκριτος), just as the older form *θέρσος for θάρσος is preserved in the names Θερσίτης, Θερσίλοχος, 'Αλιθέρσης, Πολυθερσείδης, &c. For in a proper name a stem is comparatively isolated, and thus may escape the influence of later usage. It follows that there was a time when $\lambda \eta \delta s$ was the proper Homeric form. Why then do we find $\lambda a \delta s$ in our text? Doubtless because it was the established form in Old Attic, and in other dialects familiar to the rhapsodists of the 6th and 5th centuries. In the case of so common a word this influence was sufficient to change \(\lambda\) os back into \(\lambda\) or (it may be) to prevent the change to Anos from taking place.*

The same considerations apply to ίλαος, the form ίληος occurring on a metrical inscription (Epigr. Kaib. 743, quoted by Nauck, Mél. gr.-rom. iv. 579): and to the name 'Αμφιάρασς, for which 'Αμφιάρησς was read by Zenodotus (Schol. Od. 15. 244), and is found in the MSS. of Pindar. So we find in Il. 11. 92 Βιήνορα (MSS.), Βιάνορα (Aristarchus); in Il. 14. 203 'Peins (MSS.), 'Peias (Ar. Aristoph.); in Il. 13. 824 βουγάϊε (Ar. and MSS.), βουγήϊε (Zenod.); in Il. 18, 502 'Αριήδνη (Zenod. — for 'Αριάδνη?); in Od. 13. 81 τετράοροι, but elsewhere in Homer συνήορος, παρήορος. These variations show that the question between a and n was often unsettled even in Alexandrian times +. On the same principle Fick would read Ποσειδήωνος in Archilochus (fr. 10), comparing the month Ποσιδηΐων (Anacr. fr. 6).

As a negative instance, we may notice the case of $\tilde{\epsilon}\omega s$ and $\tau \hat{\epsilon}\omega s$. These go back to a primitive Greek afos, rafos, which would become in Old Ionic hos, τhos, in New Ionic and Attic έως, τέως. The existence in Homer of such metrical deformities as έως ὁ ταῦθ' Ερμαινε is proof that later usage had the strongest influence on the formation of the text, Herm win to Worlds . Gusties Och M. M. W. Christ. Oroles

The ā of Genitives in -āo and -āων (for -āσων) stands on a somewhat different footing, since the loss of the intervening spirant is much more ancient. Hence it is possible that the change to an E-sound took place after the \bar{a} in these endings had been shortened,

^{*} The occurrence of Aaós in Callinus (i. 18) and Xenophanes (ii. 15) shows

The occurrence of λαος in Canimus (i. 18) and Lenophanes (ii. 15) shows that it became the usual Epic form from a very early time.

† Note however that Zenodotus sometimes gave η for ā where the true Ionic form had ā: thus he read ὁρῆτο for ὁρᾶτο (Il. 1. 198), κρητός for κρατός (Il. 1. 530). Perhaps βουγήϊος and ᾿Αριήδνη fall under this head: and ὅρηαι, which stands in our text (Od. 14. 343), is to be placed with ὁρῆτο. The most probable account of these forms surely is that they are 'hyper-Ionic,' i.e. are produced by the habit of regarding \u03c4 as in every case the Ionic equivalent of Attic ā. On this view they are parallel to the hyper-Doric forms which are produced by indiscriminately turning Attic n into a.

in other words, that the steps were -āo, -āω, -εω and -āων, -ἄων, -εων (not -ao, -no, &c.). It is also not improbable that the shortening had taken place in the time of Homer, so that -ao and -aw were then archaic (as -o10 almost certainly was). There are 54 instances of the Gen. Plur. Fem. in -εων (-ων) in Homer, against 306 in -āων (Menrad, pp. 36, 38). Considering the strength of tradition in such matters we may infer that the vowel was doubtful in quantity, if not actually short, in the spoken language of the time. As to -ao see § 376, 1. Now if the forms in -ao and -aww were then archaic, they might be exempted, by the force of a poetical tradition, from the general phonetic law or tendency which turned a into n in the Ionic dialect. And the influence of Old Attic and other literary dialects which retained the ā would operate the more decisively. However this may be, it is clear that the causes which retained the a of laos, vaos, παράορος, ξυνάορος, δᾶος, παύς, πέπαμαι in the Old Attic of tragedy, may have operated at an earlier time in favour of -ao and -awv.

The question between $\check{\alpha}$ and ϵ in the later form of these endings would naturally be settled by the example of Ionic in favour of $-\epsilon \omega$, $-\epsilon \omega \nu$: but it is worth noticing that the result has not been the same in the Gen. of Neuters in $-\check{\alpha}_S$ (§ 107, 3). Here the Ionic ϵ appears in Homer in the declension of oddas, $\kappa \hat{\omega} as$, $\kappa \tau \hat{\epsilon} \rho as$, but not in $\gamma \hat{\eta} \rho a - os$, $\delta \epsilon \pi \hat{a} - \omega \nu$, $\tau \epsilon \rho \hat{a} - \omega \nu$. The tendency to uniformity works much more powerfully on a large class of words, such as the Nouns in $-\bar{\alpha}$ (- η), than on a small group, like the Neuters in $-\check{\alpha}_S$. But the survival of $-\check{\alpha}os$, $-\check{\alpha}\omega \nu$ in the latter makes it probable that $-\check{\alpha}\omega$, $-\check{\alpha}\omega \nu$ were at one time the Homeric forms, anterior to $-\epsilon \omega$, $-\epsilon \omega \nu$.*

A singular problem is presented by the \bar{a} in the two forms $\pi \epsilon \nu \nu \dot{a}\omega \nu$ (Acc. $\pi \epsilon \iota \nu \dot{a}\omega \nu \tau a$) and $\delta \iota \psi \dot{a}\omega \nu$, as to which see § 55, 8. As these verbs belong to the small group in which contraction gives η instead of \bar{a} , it seems at first sight strange that they should be the only examples of $-\bar{a}\omega \nu$ in the Participle. But the connexion between the two phenomena appears when we consider that the contraction in $\pi \epsilon \iota \nu \dot{\eta} s$, &c. implies the steps $\bar{a}\epsilon > \eta \epsilon > \eta$. consequently that the exceptional feature in it is precisely the retention of the long vowel. Thus it remains only to explain the combination $\bar{a}\omega$, $\bar{a}o$, which in Ionic should become $\eta \omega$, ηo .

^{*} The fact that $-\epsilon \omega$ and $-\epsilon \omega v$ are scanned with synizesis, except in $\theta v \rho \epsilon \omega v$ and $\pi v \lambda \epsilon \omega v$, is unimportant. Obviously an ending such as $-\epsilon \omega v$ can only be scanned ω — when it is preceded by one, and not more than one, short syllable. It will be found that $\theta \dot{\nu} \rho \eta$ and $\pi \dot{\nu} \lambda \eta$ are the only Nouns in $-\eta$ which fulfil this condition.

5. In his earlier work on the Odyssey Fick recognised both av and κεν as Homeric; but subsequently he came to the conclusion that αν is everywhere due to the Ionic translators (Ilias, p. xxiii). His main argument is that of the 43 instances of av in the Ionic poets (Archilochus, &c.) there are not more than 21 in which it could be changed into KEV (KE, K') without affecting the metre, whereas in Homer the change can be made in a much larger proportion of cases. The inference is that in making the change in Homer we are restoring the original form. But his induction is far too narrow. In the first three books of Apollonius Rhodius there are 46 instances of av. and only 13 in which it cannot be changed into $\kappa \epsilon(\nu)$. Again in Æschvlus (excluding chorus) there are 212 instances of av, of which 73 are unchangeable. In the Edipus Tyrannus the number is 31 out of 107. In the Iliad, without counting ην and ἐπήν, the instances of unchangeable av are 43 out of 156. This is nearly the same proportion; and we admit that in a few cases av has replaced an original KEV. Moreover it has been already shown, on quite independent grounds, that the combination our av is Homeric (§ 362). There can be little doubt, therefore, that while $\kappa \epsilon(\nu)$ is distinctive of Æolic, as av of Ionic and Attic, the Homeric dialect possessed both Particles. It may seem strange that $\kappa \epsilon(\nu)$, which is commoner than $\vec{a}\nu$ in Homer, should have died out of Ionic. On the other hand av was the more emphatic Particle, and the desire of emphasis is a frequent cause of change in the vocabulary of a language.

It may be objected that we have still to explain the remarkable coincidence on which Fick's argument rests, viz. the fact that in so many cases the non-Ionic forms are precisely those which are different in metrical value from the Ionic equivalents. The answer is that the same coincidence would be found with archaisms of any dialect. It is only the metre of Homer (generally speaking) that has preserved or could preserve such things. Why do we find (e.g.) στήομεν, στήετε, but στήμε, στήμε, στήμει, στήεις, στήει, στήουσι)? Evidently because the metre admits the modernised forms in the latter case, not in the former. Thus all words or inflexions which do not belong to the New Ionic or Attic dialect, be they Old Ionic or Old Æolic, will be found to be metrically different from the later forms.

It has been sought thus far to show that phenomena which Fick explains by supposing a translation from Æolic into New Ionic may be equally well accounted for, partly by the changes which must have taken place within the Attic-Ionic dialect itself, and partly by the influence of the post-Homeric spoken language. We may now consider what Homeric peculiarities cannot be explained on Fick's principles, and may therefore be held to turn the scale in favour of the alternative view.

- (a) The Dual is wanting in the earliest Æolic, whereas it is in living use in Homer, and also in Attic down to the 5th century B.C. It is true, as Fick urges, that the loss of the Dual may have taken place in Æolic between the 9th and the 7th centuries. But the gap thus made between the earliest known Æolic and the supposed Æolic of Homer is a serious weakening of his case.
- (b) The moveable -v is unknown in Æolic, as also in New Ionic. Fick strikes it out whenever it is possible to do so, but is very far from banishing it from the text. Thus in the first book of the Iliad he has to leave it in ll. 45, 60, 66, 73, 77, &c.
- (c) The psilosis which Fick introduces ($d\pi i\eta$ for $d\phi i\epsilon i$, &c.) is common to Æolic and New Ionic. Why then does it not appear in Homer?
- (d) The forms of the type of δρόω, δρόωντες, &c. (§ 55) are not accounted for by Fick's theory. This is recognised by Fick himself (Odyss. p. 2). He adopts the view of Wackernagel, supposing that the Attic forms δρών, δρώντες were introduced into the recension of Pisistratus, and that these were afterwards made into δρόων, δρόωντες to fit the metre. This view is doubtless in the main correct. Setting aside the mythical 'recension of Pisistratus,' and putting in its place the long insensible influence of Attic recitation upon the Homeric text, we obtain a probable account of δρόω, and of much besides. But it can hardly be reconciled with a translation into New Ionic about 540 B.C. It is uncertain, indeed, whether the New Ionic form was δρέω or δρω (see H. Weir Smyth, Vowel-system &c. p. III); but the argument holds in either case. If the form was ὁρέω (as is made probable by the Homeric δμόκλεον, &c. § 55, 10), that form is metrically equivalent to the original, and on Fick's theory would have been adopted. If it was δρώ, which is metrically different, then on Fick's theory the original Æolic would have been retained.
- (e) The forms $\tilde{\epsilon}\omega s$ and $\tau \hat{\epsilon}\omega s$, as has been already noticed, have crept into the text in spite of the metre; on Fick's theory the original $\tilde{a}os$ and $\tau \hat{a}os$ must have been preserved.

- (g) The Æolic forms $\tilde{a}\mu\mu\nu(\nu)$, $\tilde{\nu}\mu\mu\nu(\nu)$ are not used quite consistently: thus we find the form $\tilde{a}\mu\mu\nu$ in three places (Il. 13. 379., 14. 85, Od. 12. 275), but $\tilde{\eta}\mu\tilde{\nu}\nu$ in three others (Od. 8. 569., II. 344., 17. 376). On Fick's theory $\tilde{\eta}\mu\nu$, if it was an Ionic form, would have been adopted. Again $\tilde{\nu}\mu\mu\nu$ is occasionally used where $\tilde{\nu}\mu\tilde{\nu}\nu$ is admitted by the metre (Il. 10. 380, Od. 4. 94., 20. 367).

Several of these arguments may be met by admitting an Atticising tendency, subsequent to the Ionicising which Fick supposes. Some such Attic influence clearly was exerted, and also an Æolic influence (as Fick allows in the case of $\ddot{\nu}\mu\mu\epsilon$ s). But if the Ionic Homer only dates from 540 B.C., what room is there for these other processes? And if we suppose a modernising process, as wide in place and time as the knowledge of Homer, but in which Attic and Ionic naturally predominated, what ground is left for an original Æolic element?

(h) The Iterative forms in -εσκον (§ 48) appear to be characteristic of Homer and also of later Ionic. This is one of the points—in the nature of the case not numerous—in which the Ionic character of Homer is guaranteed by the metre.

Another point of this kind is the use of $\mu \acute{e}\nu$ in $\mathring{\eta}$ $\mu \acute{e}\nu$, $\kappa \imath \imath$ $\mu \acute{e}\nu$, and other combinations where Attic would have $\mu \acute{\eta}\nu$ (§ 345). On the other side it may be said that the retention of $\mu \acute{a}\nu$ (see § 342) was due to the want of the form $\mu \acute{\eta}\nu$ in Ionic. But if $\mu \acute{a}\nu$ were an original Æolic form we should expect on Fick's theory to find it in the older parts of the Odyssey as well as in the Iliad.

Other words which show a difference of quantity between the Homeric and the Æolic forms are: Πρίαμος (Æol. Πέρραμος), τρίτος (Æol. τέρτος), κᾶλός (Æol. κάλος, see Meyer, G. G. § 65).

The ancients supposed that Homer of set purpose employed a mixture of dialects. Modern scholars have condemned this notion as uncritical, but have generally held that his language is a poetical and conventional one, a Sängersprache, never used in actual speech. It may be allowed that there is a measure of truth in both these views,

provided that we distinguish between the dialect of the time of Homer and the 'Epic' of our texts. For—

- 1. Even in the time of Homer there was doubtless an element of conventionality in the style and vocabulary, and even in the grammatical forms of poetry. Such phrases as $\mu\epsilon\rho\delta\pi\omega\nu$ ἀνθρώπων, νήδυμος (οτ ήδυμος) ὕπνος, ἀνὰ πτολέμοιο γεφύρας, are used with little or no sense of their original meaning, but evidently as part of a common poetical stock. Doubtless the Gen. in -οιο was already poetical, perhaps also the Gen. in -āo and in -āων. These forms then were genuinely Homeric, but not part of the living speech of the time.
- 2. Many primitive Homeric forms were lost in Ionic and Attic, but survived elsewhere in Greece. These seemed to the ancients to be borrowed from the dialects in which they were known in historical times, and thus gave support to the notion of a mixture of dialects.
- 3. The poems suffered a gradual and unsystematic because generally unconscious process of modernising, the chief agents in which were the rhapsodists, who wandered over all parts of Greece and were likely to be influenced by all the chief forms of literature. In this way forms crept in from various dialects,—from Ionic, from Lesbian Æolic, and from Attic. The latter stages of this process may be traced in the various readings of the ancient critics, and even in our MSS., in which a primitive word or form is often only partially displaced by that of a later equivalent. The number of instances of this kind may be materially increased as the MSS. of Homer become better known.

Other Notes and Corrections.

§ 23, 5 (p. 27). With the instances here given we may place the Cretan κατα Γελμένοι, which occurs in the inscription of Gortyn with the meaning gathered together, assembled (cp. Homeric ἐελμένοι crowded). Baunack however takes it for κατα Γηλμένοι, supposing loss of Γ and contraction from κατα Γε Γελμένοι.

§ 27 (p. 30). The Present ἀκούω I hear appears to be originally a Perfect which has gone through the process here exemplified. The true Present form is ἀκεύω, which survived in Cyprus (ἀκεύει τηρεῖ Κύπριοι) and Crete (Law of Gortyn, ii. 17). Hence the Attic ἀκήκοα (for ἀκ-ήκουα), and presumably also an earlier form *ἄκουα, formed like ἄνωγα, and passing into ἀκούω as ἄνωγα passed into ἀνώγω. This

explains the use of ἀκούω with the Perfect meaning (§ 72, 4), which accordingly is not quite parallel to the similar use of πυνθάνομαι, μανθάνω, &c. Other Homeric examples are διώκω (§ 29), in which the want of reduplication may be original (§ 23, 5), and ἰλήκω (§ 22, 9, b.). The form ἥκω, which is probably of this nature, occurs in our MSS. of Homer (II. 5. 473., 18. 406, Od. 13. 325., 15. 329), but Bekker substituted the undoubtedly Homeric ἴκω (La Roche, H. T. 287).

The form ἐνένιπε rebuked, which occurs several times in Homer (usually with the variants ἐνένιπτε and ἐνένισπε), should perhaps be placed here. It is usually classed as a Reduplicated Aorist (so Curt. Verb. ii. 26), but there is no analogy for this, and the Homeric passages do not prove that it is an Aorist. The τ of the stem may be due to the influence of the Pres. ἐνίπτω and the Noun ἐνῖπή (cp. § 25, 3). Buttmann acutely compared it with ἐπέπληγον, which is evidently related to πλήσσω and πληγή as ἐνένῖπον to ἐνίπτω (ἐνίσσω) and ἐνῖπή. The reduplication is of the type of ἐρέριπτο.

§ 42 (p. 44). The Aor. ἐτράφην, which occurs four times in our texts of the Iliad, is probably post-Homeric. In Il. 2. 661 for the vulgate τράφη ἐν (μεγάρω) nearly all MSS. have τράφ' ἐνί. If this is right we should doubtless read τράφ' ἐνί in the two similar places. Il. 3. 201 and 11. 222. In Il. 23. 84 the MSS. have ἀλλ' ὁμοῦ ὡς έτράφην περ, with the v. l. έτράφημεν: the quotation in Æschines (Timarch. 149) gives ως όμοῦ ἐτράφεμέν περ, from which Buttmann (Ausf. Sprachl. ii. 307) restored ως δ' όμου ἐτράφομέν περ. On the other hand the Thematic ¿τραφον occurs with intransitive or passive meaning in Il. 5. 555., 21. 279 (where ἔτραφ' is the only possible reading), and in the recurring phrase γενέσθαι τε τραφέμεν τε. The variation in the MSS. (including the vox nihili ἐτράφεμεν) is sufficient evidence of the comparative lateness of the forms of ἐτράφην. Buttmann's reading (adopted by Nauck) is supported by the apodosis in l. 91 ωs δε καὶ ὀστέα κτλ. See Christ (Proll. p. 115) to whom I am indebted for the reference to Buttmann.

§ 62 (p. 56). The derivative verbs in -aζω are often frequentative or intensive, but with a tone of contempt: e.g. $\mu\mu\nu\dot{a}\zeta\omega$ I loiter, ἀλυσκάζω I shirk, πτωσκάζω I cower (stronger than πτώσσω, cp. II. 4. 371 τί πτώσσεις, τί δ' ὀπιπεύεις πολέμοιο γεφύρας; οὐ μὲν Τυδέῖ γ' ὧδε φίλον πτωσκαζέμεν ἢεν): ἀκουάζομαι I please myself with hearing (II. 4. 343 δαιτὸς ἀκουάζεσθον, Od. 13. 9 ἀκουάζεσθε δ' ἀοιδοῦ): so νεύω and νευστάζω (II. 20. 162), μίγνυμι and μιγάζομαι (Od. 8. 271), ῥίπτω and ῥιπτάζω, ἐρύω and ῥυστάζω, εἰλύω and εἰλυφάζω.

§ 67 (p. 61). With ἐἡνδανον compare the Aor. form ἔηξα (for ἔαξα), preserved in the text of Zenodotus in Il. 13. 166 (ξυνέηξε for ξυνέαξε) and 257 (κατεήξαμεν for κατεάξαμεν). In this case the change to η did not make its way into the vulgate—perhaps because the form ἢξα, which suggested it, was a rarer word than ἥνδανον.

§ 71 (p. 63). The use of the Present stem to express relative time is well exemplified by the following sentence from an early Attic inscription: εἰσπραξάντων αὐτοὺς οἱ ἡρημένοι, συνεισπραττόντων δὲ αὐτοῖς καὶ οἱ στρατηγοί (Meisterhans, § 48 a.).

§ 72, 2, n. 2 (p. 64). In the Law of Gortyn ἄγω and φέρω are employed where the Aor. is the usual tense: see especially i. 12 at δ' ἀννίοιτο μὴ ἄγεν if he deny that he has taken away (Baunack, Die Inschrift von Gortyn, p. 79).

§ 77 (p. 66). Some valuable remarks on this and similar uses of the Aor. Part. are to be found in an article by Mr. Frank Carter in the Classical Review (Feb. 1891, p. 4). He observes that it is really a timeless use, i.e. that the speaker does not wish to indicate a relation in time between the action of the Participle and that of the finite verb. The Participle expresses a predication, but one which is only a part or essential circumstance of that which the verb expresses. See below, on § 245, 1.

 \S 80 (p. 68). As to the MS. authority for some forms of the Pf. Subj. see \S 283, a.

§ 92 (p. 79). The Nominative is used for the Vocative in the case of oxytones in $-\omega\nu$, and all Nouns in $-\eta\nu$ (Brugmann, *Grundr*. ii. § 206, p. 544).

§ 99* (p. 84). To the examples of metaplastic Neut. Plur. used with collective meaning add ἔσπερα evening-time (Od. 17. 191), νεῦρα sinews (used in Il. 16. 316 of one bowstring), πλευρά side (Il. 4. 468), παρειά cheeks (Neut. Plur. in Il. 22. 491 according to Aristarchus). It may be suspected that ἐρετμά oars belongs to this group, since the Sing. in later Greek is always ἐρετμός, and a Neut. ἐρετμόν is contrary to analogy, and only rests on the phrase εὐῆρες ἐρετμόν (Od.), for which we can read εὐήρε' ἐρετμόν.

§ 102 (p. 86). It appears that the stems in -ā originally formed a Loc. Plur. in -ās (as well as -āsu and -āsi): hence Lat. forās, aliās, devās (Inscr.). Hence it is possible that the few Homeric forms in -as or -ηs which cannot be written -ησ' represent this -ās (Brugmann, Grundr. ii. § 358, p. 704).

§ 110 (p. 95). The question between πάντη and πάντη cannot be

decided, as Joh. Schmidt supposes (*Pluralb.* p. 40), by the circumstance that the final vowel is frequently shortened before another vowel in Homer. It is true, as was observed by Hoffmann (*Quaest. Hom.* i. p. 58, quoted by Schmidt *l. c.*), that final η is oftener shortened than final η . In the first four books of the Iliad and Odyssey, as Hartel shows (*Hom. Stud.* ii. p. 5), $-\eta$ is shortened 41 times, $-\eta$ 19 times: and further examination confirms this ratio. But, as Hartel also points out, $-\eta$ occurs in Homer about three times as often as $-\eta$: consequently the shortening of $-\eta$ is *relatively* more frequent.

§ 116, 4 (p. 109). For $\dot{\eta}\delta\dot{v}s$ $\dot{d}\ddot{v}\tau\mu\dot{\eta}$ in Od. 12. 369 we may read $\dot{\eta}\delta\dot{v}s$ $\dot{d}\ddot{v}\tau\mu\dot{\eta}\nu$, as suggested by Baumeister on Hom. H. Merc. 110.

§ 116, 5 (p. 109). $i\gamma u/s$ has been explained as a Compound, viz. of the prefix su-(su-manas, &c.) and a stem from the root $jy\hat{a}$ (Saussure, $M\hat{e}m$. Soc. Ling. vi. 161).

§ 117 (p. 110). Adjectives in -ιος are often used with some of the meaning of a Comparative, i.e. in words which imply a contrast between two sides: as in έσπέριος evening and ἢοῦος οτ ἢέριος morning, ἢμάτιος day and νύχιος night, ἄγριος (cp. ἀγρότερος), θεῦος (cp. θεώτερος), ἄλιος (opposed to dry land), νότιος, ζεφύριος (opp. to north and east), δαιμόνιος, ξείνιος, δούλιος. The suffix serves to form a kind of softened Superlative in ἐσχάτιος and ὑστάτιος, lit. 'of the last': and the same analogy yields ὁσσάτιος from ὅσσος, a formation like Lat. quantulus. The Comparative force of -ιος, -ιος in the Pronouns is noticed by Brugmann (see § 114, p. 101).

§ 121 (p. 115 foot). The ω of σοφώτερος, &c. has lately been discussed by J. Wackernagel (Das Dehnungsgesetz der griech. Composita, pp. 5 ff.). He treats it along with the ω which we find in έτέρωθι, έτέρωσε, ἀμφοτέρωθεν, &c., also in ἱερωσύνη, and shows that if we derive it from a Case-form in -ω (as κατωτέρω from κάτω, &c.), we have still to explain the rhythmical law according to which ω and o interchange: for a law which governed common speech in all periods cannot have arisen merely from the needs of the hexameter. Accordingly he connects the phenomenon with a rhythmical lengthening of final short vowels (among others of the final ι of the Locative, see § 378), which is found in Vedic Sanscrit.

λαρώτατος (Od. 2. 350) points to a Homeric form λαερός, which we can always substitute for λαρός. It is probably for λασ-ερός from λασ- desire: see Curtius, Grundz, p. 361 (5th edit).

§ 125, 8 (p. 121). This peculiar lengthening in the second member of a Compound has been explained by Wackernagel (Dehnungsgesetz,

pp. 21 ff.) as the result of a primitive contraction, or Crasis, with the final vowel of the first part: e. g. δμώνυμος for δμο-ονυμος. The chief argument for this view is that the lengthening is only found in stems beginning with a vowel—a fact which can hardly be accounted for on any other supposition. Such cases as δυσώνυμος, in which no contraction can have taken place, may be extensions by analogy of the original type. It is to be understood of course that the contraction was governed by different laws from those which obtain in the Greek which we know. The chief rule is that the resulting long vowel is fixed by the second of the two concurrent vowels: ομήγυρις for όμοαγυρις, πεμπώβολον for πεμπε-οβολον, &c. Whether this was a primitive phonetic rule, or partly due to the working of analogy, it finds an exact parallel in the Temporal Augment, which must have been due to the influence of a prefix &- upon the initial vowel of the verb-stem. We may compare also the Subjunctive forms δύναμαι, τίθηντι, &c. (§ 81). Thus the later contraction, as in σκηπτούχος, Λυκούργος, stands in the same relation to the older forms now in question as είχον, &c. (with ει for $\epsilon \epsilon$) to $\tilde{\eta} \lambda a \sigma a$, $\tilde{\omega} \mu o \sigma a$, &c.

The primitive Indo-European 'sandhi,'-crasis of the final vowel of one word with the initial vowel of the next, -was generally given up in Greek, and the system of elision took its place. In Compounds we constantly find elision of a short final vowel along with the lengthening (which is then a mere survival): as ἐπ-ήρατος, ἀμφ-ήριστος, φθισ-ήνωρ (cp. φθισί-μβροτος). But lengthening does not take place if the vowel is long by position (e. g. έτερ-αλκής, 'Αλέξ-ανδρος, ἀναιδής), which seems to indicate that the preservation—though not the origin -of the lengthened stem was a matter of rhythm (as in σοφώ-τερος). Other exceptions to the rule of lengthening may be variously explained. In some cases, as Wackernagel suggests (p. 51), an initial short vowel may have been retained from the original formation: as in the ancient Compounds βωτιάνειρα (ἀντιάνειρα, κυδιάνειρα), ἀργιόδοντες, εὐρύοπα, εὐρυάγυια, where the metre stood in the way of lengthening by analogy. More generally it is a mark of lateness: e.g. in the forms compounded with παν-, as παν-άποτμος, παν-αφηλιξ, παν-αώριος, Παν-αχαιοί, and with Prepositions, as ἐν-αρίθμιος, ὑπεναντίος (p. 55). Such words as αἰναρέτης (Il. 16. 31), λαβρ-αγόρης (Il. 23. 479), ἀν-όλεθρος (Il. 13. 761 τούς δ' εδρ' οὐκέτι πάμπαν ἀπήμονας οὐδ' ἀνολέθρους), ἀνάποινον (Il. 1. 99), δυσ-αριστοτόκεια (Il. 18. 54), have all the appearance of being of the poet's own coinage.

On the view here taken the lengthening in ωλεσίκαρπος and the

similar cases given at the end of the section must be otherwise explained. It is probably of the kind noticed in § 386.

§ 170 (p. 159). Another example of the distributive use of the Singular is Od. 13. 78 ἀνερρίπτουν ἄλα πηδῷ they threw up the salt sea (each) with his oar-blade. So in the recurring phrase of the Odyssey ἄλα τύπτον ἐρετμοῖς we should probably read ἐρετμῷ (§ 102), which may be similarly distributive. Or we may take ἐρετμός in a collective sense, oarage.

§ 173, 2 (p. 162). For the use of the Dual with a large number which contains the numeral δύο, cp. πεντακοσίαις εἴκοσι δυοῖν δραχμαῖν in an Attic inscription of the 5th century (Meisterhans, p. 45, 4). This is a good parallel to Od. 8. 35, 48 κούρω δύω καὶ πεντήκοντα.

§ 198 (p. 180). Notice under this head the use of ἐπί with a Comparative, Od. 7. 216 οὐ γάρ τι στυγερῆ ἐπὶ γαστέρι κύντερον ἄλλο nought else is more shameless with (when you have to do with) a hungry belly,=more shameless than the belly. So Hdt. 4. 118 οὐδὲν ἐπὶ τούτῳ ἔσται ἐλαφρότερον.

§ 241 (p. 206). In Il. 17. 155 it is better to take οἴκαδ' ἴμεν with ἐπιπείσεται, leaving the apodosis to be understood: 'if any one will be persuaded to go home (let him do so), &c.' Thus the sentence is of the type exemplified in § 324* b.

§ 245, I (p. 212). The Aor. Part. in such a sentence as εὶ ἴδοιμι κατελθόντα seems to be 'timeless,' meaning if I were to see him go down (Goodwin, § 148). Mr. Carter, in the article quoted above, ranks ἐς ἡέλιον καταδύντα as an instance of timeless use in an attributive sense. It should be observed, however, that there is a distinction between a Participle which expresses a single action or event (however timeless), and one which has become a mere adjective, as in περιπλομένου ἐνιαυτοῦ, &c. (§ 243, I). Thus ἐς ἡέλιον καταδύντα means to the setting of the sun (not to the setting sun): and so with the other examples given in § 245, I. It is otherwise perhaps with Od. I. 24 οἱ μὲν δυσομένου Ὑπερίονος οἱ δὶ ἀνιόντος, where the place of sun-set—not of a particular sun-set—is intended.

§ 297 (p. 269). In the Law of Gortyn πρίν κα with the Subj. is repeatedly used after an affirmative principal clause: see Baunack, Die Inscrift von Gortyn, p. 82.

§ 324*, b, c. The omission of the principal Verb in passages of this kind (especially when it is suggested by an Infinitive in the protasis) finds a perfect parallel in the Law of Gortyn: iii. 37 κόμιστρα αἴ κα λῆ δόμεν ἀνὴρ ἡ γυνά, ἡ ξῆμα ἡ δυώδεκα στατῆρων ξρῆσς,

 $\pi\lambda \hat{i}$ ov $\delta \hat{\epsilon} \mu \hat{\eta}$ (sc. $\delta \hat{i} \tau \omega$) if man or wife choose to give payment for nurture, let him or her give a garment or twelve staters or something of the value of twelve staters, but not more: cp. the other places quoted by Baunack, Die Inschrift von Gortyn, p. 77. This shows that the usage must have been well established in Greek prose from an early period.

§ 338 (p. 309). In Il. 3. 215 most MSS, have εἰ καὶ γένει ὕστερος ἦεν, but ἣ καί is found in the two Venetian (AB) and the Townley and Eton MSS. The scholia show that the ancients knew nothing of

 ϵi , and only doubted between η (in the sense of if) and η .

§ 348, 4 (p. 318). In Il. 18. 182 one of the editions of Aristarchus had τ is τ ap σ ϵ (for τ is γ ap σ ϵ). Cobet adopts this, and would read τ ap for γ ap in the similar places Il. 10. 61, 424, Od. 10. 501., 14. 115., 15. 509., 16. 222 (Misc. Crit. p. 321). In the two last passages Bekker had already introduced τ ap into his text.

§ 370 (p. 342). To the instances of shortening before - βp - should be added $d\beta \rho \sigma \tau d\xi \sigma \mu \epsilon \nu$ (II. 10. 65), which is a derivative verb from the stem which we have in the two forms $d\mu a \rho \tau$ - and $d(\mu)\beta \rho \sigma \tau$ - (cp. $d\mu \beta \rho \sigma \tau \sigma \nu$). The appearance of $\rho \sigma$ instead of $\rho \sigma$ (for g) is Æolic.

§ 405 (p. 382). A parallel to the Naxian Afyto has now been found in the form Afytap on an Attic inscription of the VIth cent. B.C. (see J. van Leeuwen, *Mnemos.* xix. 21). Further instances of Chalcidian f (Fοικέων, σαfοί?) are given by Roberts, *Epigraphy*, p. 204.

^{§ 69 (}p. 62). In an article on the Augment in Homer in the last number of the Journal of Philology (xix, p. 211 ff.), Mr. Arthur Platt has shown that, in the case of the Aorist, the choice between the augmented and the unaugmented form is largely determined by the sense in which the tense is used. In the common historical or narrative use the augment is often wanting; but in the uses which we may call non-narrative—the use for the immediate past (§ 76), and the gnomic use (§ 78)—the augmented form prevails. With the gnomic use the rule appears to be especially strict. This is obviously a valuable extension and generalisation of the facts observed by Koch. In the case of the Imperfect there seems to be a preference for unaugmented forms in continuous narrative; but the difference is much less marked. Mr. Platt gives some good reasons for believing that the number of unaugmented forms was originally greater than it is in our text. In this we find a fresh example of the modernising process to which the poems were subjected from a very early time.

INDEX I.

OF HOMERIC FORMS.

N.B. The figures refer to the sections.

Compound verbs are not indexed if the same form of the simple verb occurs.
